The Fund

The Fund is a non-diversified, closed-end investment company whose objective is to seek long-term capital appreciation through investment in equity and equity-linked securities of Swiss companies. The Fund also may acquire and hold equity and equity-linked securities of non-Swiss companies in limited instances.

The Fund's common stock is listed on the New York Stock Exchange under the symbol "SWZ".

Net Asset Value is calculated daily by 6:15 P.M. (Eastern Time). The most recent calculation is available by calling 1-888-SWISS-00 or by accessing our Website. Net Asset Value is also published weekly in BARRON'S, the Monday edition of THE WALL STREET JOURNAL and the Sunday edition of THE NEW YORK TIMES.

1

THE SWISS HELVETIA FUND, INC.

Letter to Stockholders

GLOBAL MARKET OVERVIEW

Market volatility increased significantly over the summer, generally harming stock indexes in the developed markets, but benefiting the emerging markets. Performance in the more mature markets, however, varied by sector.

Industry groups contributing to consumer price inflation were the best performers. These groups were led by the agri-business sector, which includes machinery, crop protection, seeds, grain processing and fertilizer. The power infrastructure and transmission and the engineering sectors also were strong

Edgar Filing: SWISS HELVETIA FUND, INC. - Form N-30B-2

performers. Industrial metal prices had a strong rebound as global demand has been sustained. Steel prices also benefited from reduction in Chinese exports as outdated production capacities have been taken off line. Infrastructure spending in the United States and in Europe also notably increased. Large cap companies in the technology and telecom services sectors benefited as their earnings were perceived to be immune to the troubles in the financial intermediary sector, and their stocks were less volatile than the industrial sector due to lower investor expectations.

The consequence of the meltdown in the credit markets brought on by the sub-prime mortgage crisis, which has spread to mortgage-backed securities and asset-backed commercial paper, was an aggressive cut in interest rates by the Federal Reserve Board (FRB) which, in turn, reduced the hurdle rate for equity returns and contributed to the strong performance of the above-mentioned sectors.

On the other side, industries with low visibility and earnings deceleration, such as the financial and the housing sectors, have struggled with repercussions in both the United States and in Europe. International investment banks have been hurt by the breakdown in their business model which promoted originating debt to finance activity in the capital markets. Buyers of debt instruments suddenly went on strike, as the offered yields and stated ratings were no longer sufficient to offset the risks and the lack of transparency of those instruments.

SWISS MARKET OVERVIEW

The Swiss market has seen a wide dispersion in the returns of its components. The largest companies have been among the worst performers (except Nestle, which was up strongly), not due to their size but to their sectors (such as banking and healthcare).

The valuation of Swiss pharmaceutical companies has continued to decline to a level that is now below some of their U.S. peers. Some restructuring in response to pressure from investors is expected at Novartis and should support the price of its stock. Roche has been a victim of a sharp compression in its price multiple in response to expectations of a reduced growth rate and the impact of public policy debates on the pricing of some of its cancer drugs.

Overall the pharmaceutical sector suffers from political risk and the declining pro-

THE SWISS HELVETIA FUND, INC.

Letter to Stockholders (continued)

ductivity of R&D departments as costs generated by the discovery and development of drug candidates have increased. Meanwhile the size of the addressable market has been constrained by price controls, generic competition for expiring intellectual property protection and in some case little respect of patents.

In reaction to this trend, the pharmaceutical industry is beginning to rethink its business model and, for example, has moved to more outsourcing. Despite its known problems, the sector offers risk diversification and attractive valuations.

Edgar Filing: SWISS HELVETIA FUND, INC. - Form N-30B-2

Biotechnology stocks also have recently underperformed, which may be primarily a result of cautious investor sentiment towards the drug sector. Mergers & acquisitions activity should pick up as large pharmaceutical companies seek to replenish their pipelines, in addition to their efforts at cost cutting, before the next wave of patent expirations in 2011.

