	=====			

- o BP's first quarter pro forma result was \$4,717 million compared with \$4,048 million a year ago, an increase of 17%. Replacement cost profit for the quarter was \$4,170 million compared with \$3,420 million a year ago.
- o The first quarter result includes a net exceptional and non-operating credit of \$1,177 million compared with \$285 million in the first quarter of 2003. This includes the exceptional gains from the sale of our investments in PetroChina and Sinopec.
- o The first quarter trading environment was generally stronger than a year ago, with higher oil realizations, refining margins and petrochemicals margins, slightly reduced gas realizations and lower NGL and marketing margins.
- o Net cash inflow for the quarter was \$3.8 billion compared with an inflow of \$3.2 billion a year ago, reflecting higher cash flow from operating activities partly offset by higher acquisition spending. Net cash flow from operating activities was \$7.7 billion compared with \$6.0 billion a year ago.
- o The pro forma ratio of net debt to net debt plus equity was 22% at the end of the quarter.
- o Return on average capital employed for the quarter, on a pro forma basis, was 24%, the same as a year ago. The cash return for the quarter was 32% compared with 37% a year ago.
- o The quarterly dividend is 6.75 cents per share (\$0.405 per ADS) compared with 6.25 cents per share a year ago, an increase of 8%. In sterling terms, the quarterly dividend is 3.807 pence per share compared with 3.947 pence per share a year ago, a decrease of 3.5%. The company repurchased for cancellation 155 million of its own shares during the quarter, at a cost of \$1,249 million.

BP Group Chief Executive, Lord Browne, said:

"This has been another strong performance against the backdrop of a robust trading environment. We are on track against our targets of investing for growth, growing the dividend and utilizing surplus

Edgar Filing: BP PLC - Form 6-K

cash to fund a significant level of share buybacks. We are continuing our portfolio management actions in Petrochemicals and today announced that we intend to dispose of our Olefins and Derivatives business."

The pro forma result has been derived from the group's reported UK GAAP accounting information but is not in itself a recognized UK or US GAAP measure. This financial performance information and measures derived therefrom, shown above and elsewhere in the document, are provided in order to enable investors to evaluate better BP's performance against that of its competitors.

- (a) Replacement cost profit for the period includes the net profit or loss on the sale of fixed assets and businesses or termination of operations.
- (b) Acquisition amortization is depreciation and amortization relating to the fixed asset revaluation adjustments and goodwill consequent upon the ARCO and Burmah Castrol acquisitions. The first quarter 2004 and both comparative periods include accelerated depreciation of the revaluation adjustment in respect of the impairment of former ARCO assets.

Summary Quarterly Results

Exploration and Production's first quarter result decreased 11% compared with a year ago, reflecting lower exceptional gains, higher depreciation, the impact of the changing composition of production resulting from the TNK-BP acquisition and the divestments made in 2003, higher costs due to foreign exchange movements and slightly lower US gas realizations, partly offset by higher production and slightly higher liquids realizations.

The Refining and Marketing result increased 13% compared with a year ago, reflecting improved refining margins, particularly in the US, partly offset by lower marketing margins due to pressure from higher crude prices.

The Petrochemicals result decreased compared with the prior quarter, as overall improvement in margins was more than offset by exceptional losses associated with the sale of the Specialty Intermediates business and the exit of the Baglan Bay site in the UK.

In Gas, Power and Renewables, the result was down slightly compared with a year ago and reflects a lower result from marketing and trading, improved results in global LNG and the solar and renewables business and a similar contribution from the natural gas liquids business.

Interest and Other finance expense was \$228 million for the quarter compared with \$312 million in the previous quarter. The decrease relates primarily to a reduction in net pension finance costs.

The pro forma effective tax rate on replacement cost profit was 28%.

Capital expenditure, excluding acquisitions, was \$3.2 billion for the quarter. Total capital expenditure and acquisitions was \$4.5 billion, including \$1.35 billion for including TNK's interest in Slavneft within TNK-BP. Disposal proceeds were \$2.8 billion.

Net debt at the end of the quarter was \$17.6 billion. The pro forma ratio of net debt to net debt plus equity was 22%, compared with 26% at the end of 2003.

Edgar Filing: BP PLC - Form 6-K

The commentaries above and following are based on the pro forma replacement cost results.

The financial information for 2003 has been restated to reflect (a) the transfer of natural gas liquids (NGLs) operations from the Exploration and Production segment to Gas, Power and Renewables on 1 January 2004; (b) the adoption by the group of Financial Reporting Standard No. 17 'Retirement Benefits' (FRS 17) with effect from 1 January 2004; and (c) the adoption by the group of Urgent Issues Task Force Abstract No. 38 'Accounting for ESOP Trusts' with effect from 1 January 2004. For further information see Note 1.

