AngloGold Ashanti report for the quarter and nine months ended September 30, 2005 prepared in accordance with IFRS

Quarter 3 2005

Report

for the quarter and nine months ended 30 September 2005

Group results ...

- Gold production down 2% to 1.534Moz, due to anticipated decline in grades at Sunrise Dam and Geita, and a reduction in heap leach ounces at Siguiri.
- Strong recovery in the South Africa region following the four-day strike, which saw local production up 2% to 677,000oz and total cash costs 2% lower at R59,053/kg.
- Group total cash costs increase 2% to \$284/oz.
- Adjusted headline earnings decline to \$1m, due in part to a negative \$21m fair value (non-cash) movement on the convertible bond.

Financial and operating review OVERVIEW OF THE OUARTER

AngloGold Ashanti recorded adjusted headline earnings of \$1m for the third quarter compared with adjusted headline earnings of \$92m in the previous quarter. At a financial level, the decline was due to the non-recurrence of the \$47m tax credit recorded in the previous quarter, together with a negative \$34m fair value (non-cash) movement on the convertible bond, which arose on account of the share price appreciation and associated increased volatility during the quarter. At an operating level, the adjusted headline earnings reduction was primarily due to the anticipated decline in grades at Sunrise Dam and Geita as well as a reduction in the heap leach ounces at Siguiri.

The loss attributable to equity shareholders amounted to \$73m as compared to a profit of \$96m in the prior quarter. This is primarily as a result of the same factors that drove the decrease in adjusted headline earnings referred to above and an unrealised non-hedge derivative loss relating to the negative marked-to-market movement of the hedge book following the rally in the gold price, as compared to the gain recorded in the previous quarter.

Production declined 2% quarter-on-quarter to 1.534Moz. As previously noted, the production decline at Sunrise Dam was due to decreasing grades, as mining moves to the lower-grade northern regions of the pit and the high-grade stockpiles are depleted. In East Africa, production at Geita was down 28,000oz as a result of declining grades in the current cut-back and delayed access to the higher-grade ore of the next mining phase in the Nyankanga pit, which is scheduled for early third quarter 2006. In West Africa, production at Siguiri was down 19,000oz following the exceptionally high production level of last quarter and the impact of pipeline failures at the CIP plant. Obuasi's production of 98,000oz was 4% lower than that of the previous quarter, reflecting the continued adverse impact of limited mining flexibility and developed reserves.

Set against these negative production impacts, this quarter saw an improved performance from the South Africa region. Gold production was up 2% to 677,000oz, with total cash costs 2% lower at R59,053/kg. In the context of the four-day strike action during the quarter, this represents a commendable performance.

In respect of the international operations, CC&V's production improved 30% to 92,000oz due to more favourable leach cycle timing and the recovery of ounces placed earlier in the year. Production and cost performance of the South American assets remained fairly constant quarter-on-quarter.

In respect of the company's ongoing cost management strategy, savings arising from improved efficiencies were negated by the inflationary increases that were primarily evident at the South African operations in respect of the wage increases reflected in the current quarter, together with the continuing negative cost impacts of higher oil and mining consumables prices. These factors, together with the drop in production by 2%, increased total cash costs by 2% to \$284/oz.

In the context of these ongoing cost pressures and in order to further maximise synergies between the African operations, the company has begun a process of further rationalising management structures on the continent. Going forward, the eight open-pit mines will report to Fritz

Neethling, while the eight underground mines will report to Robbie Lazare. This will ensure that technical skills are appropriately matched to orebody type. Daniel Owiredu will manage the political, social and logistical issues of the African countries in which the company operates. The current management structures in Africa are therefore being rationalised, from three to two, supported by a small technical team, all under the leadership of Neville Nicolau.

Capital expenditure for the quarter amounted to \$215m, which includes stay-in-business capex of \$149m.

Looking ahead, production for the fourth quarter is estimated to be 1.504Moz at a total cash cost of \$282/oz, assuming the following exchange rates to the US dollar: R6.60; A\$0.75; BRL2.25 and Argentinean peso 2.97. Capital expenditure is estimated at \$206m and will be managed in line with profitability and cash flow.

OPERATING RESULTS FOR THE QUARTER SOUTH AFRICA

At Great Noligwa, volume mined fell 7% after rock engineering and geological constraints forced crew moves to a lower-grade area of the mine, interrupting production. Face values also decreased by 8%, although a concerted effort to reduce underground lock-up resulted in a 3% increase in tonnes milled. Gold production consequently fell only 2% to 5,275kg (170,000oz) and total cash costs increased marginally to R56,203/kg (\$269/oz). Gross profit adjusted for the effect of unrealised non-hedge derivatives increased by 3% to R137m (\$21m), with an increased price received compensating for the lower gold production. Going forward, Great Noligwa's grade profile should average approximately 9.0g/t for the next three years, before continuing to decline to an estimated 8.0g/t over the remaining life of the operation. The Lost-Time Injury Frequency Rate (LTIFR) was 14.12 lost-time injuries per million hours worked (15.66 for the previous quarter).

At Kopanang, volume mined and tonnes treated declined by 4% and 5% respectively this quarter, although yield improved to 7.9g/t mainly due to the release in gold lock-up tonnes from the previous quarter, as well as benefits associated with the introduction of improved blasting techniques. Gold production consequently improved 7% to 3,933kg (126,000oz). Total cash costs, despite being negatively impacted by higher seasonal power tariffs and mid-year wage increases, nevertheless improved 9% to R53,142/kg (\$254/oz) as a result of implemented cost savings initiatives and the improved gold production. Gross profit adjusted for the effect of unrealised non-hedge derivatives improved by 12% to R93m (\$14m). The LTIFR was 9.52 (12.89).