The industrial, luxury goods and agri-business sectors have had returns of between 15% to 40% in Swiss francs compared to 6.8% for the broad Swiss Performance Index ("SPI"). Syngenta, Swatch and ABB stocks were all very strong.

The Swiss banks have had a very difficult year to date, as did all international banks with exposure to U.S. mortgage-backed securities and leveraged finance. These banks were somewhat victims of the intense competition in the sector in which the practice has been to take on ever increasing risk by engaging more capital, increasing off-balance sheet transactions and relaxing debt covenants or, in some cases, guaranteeing deals, a role traditionally not assumed by investment banks who were supposed to be only intermediaries. The challenge for investors was to be able to gauge the risks being taken by the banks, a difficult task given that the variables were not easily accessible or were non-existent. This has explained why investment banks have been trading for some time at large discounts to market multiples.

On the other side, the wealth management business of the Swiss banks continued to be very strong, with healthy franchises allowing them to attract net new money at a pace exceeding expectations.

The Swiss utility sector experienced consolidation as wholesale prices were either unchanged or down, due mostly to dry weather.

As noted above, Nestle was one of the market's star performers, based on its high real internal growth and its capacity to pass price increases along to consumers, showing thereby the strength of its brands and its market position. Although investor-pleasing Chief Financial Officer, Paul Pohlman, was not selected as the company's new Chief Executive Officer, after a negative initial reaction, the stock regrouped.

The mid cap index performance was very strong (up 27%), with logistics (Panalpina and Kuehne and Nagel), industrials and food (Lindt) doing particularly very well on the back of continued globalization trends.

3

THE SWISS HELVETIA FUND, INC.

Letter to Stockholders (continued)

The real estate sector has seen a valuation compression since the beginning of the summer with premiums to net asset value falling to more reasonable levels. The increase in rates initiated by the Swiss National Bank ("SNB") represents headwinds for the sector for the time being.

SWISS ECONOMIC NOTES

The Swiss economy continued to grow at a healthy rate over the last quarter. Gross Domestic Product expanded at a rate of 0.7% during the quarter (3% annualized). Both exports, helped by favorable exchange rates against the

Edgar Filing: SWISS HELVETIA FUND, INC. - Form N-30B-2

Japanese Yen and especially against the Euro, and strong private consumption remained important contributors to economic activity, each growing at 0.5% during the quarter. Private consumption has been helped by overall income growth, with incomes of wage and salary earners likely to rise by 3.1% in real terms in 2007. Moreover, the unemployment rate is remaining at low levels (2.6%) for the first time since the economic boom in 2000. On the other hand, the lack of qualified labor has been identified as an obstacle to production expansion. Numerous companies have reported maximum capacity utilization (especially in the industrial sector), and difficulties in recruiting. As a result, they are looking to bridge the gap between supply and demand through acquisitions, noting that such activity will not come cheaply.

Even though some companies could significantly increase prices, they have been reluctant to do so because of the risk of damaging business relationships and the fear of retaliation once the economic cycle softens.

Business activity has remained high, as indicated by the Purchasing Manager Index's level of 65.1 versus its peak of 67.7 and industrial production increased by 6.7% quarter-on-quarter versus consensus predictions of 5.2%. Consumer confidence decreased in comparison to last quarter but remains at high levels, while the KOF Swiss economic institute leading economic indicator of business (which aims to project GDP growth approximately 8 months into the future) finished the quarter at 2.14 (up from 1.98 last quarter).

When the problems in the U.S. mortgage market started to spread at the end of July, the financial markets were confronted with the threat of liquidity bottlenecks. The central banks responded by injecting additional liquidity into their money markets. In Switzerland, however, high demand for liquidity and increases in credit risk premiums pushed the Swiss three-month inter-bank rate up to 2.9%. The SNB, given the healthy Swiss economic situation, decided to increase its three-month Libor target range by 0.25% to 2.25%--3.25%, targeting a rate of around 2.75%. This was unexpected, especially given the ECB decision to leave interest rates unchanged and the FRB's decision to decrease both the discount rate and the federal funds rate by 50 basis points. The SNB's decision, however, provided some support to the Swiss franc versus the euro.

