CALCULATION OF REGISTRATION FEE

Title Of Each Class Of Securities To Be Registered	Proposed Maximum Aggregate Offering Price(1)(2)	Amount Of Registration Fee
Common Stock, par value \$.01 per share	\$100,000,000	\$11,610(3)
Tangible Equity Units	\$100,000,000	\$11,610

(1) Estimated solely for the purpose of computing the amount of the registration fee pursuant to Rule 457(o) under the Securities Act of 1933.

(2) Includes offering price of shares and units that the underwriters have the option to purchase pursuant to their over-allotment option.

(3) Previously paid.

The Registrant hereby amends this Registration Statement on such date or dates as may be necessary to delay its effective date until the Registrant shall file a further amendment which specifically states that this Registration Statement shall thereafter become effective in accordance with Section 8(a) of the Securities Act or until the Registration Statement shall become effective on such date as the Commission, acting pursuant to said Section 8(a), may determine.

Table of Contents

EXPLANATORY NOTE

This Registration Statement contains a prospectus relating to an offering of shares of our common stock (for purposes of this Explanatory Note, the Common Stock Prospectus), together with separate prospectus pages relating to an offering of our tangible equity units (for purposes of this Explanatory Note, the Units Prospectus). The complete Common Stock Prospectus follows immediately. Following the Common Stock Prospectus are the following alternative and additional pages for the Units Prospectus:

front and back cover pages, which will replace the front and back cover pages of the Common Stock Prospectus;

pages for the Prospectus Summary The Offering section, which will replace the Prospectus Summary The Offering section of the Common Stock Prospectus;

pages for the Risk Factors Risks Related to Ownership of the Units, Separate Purchase Contracts, Separate Amortizing Notes and Common Stock section, which will replace the Risk Factors Risks Related to this Offering and Ownership of Our Common Stock section of the Common Stock Prospectus;

pages for Ratio of Earnings to Fixed Charges and Preferred Stock Dividends section, which will be added to the Units Prospectus;

pages for the Description of the Units , Description of the Purchase Contracts and Description of the Amortizing Notes sections, which will replace the Concurrent Transactions section of the Common Stock Prospectus;

pages for the Book-Entry Procedures and Settlement section, which will be added to the Units Prospectus;

pages for the Concurrent Transactions section, which will replace the Concurrent Transactions section of the Common Stock Prospectus;

pages for the Certain U.S. Federal Income Tax Considerations section, which will replace the U.S. Federal Tax Considerations for Non-U.S. Holders section of the Common Stock Prospectus; and

pages for the Underwriting section, which will replace the Underwriting section of the Common Stock Prospectus.

Each of the complete Common Stock Prospectus and Units Prospectus will be filed with the Securities and Exchange Commission in accordance with Rule 424 under the Securities Act of 1933, as amended. The closing of the offering of common stock is conditioned upon the closing of the offering of Units, and the closing of the offering of Units is conditioned upon the closing of the offering of common stock.

Table of Contents

The information in this preliminary prospectus is not complete and may be changed. The selling stockholder may not sell these securities until the registration statement filed with the Securities and Exchange Commission is effective. This preliminary prospectus is not an offer to sell these securities and the selling stockholder is not soliciting offers to buy these securities in any state where the offer or sale is not permitted.

Subject to Completion, Dated May 17, 2011

PRELIMINARY PROSPECTUS

Shares

ALLY FINANCIAL INC.

COMMON STOCK

The United States Department of Treasury (the selling stockholder or Treasury) is offering shares of common stock of Ally Financial Inc. (Ally). See Principal and Selling Stockholders. Ally Financial Inc. will not receive any of the proceeds from the sale of shares of common stock by the selling stockholder.

This is our initial public offering and no public market exists for our shares. We anticipate that the initial public offering price will be between \$ and \$ per share. We intend to apply to list the common stock on the New York Stock Exchange (the NYSE) under the symbol ALLY .

The selling stockholder has granted the underwriters the right to purchase up to additional shares of common stock to cover over-allotments, if any, at the public offering price, less the underwriters discount, within 30 days from the date of this prospectus.

Concurrently with this offering, Treasury is also making a public offering of tangible equity units issued by us (the Units). Treasury has granted the underwriters of that offering the right to purchase up to additional Units to cover over-allotments, if any, at the public offering price of the Units, less the underwriters discount for the Units, within 30 days from the date of the prospectus for the concurrent Units offering. The closing of the offering of Units is conditioned upon the closing of the offering of our common stock, and the closing of the offering of our common stock is conditioned upon the closing of the offering of Units.

Investing in our common stock involves risks. See Risk Factors beginning on page 17 of this prospectus.

	Per Share	Total
Public offering price and proceeds to the selling stockholder	\$	\$

In this prospectus, unless the context indicates otherwise, Ally, the company, we, us and our refer to Ally Financial Inc. and its direct and indirect subsidiaries on a consolidated basis. None of we, the underwriters, or the selling stockholder have authorized anyone to provide any information other than that contained in this prospectus or in any free writing prospectus prepared by or on behalf of us or to which we have referred you. Neither we nor the underwriters nor the selling stockholder take responsibility for, and can provide any assurance as to the reliability of, any other information that others may give you. The selling stockholder is offering to sell, and seeking offers to buy, shares of common stock only in jurisdictions where offers and sales are permitted. The information contained in this prospectus is accurate only as of the date of this prospectus, regardless of the time of delivery of this prospectus or of any sale of the common stock.

INDUSTRY AND MARKET DATA

We obtained the industry, market and competitive position data throughout this prospectus from our own internal estimates and research as well as from industry and general publications and research, surveys and studies conducted by third parties. Industry publications, studies and surveys generally state that they have been obtained from sources believed to be reliable, although they do not guarantee the accuracy or completeness of such information.

PROSPECTUS SUMMARY

This summary highlights information contained elsewhere in this prospectus. This summary may not contain all of the information that you should consider before deciding to invest in our common stock. You should read this entire prospectus carefully, including the Risk Factors section and the consolidated financial statements and the notes to those statements, before making an investment decision.

Overview

Ally operates one of the world's largest automotive finance companies. We have over 90 years of experience supporting automotive dealers and their retail customers with a broad array of financial products and services. Our automotive finance franchise operates on a global scale with strategic activities in the United States, Canada and 15 other countries worldwide. We are a bank holding company and also operate one of the largest residential mortgage loan companies in the United States. Our bank subsidiary, Ally Bank, is a leading competitor and well-recognized brand in the growing direct banking market. The bank provides us with a significant source of cost-efficient funding and had \$35.4 billion of deposits at March 31, 2011. We had \$174 billion of total assets at March 31, 2011 and \$1.6 billion and \$7.9 billion of total net revenue during the first quarter of 2011 and fiscal year 2010, respectively.

We intend to extend our leading position as one of the world's largest automotive finance companies by continuing to provide automotive dealers, retail consumers and our automotive manufacturing partners with consistent funding, competitive pricing, a comprehensive product suite and exceptional service reflecting our commitment to the automotive industry.

We also will continue to operate a complementary residential mortgage loan franchise focused on the origination and servicing of conforming and government-insured residential mortgage loans.

We intend to continue to develop Ally Bank and its core brand to enhance the value proposition for its deposit customers and to efficiently support asset growth in our lending activities.

Our primary operations are conducted within Global Automotive Services and Mortgage. Ally Bank offers a full spectrum of deposit and checking products to its customers and provides us with stable and diversified funding.

Our Global Automotive Services

Our global automotive business is centered around our strong and longstanding relationships with automotive dealers and supports our automotive manufacturing partners and their marketing programs. We serve the financial needs of approximately 20,000 dealers worldwide and 5.6 million of their retail customers as of March 31, 2011. In the United States and Canada alone, we have approximately 2,200 automotive finance and insurance employees in five regions focused on serving the needs of our dealer customers with finance and insurance products, expanding the number of overall dealer and automotive manufacturer relationships, and supporting our dealer lending and underwriting functions. In addition, we have over 2,400 employees that support our North American servicing operations.

Our Dealer-Focused Business Model

Ally's primary customers are automotive dealers, which are independently owned businesses. As part of the process of selling a vehicle, automotive dealers typically originate loans and leases to their retail customers. Dealers then select Ally or another automotive finance provider to which they sell loans and leases.

Table of Contents

Our longstanding success as an automotive finance provider is driven by the broad range and quality of products and services we offer to dealers. Our financial products offered to dealers and their customers include, among others, new vehicle retail loans and leases, used vehicle loans, floorplan loans, dealer capital and working capital loans, vehicle service contracts, wholesale inventory insurance and our SmartAuction service for remarketing vehicles. As of March 31, 2011, over 5,000 of our automotive dealer customers utilized four or more of our products.

Manufacturer Relationships

We are a preferred financing provider for a number of manufacturers including GM, Chrysler, Fiat, Saab, American Suzuki and Thor under contractual relationships. With our origination and servicing platform and competitive funding programs, we function as a strong and flexible partner that helps manufacturers fulfill their new vehicle marketing programs.

Our preferred financing relationships primarily relate to new retail loan incentive programs that support the manufacturers' new vehicle marketing initiatives while allowing us to realize market based returns. Incentivized loans, originated through our preferred financing relationships, represented 33% and 41% of our North American new retail loan and lease origination volume in the first quarter 2011 and fiscal year 2010, respectively, compared to 52% in 2009 and 60% in 2008. For non-incentivized retail loan originations, we successfully compete at the dealer-level based on our strong dealer relationships, competitive pricing, full suite of products and comprehensive service.

Our History in the Automotive Market and Who We Are Today

During our 90-year history in the automotive finance business, we have developed extensive knowledge and experience in serving the financing needs of automotive dealers and their retail customers. Ally was formed in 1919 as the captive finance subsidiary of GM. In 2006, a majority ownership interest in Ally was sold to third parties. Since that sale, we have transformed into a market-driven independent automotive finance company. We continue to be a preferred financing provider to GM on incentivized retail loans and in 2009, we became the preferred financing provider to Chrysler of incentivized retail loans. We have developed full product relationships for the vast majority of Chrysler's existing franchised dealers, including more than 1,700 Chrysler dealers that we successfully developed inventory financing relationships with over a three-month period in 2009. In addition, we have developed preferred financing relationships with Fiat, Saab, American Suzuki and Thor under contractual agreements.

We became a bank holding company on December 24, 2008, under the Bank Holding Company Act and are subject to supervision and examination by the Board of Governors of the Federal Reserve System (the "FRB"). Our bank subsidiary, Ally Bank, is supervised by the Federal Deposit Insurance Corporation (the "FDIC") and the Utah Department of Financial Institutions (the "Utah DFI").

Table of Contents

Our Global Automotive Services business is organized into three areas (the information below is as of March 31, 2011).

North American Automotive Finance Operations

Our North American Automotive Finance Operations (NAO) consist of our automotive financing operations in the United States and Canada. According to Experian Automotive, we were the largest independent provider of new retail automotive loans in the United States during 2010. We funded one out of every ten new car purchases that were financed in the United States during 2010. We had total consumer originations in the United States and Canada of \$35.4 billion in 2010 and \$12.4 billion in the first quarter of 2011. Our penetration rate of GM and Chrysler new car purchases in the United States and Canada in the first quarter of 2011 was 51% and 30%, respectively. We financed an average of \$27.9 billion of vehicle floorplan assets for our dealers, including 84% of GM s and 68% of Chrysler s total North American dealer new vehicle inventory, respectively, during the first quarter of 2011.

We manage commercial account servicing for over 5,000 dealers in the United States that utilize our floorplan inventory lending or other commercial loans. In the United States and Canada, we provide consumer asset servicing for a \$72 billion portfolio at March 31, 2011. The extensive infrastructure and experience of our servicing operation are important to our ability to minimize our loan losses and enable us to deliver favorable customer experience to both our dealers and their retail customers. We provide comprehensive automotive remarketing services, including the use of SmartAuction, our online auction platform, which efficiently supports dealer-to-dealer and other commercial wholesale car transactions.

The following table sets forth our share of retail automotive loans for new purchases in the United States:

1 st Quarter 2011		4 th Quarter 2010		3 rd Quarter 2010		2 nd Quarter 2010		1 st Quarter 2010		Year ended December 31,					
%	Rank	%	Rank	%	Rank	%	Rank	%	Rank	2010		2009		2008	
										%	Rank	%	Rank	%	Rank
13.5%	1	11.0%	1	10.0%	1	9.9%	1	8.5%	2	9.9%	1	6.1%	3	5.8%	4

Source: Experian Automotive

The used vehicle financing market is significant in size and highly fragmented. We have recently begun to increase our focus on used car financing, primarily through franchised dealers and certain national used vehicle dealers. According to Experian Automotive, over 14 million used vehicles were sold by franchised dealers in 2010. We believe that increased market share in this fragmented segment will further expand and support our dealer relationships and increase our volume of retail originations.

Table of Contents

International Automotive Finance Operations

Our International Automotive Finance Operations (IO) conduct business in Asia, Latin America and Europe. We focus on five core foreign markets: China (through our joint venture, GMAC-SAIC Automotive Finance Company Limited (GMAC-SAIC)), Brazil, Mexico, Germany and the United Kingdom. We also originate loans in 10 other countries. We provide financial services to approximately 4,800 automotive dealer customers in these 15 foreign markets.

China Our GMAC-SAIC joint venture is a leading automotive finance company in China and offers a full suite of products. We believe there is significant opportunity for growth in loan origination in China due to the strong increase in overall car sales as well as the relatively low proportion of these sales that have been financed historically. In 2010, 10% of new car purchases in China were financed according to China Auto Market, compared with 79% in the United States, according to Experian Automotive. We own 40% of GMAC-SAIC alongside Shanghai Automotive Group Finance Company LTD and Shanghai General Motors Corporation Limited, which own 40% and 20% of GMAC-SAIC, respectively. At March 31, 2011, the joint venture had total finance receivables and loans of \$4.2 billion.

Brazil and Mexico Brazil is the largest automotive market in Latin America where we had total finance receivables and loans of \$3.5 billion at March 31, 2011. In both Brazil and Mexico, we offer a full product line and have strong positions in the automotive dealer channel.