Tau Lekoa's volume mined increased 3%, favourably impacting gold production, which also improved by 3% to 2,195kg (71,000oz). Yield increased slightly to 4.2g/t.

The implementation of cost savings initiatives, together with the increased gold production, resulted in a 5% reduction in total cash costs to R78,182/kg (\$374/oz). Gross loss adjusted for the effect of unrealised non-hedge derivatives increased marginally to R12m (\$2m). The LTIFR was 12.12 (12.79). Regrettably, one

The LTIFR was 12.12 (12.79). Regrettably, one employee lost his life in a horizontal transport accident.

Moab Khotsong's slightly improved gold production of 231kg (8,000oz) is not included in the South Africa region's production, as the revenue continues to be capitalised against preproduction costs. Commercial production is scheduled for 2006.

The LTIFR was 14.69 (17.45).

At **Mponeng**, despite a 5% reduction in face values, gold production at 3,946kg (127,000oz), was on par with that of the last quarter due to increased volume mined and tonnage treated. Yield fell in line with the lower face values to 9.0g/t. Total cash costs, at R57,014/kg (\$272/oz), were held to the previous quarter's level, as the benefit of cost savings initiatives offset the effect of wage increases and other inflationary factors. Gross profit adjusted for the effect of unrealised non-hedge derivatives fell 19% to R59m (\$9m) due to higher rehabilitation charges.

The LTIFR was 8.94 (9.90).

Gold production at Savuka rose 8% to 1,121kg (36,000oz), reflecting the implementation of a rationalised mining plan wherein mining of lowgrade panels and non-critical development has been stopped. Yield improved 35% to 8.0g/t, primarily due a 22% increase in face values, while the production improvement, together with the implementation of cost savings initiatives, resulted in a 16% decrease in total cash costs to R79,484/kg (\$379/oz). Gross loss adjusted for the effect of unrealised non-hedge derivatives declined to R2m (\$0.3m). In spite of this quarter's strong operational performance, Savuka is entering into orderly closure mode with likely closure in March 2006. The LTIFR was 9.55 (16.75).

At **TauTona**, volume mined declined 9% quarter-onquarter due to lower face length availability in several key areas. However, tonnes milled fell by only 2% and, combined with a 5% increase in face values, resulted in a 3% production improvement to 3,843kg (124,000oz). In addition to wage increases and higher seasonal power tariffs, the benefits of the second quarter's non-recurring cost interventions were not again realised and total cash costs therefore increased 9% quarter-on-quarter to R54,202/kg (\$259/oz). Gross profit adjusted for the effect of unrealised non-hedge derivatives improved 37% to R81m (\$12m) due to lower amortisation charges and an improved price received. The LTIFR was 12.60 (9.35). Three employees regrettably lost their lives during a single seismic event in July.

ARGENTINA

At Cerro Vanguardia (92.5% attributable), gold production improved 2% to 52,000oz primarily as a consequence of increased ore treated. However, total cash costs rose 18% to \$202/oz, owing to lower feed grade for both gold and silver, which negatively affected the by-product credit for the latter. Gross profit adjusted for the effect of unrealised non-hedge derivatives declined by 29% to \$5m, mainly as a result of increased cost of sales. The LTIFR was 2.25 (3.74).

AUSTRALIA

As anticipated and reported last quarter, production at **Sunrise Dam** decreased 23% to 101,000oz. With volume treated maintained at a similar level to that of the previous quarter, the decrease was largely due to a decline in recovered grade to 3.2g/t. This decline, together with increased fuel prices, drove total cash costs up 33% to A\$425/oz (\$323/oz). Gross profit adjusted for the effect of unrealised non-hedge derivatives decreased 78% to A\$6m (\$5m), again as a result of significantly lower grades.

Mining at Sunrise Dam moved this quarter from the high-grade southern section of the pit to the lower-grade northern section, where it will remain for the next 18 months. The underground project, where development inclines and trial mining are accessing higher-grade ore, is however supplementing commercial production. This quarter, 997 metres of underground capital development and 675 metres of operational development were completed. The LTIFR was 2.33 (4.89).

BRAZIL

At

AngloGold Ashanti Mineração, gold

production increased 7% to 65,000oz, primarily due to additional production from the clean-up of old Morro Velho facilities in the area, in addition to higher heap leach recovery at the Córrego do Sìtio mine.

Total cash costs, at \$173/oz, were 7% higher this quarter as a consequence of the 6% appreciation of the Brazilian real and a lower sulphuric acid credit, although the improved gold production and a higher price received helped to offset these effects. Gross profit adjusted for the effect of unrealised non-hedge derivatives increased marginally to \$12m. The LTIFR was 3.69 (1.45).

At **Serra Grande** (50% attributable), gold production was maintained at last quarter's level of 24,000oz, although total cash costs rose 4% to \$159/oz, mainly due to the appreciation of the Brazilian real. Gross profit adjusted for the effect of unrealised non-hedge derivatives declined by 33% to \$4m.

The LTIFR was 0.00 (0.00).

GHANA

At **Bibiani**, gold production fell 7% to 28,000oz. As previously reported, production at the operation has recently focused on lower-grade satellite pits; however, on the basis of successful tailings treatment trials conducted this quarter, Bibiani will become a tailings-only operation from the fourth quarter of this year. Total cash costs increased 4% to \$308/oz, while gross loss adjusted for the effect of unrealised non-hedge derivatives increased from \$1m in the second quarter to \$4m in the third, due to both the lower yield and a reduction in stockpile inventory.