Exploration and Production

The pro forma replacement cost result before interest and tax for the first quarter was \$4,568 million, down 11% from the first quarter of 2003. The primary drivers for the change are lower exceptional gains, higher depreciation, the impact of the changing composition of production resulting from the TNK-BP acquisition and the divestments made in 2003, higher costs due to foreign exchange movements and slightly lower US gas realizations, partly offset by higher production and slightly higher liquids realizations.

In Venezuela, the sales agreement for our interest in Desarrollo Zuli Occidental (DZO) and Boqueron has lapsed and we will now retain these fields. We had previously reported an exceptional loss on disposal of \$217 million in respect of these assets which has now been reversed. As a result of the lapse of the

Edgar Filing: BP PLC - Form 6-K

agreement, an impairment charge of \$186 million has been recognized in the quarter, comprising a \$123 million non-operating charge and accelerated acquisition amortization of \$63 million.

The first quarter result also includes a charge of \$66 million, reflecting an increase in the provision for Unrealized Profit in Stock (UPIS), which removes the upstream margin from downstream inventories. This compares with a charge of \$125 million in the equivalent quarter of last year.

Production for the quarter was up from 3,618 mboe/d in the first quarter of 2003 to 4,015 mboe/d. This reflects the impact of the inclusion of TNK-BP from 29 August 2003 and the first quarter of Slavneft, growth in Trinidad, the start up of NaKika in Deepwater Gulf of Mexico and Xikomba in Angola, partly offset by decline in existing profit centers in North America and Europe and divestments made during 2003.

Progress continues in our new profit centres as indicated in our strategy presentation on 29 March 2004. During the first quarter, construction of the Holstein and Mad Dog Spars was completed and installation offshore has commenced. In Algeria, commissioning of the In Salah gas facilities is underway. In Azerbaijan, construction on the Azeri project and the BTC pipeline remains on track. In Angola, the Kizomba A Floating Production Storage and Offloading vessel sailed away from the construction yard in Korea enroute to the field location in Block 15.

The first quarter saw exploration successes in Egypt with the Raven 1 and Taurt wells in the Nile Delta along with three further discoveries in Angola: Cesio 1 and Chumbo 1 in offshore Block 18 and Bavuca in Block 15.

In January we sold 45% of our interest in Kings Peak in Deepwater Gulf of Mexico to Marubeni Oil & Gas (USA) Inc. Additionally, on 9 February 2004 we signed a sale and purchase agreement with Fairborne Energy Ltd to sell a package of non-core assets in Alberta, Canada for \$88 million.

	=====		

(a) The Global Indicator Refining Margin (GIM) is the average of six regional indicator margins weighted for BP's crude refining capacity in each region. Each regional indicator margin is based on a single representative crude with product yields characteristic of the typical level of upgrading complexity. The regional indicator margins may not be representative of the margins achieved by BP in any period because of BP's particular refinery configurations and crude and product slate.

Customer Facing Segments Refining and Marketing

The pro forma replacement cost result before interest and tax for the first quarter was \$941 million. This compares with \$833 million for the same period last year, an increase of 13%.

The result reflects improved refining margins, particularly in the US, due to strong demand, cold weather and concerns over US gasoline supplies. Marketing margins were lower than those in both the first quarter and the fourth quarter of 2003 due to pressure from higher crude and product prices.

Refining throughputs for the quarter were 3% below those in the first quarter of 2003; the decrease was attributable to the disposal of the Bayernoil refinery in Germany in the second quarter of 2003. The quarter's refining availability was 95.1%, enabling strong margin capture. Marketing sales were slightly higher than in the first quarter of 2003.

Edgar Filing: BP PLC - Form 6-K

During the quarter BP launched its new product line of gasoline and diesel fuels, BP Ultimate, in Portugal. We also launched a new advertising and communications campaign - Fluid Motion - for the Castrol brand in Europe, along with a new product, Castrol GTX High Mileage, in the UK.

During the quarter, BP and the Singapore Petroleum Company Limited (SPC) announced that conditional agreement had been reached for SPC to purchase BP's interests and one-third stake in Singapore Refining Company Private Limited (SRC) for \$140 million. Subsequent to this announcement we have been notified that the remaining shareholders would like to exercise their pre-emption rights. This would result in BP's one third share being divided equally between the two remaining shareholders in SRC, namely Caltex Singapore Private Ltd and Singapore Petroleum Company Limited. As a result these two companies would also acquire BP's one-sixth equity interest in Tanker Mooring Services Company Pte Ltd (TMS).