Germany and the United Kingdom Germany and the United Kingdom remain our core markets in Europe with total finance receivables and loans of \$5.7 billion at March 31, 2011. To improve operational efficiency, certain of our servicing and lending activities in Europe have been consolidated in Germany.

Insurance Operations

Our Insurance operations offer both consumer insurance products sold primarily through dealers and commercial insurance products sold to dealers. As part of our focus on offering dealers a broad range of products, we provide vehicle service contracts, mechanical breakdown and maintenance coverages. We also underwrite selected commercial insurance coverages which primarily insure dealers' wholesale vehicle inventory in the United States and internationally.

We believe our national insurance platform provides us with a competitive advantage, allowing us to design products tailored to our dealer customers, control underwriting and retain the profits generated by this business. We sell insurance products to over 4,000 dealers in the United States. Among U.S. GM dealers to whom we provide wholesale financing, our wholesale insurance product penetration rate is approximately 80%. Dealers who receive wholesale financing from Ally are eligible for wholesale insurance incentives, such as automatic eligibility in our preferred insurance programs and increased financial benefits.

Mortgage

Our Origination and Servicing operations consist of originating, purchasing, selling and securitizing conforming and government-insured residential mortgage loans in the United States and Canada; servicing residential mortgage loans for ourselves and others; and providing collateralized lines of credit to other mortgage loan originators, also called warehouse lending. We also originate a small amount of high quality prime jumbo mortgage loans in the United States. Our Origination and Servicing operations had \$19.2 billion in assets at March 31, 2011.

In the first quarter of 2011 and full year 2010, we originated \$11.8 billion and \$69.5 billion, respectively, of U.S. residential mortgage loans, including \$10.3 billion and \$61.5 billion, respectively, through our network of over 900 correspondents. Conforming and government-insured residential mortgage loans comprised approximately 97% and 98% of our first quarter of 2011 and fiscal year 2010 originations, respectively. At

Table of Contents

March 31, 2011, we were the primary servicer of 2.4 million mortgage loans with \$359.7 billion of unpaid principal balances. We have substantially derisked our mortgage operations since the onset of the housing crisis and reduced our overall mortgage assets from \$135.1 billion in 2006 to \$31.0 billion at March 31, 2011, primarily through the run-off and divestiture of noncore businesses and assets.

Our Legacy Portfolio and Other operations primarily consist of mortgage loans originated prior to January 1, 2009, and consist of noncore business activities including portfolios in run-off. Total assets of our Legacy Portfolio and Other operations decreased from \$32.9 billion at December 31, 2008, to \$11.8 billion at March 31, 2011.

Ally Bank

Ally Bank raises deposits directly from customers through the direct banking channel via the internet and over the telephone. We believe that Ally Bank is well-positioned to continue to take advantage of the consumer-driven shift from branch banking to direct banking. We believe internet banking is now the preferred banking channel by consumers. According to a 2010 American Bankers Association survey, the number of bank customers who prefer to do their banking online increased from 21% to 36% between 2007 and 2010, while those who prefer branch banking has declined from 39% to 25% over the same period.

We have quickly become a leader in direct banking with our recognizable brand, accessible 24/7 customer service, and competitively priced deposit products. We have distinguished our direct bank with our "Talk Straight, Do Right, Be Obviously Better" branding and products that are "Easy to Use" with "No Fine Print, Hidden Fees, Rules or Penalties". Recent introductions of retail banking products include interest-bearing checking accounts, electronic bill pay, remote deposit, and no-fee debit cards.

Ally Bank provides our automotive finance and mortgage loan operations with a stable and low-cost funding source. At March 31, 2011, Ally Bank had \$35.4 billion of deposits including \$23.5 billion of retail deposits. The growth of our retail deposit base from \$7.2 billion at the end of 2008 to \$23.5 billion at March 31, 2011 has enabled us to reduce our cost of funds during that period. We expect to continue to lower our cost of funds over time and diversify our overall funding as our deposit base grows. Over the past two years, we have grown our retail deposits even as we have reduced the cost of our deposits.

The following chart shows the amount and type of Ally Bank's customer deposits and the average retail deposit rate as of the dates indicated:

Table of Contents

Our Strengths

Automotive financial services category leader with full product suite.

We are one of the largest providers of retail and wholesale automotive financing in the world and are an integral part of the automotive industry. We believe that our 90-year history has provided us extensive knowledge of the automotive industry and the financial services needs of its dealers, automotive manufacturers, and retail consumers.

Our full suite of financing and insurance products and extensive on-site service relationships differentiate us from most of our competitors. As of March 31, 2011, over 5,000 of our automotive dealer customers utilized four or more of our products. We use incentive programs, such as our Ally Dealer Rewards program, to increase the volume of business and number of products used by our dealer customers. During the first quarter of 2011 and fiscal year 2010, over 62% and 60%, respectively, of our U.S. dealer customers received benefits under the Ally Dealer Rewards program which was initiated in 2009.

Implementation of our market-driven strategies since 2008 has enabled us to grow our Global Automotive Services business within our existing dealer relationships and expand into new relationships with dealers of various manufacturers. Since 2008, we have successfully added preferred provider agreements, including Chrysler (U.S., Canada and Mexico), Fiat (U.S. and Mexico), Saab (U.S. and Europe), American Suzuki (U.S.) and Thor (U.S.). Our strong relationships with manufacturers have allowed us to offer more products, expand our dealer base and strengthen our existing network of dealer relationships. We have increased our new non-GM retail originations from \$1.0 billion in 2006 to \$9.5 billion in 2010 and from \$1.7 billion in the first quarter of 2010 to \$2.6 billion in the first quarter of 2011.

We believe that the combination of our full suite of products, service standards, global platform, incentive programs, and funding strategy put us in a strong position relative to competing financial institutions and future entrants to the market.

Scalable platform with significant growth opportunities.

We are well-positioned for growth as the U.S. economy recovers and U.S. Seasonally Adjusted Annualized Rate (SAAR) of vehicle sales rebounds from its 2008-2009 recessionary levels. Consumer and business spending on automobiles has recovered from recent lows but remains well below historical average levels. The chart below shows historical consumer, business and government spending on automobiles as a percentage of U.S. GDP.

Source: Bureau of Economic Analysis, U.S. Department of Commerce

Table of Contents

The chart below shows historical and projected U.S. SAAR (in millions):

Source: Bureau of Economic Analysis as to 2006-2010 data and Blue Chip Economic Indicators, Vol. 35, No. 10/Vol. 36, No. 5, as to projected 2011-2013 data.

In the United States and Canada, we have approximately 2,200 automotive finance and insurance employees dedicated to dealer sales, product support, lending and underwriting. This infrastructure allows us to accommodate our growing volume of business and support our existing customers. We maintain a dedicated sales force, which meets the needs of our existing dealer customers, expands our market penetration in the dealer network and supports our existing and new automotive manufacturing partners. Our sales force consists of direct dealer account relationship professionals, supplemental product support coverage professionals, and primary manufacturer relationship account professionals.

We also have invested significantly in our technology infrastructure and other initiatives to support our automotive financing and banking services platforms to further enhance our dealer and retail customer relationships and increase business volumes. This focus has resulted in increased credit application flow and originations from dealers representing various manufacturers, including GM and Chrysler. We are now able to access applications from almost all U.S. automotive dealerships under any brand. The combination of our extensive infrastructure, our relationships with finance and insurance departments of dealers, and our participation in the major credit application on-line networks, provides us with a strong platform to efficiently grow our consumer business volumes across a broad mix of automotive dealers.

In addition, we expect our incentive programs, such as Ally Dealer Rewards and other market-driven strategies, to increase business volumes and the number of products used by dealers. Other major initiatives underway such as dealer diversification strategies and additional preferred relationships with other manufacturers should increase our consumer retail, lease, and dealer funding volumes. The used vehicle financing market is highly fragmented and we believe this provides us with a growth opportunity within our franchised dealer relationships. We believe our significant presence in attractive markets such as China and Brazil also supports our growth opportunity internationally.

Leading direct banking franchise.

We believe Ally Bank is well-positioned for continued growth within the direct banking market. The Ally Bank brand has attained strong recognition since it was launched in 2009. Ally Bank provides us with a diversified source of stable, low-cost funding. The bank's assets primarily consist of high quality commercial and

Table of Contents

consumer automotive finance receivables and conforming and government-insured residential mortgage loans originated through our automotive and mortgage businesses, respectively. We believe there are opportunities to deliver other products to our growing banking customer base, in addition to our full suite of deposit, savings and checking products.

Complementary mortgage origination and servicing operations.

Our Origination and Servicing business is one of the largest participants in the U.S. residential mortgage loan market and provides us with an additional source of profitability. It is now focused on the segments of the mortgage loan market that have remained profitable for us during the housing crisis. We believe our Origination and Servicing operations are well-positioned as a result of our strong market position, scalable platform, well-known brands and extensive experience.

Strong balance sheet, liquidity position and risk management.

We believe that the consumer automotive loans on our balance sheet reflect the significantly tighter underwriting standards across the credit spectrum that we adopted since 2008. Our underwriting process utilizes a robust combination of credit metrics, including, among others, FICO scores, loan-to-value ratios, debt-to-income ratios and proprietary scoring models. The average FICO score at origination of the U.S. new retail loans in our outstanding portfolio as of March 31, 2011 was 733. We are prudently expanding automotive originations across the credit spectrum in accordance with our underwriting standards. During the first quarter of 2011 and fiscal year 2010, the loss rate on our U.S. consumer automotive portfolio was 0.95% and 1.73%, respectively.

Our commercial automotive financing business consists primarily of wholesale financing in which credit is extended to individual dealers and is secured by vehicles in inventory and, in some circumstances, other assets owned by the dealer or by a personal guarantee. We manage risk in our commercial automotive financing business through our rigorous credit underwriting process, which utilizes our proprietary dealer credit evaluation system, our ongoing risk monitoring program, and vehicle inventory audits to verify collateral and dealer compliance with lending agreements. During the first quarter of 2011 and fiscal year 2010, the loss rate on our U.S. commercial automotive portfolio was 0.04% and 0.27%, respectively.

The loans originated in our mortgage operations are currently comprised primarily of high credit quality conforming, government-insured and prime jumbo residential mortgage loans. We have substantially reduced and derisked our legacy mortgage exposure of nonconforming assets through writedowns, run-offs and divestitures over the last three years. We have also settled with Federal National Mortgage Association (Fannie Mae) and Federal Home Loan Mortgage Corporation (Freddie Mac), as well as several other counterparties, which resolved material repurchase obligations with each counterparty. At March 31, 2011, we held reserves of \$830 million for potential repurchase obligations for loans we sold to counterparties.

We have demonstrated strong access to funding and liquidity that are critical to our business. In the first quarter of 2011 and fiscal year 2010, we raised over \$7 billion and nearly \$36 billion of secured and unsecured funding in the capital markets, respectively. We also have significant liquidity available beyond capital markets funding with access to \$33.4 billion of liquidity in the form of cash, highly liquid unencumbered securities, and available committed credit facility capacity at March 31, 2011.

Our access to deposits is an important source of diversified funding. Approximately 30% of our funding at the end of the first quarter of 2011 came from deposits compared to 14% at the end of 2008. We believe Ally Bank gives us the stable, low-cost benefits of deposit funding with a direct-to-consumer delivery model. Ally Bank's leadership in direct banking, recognizable brand and compelling customer value proposition position us well for consistent growth.

Table of Contents

Our balance sheet is well capitalized. At March 31, 2011, we had a Tier 1 capital ratio of 14.68%, and a Tier 1 common ratio of % pro forma for this offering. We believe this capitalization compares favorably to our peers and positions us well for the future.

Experienced management team.

Our senior management team is comprised of financial professionals with deep operating experience in automotive and consumer finance and extensive experience managing some of the largest and most successful financial institutions in the world. Our senior management team has successfully led our return to profitability and the development of our strong liquidity and capital position following the financial crisis. Our management team has taken significant actions to make our automotive finance business more efficient and better positioned for growth opportunities. Substantial actions have also been taken to materially reduce the legacy risk in our mortgage operations. Our capital structure and prudent liquidity actions by management have positioned us for growth as the automotive industry and overall economy continue to rebound.

Our Business Strategy

Expand our position as a leading global provider of automotive financial services products.

We believe that our dealer-focused business model, global platform, full range of product offerings and sales organization position us to further broaden our relationships with existing and new dealers and automotive manufacturers, and to originate attractive retail automotive loans and leases for our portfolio in addition to other products. Our market-driven strategies, including incentive programs, have been designed and implemented to drive higher business volumes with our dealer relationships. Furthermore, we have dedicated resources to the underwriting and financing of used vehicle sales that should allow us to expand loan origination volume with our existing dealer base. We are also leveraging our existing dealer relationships, product suite, and extensive operating experience to expand our diversified dealer network and facilitate financing relationships with additional automotive manufacturers. We intend to continue to strongly support our financing relationships with GM and Chrysler by providing dependable new car inventory and consumer financing through all economic cycles. We will continue to utilize our international infrastructure to build upon our strong presence in attractive, developing markets such as China, Brazil and Mexico. Our objective is to generate incremental profitability and asset growth without straying from our core competencies in automotive finance.

Continue to generate consistent results through our Mortgage operations.

Our Mortgage Origination and Servicing operations, which primarily originate and service high credit quality mortgage loans, provide a complementary source of consumer assets and a diversified source of profitability. The vast majority of our mortgage loans are originated, financed, and sold without significant balance sheet growth.

We plan to prudently expand our direct lending origination channel to complement our existing origination platform. Our servicing operations are fee-based and do not expose us to significant credit risk. We expect to sell the vast majority of our mortgage loans soon after origination, thereby reducing funding requirements.

Reduce our funding costs and continue funding diversification.

We continue to expand and diversify our funding in order to improve our profitability and enhance our competitiveness. Our success at developing our franchise at Ally Bank has supported the growth of our retail deposit base to \$23.5 billion at March 31, 2011 from \$7.2 billion at the end of 2008. Our retail deposit growth has enabled us to diversify and reduce our cost of funds since 2008. Our strategy is to continue to increase our retail deposit base through the delivery of our full suite of deposit products and continued investment in the Ally Bank brand name.