The LTIFR was 1.13 (0.00).

At **Iduapriem**, gold production increased 10% to 44,000oz, due primarily to a 10% improvement in tonnage treated after the crusher and conveyor problems of last quarter were resolved. Total cash costs nevertheless increased 9% to \$369/oz as a consequence of ore dilution, which is currently being addressed through better blasting patterns.

The resolution of this problem, combined with the implementation of the initial recommendations from the mine-to-mill study noted last quarter will likely result in improved production during the fourth quarter. Due to a lower price received and increased total cash costs, gross loss adjusted for the effect of unrealised non-hedge derivatives was \$2m versus a second quarter profit of \$2m.

The LTIFR was 0.00 (1.15).

Obuasi this quarter experienced a 19% decline in grade and production consequently dropped 4% to 98,000oz, while total cash costs increased 5% to \$341/oz. This is a consequence of a primary crusher failure early in the quarter, as well as delayed access to two high-grade areas, due to unstable ground conditions. In an effort to address the grade decline, measures have been put in place to reduce dilution and to more effectively identify and mine quality tons, which has resulted in improved underground grades from the beginning of the fourth quarter. Gross loss adjusted for the effect of unrealised non-hedge derivatives, at \$5m, was in line with that of the previous quarter.

The improving trend in the mining mix and flexibility continued, with 17% and 35% increases in development and definition drilling, respectively. However, the 2005 forecast production for Obuasi is now estimated at 400,000oz, with a likely modest improvement in 2006 to approximately 415,000oz.

The LTIFR was 1.12 (3.56). Regrettably, two employees lost their lives this quarter, one due to a fall of ground and the other in a machinery accident.

REPUBLIC OF GUINEA

The exceptionally high second quarter production at **Siguiri** (85% attributable), which was mostly due to the processing of the final heap leach ounces, combined with the commissioning of the new CIP plant, was not repeated. A series of pipeline failures also prevented the new CIP plant from operating at full capacity, and these factors together resulted in a 24% production decline to 61,000oz. Following the initial resolution of plant problems last quarter, a plan is now underway to replace the plant pipeline during the next two quarters, in order to ensure optimal performance.

Total cash costs consequently increased 46% to \$310/oz and gross profit adjusted for the effect of unrealised non-hedge derivatives declined significantly to \$1m, as a result of both the lower recovered grade and the lower tonnage treated due to the pipeline failure.

The LTIFR was 1.47 (0.64).

MALI

At

Morila (40% attributable), production increased 3% to 69,000oz, after a reduction in recovered grade partially offset the benefit of a 6% increase in tonnage throughput. Total cash costs, at \$194/oz, rose 12% quarter-on-quarter due to the lower grades, as well as to increased cost per ton mined and reduced mining activity, both related to a mining contractor employee strike, which has since been resolved. Gross profit adjusted for the effect of unrealised non-hedge derivatives declined by 36% to \$7m as a consequence of increased amortisation charges this quarter.

The LTIFR was 2.87 (1.16).

At Sadiola (38% attributable), gold production increased 2% to 44,000oz. The previously reported mill problems were resolved this quarter, resulting in a 16% increase in tonnage throughput, although recovered grade declined 12%, as the mill primarily processed lowergrade oxides. Given the reduced processing costs associated with treating oxide material, total cash costs declined 6% to \$240/oz. Gross profit adjusted for the effect of unrealised nonhedge derivatives increased 75% to \$7m, as a consequence of a higher received gold price, increased gold production and improved cost performance.

The LTIFR was 2.77 (0.00).

At

Yatela (40% attributable), production declined 9% to 21,000oz, although recovered grade improved 23%, partially offsetting the effect of a 10% decline in tonnage stacked related to the area's rainy season. Total cash costs improved 5% to \$285/oz, mainly due to the improvement in recovered grade. Gross profit adjusted for the effect of unrealised nonhedge derivatives increased to \$2m.

The LTIFR was 1.75 (0.00).

NAMIBIA

At **Navachab**, gold production increased 17% to 21,000oz due to a 16% improvement in tonnage throughput after the crusher failure reported last quarter was remedied. Total cash costs declined 26% to \$268/oz largely as a result of the better production.

Gross profit adjusted for the effect of unrealised non-hedge derivatives rose significantly to \$4m, compared with last quarter's loss of \$1m, due to the higher production, an improvement in the received gold price and lower operating costs.

The LTIFR was 4.01 (8.49).

TANZANIA

Production at **Geita** declined 17% as anticipated to 137,000oz due to a 19% decrease in recovered grade. As previously reported, grades and production are both expected to continue to decline for the remainder of the year as the high-grade ore in the current cut-back will be exhausted before the high-grade ore of the next mining phase in the Nyankanga pit can begin to be accessed, likely in the third quarter of next year. Geita is expected to produce an estimated 600,000oz in 2006, increasing to approximately 750,000oz in 2007. In spite of the 17% production decline, total cash costs increased by only 7% to \$353/oz, reflecting the operation's successful transition to ownermining, which was completed in early August. As a result of the transition, a \$9m contract termination fee was incurred during the quarter and is reflected separately in the income statement as "contract termination expenditure".

Against a loss of \$9m in the previous quarter, gross loss adjusted for the effect of unrealised non-hedge derivatives decreased to \$1m, primarily as a result of the lower operating costs, as well as an improved received gold price.

The LTIFR was 0.82 (0.48).