4

THE SWISS HELVETIA FUND, INC.

Letter to Stockholders (continued)

Real interest rates were at 1.85% in the second quarter of 2007, above the historical average of 1.6% since 2001.

Long-term nominal market rates on government debt, however, declined. The yields on 10-year Confederation bonds fell significantly. After reaching a peak of 3.4% on July 9, 2007 they dropped to 2.8% by September 17, 2007.

On the economic activity front, the SNB still expects real GDP growth of 2.5% for the year, and forecasts inflation rates of 0.6% in 2007, 1.5% in 2008 and 1.8% in 2009.

The value of the Swiss franc increased significantly against the U.S. dollar and is still seen as a safe currency during market turmoil. After the U.S. dollar reached a high of 1.246 Swiss francs in mid-June, just before the

Edgar Filing: SWISS HELVETIA FUND, INC. - Form N-30B-2

problems with the U.S. sub-prime mortgage market surfaced, it dropped 6.7% reaching 1.16 Swiss francs, the lowest level since 1995.

SWITZERLAND IN THE NEWS

In a study done by IBM for Business Value and The Economist Intelligence Unit in August 2007, Switzerland was ranked as the most sophisticated financial market, ahead of Great Britain and New York. The study included 35 markets and took into account, among other things, GDP growth and the level of development of the financial markets.

SWISS EXCHANGE NEWS

On July 1, 2007 the Swiss Leading Index (SLI) started trading. This index is composed of the largest and most liquid 30 SPI components. As such, it includes the 20 stocks in the Swiss Market Index (SMI) and the 10 largest stocks in the Swiss Mid-Cap Index (SMIM). Due to this change, Actelion Ltd, Geberit AG, Kuehne & Nagel AG, Logitech International and Petroplus Holdings AG moved from the Swiss stock exchange (SWX) to trading on the Virtex electronic platform (VIRTEX), which should improve their liquidity.

Nestle, having overtaken Novartis, is now ranked as the largest company in the Swiss market with a market capitalization of 205 billion Swiss francs.

FUND PERFORMANCE

Since the conclusion of the Fund's rights offering in June, Management has invested substantially all of the proceeds from the offering in accordance with the Fund's investment objective and policies. The rights offering resulted, as anticipated and as is typical with rights offerings, in dilution to the net asset value of the Fund's shares. This dilution was 6.81% (Swiss francs) at the conclusion of the offering. As of September 30, 2007, the Fund's year-to-date total return based on net asset value was 0.34% (1.64% as of October 31, 2007). Calculated without giving effect to this dilution, the Fund's year-to-date total return was 6.84% as of September 30, 2007 (8.08% as of October 31, 2007). The SPI's year-to-date total return was 4.81% as of September 30, 2007 (6.39% as of October 31, 2007).

While the Fund had a lower exposure than its benchmark (the SPI) to the financial sector, it also had a lower exposure to Nestle (as Management is in the process of reducing

THE SWISS HELVETIA FUND, INC.

Letter to Stockholders (continued)

the Fund's largest positions to diversify the Fund's portfolio and to take advantage of opportunities in the mid-cap segment of the market). The Fund also had much higher exposure than its benchmark to the smaller bio-pharmaceutical and biotech companies and lower exposure to the large pharmaceutical companies. This was somewhat neutral to its performance since the biotech companies from the middle of the year started to underperform the market despite a promising pipeline of new products.

The Fund's exposure to the utility sector started to contribute to performance late in the quarter, a contribution that is expected to continue. Sale prices for electricity are on the rise in Europe after a period of

Edgar Filing: SWISS HELVETIA FUND, INC. - Form N-30B-2

stagnation. Prices in Switzerland for retail consumers (where the market is still subject to price controls) are 40% lower than the rest of Europe, a situation that is not sustainable.