Table of Contents

Our objective is to attain investment grade credit ratings from the rating agencies. We believe that improved ratings will help us to reduce our cost of funds further and improve our ability to compete even more effectively with other large banks and financial institutions across all products. We believe that the stable performance of our asset base, strong capitalization, demonstrated access to diversified funding markets, and the ability to operate profitably will help us reach this goal over time.

By continuing to diversify our funding sources and lower our overall cost of funding, including the prudent growth of Ally Bank, we believe that we can provide even more efficient and consistent funding for our dealers and their retail customers through various economic cycles.

Maintain a strong balance sheet through disciplined origination, servicing and risk management.

We will continue to focus primarily on originating and managing secured automotive and mortgage loans and related products. The types of secured commercial and consumer automotive loans that we originate performed well through the recent financial crisis. Our Mortgage Origination and Servicing operations originate conforming, government-insured residential and prime jumbo residential mortgage loans, which we believe have an attractive risk return profile. We believe we have significantly reduced our risk profile and improved our profitability by divesting and discontinuing a number of noncore activities.

We believe that we maintain strong levels of capital and liquidity relative to other bank holding companies. Our strategy is to materially increase our volume of automotive finance assets within our existing infrastructure and with prudent underwriting criteria which we believe will allow us to efficiently utilize our capital and enhance our profitability.

Improve our shareholder return profile.

We seek to enhance our returns for shareholders by prudently originating loans and leases across the credit spectrum. We have also recently increased our focus on offering financing for used vehicles through our franchised dealer relationships. We have invested significant capital in risk management and technology to manage this expansion. By prudently expanding automotive originations across broad credit segments and with continued diversification, we believe we can increase asset yields and generate attractive risk-adjusted returns in a variety of interest rate and credit environments. We plan to continue to decrease our overall costs by increasing productivity, adding retail deposits, and efficiently accessing secured and unsecured wholesale markets as certain higher-cost legacy funding matures. The combination of higher asset yields and lower operating and funding costs with an efficient capital structure will provide opportunities for us to improve returns to our shareholders.

Corporate Information

Our principal executive offices are located at 200 Renaissance Center, P.O. Box 200, Detroit, Michigan 48265-2000 and our telephone number is (866) 710-4623. Our website is www.ally.com. Our website and the information included in, or linked to on, our website are not part of this prospectus. We have included our website address in this prospectus solely as a textual reference.

Table of Contents

THE OFFERING

Common stock offered by the selling stockholder	shares.
Common stock to be outstanding after this offering	shares (assuming no exercise of the underwriters' over-allotment option and assuming that the public offering price of our common stock in this offering will be \$ _____ per share (the midpoint of the price range set forth on the cover of this prospectus) for purposes of calculating the number of shares we issue to Treasury in the conversion under Concurrent transactions below).
Over-allotment option	shares from the selling stockholder to cover over-allotments.
Common stock listing	We intend to apply to list our common stock on the NYSE under the symbol ALLY.
Voting rights	One vote per share.
Use of proceeds	Ally will not receive any proceeds from sale of common stock in the offering.
Dividend policy	<p>We have no current plans to commence payment of a dividend on our common stock. Our payment of dividends on our common stock in the future will be determined by our Board of Directors in its sole discretion and will depend on business conditions, our financial condition, earnings and liquidity, and other factors. Our Fixed Rate Cumulative Perpetual Preferred Stock, Series G (the Series G preferred stock) prohibits us from making dividend payments on our common stock before January 1, 2014 and restricts our ability to pay dividends thereafter. In addition, so long as any share of our Fixed Rate / Floating Rate Perpetual Preferred Stock, Series A (the Series A preferred stock) remains outstanding, no dividend or distribution may be declared or paid on our common stock unless all accrued and unpaid dividends have been paid on such series of preferred stock.</p> <p>In addition, any plans to commence payment of dividends on our common stock in the future would be subject to the FRB's review and absence of objection.</p>
Concurrent transactions	Treasury currently holds 118,750,000 shares of our Fixed Rate Cumulative Mandatorily Convertible Preferred Stock, Series F-2 (the Series F-2 preferred stock), having an aggregate liquidation amount of \$5,937,500,000. In connection with this offering and the concurrent Units offering, Treasury has agreed (i) to convert (the conversion) 58,750,000 shares of Series F-2 preferred stock into a number of shares of our common stock based on a conversion price equal to the public offering price of our common stock in this offering (the common stock public offering price) and (ii) to exchange (the

Table of Contents

exchange) the remaining 60,000,000 shares of Series F-2 preferred stock having an aggregate liquidation amount of \$3 billion, for a number of our tangible equity units (the Units) having an aggregate stated amount of \$3 billion.

The number of shares of common stock we will issue to Treasury in connection with the conversion will depend upon the common stock public offering price. The higher the common stock public offering price is, the fewer the number of shares of common stock Treasury will receive and the lower the common stock public offering price is, the greater the number of shares of common stock Treasury will receive. The following table sets forth the number of shares we will issue to Treasury in connection with the conversion for each common stock public offering price set forth below:

Public Offering Price	Number of Shares Issued to Treasury
\$	
\$	
\$	
\$	

Treasury is offering in the concurrent Units offering a number of Units having an aggregate stated amount of \$, plus up to an additional number of Units having an aggregate stated amount of \$ to cover over-allotments, if any. Upon completion of the Units offering, Treasury will hold Units having an aggregate stated amount of \$ (or \$ if the underwriters for the Units offering exercise their over-allotment option in full). The Units that are retained by Treasury will be fungible with the Units being offered in the Units offering.

The closing of each of the Units offering, this offering, the conversion and the exchange is conditioned upon the closing of each such other transaction.

Risk factors

See Risk Factors beginning on page 17 of this prospectus for a discussion of risks you should carefully consider before deciding whether to invest in our common stock.

Unless we specifically state otherwise, the information in this prospectus (i) does not take into account shares issuable under our equity compensation incentive plan and (ii) assumes for purposes of calculating the number of shares of common stock we will issue to Treasury in the conversion that the common stock public offering price will be \$ per share (the midpoint of the price range set forth on the cover of this prospectus). All applicable share, per share and related information in this prospectus for periods on or subsequent to has been adjusted retroactively for the -for-one stock split on shares of our common stock effected on , 2011.

Table of Contents**SUMMARY CONSOLIDATED FINANCIAL AND OTHER DATA**

The following summary consolidated financial data of Ally should be read in conjunction with, and are qualified by reference to, Management's Discussion and Analysis of Financial Condition and Results of Operations and the consolidated financial statements and notes thereto included elsewhere in this prospectus. The consolidated statement of income data for the years ended December 31, 2010, 2009 and 2008 and the consolidated balance sheet data at December 31, 2010 and 2009 are derived from, and qualified by reference to, our audited consolidated financial statements included elsewhere in this prospectus and should be read in conjunction with those consolidated financial statements and notes thereto. The consolidated statement of income data for the years ended December 31, 2007 and 2006 and the consolidated balance sheet data at December 31, 2008, 2007 and 2006 are derived from our audited consolidated financial statements not included in this prospectus. The condensed consolidated statement of income data for the three months ended March 31, 2011 and 2010 and the condensed consolidated balance sheet data at March 31, 2011 and 2010 are derived from, and qualified by reference to, our unaudited condensed consolidated financial statements included elsewhere in this prospectus and should be read in conjunction with those condensed consolidated financial statements and notes thereto. In our opinion, the unaudited financial statements provided herein have been prepared on substantially the same basis as the audited historical consolidated financial statements and reflect all adjustments, consisting of normal recurring adjustments, necessary for a fair presentation of our financial position and results of operations for the periods presented. Our results for the three months ended March 31, 2011 are not necessarily indicative of those to be expected for the fiscal year.

Table of Contents

- (a) Total other revenue for 2008 includes \$12.6 billion of gains on the extinguishment of debt, primarily related to private exchange and cash tender offers settled during the fourth quarter. Total other revenue for 2006 includes realized capital gains of \$1.1 billion primarily related to the rebalancing of our investment portfolio at our Insurance operations.
- (b) Effective June 30, 2009, we converted from a limited liability company into a corporation and, as a result, became subject to corporate U.S. federal, state, and local taxes beginning in the third quarter of 2009. Our conversion to a corporation resulted in a change in tax status and a net deferred tax liability of \$1.2 billion was established through income tax expense. Effective November 28, 2006, we, along with certain of our U.S. subsidiaries, converted to limited liability companies (LLCs) and became pass-through entities for U.S. federal income tax purposes. Our conversion to an LLC resulted in a change in tax status and the elimination of a \$791 million net deferred tax liability through income tax expense. Refer to Note 24 to the fiscal year Consolidated Financial Statements (the Consolidated Financial Statements) for additional information regarding our changes in tax status.
- (c) Core pretax income (loss) is not a financial measure defined by generally accepted accounting principles in the United States of America (GAAP). We define core pretax income as earnings from continuing operations before income taxes, original issue discount amortization expense primarily associated with our 2008 bond exchange, and the gain on extinguishment of debt related to the 2008 bond exchange. We believe that the presentation of core pretax income (loss) is useful information for the users of our financial statements in understanding the earnings from our core businesses. In addition, core pretax income (loss) is the primary measure that management uses to assess the performance of our operations. We believe that core pretax income (loss) is a useful alternative measure of our ongoing profitability and performance, when viewed in conjunction with GAAP measures. The presentation of this additional information is not a substitute for net income (loss) determined in accordance with GAAP.
- (d) Primarily represents original issue discount amortization expense associated with the 2008 bond exchange, including \$30 million and \$101 million of accelerated amortization that was reported as a loss on extinguishment of debt in the first quarter 2011 Condensed Consolidated Statement of Income and fiscal year 2010 Consolidated Statement of Income, respectively.
- (e) Pro forma to reflect the -for-one stock split on our common stock effected on , 2011.
- (f) Effective June 30, 2009, we converted from a Delaware limited liability company into a Delaware corporation. Each unit of each class of common membership interest issued and outstanding immediately prior to the conversion was converted into an equivalent number of shares of common stock with substantially the same rights and preferences as the common membership interests. Upon conversion, holders of our preferred membership interests also received an equivalent number of shares of preferred stock with substantially the same rights and preferences as the former preferred membership interests.
- (g) The efficiency ratio equals total other noninterest expense divided by total net revenue. The core efficiency ratio equals total other noninterest expense divided by total net revenue excluding original issue discount amortization expense and gain on extinguishment of debt related to the 2008 bond exchange.
- (h) The 2011, 2010 and 2009 ratios were computed based on average assets and average equity using a combination of monthly and daily average methodologies. The 2008, 2007, and 2006 ratios have been computed based on period-end total assets and period-end total equity at December 31, 2008, 2007, and 2006.
- (i) Net interest spread represents the difference between the rate on total interest earning assets and the rate on total interest-bearing liabilities, excluding discontinued operations for the periods shown.

Edgar Filing: Ally Financial Inc. - Form S-1/A

(j) Not applicable at December 31, 2008, 2007, and 2006, as we did not become a bank holding company until December 24, 2008.

Table of Contents

- (k) Net yield on interest-earning assets represents net financing revenue as a percentage of total interest-earning assets.

- (l) Tier 1 capital generally consists of common equity, minority interests, qualifying preferred stock (including fixed rate cumulative preferred stock issued and sold to Treasury) and purchase contracts (including the purchase contracts that are components of the Units being offered in the concurrent offering) less goodwill and other adjustments.

- (m) Total risk-based capital is the sum of Tier 1 and Tier 2 capital. Tier 2 capital generally consists of preferred stock not qualifying as Tier 1 capital, limited amounts of subordinated debt and the allowance for loan losses, and other adjustments. The amount of Tier 2 capital may not exceed the amount of Tier 1 capital.

- (n) Tier 1 leverage equals Tier 1 capital divided by adjusted average total assets (which reflects adjustments for disallowed goodwill and certain intangible assets). The minimum Tier 1 leverage ratio is 3% or 4% depending on factors specified in the regulations.

- (o) We define Tier 1 common as Tier 1 capital less noncommon elements including qualified perpetual preferred stock, qualifying minority interest in subsidiaries, and qualifying trust preferred securities. However, the purchase contracts that are components of the Units being offered in the concurrent offering are not subtracted from Tier 1 capital to determine Tier 1 common. Ally considers various measures when evaluating capital utilization and adequacy, including the Tier 1 common equity ratio, in addition to capital ratios defined by banking regulators. This calculation is intended to complement the capital ratios defined by banking regulators for both absolute and comparative purposes. Because GAAP does not include capital ratio measures, Ally believes there are no comparable GAAP financial measures to these ratios. Tier 1 common equity is not formally defined by GAAP or codified in the federal banking regulations and, therefore, is considered to be a non-GAAP financial measure. Ally believes the Tier 1 common equity ratio is important because we believe analysts and banking regulators may assess our capital adequacy using this ratio. Additionally, presentation of this measure allows readers to compare certain aspects of our capital adequacy on the same basis to other companies in the industry.

- (p) Risk-weighted assets are defined by regulation and are determined by allocating assets and specified off-balance sheet financial instruments into several broad risk categories.

Table of Contents

RISK FACTORS

You should carefully consider the following risk factors that may affect our business, future operating results and financial condition, as well as the other information set forth in this prospectus before making a decision to invest in our common stock. Any of the following risks could materially and adversely affect our business, financial condition or results of operations. In such case, the trading price of our common stock would likely decline due to any of these risks, and you may lose all or part of your investment.

Risks Related to Regulation

Our business, financial condition, and results of operations could be adversely affected by regulations to which we are subject as a result of our bank holding company status.

On December 24, 2008, the FRB approved our application to become a bank holding company under the Bank Holding Company Act of 1956, as amended (the BHC Act). Many of the regulatory requirements to which we are subject as a bank holding company were not previously applicable to us and have and will continue to require significant expense and devotion of resources to fully implement processes that will be necessary to ensure compliance. Compliance with such laws and regulations involves substantial costs and may adversely affect our ability to operate profitably. Recent events, particularly in the financial and real estate markets, have resulted in bank regulatory agencies placing increased focus and scrutiny on participants in the financial services industry, including us. For a description of our regulatory requirements, see Business Certain Regulatory Matters.