USA

At **Cripple Creek & Victor** (67% ownership with 100% interest in production until initial loans are repaid), gold production increased 30% to 92,000oz, as the delayed heap leach recoveries of the second quarter were realised in the third quarter as expected.

In spite of the significant production improvement, however, total cash costs rose slightly to \$231/oz as a result of higher fuel and component part prices. Gross profit adjusted for the effect of unrealised non-hedge derivatives improved to \$4m due to both the production increase and a better realised price.

The LTIFR was 0.00 (0.00). In September, CC&V achieved 22 months without a lost-time accident.

Notes:

- All references to price received includes realised non-hedge derivatives.
- In the case of joint venture operations, all production and financial results are attributable to AngloGold Ashanti.
- · Rounding of figures may result in computational discrepancies.

Exploration

Exploration expenditure amounted to \$25m (\$12m expensed, \$13m capitalised) during the third quarter, compared to \$19m (\$12m expensed, \$7m capitalised) in the previous quarter. Exploration expenditure at existing mines was \$16m. At Obuasi in **Ghana**, drilling commenced at the first two of six surface diamond holes of the Obuasi Ultra Deeps project.

At Sadiola in **Mali**, in-fill drilling at FN2, located north of the main pit, verified the continuity of mineralisation, while drilling at FE3S closed off the mineralisation associated with the NNE striking structures that splay off the main FE trend. Work on the Deep Sulphide pre-feasibility study continued and focused primarily on comminution and metallurgical test work.

At Siguiri in **Guinea**, resource delineation drilling at the Kintinian prospect, located 5km north of the plant, is in progress. Additional mineralisation has been identified in two zones immediately northwest of the nearby Kintinian village.

In **Tanzania** at Geita, resource in-fill drilling on the down-dip extensions at the Geita Hill North East Extension zone continues to expand the mineralised envelope down-dip and along strike. Definition and follow-up drilling is in progress to the south of the Nyankanga pit along the strike extension of previously delineated mineralisation.

In **Brazil**, drilling at Córrego do Sìtio continued to expand the mineral resource at the Carvoaria Velha, Laranjeiras, Mutuca and Cachorro Bravo orebodies. Underground development was reinitiated at Cachorro Bravo on the 200 ore horizon, 10 metres below the previous development. Thus far, 64 metres of development has yielded an average face grade of 12.8g/t over a mean horizontal width of 2.9 metres.

Greenfields exploration activities are underway in the DRC, Alaska, Australia, Colombia, Tanzania, China, Mongolia and Russia, with an expensed expenditure of \$9m for the quarter, compared with \$10m in the previous quarter.

At the Kimin project in the **DRC**, the drilling programme at Adidi/D7 Kanga is now 70% complete and continues to confirm historical tonnage and grade estimates. An airborne geophysical survey is planned for the fourth quarter over the 10km by 15km Mongbwalu Ridge area. Drilling at the Kimin project was interrupted for a three-week period from the

beginning of October, as a result of instability in Mongbwalu after FARDC (Congolese Army) troops were deployed to the area. This deployment is now complete and exploration activities have resumed. The presence of FARDC troops is expected to further stabilise the Mongbwalu region.

In Alaska, drill results from the Lost Mine South project near Pogo indicate that the broad, nearsurface, low-grade zone discovered earlier this year transitions into a high-grade vein system at depth. Significant intersections include 3.2m at 16.3g/t at a depth of 121.9m; 3.4m at 21.7g/t at a depth of 143m; and 1.5m at 49.3g/t at a depth of 171.8m. Drilling at the Terra project, situated approximately 200km west of Anchorage, has defined multiple narrow, high-grade veins in an overall system that appears to be over 8km in length. Further field work is planned. Regional systematic exploration continued in six areas in Colombia. Further target definition and follow-up work is planned and a number of projects are now drill-ready.

In **Australia**, at the Tropicana JV, encouraging drill results have been obtained at the Tropicana, Rusty Nail and Kamikaze prospects. Mineralisation at Tropicana now extends over a strike length of approximately 800 metres, with widths of 20 to 40 metres and grades of 1.5 to 8g/t over mineable widths. A number of additional geochemical anomalies that require more follow-up have been identified within 30km of the Tropicana Prospect.

Review of the gold market

The third quarter of 2005 saw new levels of investor and speculator interest in gold and a strong break in gold price behaviour from its linkage over the past four years to the US dollar/euro exchange rate.

Although the average spot price of gold for the quarter of US\$439/oz was only \$12/oz or some 3% higher than the average price for the metal during the first half of the year, the average figure does not reflect the extent of activity in gold this quarter. The price saw a range of \$57/oz during this quarter, the second highest quarterly price range in five years. Much of this activity came during the latter part of the quarter, and the spot price has strengthened by almost 15% since late July, to touch \$480/oz in early October. This is the highest gold spot price seen in seventeen years, and the market now is looking to the figure of US\$500/oz last seen in December 1987. See Graph 1: US \$ Gold Price 1979 - 2005. Although the tone of the rand against the US dollar was generally weaker, the average exchange rate of R6.48 to the dollar was little changed from the average of R6.40 for the previous quarter. This translated to an average local gold price of close to R92,000/kg for the quarter which was some 4% higher than the average local price in the second quarter of the year.

Gold

The divergence of the gold price from a strong inverse correlation to the movement in the US dollar exchange rate against the euro, continued much more strongly during the period under review. Whilst the US dollar has traded sideways for the last five months, the gold price has moved up strongly and steadily for much of the third quarter. See Graph 2: US\$/Euro and US\$ Gold Price Indexed, 2004 – 2005.