The Fund's investments in the mid cap industrial sector linked to energy (such as ABB and, to a certain extent, Komax and Oerlikon) have delivered very good results and continue to offer good opportunities as there are increasing signs of the development of a "super-cycle" for agri-business and energy infrastructure as well as solutions to reduce emissions of carbon dioxide. The trend for stock prices in the sector is up, but as investors' expectations are high any disappointment could lead to short-term volatility. Price weakness brought by this volatility most likely will represent an opportunity to increase exposure.

The Fund has started to make private equity investments. Management will continue to build on relationships with private equity managers to reinforce positions, especially in specialized buy-outs of family-owned businesses where price competition to get access to such deals is not exceptionally strong. Overall, the debt financing of transactions is much less available which has a positive impact on acquisition prices. On the other hand, since Management favors transactions with low leverage, the higher cost of debt will not have such a negative impact on the expected returns of its private equity investments.

In Management's view, the increasingly widespread effect of the turmoil in the investment banking sector of the developed economies, along with the weakness of the housing sector in the United States, which has pushed the FRB to create liquidity in the U.S. dollar, thereby choking currency markets and feeding volatility in stock markets, warranted a strategy that included hedging transactions. That was accomplished during the quarter through the purchase of put options on the main Swiss indexes, providing temporary downside protection without the necessity of raising cash and increasing portfolio turnover.

At the same time, inflation, at least outside of the United States, is an obvious risk as labor, energy and raw material costs continue to increase. So far, productivity improvements have compensated for such increases but, as capacity utilization is stretched to the limit, it is difficult to see how inflation that already is in the pipeline will not spill over in the consumer price index.

OUTLOOK

The world economy is still strong and there is still substantial liquidity in the global system as a result of the recent FRB actions and the desire of the emerging market central banks to keep a lid on their currencies, thereby forcing savers to accept higher risk (invest in the stock market) to improve on the low real rates available on deposits.

Sector performance will continue to vary, because investors, fearing economic slowdown but enticed by low interest rates, will most likely bid up prices for industry groups with solid fundamentals. Supply constraints and strong demand should help support the industrials and commodities producers as long as they can pass on cost inflation. Valuations should continue to expand as long as U.S. interest rates continue their downward trend and as long as China continues to promote strong economic growth and to keep its currency appreciation under control. Earnings are still plentiful outside of residential real estate, investment banking and large pharmaceutical companies. As

Edgar Filing: SWISS HELVETIA FUND, INC. - Form N-30B-2

mentioned above, however, developments on the inflation front should continue to be monitored closely.

STOCK REPURCHASE PROGRAM

Pursuant to authorization by the Board, the Fund began open market purchases of its common stock on the New York Stock Exchange ("NYSE") in 1999 and has continued purchases in each subsequent year. The principal purpose of the stock repurchase program is to enhance stockholder value by increasing the Fund's net asset value per share without creating a meaningful adverse effect upon the Fund's expense ratio. The Board has authorized the Fund to repurchase up to 500,000 shares during 2007. During the period ended September 30, 2007, the Fund repurchased and retired 339,500 shares at an

8

THE SWISS HELVETIA FUND, INC.

THE SWISS HELVETIA FUND, INC.

Dividend Reinvestment Plan (Unaudited)

The Plan

The Fund's Dividend Reinvestment Plan (the "Plan") offers a convenient way for you to reinvest capital gains distributions and ordinary income dividends, payable in whole or in part in cash, in additional shares of the Fund.