Ally is subject to ongoing supervision by the FRB, and Ally Bank by the FDIC and the Utah DFI, in each case, through regular examinations and other means that allow the regulators to gauge management's ability to identify, assess, and control risk in all areas of operations in a safe-and-sound manner and to ensure compliance with laws and regulations. As a result of Ally's conversion to a bank holding company, Ally and Ally Bank have been required to implement policies and procedures and take other actions to improve their current processes and to seek to ensure adherence to applicable regulatory guidelines and standards.

Ally is currently required by its banking supervisors to make improvements in areas such as board and senior management oversight, risk management, regulatory reporting, internal audit planning, capital adequacy process, stress testing, and Bank Secrecy Act / anti-money laundering compliance, and to continue to reduce problem assets. Separately, Ally Bank is currently required by its banking supervisors to make improvements in areas such as compliance management and training, consumer protection monitoring, consumer complaint resolution, internal audit program and residential mortgage loan pricing, and fee monitoring. These requirements are judicially enforceable, and if we are unable to implement and maintain these required actions, plans, policies and procedures in a timely and effective manner and otherwise comply with the requirements outlined above, we could become subject to formal supervisory actions which could subject us to significant restrictions on our existing business or on our ability to develop any new business. Such forms of supervisory action could include, without limitation, written agreements, cease and desist orders, and consent orders and may, among other things, result in restrictions on our ability to pay dividends, requirements to increase capital, restrictions on our activities, the imposition of civil monetary penalties, and enforcement of such action through injunctions or restraining orders. We could also be required to dispose of certain assets and liabilities within a prescribed period. The terms of any such supervisory action could have a material adverse effect on our business, operating flexibility, financial condition, and results of operations.

Our ability to engage in certain activities may be adversely affected by our status as a bank holding company.

As a bank holding company, Ally's activities are generally limited to banking or to managing or controlling banks or other companies engaged in activities deemed closely related to banking or otherwise permissible under the BHC Act and related regulations. Likewise, Ally generally may not hold more than 5% of any class of voting

Table of Contents

shares of any company unless that company's activities conform with the above requirements. Upon our bank holding company approval, we were permitted an initial two-year grace period to bring our activities and investments into conformity with these restrictions. This initial grace period expired in December 2010; however, the FRB has granted a one-year extension that expires in December 2011. We will be permitted to apply to the FRB for up to two additional one-year extensions. Certain of Ally's existing activities and investments, including most of our insurance activities and our SmartAuction vehicle remarketing services, are deemed impermissible under the BHC Act and must be terminated or disposed of by the expiration of this extension and any additional extensions. While some of these activities may be continued if Ally is able to convert to a financial holding company under the BHC Act, Ally may be unable to satisfy the requirements to enable it to convert to a financial holding company prior to that time, and activities, businesses, or investments that would be permissible for a financial holding company will need to be terminated or disposed of. The FRB may also decline to grant any additional requested extensions, and Ally may be obligated to terminate or dispose of any impermissible activities, businesses, or investments more quickly than anticipated or under terms less advantageous to Ally than expected. Either situation could have a material adverse effect on our business, results of operations, and financial position.

As a bank holding company, our ability to expand into new business activities requires us to obtain the prior approval of the relevant banking supervisors. There can be no assurance that any required approval will be obtained or that we will be able to execute on these plans in a timely manner or at all. If we are unable to obtain approval to expand into new business activities, our business, results of operations, and financial position may be materially adversely affected.

Our business and financial condition could be adversely affected as a result of issues relating to mortgage foreclosures, home sales, and evictions in certain states and our entry into a related consent order.

Representatives of federal and state governments, including the United States Department of Justice, the FRB, the FDIC, the SEC and law enforcement authorities in all 50 states, have announced investigations into the procedures followed by mortgage servicing companies and banks, including subsidiaries of Ally, in connection with mortgage foreclosure home sales and evictions. As a result of an examination conducted by the FRB and FDIC, on April 13, 2011, each of Ally, Ally Bank, Residential Capital, LLC and GMAC Mortgage, LLC (collectively, the Ally Entities) entered into a Consent Order (the Order) with the FRB and the FDIC. The Order requires, among other things, the Ally Entities to retain independent consultants to conduct a risk assessment related to mortgage servicing activities and to conduct a review of certain past residential mortgage foreclosure actions. We do not expect the costs associated with our required near-term response to the Order to be material. The Order further requires the Ally Entities to make improvements in various areas related to aspects of Ally's mortgage servicing business, including board oversight, compliance programs, internal audit, communications with borrowers, outsourcing activities, management information systems, and employee training. The estimated increased costs associated with future servicing and foreclosure costs as a result of the Order have been considered as part of the fair value adjustment of our existing mortgage servicing rights for the three months ended March 31, 2011.

We continue to cooperate with the ongoing investigations of various regulators. Any additional results of these investigations are uncertain, but we expect that Ally or its subsidiaries will become subject to additional penalties, sanctions, or other adverse actions, including monetary fines, that could have a material adverse impact on us.

On September 17, 2010, GMAC Mortgage, LLC (GMACM), our indirect wholly owned subsidiary, temporarily suspended mortgage foreclosure home sales and evictions and postponed hearings on motions for judgment in certain states. This decision was made after an operational matter was detected in the execution of certain affidavits used in connection with judicial foreclosures in some but not all states. The issue relates to whether persons signing the affidavits had appropriately verified the information in them and whether they were signed in the immediate physical presence of a notary. In response to this and to enhance existing procedures, GMACM has recently implemented supplemental procedures that are used in all new foreclosure cases to seek to ensure that affidavits are prepared in compliance with applicable law. GMACM is also conducting an additional review of all foreclosure files in all states prior to proceeding with foreclosure sales.

Table of Contents

Our review related to this matter is ongoing, and we cannot estimate the ultimate impact of any deficiencies that have been or may be identified in our historical foreclosure procedures. There are potential risks related to these matters that extend beyond potential liability on individual foreclosure actions. Specific risks could include, for example, claims and litigation related to foreclosure file remediation and resubmission; claims from investors that hold securities that become adversely impacted by continued delays in the foreclosure process; actions by courts, state attorneys general, or regulators to delay further the foreclosure process after submission of corrected affidavits; regulatory fines, sanctions, and other additional costs; and reputational risks. If the magnitude of any negative impact related to the foregoing proves to be material, it could have an adverse affect on our business, results of operations, and financial position.

Our ability to execute our business strategy may be affected by regulatory considerations.

Our business strategy for Ally Bank, which includes further expansion of both automotive and mortgage lending, is subject to regulatory oversight from a safety and soundness perspective. If our banking supervisors determine that any aspect of our business strategy for Ally Bank raises any safety and soundness concerns, we may be obliged to alter our strategy, including by moving certain activities, such as certain types of lending, outside of Ally Bank to one of our nonbanking affiliates. Alternative funding sources outside of Ally Bank, such as asset securitization or financings in the capital markets, could be more expensive than funding through Ally Bank and could adversely affect our business prospects, results of operations and financial condition.

Our ability to rely on deposits as a part of our funding strategy may be limited.

Ally Bank continues to be a key part of our funding strategy, and we have increased our reliance on deposits as an alternative source of funding through Ally Bank. Ally Bank does not have a retail branch network, and it obtains its deposits through direct banking and brokered deposits (which, at December 31, 2010, included \$10 billion of brokered certificates of deposit that may be more price sensitive than other types of deposits and may become less available if alternative investments offer higher interest rates). Our ability to maintain our current level of deposits or grow our deposit base could be affected by regulatory restrictions including the possible imposition of prior approval requirements, restrictions on deposit growth or restrictions on our rates offered. In addition, perceptions of our financial strength, rates offered by third parties, and other competitive factors beyond our control, including returns on alternative investments, will also impact our ability to grow our deposit base. Even if we are able to grow the deposit base of Ally Bank, our regulators may impose restrictions on our ability to use Ally Bank deposits as a source of funding for certain business activities potentially raising the cost of funding those activities without the use of Ally Bank deposits.

The FDIC has indicated that it expects Ally to diversify Ally Bank's overall funding and to focus on reducing Ally Bank's overall funding costs including the interest rates paid on Ally Bank deposits. Any such actions could limit Ally Bank's ability to grow and maintain deposits, which could have a material adverse impact on the funding and capital position of Ally.

The regulatory environment in which we operate could have a material adverse effect on our business and earnings.

Our domestic operations are subject to various laws and judicial and administrative decisions imposing various requirements and restrictions relating to supervision and regulation by state and federal authorities. Such regulation and supervision are primarily for the benefit and protection of our customers, not for the benefit of investors in our securities, and could limit our discretion in operating our business. Noncompliance with applicable statutes, regulations, rules, or policies could result in the suspension or revocation of any license or registration at issue as well as the imposition of civil fines and criminal penalties.

Ally, Ally Bank, and many of our nonbank subsidiaries are heavily regulated by bank and other regulatory agencies at the federal and state levels. This regulatory oversight is established to protect depositors, the FDIC's Deposit Insurance Fund, and the banking system as a whole, not security holders. Changes to statutes,

Table of Contents

regulations, rules, or policies including the interpretation or implementation of statutes, regulations, rules, or policies could affect us in substantial and unpredictable ways including limiting the types of financial services and products we may offer, limiting our ability to pursue acquisitions and increasing the ability of third parties to offer competing financial services and products.

Our operations are also heavily regulated in many jurisdictions outside the United States. For example, certain of our foreign subsidiaries operate either as a bank or a regulated finance company, and our insurance operations are subject to various requirements in the foreign markets in which we operate. The varying requirements of these jurisdictions may be inconsistent with U.S. rules and may materially adversely affect our business or limit necessary regulatory approvals, or if approvals are obtained, we may not be able to continue to comply with the terms of the approvals or applicable regulations. In addition, in many countries, the regulations applicable to the financial services industry are uncertain and evolving, and it may be difficult for us to determine the exact regulatory requirements.

Our inability to remain in compliance with regulatory requirements in a particular jurisdiction could have a material adverse effect on our operations in that market with regard to the affected product and on our reputation generally. No assurance can be given that applicable laws or regulations will not be amended or construed differently, that new laws and regulations will not be adopted, or that we will not be prohibited by local laws or regulators from raising interest rates above certain desired levels, any of which could materially adversely affect our business, operating flexibility, financial condition, or results of operations.

Financial services legislative and regulatory reforms may have a significant impact on our business and results of operations.

On July 21, 2010, the President of the United States signed into law the Dodd-Frank Wall Street Reform and Consumer Protection Act (the Dodd-Frank Act). The Dodd-Frank Act will have material implications for Ally and the entire financial services industry. Among other things, it will or potentially could:

result in Ally being subject to enhanced oversight and scrutiny as a result of being a bank holding company with \$50 billion or more in consolidated assets;

result in the appointment of the FDIC as receiver of Ally in an orderly liquidation proceeding if the Secretary of Treasury, upon recommendation of two-thirds of the FRB and the FDIC and in consultation with the President of the United States, finds Ally to be in default or danger of default;

affect the levels of capital and liquidity with which Ally must operate and how it plans capital and liquidity levels;

subject Ally to new and/or higher fees paid to various regulatory entities, including but not limited to deposit insurance fees to the FDIC;

impact Ally's ability to invest in certain types of entities or engage in certain activities;

impact a number of Ally's business and risk management strategies;

restrict the revenue that Ally generates from certain businesses; and

subject Ally to a new Consumer Financial Protection Bureau, which will have very broad rule-making and enforcement authorities. As the Dodd-Frank Act requires that many studies be conducted and that hundreds of regulations be written in order to fully implement it, the full impact of this legislation on Ally, its business strategies, and financial

Table of Contents

performance cannot be known at this time and may not be known for a number of years. In addition, regulations may impact us differently in comparison to other more established financial institutions. However, these impacts are expected to be substantial and some of them are likely to adversely affect Ally and its financial performance. The extent to which Ally can adjust its strategies to offset such adverse impacts also is not knowable at this time.

Our business may be adversely affected upon our implementation of the revised capital requirements under the Basel III capital rules.

The Bank for International Settlements' Basel Committee on Banking Supervision recently adopted new capital, leverage, and liquidity guidelines under the Basel Accord (Basel III), which when implemented in the United States, may have the effect of raising capital requirements beyond those required by current law and the Dodd-Frank Act. Basel III increases (i) the minimum Tier 1 common equity ratio from 2.0% to 4.5%, net of regulatory deductions, and introduces a capital conservation buffer of an additional 2.5% of common equity to risk-weighted assets, raising the target minimum common equity ratio to 7.0% and (ii) the minimum Tier 1 capital ratio to 8.5% inclusive of the capital conservation buffer, increases the minimum total capital ratio to 10.5% inclusive of the capital buffer, and introduces a countercyclical capital buffer of up to 2.5% of common equity or other fully loss absorbing capital for periods of excess credit growth. Basel III also introduces a nonrisk adjusted Tier 1 leverage ratio of 3% based on a measure of the total exposure rather than total assets and new liquidity standards. The Basel III capital, leverage, and liquidity standards will be phased in over a multiyear period. The Basel III rules, when implemented, will also impose a 15% cap on the amount of Tier 1 capital that can be met, in the aggregate, through significant investments in the common shares of unconsolidated financial subsidiaries, mortgage servicing rights (MSR) and deferred tax assets through timing differences, as well as a 10% cap on the amount of each of the three individual items that may be included in Tier 1 capital. In addition, under Basel III rules, after a 10-year phase-out period beginning on January 1, 2013, trust preferred and other hybrid securities will no longer qualify as Tier 1 capital. However, under the Dodd-Frank Act, subject to certain exceptions, trust preferred and other hybrid securities are phased out from Tier 1 capital in a three-year period starting January 1, 2013. At March 31, 2011, Ally had \$3.4 billion of MSRs and \$2.5 billion of trust preferred securities, which were included as Tier 1 capital. Ally currently has no other hybrid securities outstanding. The Basel III rules, when implemented, will impose limits on Ally's ability to meet its regulatory capital requirements through the use of MSRs, trust preferred securities, or other hybrid securities, if applicable.