Whilst for a time this looked like simply a re-rating or re-pricing of the gold market against a dollar/euro denominator, this interpretation becomes inadequate during September and October, when the gold price has moved \$40/oz higher even whilst the dollar strengthened from \$1.25 to \$1.19 to the euro.

The result of this divergence has been a material increase in the gold price in non-US dollar terms for the first time in the current gold price cycle. After averaging some €325/oz for the past four

years, the gold price reached €400/oz early in October. *See Graph 3: Euro Gold Price 2001 – 2005*.

A number of circumstances outside of the currency markets have encouraged an interest in gold. Probably the most direct influence on sentiment has come from the oil market, where supply dislocation caused by hurricane damage in the USA pushed the spot price of benchmark West Texas Intermediate up by \$10/barrel to a record price of \$70/barrel in early September. The possible impact of this oil price increase on inflation and on global economic growth became the subject of widespread comment. This, in turn, translated to buying interest in gold, and there was some correlation between gold buying and oil price increases during August and early September. Sentiment was further encouraged by positive news during the quarter about physical demand for gold in important markets during the first half of 2005. This renewed interest in gold became self-fulfilling, and rising gold prices justified further interest and speculative buying in the gold market. This continued interest has kept the gold price rising during the past four weeks, even as the oil price has fallen back close to its pre-hurricane Katrina levels.

The expectation of rising inflation rates is one commonly in use today to justify higher gold prices. However, there is little conclusive evidence of an increased inflation threat, notwithstanding base metal, commodity and energy price increases in recent years. Whilst headline inflation in the USA in September moved sharply upwards due to the impact of higher pump prices for gasoline during the period of hurricaneinduced supply dislocation, core inflation in the US remains a little over 2% p.a. Most recent core inflation figures in Europe remain below 2% p.a. Nevertheless, the impact of higher oil prices has introduced a sense of uncertainty about the health of the global economy, and this uncertainty continues to encourage interest in gold amongst both investors and speculators.

In order to measure the extent of this investor interest in the metal, one needs to look both at the New York Comex open interest, and at the latest gold Exchange Traded Fund (ETF) holdings. The Comex continued to be the most direct predictor of gold price movement, and the spot price of metal tracked the rising buying interest on that exchange. The net open position recorded weekly on the Comex matched last year's record level in April 2004 at around 22Moz net long (685t net long) and most certainly exceeded that level intra-week in early October. However, to the net open Comex interest must be added aggregate investor holdings in gold ETFs, which amounted at the end of September to over 9Moz or 280t of gold. These ETF holdings have been accumulated mostly during the past nine months, and predominantly in the New York Stock Exchange streetTRACKS fund launched in late 2004. The combined Comex and ETF holdings thus exceed 31Moz, or almost 1,000t of gold in net investment and speculative positions in developed markets.

Looking to the future, there appears to be sufficient uncertainty in financial markets and in the global economy to sustain the current levels of interest in gold.

Physical Demand

Reports of physical demand for gold during the first half of 2005 have been very positive, with a powerful recovery in many markets from the slippage in offtake between 2000 and 2003. Jewellery demand was particularly buoyant in India and in the Middle East. In India, general economic growth has translated to better offtake on a wide front and it would appear that that market has adjusted to higher and more volatile gold prices. Improved offtake in the Middle East has come primarily on the back of increased oil revenues in that region. Both Turkey and China also show growth. As has been the case for some time, however, the volume of offtake of gold in jewellery in the developed markets of the USA, Europe and Japan remains disappointing.

Currencies

After gaining strongly against the euro during the second quarter of 2005, the US dollar traded during the third quarter in a range between \$1.20 and \$1.25 against the euro.

The sideways movement in the dollar/euro exchange rate seems to reflect an equilibrium in

sentiment in foreign exchange markets in respect of the current state of the US and European economies. Whilst in the USA, the challenge presented by the federal budget deficit and the record levels of trade deficit remains unsolved, the US economy continues to grow more rapidly than any other part of the developed world, and the US trade deficits continue to be funded by capital inflows. Similarly, in Europe, the negative effects of political uncertainty induced by the inconclusive parliamentary election in Germany and by the rejection in France and Holland earlier this year of the proposed new constitution for the European Union, have been moderated by encouraging performance by the German economy. Even though the recovery of the dollar earlier this year seemed to signal an end to the three years of correction in the US currency against the euro, most market commentators continue to expect renewed weakening by the US currency before the end of this year. Should this happen, this would most likely encourage further interest in gold.

In South Africa, interest rates have remained unchanged, and there has been little news to influence the value of the local currency one way or another. Nevertheless, the quarter has seen a slightly weaker rand against the US dollar, due to the stable to stronger state of the US currency.

Hedging

As at 30 September 2005, the net delta hedge position of AngloGold Ashanti was 10.68Moz or 332t, valued at the spot gold price at the end of the quarter of \$465.60/oz. This net delta position reflects an increase of some 360,000oz or 11t in the net delta size of the AngloGold Ashanti hedge compared with the position at the end of the previous quarter. The net increase quarter-on-quarter is due entirely to a higher net volume of open options positions valued against a quarter-end spot price which was \$30/oz higher than the spot price of \$434.50/oz at which the hedge was measured at the end of June 2005.

The marked-to-market value of the hedge position as at 30 September 2005 was negative \$1.349bn, compared with the value at 30 June of negative \$1.032bn.