In the first quarter, BP and Lembaga Tabung Angkatan Tentera (LTAT) announced that agreement had been reached for LTAT to purchase BP's 70% shareholding in the BP Malaysia Sdn Bhd fuels business. Subject to receiving the necessary regulatory consents, this transaction is also expected to be concluded by 30 June 2004.

The quarter's result includes net exceptional losses of \$140 million before tax, which principally relate to the disposal of the SRC and the closure of the lubricants operation of the Coryton Refinery, in the UK.

=====

- (a) The Chemicals Indicator Margin (CIM) is a weighted average of externally based product margins. It is based on market data collected by Nexant in their quarterly market analyses, then weighted based on BP's product portfolio. While it does not cover our entire portfolio, it includes a broad range of products. Among the products and businesses covered in the CIM are the olefins and derivatives, the aromatics and derivatives, linear alpha-olefins (LAOs), acetic acid, vinyl acetate monomers and nitriles. Not included are fabrics and fibres, plastic fabrications, poly alpha-olefins (PAOs), anhydrides, speciality intermediates, and the remaining parts of the solvents and acetyls businesses.
- (b) Provisional. The data for the first quarter is based on two months' actuals and one month of provisional data.

Petrochemicals' pro forma replacement cost result before interest and tax for the first quarter was a loss of \$25 million, down from \$41 million in the fourth quarter of 2003. The result was affected by exceptional losses largely associated with the sale of our Specialty Intermediates Business and the exit of the Baglan Bay site in the UK more than offsetting overall margin improvement. The first quarter result was a decrease of \$162 million compared with the same quarter last year, due to the exceptional losses and adverse foreign exchange impacts. The margin structures of our European operations continue to be affected by the strength of the Euro and Sterling, as we are unable to achieve offsetting price increases due to dollar-based competition.

Petrochemicals production of 7,243 thousand tonnes in the first quarter was up 90 thousand tonnes compared with the previous quarter due to improved reliability and asset utilization.

During the first quarter, our portfolio management actions continued. We announced the closure and exit from the Baglan Bay site in the UK. We signed a sale and purchase agreement for our Specialty Intermediates Business (trimellitic anhydride, purified isophthalic acid (PIA) and maleic anhydride) based in Joliet, Illinois in the USA, plus the economic interest in our European PIA business. We also announced the intention to sell our Global Fabrics and Fibres business as well as our speciality business manufacturing and marketing linear and poly alpha olefins based in Feluy, Belgium; Pasadena, USA and Joffre, Canada.

	=====		

The pro forma replacement cost result before interest and tax for the first quarter was \$198 million compared with \$216 million a year ago. The result reflects a lower result in marketing and trading, improved results in global LNG and Solar and a similar contribution from the natural gas liquids business.

The marketing and trading result in North America is down compared with the first quarter of 2003, when the business benefited from high margins as a result of the prolonged cold weather in north east and midwest markets. The global LNG business had a strong quarter due to higher margins and continued growth in LNG sales volumes. Group gas sales volumes are up 15% above the same period last year.

The first quarter NGL result was flat, with volume increases of 32% offset by lower margins.

First quarter results for the solar business were improved over a year ago primarily as a result of the benefits of the 2003 restructuring programme.

BP today announced a first quarterly dividend for 2004 of 6.75 cents per ordinary share. Holders of ordinary shares will receive 3.807 pence per share and holders of American Depository Receipts (ADRs) \$0.405 per ADS share. The dividend is payable on 7 June to shareholders on the register on 14 May. Participants in the Dividend Reinvestment Plan (DRIP) or the DRIP facility in the US Direct Access Plan will receive the dividend in the form of shares, also on 7 June. The second quarter 2004 results and dividend will be announced on 27 July 2004.

Outlook

BP Group Chief Executive, Lord Browne, concluded:

"The world economy appears to have grown at or above trend in the first quarter of 2004. Growth was especially robust in the US and in Asian economies, particularly in China, but Europe, with the exception of the UK, continues to lag. The US and Asia are expected to continue growing at or above trend in 2004 but mainland European growth is expected to remain below trend.

"At just over \$32 per barrel (dated Brent), crude oil prices during the first quarter were the highest since the fourth quarter of 1990 (immediately prior to the first Gulf War) and \$2.60 per barrel higher

Edgar Filing: BP PLC - Form 6-K

than in the fourth quarter of 2003. Prices have averaged around \$32.91 so far in April (through close 23 April 2004). Strong oil demand growth, low inventories, a tight US gasoline market and concern about possible supply disruptions have kept crude prices supported, notwithstanding the continuing high levels of OPEC production. The same forces should underpin crude prices during the second quarter but a rebuilding of inventories closer to seasonal norms looks likely if OPEC does not make production cuts that more closely match the seasonal drop in oil product demand.