If we or Ally Bank fail to satisfy regulatory capital requirements, we or Ally Bank may be subject to serious regulatory sanctions ranging in severity from being precluded from making acquisitions or engaging in new activities to becoming subject to informal or formal supervisory actions by the FRB and/or FDIC and, potentially, FDIC receivership of Ally Bank. If any of these were to occur, such actions could prevent us from successfully executing our business plan and have a material adverse effect on our business, results of operations, and financial position.

The actions of the FRB and international central banking authorities directly impact our cost of funds for lending, capital raising, and investment activities and may impact the value of financial instruments we hold. In addition, such changes in monetary policy may affect the credit quality of our customers. Changes in domestic and international monetary policy are beyond our control and difficult to predict.

Future consumer or mortgage legislation could harm our competitive position.

In addition to the recent enactment of the Dodd-Frank Act, various legislative bodies have also recently been considering altering the existing framework governing creditors' rights and mortgage products including legislation that would result in or allow loan modifications of various sorts. Such legislation may change banking statutes and the operating environment in substantial and unpredictable ways. If enacted, such legislation could increase or decrease the cost of doing business; limit or expand permissible activities; or affect the competitive balance among banks, savings associations, credit unions, and other financial institutions. We cannot predict whether new legislation will be enacted, and if enacted, the effect that it or any regulations would have on our activities, financial condition, or results of operations.

Table of Contents

Ally and its subsidiaries are or may become involved from time to time in information-gathering requests, investigations and proceedings by government and self-regulatory agencies which may lead to adverse consequences.

Ally and its subsidiaries, including Ally Bank, are or may become involved from time to time in information-gathering requests, reviews, investigations, and proceedings (both formal and informal) by government and self-regulatory agencies, including the FRB, FDIC, Utah DFI, SEC and the Federal Trade Commission regarding their respective operations. Such matters may result in determinations of material weaknesses in our controls and procedures or material adverse consequences including without limitation, adverse judgments, settlements, fines, penalties, injunctions, or other actions.

Our business, financial position, and results of operations could be adversely affected by the impact of affiliate transaction restrictions imposed in connection with certain financing transactions.

Certain transactions between Ally Bank and any of its nonbank affiliates, including but not limited to Ally Financial Inc. and Residential Capital, LLC (ResCap) are subject to federal statutory and regulatory restrictions. Pursuant to these restrictions, unless otherwise exempted, covered transactions, including Ally Bank's extensions of credit to and asset purchases from its nonbank affiliates, generally (1) are limited to 10% of Ally Bank's capital stock and surplus with an aggregate limit of 20% of Ally Bank's capital stock and surplus for all such transactions; (2) in the case of certain credit transactions, are subject to stringent collateralization requirements; (3) in the case of asset purchases by Ally Bank, may not involve the purchase of any asset deemed to be a low quality asset under federal banking guidelines; and (4) must be conducted in accordance with safe-and-sound banking practices (collectively, the Affiliate Transaction Restrictions). Under the Dodd-Frank Act, among other changes to Sections 23A and 23B of the Federal Reserve Act, credit exposures resulting from derivatives transactions and securities lending and borrowing transactions will be treated as covered transactions. Furthermore, there is an attribution rule that provides that a transaction between Ally Bank and a third party will be treated as a transaction between Ally Bank and a nonbank affiliate to the extent that the proceeds of the transaction are used for the benefit of, or transferred to, a nonbank affiliate of Ally Bank. Retail financing transactions by Ally Bank involving vehicles which are floorplan financed by Ally Financial Inc. are subject to the Affiliate Transaction Restrictions because the proceeds of the retail financings are deemed to benefit, and are ultimately transferred to, Ally.

The FRB is authorized to exempt, in its discretion, transactions or relationships from the requirements of these rules if it finds such exemptions to be in the public interest and consistent with the purposes of the rules. The FRB has granted several such exemptions to Ally Bank. However, the existing exemptions are subject to various conditions and any requests for future exemptions may not be granted. Moreover, these limited exemptions generally do not encompass consumer leasing or used vehicle financing. Since there is no assurance that Ally Bank will be able to obtain any further exemptions or waivers with respect to these restrictions, the ability to grow Ally Bank's business will be affected by the Affiliate Transaction Restrictions and the conditions set forth in these exemption letters.

Ally Financial Inc. may in the future require distributions from its subsidiaries.

We currently fund Ally Financial Inc.'s obligations, including dividend payments to our preferred shareholders, and payments of interest and principal on our indebtedness, from cash generated by Ally Financial Inc. In the future, Ally Financial Inc. may not generate sufficient funds at the parent company level to fund its obligations. As such, it may require dividends, distributions, or other payments from its subsidiaries to fund its obligations. However, regulatory and other legal restrictions may limit the ability of Ally Financial Inc.'s subsidiaries to transfer funds freely to Ally Financial Inc. In particular, many of Ally Financial Inc.'s subsidiaries are subject to laws, regulations, and rules that authorize regulatory bodies to block or reduce the flow of funds to it or that prohibit such transfers entirely in certain circumstances. These laws, regulations, and rules may hinder Ally Financial Inc.'s ability to access funds that it may need to make payments on its obligations in the future. Furthermore, as a bank holding company, Ally Financial Inc. may become subject to a prohibition or to

Table of Contents

limitations on its ability to pay dividends. The bank regulators have the authority and, under certain circumstances, the duty to prohibit or to limit payment of dividends by the banking organizations they supervise, including Ally Financial Inc. and its subsidiaries.

Current and future increases in FDIC insurance premiums, including the FDIC special assessment imposed on all FDIC-insured institutions, could decrease our earnings.

During 2008 and continuing in 2009 and 2010, higher levels of bank failures have dramatically increased resolution costs of the FDIC and depleted the Deposit Insurance Fund (the "DIF"). In May 2009, the FDIC announced that it had voted to levy a special assessment on insured institutions in order to facilitate the rebuilding of the DIF. In September 2009, the FDIC voted to adopt an increase in the risk-based assessment rate effective beginning January 1, 2011, by three basis points. Further, the Dodd-Frank Act alters the calculation of an insured institution's deposit base for purposes of deposit insurance assessments and removes the upper limit for the reserve ratio designated by the FDIC each year. On February 7, 2011, the FDIC approved a final rule implementing these changes, which will take effect April 1, 2011. The FDIC will continue to assess the changes to the assessment rates at least annually. Future deposit premiums paid by Ally Bank depend on the level of the DIF and the magnitude and cost of future bank failures. Any increases in deposit insurance assessments could decrease our earnings.

Risks Related to Our Business

The profitability and financial condition of our operations are heavily dependent upon the performance, operations, and prospects of GM and Chrysler.

GM, GM dealers, and GM-related employees compose a significant portion of our customer base, and our domestic and, in particular, our International Automotive Finance operations are highly dependent on GM production and sales volume. In 2010, 66% of our North American new vehicle dealer inventory financing and 66% of our North American new vehicle consumer automotive financing volume were for GM dealers and customers. In addition, 90% of our international new vehicle dealer inventory financing and 82% of our international new vehicle consumer automotive financing volume were for GM dealers and customers. Furthermore, we have expanded our financing footprint to Chrysler dealers and customers. We have entered into an agreement with Chrysler to provide automotive financing products and services to Chrysler dealers and customers pursuant to which we will be the preferred provider of new wholesale financing for Chrysler dealer inventory. In 2010, 26% of our North American new vehicle dealer inventory financing and 31% of our North American new vehicle consumer automotive financing volume were for Chrysler dealers and customers.

Ally's agreements with GM and Chrysler to provide automotive financing products to their dealers and customers extend through December and April 2013, respectively. These agreements provide Ally with certain preferred provider benefits including limiting the use of other financing providers by GM and Chrysler in their incentive programs. The terms of the Ally agreement with GM changed after January 1, 2011, such that GM is now able to offer any incentive programs on a graduated basis through third parties on a nonexclusive, side-by-side basis with Ally, provided that the pricing of the third parties meets certain requirements. Due to the highly competitive nature of the market for financial services, Ally may be unable to extend one or both of these agreements or may face less favorable terms upon extension. If Ally is unable to extend one or both of these agreements or if GM enters a similar agreement with a third party, Ally's retail financing volumes could be materially and adversely impacted.

On October 1, 2010, GM acquired AmeriCredit Corp. (which GM subsequently renamed General Motors Financial Company, Inc.), an independent automotive finance company that focuses on providing leasing and subprime financing options. If GM were to direct substantially more business, including wholesale financing business, to its captive on noncommercial terms thus reducing its reliance on our services over time, it could have a material adverse effect on our profitability and financial condition. In addition, it is possible that GM or other automotive manufacturers could utilize other existing companies to support their financing needs including

Table of Contents

offering products or terms that we would not or could not offer, which could have a material adverse impact on our business and operations. Furthermore, other automotive manufacturers could expand or establish or acquire captive finance companies to support their financing needs thus reducing their need for our services.

A significant adverse change in GM's or Chrysler's business, including significant adverse changes in their respective liquidity position and access to the capital markets; the production or sale of GM or Chrysler vehicles; the quality or resale value of GM or Chrysler vehicles; the use of GM or Chrysler marketing incentives; GM's or Chrysler's relationships with its key suppliers; or GM's or Chrysler's relationship with the United Auto Workers and other labor unions and other factors impacting GM or Chrysler or their respective employees, could have a material adverse effect on our profitability and financial condition. In addition, growth in our International Automotive Finance operations are highly dependent on GM, and therefore any significant change to GM's international business or our relationship with GM may hinder our ability to achieve our stated goal of expanding internationally.

There is no assurance that the global automotive market or GM's and Chrysler's respective share of that market will not suffer downturns in the future. Vehicle sales volume could be further adversely affected by any additional restructuring activities that GM or Chrysler may decide to pursue, if any. Any negative impact could in turn have a material adverse effect on our business, results of operations, and financial position.

Our business requires substantial capital and liquidity, and disruption in our funding sources and access to the capital markets would have a material adverse effect on our liquidity, capital positions, and financial condition.

Our liquidity and the long-term viability of Ally depend on many factors including our ability to successfully raise capital and secure appropriate bank financing. We are currently required to maintain a Total risk-based capital ratio of 15% and a Tier 1 leverage ratio of 15% at Ally Bank. The latter will require that Ally maintain substantial equity funds in Ally Bank and inject substantial additional equity funds into Ally Bank as Ally Bank's assets increase over time.

We have significant maturities of unsecured debt each year. While we have reduced our reliance on unsecured funding, it continues to remain a critical component of our capital structure and financing plans. At March 31, 2011, approximately \$7.1 billion in principal amount of total outstanding consolidated unsecured debt is scheduled to mature in 2011, and approximately \$12.8 billion and \$1.9 billion in principal amount of consolidated unsecured debt is scheduled to mature in 2012 and 2013, respectively, which includes \$7.4 billion in principal amount of debt issued under the FDIC's Temporary Liquidity Guaranty Program that matures in 2012. We also obtain short-term funding from the sale by Ally of floating rate demand notes, all of which the holders may elect to have redeemed by Ally at any time without restriction. At March 31, 2011, a total of \$2.3 billion in principal amount of Demand Notes were outstanding. We also rely on secured funding. At March 31, 2011, approximately \$9.1 billion of outstanding consolidated secured debt is scheduled to mature in 2011, approximately \$9.1 billion is scheduled to mature in 2012, and approximately \$9.6 billion is scheduled to mature in 2013. Furthermore, at March 31, 2011, approximately \$8.9 billion in certificates of deposit at Ally Bank is scheduled to mature in 2011, which is not included in the 2011 unsecured maturities provided above. Additional financing will be required to fund a material portion of the debt maturities over this period. The capital markets continue to be volatile, and Ally's access to the debt markets may be significantly reduced during periods of market stress. In addition, we will continue to have significant original issue discount amortization expenses (OID expense) in the near future, which will adversely affect our net income and resulting capital position. OID expense was \$299 million in the first quarter of 2011, and the scheduled amortization is \$646 million, \$350 million, and \$264 million in 2011, 2012, and 2013, respectively.

As a result of the volatility in the markets and our current unsecured debt ratings, we have increased our reliance on various secured debt markets. Although market conditions have improved, there can be no assurances that this will continue. In addition, we continue to rely on our ability to borrow from other financial institutions, and many of our primary bank facilities are up for renewal on a yearly basis. Any weakness in market conditions

Table of Contents

and a tightening of credit availability could have a negative effect on our ability to refinance these facilities and increase the costs of bank funding. Ally and Ally Bank also continue to access the securitization markets. While markets have begun to stabilize following the recent liquidity crisis, there can be no assurances these sources of liquidity will remain available to us.

Our indebtedness and other obligations are significant and could materially and adversely affect our business.

We have a significant amount of indebtedness. At December 31, 2010, we had approximately \$96.8 billion in principal amount of indebtedness outstanding (including \$42.4 billion in secured indebtedness). Interest expense on our indebtedness constituted approximately 54% of our total financing revenue and other interest income for the year ended December 31, 2010. In addition, during the twelve months ending December 31, 2010, we declared and paid preferred stock dividends of \$1.2 billion in the aggregate.

We have the ability to create additional unsecured indebtedness. If our debt service obligations increase, whether due to the increased cost of existing indebtedness or the incurrence of additional indebtedness, we may be required to dedicate a significant portion of our cash flow from operations to the payment of principal of, and interest on, our indebtedness, which would reduce the funds available for other purposes. Our indebtedness also could limit our ability to withstand competitive pressures and reduce our flexibility in responding to changing business and economic conditions.

The worldwide financial services industry is highly competitive. If we are unable to compete successfully or if there is increased competition in the automotive financing, mortgage, and/or insurance markets or generally in the markets for securitizations or asset sales, our business could be negatively affected.