As noted above in respect of the net delta size of the hedge position, the increased negative value of the hedge was due to its valuation against the quarter-end spot price of \$465.60/oz compared with its valuation at the end of June at a spot price \$30/oz lower. The marked-to-market value of the hedge at 21 October 2005 at a spot price of \$463/oz was negative \$1.342bn.

The price received by the company for the quarter under review was \$433/oz, compared with an average spot price for the period of \$439/oz. The company continues to manage its hedge positions actively, and to reduce overall levels of pricing commitments in respect of future gold production by the company.

Hedge position

As at 30 September 2005, the group had outstanding the following forward-pricing commitments against future production. The total net delta tonnage of the hedge of the company on this date was 10.68Moz or 332t (at 30 June 2005: 10.32Moz or 321t).

The marked-to-market value of all hedge transactions making up the hedge positions was a negative \$1.349bn (negative R8.59bn) as at 30 September 2005 (as at 30 June 2005: \$1.032bn or R6.94bn). This value at 30 September 2005 was based on a gold price of \$465.60/oz, exchange rates of R/\$6.37 and A\$/\$0.7594 and the prevailing market interest rates and volatilities at that date. As at 25 October 2005, the marked-to-market value of the hedge book was a negative \$1.370bn (negative R9.085bn), based on a gold price of \$465.40/oz and exchange rates of R/\$6.63 and A\$/\$0.7494 and the prevailing market interest rates and volatilities at the time.

These marked-to-market valuations are not predictive of the future value of the hedge position, nor of future impact on the revenue of the company. The valuation represents the cost of buying all hedge contracts at the time of valuation, at market prices and rates available at the time.

The Delta of the hedge position indicated above is the equivalent gold position that would have the same marked-to-market sensitivity for a

small change in the gold price. This is calculated using the Black-Scholes option formula with the ruling market prices, interest rates and

volatilities as at 30 September 2005.

Notes

for the quarter and nine months ended 30 September 2005

1.

Basis of preparation

The financial statements have been prepared in accordance with the historic cost convention except for certain financial instruments which are stated at fair value. The group's accounting policies used in the preparation of these financial statements are consistent with those used in the annual financial statements for the year ended 31 December 2004 except for the new and revised International Financial Reporting Standards (IFRS) statements which are effective 1 January 2005, where applicable and where indicated.

The option to account for actuarial gains and losses through equity reserves under Employee benefits (IAS19) revised has been adopted. The financial effects of the adoption on prior periods are disclosed in note 15. The financial statements of AngloGold Ashanti have been prepared in compliance with IAS34, in compliance with the JSE Listings Requirements and in the manner required by the South African Companies Act, 1973 for the preparation of financial information of the group for the quarter and nine months ended 30 September 2005. Where the preparation or classification of an item has been amended, comparative information has been reclassified to ensure comparability with the current period. The amendments have been made to provide the users of the financial statements with additional information. Refer to note 9, discontinued operations, note 15, financial effects of IAS19 revised and note 21, convertible bonds.

66

(1)

Calculated on the basic weighted average number of ordinary shares.

(2)

Non-hedge derivatives in the income statement comprise the change in fair value of all non-hedge derivatives as follows:

_

Open positions: The change in fair value from the previous reporting date or date of recognition (if later) through to the current

reporting date; and

-

Settled positions: The change in fair value from the previous reporting date or date of recognition (if later) through to the date of

settlement.

Rounding of figures may result in computational discrepancies.

Headline (loss) earnings adjusted for the effect of unrealised non-hedge derivatives, is intended to illustrate earnings after adjusting for:

_

The unrealised fair value change in contracts that are still open at the reporting date, as well as, the unwinding of the historic

marked-to-market value of the positions settled in the period; and

_

Investment in hedge restructure transaction: During the hedge restructure in the quarter ended 31 December 2004 and the quarter

ended 31 March 2005, \$83m and \$69m in cash was injected into the hedge book in these quarters to increase the value of long-

dated contracts. The entire investment in short-dated derivatives (certain of which have now matured) and investment in long-dated

derivatives (all of which have not yet matured), for the purposes of the adjustment to earnings, will only be taken into account when

the realised portion of long-dated non-hedge derivatives are settled, and not when the short-term contracts are settled.

Liquidity and capital resources:

To service the above capital commitments and other operational requirements, the group is dependant upon cash generated from the

South African operations, borrowing facilities and cash distributions from offshore operations.

Cash generated from the South African operations fund to a large extent the capital expenditure to maintain and expand those operations

in South Africa. Consequently other funding requirements are serviced from borrowing facilities and offshore distributions which are

subject to market and other risks. The credit facilities and other financing arrangements contain financial covenants and other similar

undertakings.

The distributions from offshore operations are subject to foreign investment and exchange control laws and regulations and the quantity

of foreign exchange available in offshore countries. In addition offshore distributions from joint venture partners are subject to consent

and co-operation from those joint venture partners.

The group's current covenant performance, cash and liquidity funds from the various resources available are within the required limits

which will meet its obligations and capital commitments.

Rounding of figures may result in computational discrepancies.

16.

Contingent liabilities

At 30 September 2005, the aggregate contingent liability is approximately \$100 million. The details of significant contingent liabilities are listed below:

Capital cost of water pipelines and electricity supply of Navachab – A potential liability of \$1m exists at Navachab in Namibia to pay the outstanding capital cost of the water pipeline and electricity supply in the event of mine closure prior to 2019.