Some of the Plan features are:

- . Once you enroll in the Plan, all of your future distributions and dividends payable in whole or in part in cash will be automatically reinvested in Fund shares in accordance with the terms of the Plan.
- . You will receive shares valued at the lower of the Fund's net asset value or the Fund's market price as described below. The entire amount of your distribution or dividend will be reinvested automatically in additional Fund shares. For any balance that is insufficient to purchase full shares of the Fund, your account will be credited with fractional shares.
- . Your shares will be held in an account with the Plan agent. You will be sent regular statements for your records.
- . You may terminate participation in the Plan at any time.

The following are answers to frequently asked questions about the Plan.

How do I enroll in the Plan?

If you are holding certificates for your shares, contact American Stock Transfer & Trust Company (AST) at the address shown below. If your shares are held in a brokerage account, contact your broker. Not all brokerage firms permit their clients to participate in dividend reinvestment plans such as the Plan and, even if your brokerage firm does permit participation, you may not be able to transfer your Plan shares to another broker who does not permit participation. Your brokerage firm will be able to advise you about its policies.

How does the Plan work?

The cash portion of any dividends or distributions you receive, payable in whole or in part in cash, will be reinvested in shares of the Fund. The number of shares credited to your Plan account as a result of the reinvestment will depend upon the relationship between the Fund's market price and its net asset value per share on the record date of the distribution or dividend, as described below:

- . If the net asset value is greater than the market price (the Fund is trading at a discount), AST, as Plan Agent, will buy Fund shares for your account on the open market on the New York Stock Exchange or elsewhere. Your dividends or distributions will be reinvested at the average price AST pays for those purchases.
- . If the net asset value is equal to the market price (the Fund is trading at parity), the Fund will issue for your account new shares at net asset value.
- . If the net asset value is less than but within 95% of the market price (the Fund is trading at a premium of less than 5%), the Fund will issue for your account new shares at net asset value.
- . If the net asset value is less than 95% of the market price (the Fund is trading at a premium of 5% or more), the Fund will issue for your account new shares at 95% of the market price.

Edgar Filing: SWISS HELVETIA FUND, INC. - Form N-30B-2

If AST begins to buy Fund shares for your account at a discount to net asset value but, during the course of the purchases, the Fund's market

18

THE SWISS HELVETIA FUND, INC.

Dividend Reinvestment Plan (Unaudited) (concluded)

price increases to a level above the net asset value, AST will complete its purchases, even though the result may be that the average price paid for the purchases exceeds net asset value.

Will the entire amount of my distribution or dividend be reinvested?
The entire amount of your distribution or dividend, payable in cash, will be reinvested in additional Fund shares. If a balance remains after the purchase of whole shares, your account will be credited with any fractional shares (rounded to three decimal places) necessary to complete the reinvestment.

How can I sell my shares?
You can sell any or all of the shares in your Plan account by contacting AST. AST charges \$15 for the transaction plus \$.10 per share for this service. You can also withdraw your shares from your Plan account and sell them through your broker.

Does participation in the Plan change the tax status of my distributions or dividends?
No. The distributions and dividends are paid in cash and their taxability is the same as if you received the cash. It is only after the payment of distributions and dividends that AST reinvests the cash for your account.

Can I get certificates for the shares in the Plan?
AST will issue certificates for whole shares upon your request. Certificates for fractional shares will not be issued.

Is there any charge to participate in the Plan?
There is no charge to participate in the Plan. You will, however, pay a pro rata share of brokerage commissions incurred with respect to AST's open market purchases of shares for your Plan account.

How can I discontinue my participation in the Plan?
Contact your broker or AST in writing. If your shares are in a Plan account, AST will send you a certificate for your whole shares and a check for any fractional shares.

Where can I direct my questions and correspondence?
Contact your broker, or contact AST as follows:

By mail:
American Stock Transfer & Trust Company
PO Box 922
Wall Street Station
New York, NY 10269-0560

Through the Internet:
www.amstock.com

Edgar Filing: SWISS HELVETIA FUND, INC. - Form N-30B-2

Through AST's automated voice response System:
1-888-556-0425

AST will furnish you with a copy of the Terms and Conditions of the Plan
without charge.