The markets for automotive and mortgage financing, banking, and insurance are highly competitive. The market for automotive financing has recently grown increasingly more competitive as more consumers are financing their vehicle purchases and as more competitors continue to enter this market as a result of how well automotive finance assets generally performed relative to other asset classes during the recent economic downturn. Our mortgage business and Ally Bank face significant competition from commercial banks, savings institutions, mortgage companies, and other financial institutions. Our insurance business faces significant competition from insurance carriers, reinsurers, third-party administrators, brokers, and other insurance-related companies. Many of our competitors have substantial positions nationally or in the markets in which they operate. Some of our competitors have lower cost structures, substantially lower costs of capital, and are much less reliant on securitization activities, unsecured debt, and other public markets. We face significant competition in most areas including product offerings, rates, pricing and fees, and customer service. If we are unable to compete effectively in the markets in which we operate, our profitability and financial condition could be negatively affected.

The markets for asset and mortgage securitizations and whole-loan sales are competitive, and other issuers and originators could increase the amount of their issuances and sales. In addition, lenders and other investors within those markets often establish limits on their credit exposure to particular issuers, originators, and asset classes, or they may require higher returns to increase the amount of their exposure. Increased issuance by other participants in the market or decisions by investors to limit their credit exposure to (or to require a higher yield for) us or to automotive or mortgage securitizations or whole-loans could negatively affect our ability and that of our subsidiaries to price our securitizations and whole loan sales at attractive rates. The result would be lower proceeds from these activities and lower profits for our subsidiaries and us.

Our allowance for loan losses may not be adequate to cover actual losses, and we may be required to materially increase our allowance, which may adversely affect our capital, financial condition, and results of operations.

We maintain an allowance for loan losses, which is a reserve established through a provision for loan losses charged to expenses, which represents management's best estimate of probable credit losses that have been

Table of Contents

incurred within the existing portfolio of loans, all as described under Note 1 to the Consolidated Financial Statements. The allowance, in the judgment of management, is established to reserve for estimated loan losses and risks inherent in the loan portfolio. The determination of the appropriate level of the allowance for loan losses inherently involves a high degree of subjectivity and requires us to make significant estimates of current credit risks using existing qualitative and quantitative information, all of which may undergo material changes. Changes in economic conditions affecting borrowers, new information regarding existing loans, identification of additional problem loans, and other factors, both within and outside of our control, may require an increase in the allowance for loan losses.

Bank regulatory agencies periodically review our allowance for loan losses, as well as our methodology for calculating our allowance for loan losses and may require an increase in the provision for loan losses or the recognition of additional loan charge-offs, based on judgments different than those of management. An increase in the allowance for loan losses results in a decrease in net income and capital and may have a material adverse effect on our capital, financial condition and results of operations.

Our mortgage subsidiary, ResCap, requires substantial liquidity and capital which could have an adverse effect on our own capital and liquidity position.

ResCap remains heavily reliant on support from us to meet its liquidity and capital requirements, which includes approximately \$2.3 billion in principal amount of indebtedness scheduled to mature in 2011, 2012 and 2013. In addition, ResCap has commitments to lend up to \$2.3 billion under existing home equity lines of credit it has extended to customers. Recent developments in the market for many types of mortgage products (including mortgage-backed securities) have resulted in reduced liquidity for these assets. As a result, a significant portion of ResCap's assets are relatively illiquid. Any negative events with respect to ResCap could serve as a further drain on our financial resources.

Pursuant to an existing contractual arrangement, ResCap is precluded from paying any dividends to us, including any additional capital that we may provide in the future, if any.

ResCap employs various economic hedging strategies to mitigate the interest rate and prepayment risk inherent in many of its assets including its mortgage loans held-for-sale portfolio, MSRs, its portfolio of held-for-investment mortgage loans, and interests from securitizations. A significant portion of ResCap's operating cash at any given time may consist of funds delivered to it as credit support by counterparties to these arrangements. However, interest rate movements during 2010 required ResCap to return a significant amount of such funds. As interest rates change and dependent upon the hedge position, ResCap may need to continue to repay or deliver cash as credit support for these arrangements. If the amount ResCap must repay or deliver is substantial, depending on its liquidity position at that time, ResCap may not be able to pay such amounts as required.

The protracted period of adverse developments in the mortgage finance and credit markets has adversely affected ResCap's business, liquidity, and its capital position and has raised substantial doubt about ResCap's ability to continue as a going concern.

ResCap has been adversely affected by the events and conditions in the broader mortgage banking industry, most severely but not limited to the domestic nonprime and nonconforming and international mortgage loan markets. Fair market valuations of held-for-sale mortgage loans, MSRs, and securitized interests that continue to be held by ResCap and other assets and liabilities ResCap records at fair value may continue to deteriorate if there continues to be weakness in housing prices, increasing mortgage rates, or increased severity of delinquencies and defaults of mortgage loans. These deteriorating factors previously resulted in higher provision for loan losses on ResCap's held-for-investment mortgage loans and real estate-lending portfolios. As a direct result of these events and conditions, ResCap discontinued new originations in all of its international operations and sold its U.K. and European operations and currently generally only purchases or originates mortgage loans that can be sold in the form of securitizations guaranteed by the GSEs. If the GSEs became unable or unwilling to

Table of Contents

purchase mortgage loans from ResCap, it would have a materially adverse impact on ResCap's funding and liquidity and on its ability to originate or purchase new mortgage loans.

ResCap is highly leveraged relative to its cash flow and has previously recognized substantial losses resulting in a significant deterioration in capital. There continues to be a risk that ResCap will not be able to meet its debt service obligations, will default on its financial debt covenants due to insufficient capital or liquidity, and/or be in a negative liquidity position in 2011 or beyond. ResCap remains heavily dependent on Ally for funding and capital support, and there can be no assurance that Ally will continue to provide such support.

In light of ResCap's liquidity and capital needs combined with volatile conditions in the marketplace, there is substantial doubt about ResCap's ability to continue as a going concern. If Ally determines to no longer support ResCap's capital or liquidity needs or if ResCap or Ally are unable to successfully execute effective initiatives, it could have a material adverse effect on ResCap's business, results of operations, and financial position.

There is a significant risk that ResCap will not be able to meet its debt service obligations and other funding obligations in the near term.

ResCap expects its liquidity pressures to continue in 2011. ResCap is highly leveraged relative to its cash flow. At December 31, 2010, ResCap's unrestricted liquidity (cash readily available to cover operating demands from across its business operations) totaled \$444 million with cash and cash equivalents totaling \$672 million.

ResCap expects that additional and continuing liquidity pressure, which is difficult to forecast with precision, will result from the obligation of its subsidiaries to advance delinquent principal, interest, property taxes, casualty insurance premiums, home equity line advances, and certain other amounts with respect to mortgage loans its subsidiaries service that become delinquent. In addition, ResCap continues to be subject to financial covenants requiring it to maintain minimum consolidated tangible net worth and consolidated liquidity balances. ResCap will attempt to meet these and other liquidity and capital demands through a combination of cash flow from operations and financings, potential asset sales, and other various alternatives. To the extent these sources prove insufficient, ResCap will be dependent on continued support from Ally to the extent Ally agrees to provide such support. Ally currently provides funding and capital support to ResCap through various facilities, including a \$500 million unsecured line of credit. The sufficiency of these sources of additional liquidity cannot be assured, and any asset sales, even if they raise sufficient cash to meet ResCap's liquidity needs, may adversely affect its overall profitability and financial condition.

Moreover, even if ResCap is successful in implementing all of the actions described above, its ability to satisfy its liquidity needs and comply with any covenants included in its debt agreements requiring maintenance of minimum cash balances may be affected by additional factors and events (such as interest rate fluctuations and margin calls) that increase ResCap's cash needs making ResCap unable to independently satisfy its near term liquidity requirements.

We have extensive financing and hedging arrangements with ResCap, which could be at risk of nonpayment if ResCap were to file for bankruptcy.

We have secured financing arrangements and secured hedging agreements in place with ResCap. At March 31, 2011, we had \$1.9 billion in secured financing arrangements with ResCap, of which \$1.3 billion in loans was utilized. At March 31, 2011, there was no net exposure under hedging arrangements because the arrangements were fully collateralized. Amounts outstanding under the secured financing and hedging arrangements fluctuate. If ResCap were to file for bankruptcy, ResCap's repayments of its financing facilities, including those with us, will be subject to bankruptcy proceedings and regulations, or ResCap may be unable to repay its financing facilities. In addition, we could be an unsecured creditor of ResCap to the extent that the proceeds from the sale of our collateral are insufficient to repay ResCap's obligations to us. In addition, it is possible that other ResCap creditors would seek to recharacterize our loans to ResCap as equity contributions or

Table of Contents

to seek equitable subordination of our claims so that the claims of other creditors would have priority over our claims. We may also find it advantageous to provide debtor-in-possession financing to ResCap in a bankruptcy proceeding in order to preserve the value of the collateral ResCap has pledged to us. In addition, should ResCap file for bankruptcy, our investment related to ResCap's equity position would likely be reduced to zero, and creditors of ResCap may attempt to assert claims directly against us for payment of their obligations.

We may be required to repurchase mortgage or other loans or indemnify investors if we breach representations and warranties, which could harm our profitability.

When we sell mortgage or other loans (such as retail automotive contracts) through whole-loan sales or securitizations, we are required to make customary representations and warranties about the loans to the purchaser or securitization trust. These representations and warranties relate to, among other things, the ownership of the loan, the validity of the lien securing the loan, the loan's compliance with the criteria for inclusion in the transaction, including compliance with underwriting standards or loan criteria established by the buyer, ability to deliver required documentation, and compliance with applicable laws. Generally, the representations and warranties described above may be enforced at any time over the life of the loan.

We use estimates and assumptions in determining our reserves for representation and warranty exposure. It is difficult to determine the accuracy of our estimates and assumptions, and our actual experience may differ materially from these estimates and assumptions. A material difference between our estimates and assumptions and our actual experience may materially adversely affect our cash flow, profitability and financial condition.

As the mortgage industry continues to experience higher repurchase requirements and additional investors begin to attempt to put back loans, a significant increase in activity beyond that experienced today could have a material adverse effect on our business, results of operations, and financial position.

Certain of our mortgage subsidiaries face potential legal liability resulting from legal claims related to the sale of private-label mortgage-backed securities.

Claims related to private-label mortgage-backed securities (PLS) have been brought under federal and state securities laws and contract laws (among other theories), and it is possible that additional similar claims, including claims from other third-party claimants, will be brought in the future. The claims made to date are similar in some respects to the repurchase demands we have previously disclosed related to alleged breaches of representations and warranties that our mortgage subsidiaries made in connection with mortgage loans they sold or securitized. Further, and as previously disclosed, the Federal Housing Finance Agency (FHFA), as conservator of Fannie Mae and Freddie Mac, announced on July 12, 2010, that it issued 64 subpoenas to various entities seeking documents related to PLS in which Fannie Mae and Freddie Mac had invested. Certain of our mortgage subsidiaries received such subpoenas. In connection with our settlement with Fannie Mae announced on December 23, 2010, the FHFA has agreed to withdraw the subpoenas that relate to Fannie Mae. However, we continue to respond to the subpoenas related to Freddie Mac. The FHFA has indicated that documents provided in response to the subpoenas will enable the FHFA to determine whether they believe issuers of PLS are potentially liable to Freddie Mac for losses they might have suffered. A final outcome in any existing or future legal proceeding related to the foregoing, if unfavorable, could result in additional liability, which could have a material adverse effect on our business, reputation, results of operations, or financial condition.

Changes in existing U.S. government-sponsored mortgage programs, restrictions on our access to such programs, or disruptions in the secondary markets in the United States or in other countries in which we operate could adversely affect our profitability and financial condition.

Our ability to generate revenue through mortgage loan sales to institutional investors in the United States depends to a significant degree on programs administered by the GSEs and others that facilitate the issuance of mortgage-backed securities in the secondary market. These GSEs play a powerful role in the residential mortgage industry and we have significant business relationships with them. Proposals have been enacted in the U.S. Congress and are under consideration by various regulatory authorities that would affect the manner in which

Table of Contents

these GSEs conduct their business to require them to register their stock with the U.S. Securities and Exchange Commission to reduce or limit certain business benefits that they receive from the U.S. government and to limit the size of the mortgage loan portfolios that they may hold. Furthermore, the Obama administration recently released a report that recommended winding down Fannie Mae and Freddie Mac. We do not know what impact, if any, the report would have on the future of the GSEs. In addition, the GSEs themselves have been negatively affected by recent mortgage market conditions, including conditions that have threatened their access to debt financing. Any discontinuation of, or significant reduction in, the operation of these GSEs could adversely affect our revenues and profitability. Also, any significant adverse change in the level of activity in the secondary market including declines in institutional investors' desire to invest in our mortgage products could materially adversely affect our business.

We are exposed to consumer credit risk, which could adversely affect our profitability and financial condition.

We are subject to credit risk resulting from defaults in payment or performance by customers for our contracts and loans, as well as contracts and loans that are securitized and in which we retain a residual interest. For example, the continued decline in the domestic housing market and the increase in unemployment rates resulted in an increase in delinquency rates related to mortgage loans that ResCap and Ally Bank either hold or retain an interest in. Furthermore, a weak economic environment, high unemployment rates, and the continued deterioration of the housing market could exert pressure on our consumer automotive finance customers resulting in higher delinquencies, repossessions, and losses. There can be no assurances that our monitoring of our credit risk as it affects the value of these assets and our efforts to mitigate credit risk through our risk-based pricing, appropriate underwriting policies, and loss-mitigation strategies are, or will be, sufficient to prevent a further adverse effect on our profitability and financial condition. In addition, we have begun to increase our used car and nonprime car financing (nonprime car financing). As we grow our automotive asset portfolio in nonprime car financing loans over time, our credit risk may increase. As part of the underwriting process, we rely heavily upon information supplied by third parties. If any of this information is intentionally or negligently misrepresented and the misrepresentation is not detected before completing the transaction, the credit risk associated with the transaction may be increased.

General business and economic conditions may significantly and adversely affect our revenues, profitability, and financial condition.

Our business and earnings are sensitive to general business and economic conditions in the United States and in the markets in which we operate outside the United States. A downturn in economic conditions resulting in increased short and long term interest rates, inflation, fluctuations in the debt capital markets, unemployment rates, consumer and commercial bankruptcy filings, or a decline in the strength of national and local economies and other factors that negatively affect household incomes could decrease demand for our financing and mortgage products and increase mortgage and financing delinquency and losses on our customer and dealer financing operations. We have been negatively affected due to the recent significant stress in the residential real estate and related capital markets and, in particular, the lack of home price appreciation in many markets in which we lend. Further, a significant and sustained increase in fuel prices could lead to diminished new and used vehicle purchases and negatively affect our automotive finance business.