Tax claims – Tanzania and Mali – Potential tax claims including interest and penalties in Tanzania of \$22m and in Mali of \$2m. The Tanzanian amount relates to corporate tax and VAT claims by the Tanzanian revenue authorities which claims are being contested. Discussions are continuing with the Malian government as to the validity of these tax claims.

Yatela loan – AngloGold Ashanti has signed a surety in favour of the bankers on the Yatela loan for \$2m. Australia – Exploration and development tenements – AngloGold Ashanti stands collateral to certain bankers for the satisfactory contract performance in relation to exploration and development tenements and mining operations in Australia, amounting to \$15m.

North America – Reclamation – AngloGold Ashanti USA has posted reclamation bonds of \$49m with various federal and governmental agencies to cover potential rehabilitation obligations. The company has guaranteed these obligations. At 30 September 2005, the carrying value of these obligations relating to AngloGold Ashanti USA amounted to \$21m.

Tax claims – South America – Various equipment tax claims are subject to litigation. Guarantees amounting to \$3m have been posted as a requirement of the judiciary until legal proceedings are complete.

Re-export arrangements of artifacts – South Africa – AngloGold Ashanti has undertaken to re-export certain gold artefacts, temporarily imported into South Africa, for which custom and value added tax was waived to the amount of \$3m.

Provision of Surety – ORO Africa, South Africa – AngloGold Ashanti has provided sureties in favour of a lender on a Gold loan facility with its affiliate ORO Africa (Pty) Ltd and one of its subsidiaries to a maximum value of ZAR100m (\$16m).

Litigation with mining contractor and non-payment of receivable – Ghana – A group of employees of Mining and Building Contractors (MBC), the Obuasi underground developer, are claiming to be employees of the group. The potential liability amounts to \$6m.

US Class Action – The terms of settlement in the US Class Action brought against the former Ashanti Goldfields Company Limited (AGC) have been concluded subject to court approval. The complaint inter-alia alleges non-disclosures and misstatements by AGC regarding its hedging programme.

Water pumping cost – Vaal River – South Africa – Several mining companies operate in the area immediately upstream from the Vaal River mining operation. By law, these companies are obliged to continue pumping underground water. The South African Department of Water Affairs and Forestry issued a directive that splits the cost of water pumping between DRDgold, Harmony, Stilfontein and AngloGold Ashanti. This directive expires at the end of October 2005. AngloGold Ashanti believes that it is not liable to fund these pumping costs but cannot make any assurances regarding the ultimate result until the matter has been settled.

Siguiri Convention de Base – Pursuant to the Convention de Base that governs the Siguiri mine, a royalty on production may be payable to the International Finance Corporation (IFC) and to Umicore SA (UM), on a sliding scale between 2.5% and 7.5%, based on the spot gold price per ounce of between \$350 and \$475, subject to indexation from 1 January 1995, to a cumulative maximum of \$60m. In terms of the restructuring agreement with the IFC, a sliding scale royalty on production is payable to the IFC calculated on the same basis at 1.25% subject to a maximum of \$7.8m. The royalty rate payable to the UM is 2.5% of revenue. The trigger price agreed and calculated for 2004 is \$433.05/oz which was reached in the fourth quarter and the total royalty payable is \$0.7m. The trigger price for 2005 is \$442.91/oz which has, to date, not been reached.

17.

Acquisition of Ashanti assets

The transaction was accounted for as a purchase business combination during the second quarter of 2004. AngloGold Ashanti has performed a preliminary purchase price allocation based on independent appraisals. The purchase price allocation is not expected to vary significantly from the preliminary allocation.

18. Attributable

interest

Although AngloGold Ashanti holds a 66.7% interest in Cripple Creek & Victor Gold Mining Company Limited, it is currently entitled to receive 100% of the cash flows from the operation until the loan, extended to the joint venture by AngloGold Ashanti USA Inc., is repaid.

19. Announcements

- 19.1 On 2 August 2005, AngloGold Ashanti announced that the company had received notification from the Director-General of Minerals and Energy that it had been granted its application for new order mining rights in terms of the Mineral Resources and Petroleum Development Act. In its application for these rights, the company committed itself to achieving the Mining Charter's goals, including: 40% representation in management of Historically Disadvantaged South Africans within five years; participating in local economic development programmes in the areas where it operates and from which it draws its labour; and meeting the Charter's empowerment ownership target. In respect of the latter, in addition to the transactions with Armgold carried out between 1998 and 2002, the company committed to the development of an Employee Share Ownership Programme, with a value equivalent to approximately 6% of the South African net assets.
- 19.2 On 11 August 2005, AngloGold Ashanti announced the end of the South African gold mining industry's wage dispute and strike, which resulted in three lost production shifts and culminated in the signing of a two-year wage agreement, effective 1 July 2005.
- 19.3 On 11 August 2005, AngloGold Ashanti announced that it had disposed of its La Rescatada Project for a total consideration of \$13m with an option to repurchase 60% of the project should reserves in excess of 2Moz be identified within three years. The exploration project is located approximately 800km south-east of the city of Lima in Peru.

20. Dividend

Interim dividend No. 98 of 170 South African cents or 14.78 UK pence or 2,381.75 cedis per share was paid to registered shareholders on 26 August 2005, while a dividend of 6.8102 Australian cents per CHESS Depositary Interest (CDI) was paid on the same day. On 29 August 2005, a dividend of 23.81751 cedis per Ghanaian Depositary Share (GhDS) was paid to holders thereof. Each CDI represents one-fifth of an ordinary share, and 100 GhDSs represents one ordinary share. A dividend was paid to holders of American Depositary Receipts (ADRs) on 6 September 2005 at a rate of 26.095 US cents per American Depositary Share (ADS). Each ADS represents one ordinary share.