"US natural gas prices traded in a relatively narrow range for most of the first quarter, averaging \$5.69/mmbtu (Henry Hub first of the month index). This represented an increase of around \$1.10/mmbtu versus the fourth quarter of 2003, due to seasonal weather effects, lingering supply concerns and the strength in oil prices. Spot gas prices traded between residual fuel oil and distillate parity throughout the whole period. Working gas in storage currently stands well above last year's levels and close to the five-year average. With storage at adequate levels and with growth in supply and demand looking more balanced than in recent years, we expect that gas prices will remain strongly influenced by movements in oil prices for the remainder of 2004.

"Refining margins in the first quarter strengthened relative to the fourth quarter 2003 in the face of declining product inventories, strong global oil demand growth and cold US weather. Margin gains were most pronounced in the US, where low gasoline inventories and specification changes raised concerns about supply during the coming driving season. Margins have begun the second quarter strongly, with low gasoline inventories and demand strength. Marketing margins are expected to reflect seasonal improvements although they continue to be impacted by high crude oil and product prices.

"Petrochemical margins in the first quarter improved versus the prior period. We continue to remain cautious about the overall market although we expect demand to improve gradually during 2004 provided the global economic recovery is sustained.

"Capital expenditure, excluding acquisitions, for the quarter was \$3.2 billion, and is projected to be approximately \$13.5 billion for the year, subject to developments in the US dollar exchange rate. The share buyback programme is continuing."

The foregoing discussion, in particular the statements under "Outlook", contains forward looking statements particularly those regarding BP's asset portfolio and changes in it, capital expenditure, economic growth, growth in oil demand, impact of foreign exchange exposure, inventory levels, the US gasoline market and supply concerns, margins, prices, petrochemicals demand and share buybacks. Forward looking statements by their nature involve risks and uncertainties and actual results may differ from those expressed in such statements depending on a variety of factors including the following: the timing of bringing new fields on stream; industry product supply, demand and pricing; operational problems; general economic conditions; political stability and economic growth in relevant areas of the world; changes in governmental regulations; exchange rate fluctuations; development and use of new technology and successful commercial relationships; the actions of competitors; natural disasters and other changes in business conditions; prolonged adverse weather conditions; and wars and acts of terrorism or sabotage. Notes

1. Restatement of comparative information

Comparative information for 2003 has been restated to reflect the changes described below.

- (a) Transfer of natural gas liquids activities
With effect from 1 January 2004 natural gas liquids (NGLs) activities have been transferred from the Exploration and Production segment to Gas, Power and Renewables.
- (b) New accounting standard for pensions and other post-retirement benefits
With effect from 1 January 2004 BP has adopted Financial Reporting Standard No. 17 'Retirement Benefits' (FRS 17). FRS 17 requires that financial statements reflect at fair value the assets and liabilities arising from an employer's retirement benefit obligations and any related funding. The operating costs of providing retirement benefits are recognized in the period in which they are earned together with any related finance costs and changes in the value of related assets and liabilities. This contrasts with Statement of Standard Accounting Practice No. 24 'Accounting for Pension Costs', which requires the cost of providing pensions to be recognized on a systematic and rational basis over the period during which the employer benefits from the employee's services. The

Edgar Filing: BP PLC - Form 6-K

difference between the amount charged in the income statement and the amount paid as contributions into the pension fund is shown as a prepayment or provision on the balance sheet.

(c) Accounting for Employee Share Ownership Plans

With effect from 1 January 2004 BP has adopted Urgent Issues Task Force Abstract No. 38 'Accounting for ESOP Trusts'. This abstract requires that BP shares held by the group for the purposes of Employee Share Ownership Plans (ESOPs) are deducted from equity on the balance sheet. Such shares were previously classified as fixed asset investments.

Balance sheet at 31 December 2003	Restated	Reported

(a) Natural gas is converted to oil equivalent at 5.8 billion cubic feet = 1 million barrels.

BP's share of the result of the TNK-BP joint venture has been included within Exploration and Production with effect from 29 August 2003. TNK-BP operational and financial information for the first quarter has been estimated and includes an adjustment in respect of the period 29 August to 31 December 2003 amounting to charges of \$11 million and \$29 million respectively in replacement cost profit before interest and tax and net income. TNK-BP's 2003 audited financial statements are expected to be finalized in May 2004. Any further adjustment in respect of 2003 will be reflected in BP's second quarter results.

Notes

11. Statutory accounts

The financial information shown in this publication is unaudited and does not constitute statutory accounts. The 2003 Annual Report and Accounts have been delivered to the UK Registrar of Companies; the report of the auditors on those accounts was unqualified.