If the rate of inflation were to increase, or if the debt capital markets or the economies of the United States or our markets outside the United States were to weaken, or if home prices or new and used vehicle purchases experience declines, we could be significantly and adversely affected, and it could become more expensive for us to conduct our business. For example, business and economic conditions that negatively affect household incomes, housing prices, and consumer behavior related to our businesses could decrease (1) the demand for our mortgage loans and new and used vehicle financing and (2) the value of the collateral underlying our portfolio of held-for-investment mortgages and new and used vehicle loans and interests that continue to be held by us, thus further increasing the number of consumers who become delinquent or default on their loans. In addition, the rate

Table of Contents

of delinquencies, foreclosures, and losses on our loans (especially our nonprime mortgage loans) as experienced recently could be higher during more severe economic slowdowns.

Any sustained period of increased delinquencies, foreclosures, or losses could further harm our ability to sell our mortgage and new and used vehicle loans, the prices we receive for our mortgage and new and used vehicle loans, or the value of our portfolio of mortgage and new and used vehicle loans held-for-investment or interests from our securitizations, which could harm our revenues, profitability, and financial condition. Continued adverse business and economic conditions could affect demand for housing, new and used vehicles, the cost of construction, and other related factors that could harm the revenues and profitability of our business.

In addition, our business and earnings are significantly affected by the fiscal and monetary policies of the U.S. government and its agencies and similar governmental authorities in the markets in which we operate outside the United States. We are particularly affected by the policies of the FRB, which regulates the supply of money and credit in the United States. The FRB's policies influence the new and used vehicle financing market and the size of the mortgage origination market, which significantly affects the earnings of our businesses and the earnings of our business capital activities. The FRB's policies also influence the yield on our interest earning assets and the cost of our interest-bearing liabilities. Changes in those policies are beyond our control and difficult to predict and could adversely affect our revenues, profitability, and financial condition.

Acts or threats of terrorism and political or military actions taken by the United States or other governments could adversely affect general economic or industry conditions.

Geopolitical conditions may affect our earnings. Acts or threats of terrorism and political or military actions taken by the United States or other governments in response to terrorism, or similar activity, could adversely affect general economic or industry conditions.

Treasury (or its designee) will continue to own a substantial interest in us following this offering, and its interests may differ from those of our other stockholders.

Immediately following this offering, and the concurrent transactions described under Concurrent Transactions, Treasury will own approximately % of our outstanding shares of common stock (% if the underwriters in the offering of common stock and the underwriters in the concurrent offering of Units exercise their over-allotment options in full), assuming the common stock public offering price is the midpoint of the price range set forth on the cover of this prospectus, and Treasury will own approximately % of the outstanding Units (% if the underwriters in the concurrent offering of Units exercise their over-allotment options in full). Pursuant to the Amended and Restated Governance Agreement dated May 21, 2009, as of the date hereof, Treasury also has the right to appoint six of the eleven members to the our board of directors. As a result of this stock ownership interest and Treasury's right to appoint six directors to our board of directors, Treasury has the ability to exert control, through its power to vote for the election of our directors, over various matters. To the extent Treasury elects to exert such control over us, its interests (as a government entity) may differ from those of our other stockholders and it may influence, through its ability to vote for the election of our directors, matters including:

The selection, tenure and compensation of our management;

Our business strategy and product offerings;

Our relationship with our employees and other constituencies; and

Our financing activities, including the issuance of debt and equity securities.

In particular, Treasury may have a greater interest in promoting U.S. economic growth and jobs than our other stockholders. In the future we may also become subject to new and additional laws and government regulations regarding various aspects of our business as a result of participation in the TARP program and the U.S. government's ownership in our business. These regulations could make it more difficult for us to compete with other companies that are not subject to similar regulations.

Table of Contents

The limitations on compensation imposed on us due to our participation in TARP, including the restrictions placed on our compensation by the Special Master for TARP Executive Compensation, may adversely affect our ability to retain and motivate our executives and employees.

Our performance is dependent on the talent and efforts of our management team and employees. As a result of our participation in TARP, the compensation of certain members of our management team and employees is subject to extensive restrictions under the Emergency Economic Stabilization Act of 2008, as amended by the American Recovery and Reinvestment Act of 2009 (the ARRA), which was signed into law on February 17, 2009, as implemented by the Interim Final Rule issued by Treasury on June 15, 2009 (the IFR). In addition, due to our level of participation in TARP, pursuant to ARRA and the IFR, the Office of the Special Master for TARP Executive Compensation has the authority to further regulate our compensation arrangements with certain of our executives and employees. In addition, we may become subject to further restrictions under any other future legislation or regulation limiting executive compensation. Many of the restrictions are not limited to our senior executives and affect other employees whose contributions to revenue and performance may be significant. These limitations may leave us unable to create a compensation structure that permits us to retain and motivate certain of our executives and employees or to attract new executives or employees, especially if we are competing against institutions that are not subject to the same restrictions. Any such inability could have a material and adverse effect on our business, financial condition, and results of operations.

Our borrowing costs and access to the unsecured debt capital markets depend significantly on our credit ratings.

The cost and availability of unsecured financing are materially affected by our short- and long-term credit ratings. Each of Standard & Poor's Rating Services; Moody's Investors Service, Inc.; Fitch, Inc.; and Dominion Bond Rating Service rates our debt. Our current ratings as assigned by each of the respective rating agencies are below investment grade, which negatively impacts our access to liquidity and increases our borrowing costs in the unsecured market. Ratings reflect the rating agencies' opinions of our financial strength, operating performance, strategic position, and ability to meet our obligations. Future downgrades of our credit ratings would increase borrowing costs and further constrain our access to the unsecured debt markets and, as a result, would negatively affect our business. In addition, downgrades of our credit ratings could increase the possibility of additional terms and conditions being added to any new or replacement financing arrangements as well as impact elements of certain existing secured borrowing arrangements.

Agency ratings are not a recommendation to buy, sell, or hold any security and may be revised or withdrawn at any time by the issuing organization. Each agency's rating should be evaluated independently of any other agency's rating.

Our profitability and financial condition could be materially and adversely affected if the residual value of off-lease vehicles decrease in the future.

Our expectation of the residual value of a vehicle subject to an automotive lease contract is a critical element used to determine the amount of the lease payments under the contract at the time the customer enters into it. As a result, to the extent the actual residual value of the vehicle, as reflected in the sales proceeds received upon remarketing at lease termination, is less than the expected residual value for the vehicle at lease inception, we incur additional depreciation expense and/or a loss on the lease transaction. General economic conditions, the supply of off lease and other vehicles to be sold, new vehicle market prices, perceived vehicle quality, overall price and volatility of gasoline or diesel fuel, among other factors, heavily influence used vehicle prices and thus the actual residual value of off lease vehicles. Consumer confidence levels and the strength of auto manufacturers and dealers can also influence the used vehicle market. For example, during 2008, sharp declines in demand and used vehicle sale prices adversely affected Ally's remarketing proceeds and financial results.

Vehicle brand images, consumer preference, and vehicle manufacturer marketing programs that influence new and used vehicle markets also influence lease residual values. In addition, our ability to efficiently process

Table of Contents

and effectively market off lease vehicles affects the disposal costs and proceeds realized from the vehicle sales. While manufacturers, at times, may provide support for lease residual values including through residual support programs, this support does not in all cases entitle us to full reimbursement for the difference between the remarketing sales proceeds for off lease vehicles and the residual value specified in the lease contract. Differences between the actual residual values realized on leased vehicles and our expectations of such values at contract inception could have a negative impact on our profitability and financial condition.

Current conditions in the residential mortgage market and housing markets may continue to adversely affect Ally's mortgage business.

The residential mortgage market in the United States and other international markets in which our Mortgage operations conduct, or previously conducted, business have experienced a variety of difficulties and changed economic conditions that adversely affected our mortgage business results of operations and financial condition. Delinquencies and losses with respect to our Legacy Portfolio and Other segment's nonprime mortgage loans increased significantly. Housing prices in many parts of the United States, the United Kingdom, and other international markets also declined or stopped appreciating after extended periods of significant appreciation. In addition, the liquidity provided to the mortgage sector had been significantly reduced. This liquidity reduction combined with our decision to reduce our mortgage business' exposure to the nonprime mortgage market caused its nonprime mortgage production to decline. Similar trends have emerged beyond the nonprime sector, especially at the lower end of the prime credit quality scale, and have had a similar effect on our mortgage business' related liquidity needs and businesses. These trends have resulted in significant write-downs to our Legacy Portfolio and Other's held-for-sale mortgage loans and trading securities portfolios and additions to its allowance for loan losses for its held-for-investment mortgage loans and warehouse-lending receivables portfolios. A continuation of these conditions may continue to adversely affect our mortgage business' financial condition and results of operations.

Moreover, the continued deterioration of the U.S. housing market and decline in home prices since 2008 in many U.S. markets, which may continue for the near term, could result in increased delinquencies or defaults on the mortgage assets ResCap owns and services as well as those mortgage assets owned by Ally Bank. Further, loans that our Mortgage operations historically made based on limited credit or income documentation also increase the likelihood of future increases in delinquencies or defaults on mortgage loans. An increase in delinquencies or defaults will result in a higher level of credit losses and credit-related expenses and increased liquidity requirements to fund servicing advances, all of which in turn will reduce revenues and profits of our mortgage business. Higher credit losses and credit-related expenses also could adversely affect our financial condition.

Our lending volume is generally related to the rate of growth in U.S. residential mortgage debt outstanding and the size of the U.S. residential mortgage market. Recently, the rate of growth in total U.S. residential mortgage debt outstanding has slowed sharply in response to the reduced activity in the housing market and national declines in home prices. In addition, most of our mortgage business is currently conducted through the correspondent channel, which relies heavily on the mortgage refinancing business. The volume of mortgage refinancing experienced a significant increase in 2009 and 2010 due to interest rate decreases, but we expect it will experience a significant decrease in 2011 as interest rates increase. A decline in the rate of growth in mortgage debt outstanding reduces the number of mortgage loans available for us to purchase or securitize, which in turn could lead to a reduction in our revenue, profits, and business prospects.

Our earnings may decrease because of increases or decreases in interest rates.

Changes in interest rates could have an adverse impact on our business. For example:

rising interest rates will increase our cost of funds;

rising interest rates may reduce our consumer automotive financing volume by influencing customers to pay cash for, as opposed to financing, vehicle purchases or not to buy new vehicles;

Table of Contents

rising interest rates may negatively impact our ability to remarket off lease vehicles;

rising interest rates generally reduce our residential mortgage loan production as borrowers become less likely to refinance and the costs associated with acquiring a new home become more expensive; and

rising interest rates will generally reduce the value of mortgage and automotive financing loans and contracts and retained interests and fixed income securities held in our investment portfolio.

We are also subject to risks from decreasing interest rates. For example, a significant decrease in interest rates could increase the rate at which mortgages are prepaid, which could require us to write down the value of our retained interests and MSRs. Moreover, if prepayments are greater than expected, the cash we receive over the life of our held-for-investment mortgage loans and our retained interests would be reduced. Higher-than-expected prepayments could also reduce the value of our MSRs and, to the extent the borrower does not refinance with us, the size of our servicing portfolio. Therefore, any such changes in interest rates could harm our revenues, profitability, and financial condition.

Our hedging strategies may not be successful in mitigating our risks associated with changes in interest rates and could affect our profitability and financial condition as could our failure to comply with hedge accounting principles and interpretations.

We employ various economic hedging strategies to mitigate the interest rate and prepayment risk inherent in many of our assets and liabilities. Our hedging strategies rely on assumptions and projections regarding our assets, liabilities, and general market factors. If these assumptions and projections prove to be incorrect or our hedges do not adequately mitigate the impact of changes in interest rates or prepayment speeds, we may experience volatility in our earnings that could adversely affect our profitability and financial condition. In addition, we may not be able to find market participants that are willing to act as our hedging counterparties, which could have an adverse effect on the success of our hedging strategies.

In addition, hedge accounting in accordance with accounting principles generally accepted in the United States of America (GAAP) requires the application of significant subjective judgments to a body of accounting concepts that is complex and for which the interpretations have continued to evolve within the accounting profession and among the standard-setting bodies.

A failure of or interruption in, as well as, security risks of the communications and information systems on which we rely to conduct our business could adversely affect our revenues and profitability.

We rely heavily upon communications and information systems to conduct our business. Any failure or interruption of our information systems or the third-party information systems on which we rely as a result of inadequate or failed processes or systems, human errors, or external events could cause underwriting or other delays and could result in fewer applications being received, slower processing of applications, and reduced efficiency in servicing. In addition, our communication and information systems may present security risks, and could be susceptible to hacking or identity theft. The occurrence of any of these events could have a material adverse effect on our business.

We use estimates and assumptions in determining the fair value of certain of our assets in determining lease residual values and in determining our reserves for insurance losses and loss adjustment expenses. If our estimates or assumptions prove to be incorrect, our cash flow, profitability, financial condition, and business prospects could be materially and adversely affected.

We use estimates and various assumptions in determining the fair value of many of our assets, including certain held-for-investment and held-for-sale loans for which we elected fair value accounting, retained interests

Table of Contents

from securitizations of loans and contracts, MSRs, and other investments, which do not have an established market value or are not publicly traded. We also use estimates and assumptions in determining the residual values of leased vehicles. In addition, we use estimates and assumptions in determining our reserves for insurance losses and loss adjustment expenses which represent the accumulation of estimates for both reported losses and those incurred, but not reported, including claims adjustment expenses relating to direct insurance and assumed reinsurance agreements. For further discussion related to estimates and assumptions, see Management's Discussion and Analysis of Financial Condition and Results of Operations Critical Accounting Estimates. It is difficult to determine the accuracy of our estimates and assumptions, and our actual experience may differ materially from these estimates and assumptions. A material difference between our estimates and assumptions and our actual experience may adversely affect our cash flow, profitability, financial condition, and business prospects.