21.

Group financial statements

The group financial statements for the quarter and nine months ended 30 September 2005 were authorised for issue in accordance with a resolution of the directors passed on 26 October 2005. AngloGold Ashanti is a limited liability company incorporated in the Republic of South Africa.

22. Convertible bonds

The group changed its accounting policy for convertible bonds during the first quarter of 2005. Previously, convertible bonds were accounted for as compound financial instruments, part equity and part liability. The equity component was not re-measured for changes in fair value.

Convertible bonds are now accounted for entirely as a liability, with the option component disclosed as a derivative liability, carried at fair value. Changes in such fair value are recorded in the income statement. This change was made in response to additional guidance becoming available on the interpretation of International Financial Reporting Standards. This change is applied retrospectively and comparative figures have been restated.

The impact on comparative figures is as follows:

Quarter to 30 September 2004:

Profit attributable to equity shareholders decreased by \$30m recorded in the income statement; Option component previously disclosed as equity (\$82m) is removed from shareholders equity, and replaced by a derivative liability of \$73m.

Nine months ended 30 September 2004:

Profit attributable to equity shareholders increased by \$9m recorded in the income statement; Option component previously disclosed as equity (\$82m) is removed from shareholders equity, and replaced by a derivative liability of \$73m.

23. Borrowings

AngloGold Ashanti's borrowings are interest bearing.

By order of the Board

Gross profit (loss) adjusted for the effect of unrealised non-hedge derivatives plus amortisation of tangible and intangible assets, less non-cash revenues.

Rounding of figures may result in computational discrepancies.

Based on risks and returns the directors consider that the primary reporting format is by business segment. The directors consider that there is only one business segment being

mining, extraction and production of gold. Therefore the disclosures for the primary segment have already been given in the abbreviated financial statements. The secondary

reporting format is by geographical analysis by origin.

1

Attributable year to date production at Moab Khotsong yielded 585 kilograms which will be 4

Yatela and Cripple Creek & Victor Joint Venture operations yield reflects gold capitalised against pre-production costs.

placed/tonnes placed.

2

The yield of AngloGold Ashanti Mineração represents underground operations.

5

The yield of Obuasi represents underground operations.

3

The yield of Bibiani, Siguiri and Iduapriem represents open-pit operations.

6

The yield is calculated on gold placed into leach pad inventory / tonnes placed on to leach pad. Rounding of figures may result in computational discrepancies.

Attributable year to date production at Moab Khotsong yielded 19,000 oz which will be
Yatela and Cripple Creek & Victor Joint Venture operations yield reflects gold
capitalised against pre-production costs.
placed/tonnes placed.
```

The yield of AngloGold Ashanti Mineração represents underground operations.

5

The yield of Obuasi represents underground operations

3

The yield of Bibiani, Siguiri and Iduapriem represents open-pit operations.

6

The yield is calculated on gold placed into leach pad inventory / tonnes placed on to leach pad.

Rounding of figures may result in computational discrepancies.

Board of **directors** and executive **officers**

Non-Executive Directors

MR R P EDEY (63)

FCA

Chairman

Russell Edey was appointed to the AngloGold board in April 1998 and as deputy chairman in December 2000. In May 2003 he was appointed chairman when Bobby Godsell relinquished this office. Based in the United Kingdom, he is deputy chairman of N M Rothschild Corporate Finance and a director of a number of other companies.

DR T J MOTLATSI (54)

Hon D Soc Sc (Lesotho)

Deputy Chairman

James Motlatsi was appointed to the AngloGold board in April 1998 and as deputy chairman in May 2002 upon Russell Edey being appointed chairman. He has been associated with the South African mining industry since 1970, and is a past president of the National Union of Mineworkers. He is chief executive officer of TEBA Limited.

MR F B ARISMAN (61)

MSc (Finance)

Frank Arisman was appointed to the AngloGold board in April 1998. He resides in New York and recently retired, after 32 years of service, from JP Morgan Chase, where he held the position of managing director.

He was appointed company secretary of AngloGold in 1998 and is responsible for ensuring compliance with statutory and corporate governance requirements and the regulations of the stock exchanges on which AngloGold Ashanti is listed.

Certain statements contained in this document, including, without limitation, those concerning the economic outlook for the gold mining industry, expectations

regarding gold prices and production, the completion and commencement of commercial operations of certain of AngloGold Ashanti's exploration and production

projects, and its liquidity and capital resources and expenditure, contain certain forward-looking statements regarding AngloGold Ashanti's operations, economic

performance and financial condition. Although AngloGold Ashanti believes that the expectations reflected in such forward-looking statements are reasonable, no

assurance can be given that such expectations will prove to have been correct. Accordingly, results could differ materially from those set out in the forward-looking

statements as a result of, among other factors, changes in economic and market conditions, success of business and operating initiatives, changes in the regulatory

environment and other government actions, fluctuations in gold prices and exchange rates, and business and operational risk management. AngloGold Ashanti

undertakes no obligation to update publicly or release any revisions to these forward-looking statements to reflect events or circumstances after the date of the annual

report on Form 20-F or to reflect the occurrence of unanticipated events. All subsequent written or oral forward-looking statements attributable to AngloGold Ashanti or

any person acting on its behalf are qualified by the cautionary statements herein. For a discussion on such risk factors, refer to AngloGold Ashanti's annual report on

Form 20-F for the year ended 31 December 2004, which was filed with the Securities and Exchange Commission (SEC) on 14 July 2005.