Our business outside the United States exposes us to additional risks that may cause our revenues and profitability to decline.

We conduct a significant portion of our business outside the United States exposing us to risks such as the following:

multiple foreign regulatory requirements that are subject to change;

differing local product preferences and product requirements;

fluctuations in foreign interest rates;

difficulty in establishing, staffing, and managing foreign operations;

differing labor regulations;

consequences from changes in tax laws;

restrictions on our ability to repatriate profits or transfer cash into or out of foreign countries; and

political and economic instability, natural calamities, war and terrorism.

The effects of these risks may, individually or in the aggregate, adversely affect our revenues and profitability.

Our business could be adversely affected by changes in foreign-currency exchange rates.

We are exposed to risks related to the effects of changes in foreign-currency exchange rates. Changes in currency exchange rates can have a significant impact on our earnings from international operations as a result of foreign-currency-translation adjustments. While we carefully monitor and attempt to manage our exposure to fluctuation in currency exchange rates through foreign-currency hedging activities, these types of changes could have a material adverse effect on our business, results of operations, and financial condition.

Fluctuations in valuation of investment securities or significant fluctuations in investment market prices could negatively affect revenues.

Investment market prices in general are subject to fluctuation. Consequently, the amount realized in the subsequent sale of an investment may significantly differ from the reported market value that could negatively affect our revenues. Additionally, negative fluctuations in the value of available for sale investment securities could result in unrealized losses recorded in equity. Fluctuation in the market price of a security may result from perceived changes in the underlying economic characteristics of the investee, the relative price of alternative investments, national and international events, and general market conditions.

Table of Contents

Significant indemnification payments or contract, lease, or loan repurchase activity of retail contracts or leases or mortgage loans could harm our profitability and financial condition.

We have repurchase obligations in our capacity as servicer in securitizations and whole-loan sales. If a servicer breaches a representation, warranty, or servicing covenant with respect to an automotive receivable or mortgage loan, the servicer may be required by the servicing provisions to repurchase that asset from the purchaser or otherwise compensate one or more classes of investors for losses caused by the breach. If the frequency at which repurchases of assets or other payments occurs increases substantially from its present rate, the result could be a material adverse effect on our financial condition, liquidity, and results of operations.

In connection with its servicing of securitized mortgage loans, ResCap is subject to contractual caps on the percentage of mortgage loans it is permitted to modify in any securitized pool. The financial crisis has resulted in dramatic increases in the volume of delinquent mortgage loans over the past three years. In an effort to achieve the best net present value recovery for the securitization trust, ResCap increased the volume of modifications of distressed mortgage loans to assist homeowners and avoid liquidating properties in a collapsing and opaque housing market. In certain securitization transactions, ResCap has exceeded the applicable contractual modification cap. The securitization documents provide that the contractual caps can be raised or eliminated with the concurrence of each rating agency rating the transaction. For certain transactions with respect to which loan modifications have exceeded the contractual caps, the rating agencies have concurred in raising or eliminating the caps, but they have not consented in connection with other such transactions. ResCap will continue to seek their concurrence in connection with other transactions as it deems appropriate and will suspend modifications in excess of applicable caps pending receipt of such consent or investor approval to amend the servicing contracts. An investor in a specific mortgage security class might claim that modifications in excess of the applicable cap amounted to a material failure of ResCap to perform its servicing obligations and that the investor was damaged as a result. Such claims, if successful, could have a material adverse effect on our financial condition, liquidity, and results of operations.

A loss of contractual servicing rights could have a material adverse effect on our financial condition, liquidity, and results of operations.

We are the servicer for all of the receivables we have acquired or originated and transferred to other parties in securitizations and whole-loan sales of automotive receivables. Our mortgage subsidiaries service the mortgage loans we have securitized, and we service the majority of the mortgage loans we have sold in whole-loan sales. In each case, we are paid a fee for our services, which fees in the aggregate constitute a substantial revenue stream for us. In each case, we are subject to the risk of termination under the circumstances specified in the applicable servicing provisions.

In most securitizations and whole-loan sales, the owner of the receivables or mortgage loans will be entitled to declare a servicer default and terminate the servicer upon the occurrence of specified events. These events typically include a bankruptcy of the servicer, a material failure by the servicer to perform its obligations, and a failure by the servicer to turn over funds on the required basis. The termination of these servicing rights, were it to occur, could have a material adverse effect on our financial condition, liquidity, and results of operations and those of our mortgage subsidiaries.

Changes in accounting standards issued by the Financial Accounting Standards Board (FASB) could adversely affect our reported revenues, profitability, and financial condition.

Our financial statements are subject to the application of GAAP, which are periodically revised and/or expanded. The application of accounting principles is also subject to varying interpretations over time. Accordingly, we are required to adopt new or revised accounting standards or comply with revised interpretations that are issued from time to time by various parties, including accounting standard setters and those who interpret the standards, such as the FASB and the SEC, banking regulators, and our independent registered public accounting firm. Those changes could adversely affect our reported revenues, profitability, or financial condition.

Table of Contents

Recently, the FASB has proposed new financial accounting standards, and has many active projects underway, that could materially affect our reported revenues, profitability, or financial condition. These proposed standards or projects include the potential for significant changes in the accounting for financial instruments (including loans, deposits, and debt) and the accounting for leases, among others. It is possible that any changes, if enacted, could adversely affect our reported revenues, profitability, or financial condition.

The soundness of other financial institutions could adversely affect us.

Financial services institutions are interrelated as a result of trading, clearing, counterparty, or other relationships. We have exposure to different counterparties, and we routinely execute transactions with counterparties in the financial services industry, including brokers and dealers, commercial banks, investment banks, and other institutions. Many of these transactions expose us to credit risk in the event of default of our counterparty.

Our inability to maintain relationships with dealers could have an adverse effect on our business, results of operations, and financial condition.

Our business depends on the continuation of our relationships with our customers, particularly the automotive dealers with whom we do business. If we are not able to maintain existing relationships with key automotive dealers or if we are not able to develop new relationships for any reason, including if we are not able to provide services on a timely basis or offer products that meet the needs of the dealers, our business, results of operations and financial condition could be adversely affected.

Adverse economic conditions or changes in laws in states in which we have customer concentrations may negatively affect our operating results and financial condition.

We are exposed to consumer loan portfolio concentration in California and Texas and consumer mortgage loan concentration in California, Florida, and Michigan. Factors adversely affecting the economies and applicable laws in these states could have an adverse effect on our business, results of operations and financial position.

Risks Related to this Offering and Ownership of Our Common Stock

The sale or availability for sale of substantial amounts of our common stock could cause our common stock price to decline or impair our ability to raise capital.

Sales of a substantial number of shares of our common stock in the public market following this offering, or the perception that large sales could occur, or the settlement of the purchase contracts that are components of the Units being offered in the concurrent offering or the perception that settlement could occur, could depress the market price of our common stock and could impair our ability to raise capital through the sale of equity and equity-related securities. Upon completion of this offering, there will be _____ shares of common stock issued and outstanding, assuming the common stock public offering price is the midpoint of the price range set forth on the cover of this prospectus.

Of the _____ outstanding shares of common stock, the _____ shares of common stock to be sold in this offering (_____ shares if the underwriters in this offering exercise their over-allotment option in full) will be freely tradable without restriction or further registration under the Securities Act, unless those shares are held by any of our _____ affiliates, as that term is defined under Rule 144 of the Securities Act. Following the expiration of any applicable lock-up periods referred to in the section of this prospectus entitled _____ Shares Eligible for Future Sale, the _____ remaining outstanding shares of common stock may be eligible for resale under Rule 144 under the Securities Act subject to applicable restrictions under Rule 144. In addition, pursuant to Exhibit F of the Bylaws of Ally Financial Inc. (the _____ Registration Rights Agreement), we have granted our existing common stockholders

Table of Contents

the right to require us in certain circumstances to file registration statements under the Securities Act covering additional resales of our common stock held by them and the right to participate in other registered offerings in certain circumstances. As restrictions on resale end or if these stockholders exercise their registration rights or otherwise sell their shares, the market price of our common stock could decline.

In particular, following this offering, Treasury or GMAC Common Equity Trust I might sell a large number of the shares of our common stock that they hold. Such sales of a substantial number of shares of our common stock could adversely affect the market price of our common stock.

The number of shares of our common stock Treasury will receive upon conversion of our Series F-2 preferred stock will depend upon the public offering price of the common stock in this offering.

Treasury currently holds 118,750,000 shares of our Fixed Rate Cumulative Mandatorily Convertible Preferred Stock, Series F-2 (the Series F-2 preferred stock), having an aggregate liquidation amount of \$5,937,500,000. In connection with this offering and the concurrent Units offering, Treasury has agreed to convert 58,750,000 shares of Series F-2 preferred stock into a number of shares of our common stock using a conversion price equal to the common stock public offering price. See Concurrent Transactions.

Accordingly, the number of shares of our common stock we will issue to Treasury in connection with the conversion will depend upon the common stock public offering price. For example, if the common stock public offering price is \$ (the midpoint of the price range set forth on the cover of this prospectus), then we will issue shares of our common stock to Treasury upon conversion. By contrast, if the common stock public offering price were to increase by \$1.00, then we will issue shares of our common stock to Treasury upon conversion and if the common stock public offering price were to decrease by \$1.00, then we will issue shares of our common stock to Treasury upon conversion.

We have no current plans to pay dividends on our common stock, and our ability to pay dividends on our common stock may be limited.

We have no current plans to commence payment of a dividend on our common stock. Our payment of dividends on our common stock in the future will be determined by our Board of Directors in its sole discretion and will depend on business conditions, our financial condition, earnings and liquidity, and other factors. Our Series G preferred stock prohibits us from making dividend payments on our common stock before January 1, 2014 and allows dividend payments thereafter only if 1) our senior guaranteed notes issued on December 31, 2008 are rated investment grade and 2) the payment, together with other dividend payments we made since December 31, 2008, is less than 25% of the excess of our cumulative consolidated net income from January 1, 2014 to the most recently ended fiscal quarter for which financial statements are available at the time of such dividend payment. In addition, so long as any share of our Series A preferred stock remains outstanding, no dividend or distribution may be declared or paid on our common stock unless all accrued and unpaid dividends have been paid on such series of preferred stock.

Any indentures and other financing agreements that we enter into in the future may limit our ability to pay cash dividends on our capital stock, including our common stock. In the event that any of our indentures or other financing agreements in the future restrict our ability to pay dividends in cash on our common stock, we may be unable to pay dividends in cash on our common stock unless we can refinance the amounts outstanding under those agreements.

In addition, under Delaware law, our Board of Directors may declare dividends on our capital stock only to the extent of our statutory surplus (which is defined as the amount equal to total assets minus total liabilities, in each case at fair market value, minus statutory capital), or if there is no such surplus, out of our net profits for the then current and/or immediately preceding fiscal year. Further, even if we are permitted under our contractual obligations and Delaware law to pay cash dividends on our common stock, we may not have sufficient cash to pay dividends in cash on our common stock.

Table of Contents

Any plans to commence payment of dividends on our common stock in the future would be subject to the FRB's review and absence of objection. See Business Certain Regulatory Matters Bank Holding Company Status. There is no assurance that, upon the FRB's review of our future capital plans, we would be permitted to make any planned payments of dividends on our common stock.

Anti-takeover provisions contained in our organizational documents and Delaware law could delay or prevent a takeover attempt or change in control of our company, which could adversely affect the price of our common stock.

Our amended and restated certificate of incorporation, our amended and restated bylaws, and Delaware law contain provisions that could have the effect of rendering more difficult or discouraging an acquisition deemed undesirable by our Board of Directors. Our organizational documents include provisions:

Limiting the liability of, and providing indemnification to, our directors and officers; and

Limiting the ability of our stockholders to call and bring business before special meetings.

These provisions, alone or together, could delay hostile takeovers and changes in control of the company or changes in management.

In addition, after the completion of this offering, we will be subject to Section 203 of the General Corporation Law of the State of Delaware (the DGCL), which generally prohibits a corporation from engaging in various business combination transactions with any interested stockholder (generally defined as a stockholder who owns 15% or more of a corporation's voting stock) for a period of three years following the time that such stockholder became an interested stockholder, except under certain circumstances including receipt of prior board approval.

Any provision of our Certificate of Incorporation or our Bylaws or Delaware law that has the effect of delaying or deterring a hostile takeover or change in control could limit the opportunity for our stockholders to receive a premium for their shares of our common stock and could also affect the price that some investors are willing to pay for our common stock.

See Description of Capital Stock for a further discussion of these provisions.

Because there has not been any public market for our common stock, the market price and trading volume of our common stock may be volatile.

You should consider an investment in our common stock to be risky and you should invest in our common stock only if you can withstand a significant loss and wide fluctuations in the market value of your investment. The price of our common stock after the closing of this offering may fluctuate widely, depending upon many factors, including, but not limited to:

the perceived prospects for the auto finance and mortgage industries in general or for our company;

differences between our actual financial and operating results and those expected by investors;

changes in the share price of public companies with which we compete;

news about our new products or services, enhancements, significant contracts, acquisitions or strategic investments;

changes in our capital structure, such as future issuances of securities, repurchases of our common stock or our incurrence of debt;

Table of Contents

changes in general economic or market conditions;

broad market fluctuations;

regulatory actions or changes in applicable laws, rules or regulations;

unfavorable or lack of published research by securities or industry analysts; and

departure of key personnel.

In addition, the market price of our common stock is likely to be influenced by the purchase contracts that are components of the Units being offered in the concurrent offering. For example, the market price of our common stock could become more volatile and could be depressed by investors' anticipation of the potential resale in the market of a substantial number of additional shares of our common stock, including shares of common stock received upon settlement of the purchase contracts that are components of the Units being offered in the concurrent offering, possible sales of our common stock by investors who view the Units as a more attractive means of equity participation in us than owning shares of our common stock; and hedging or arbitrage trading activity that may develop involving the Units and our common stock.

Our common stock may trade at prices significantly below the initial public offering price. In addition, when the market price of a company's common equity drops significantly, stockholders often institute securities class action lawsuits against the company. A lawsuit against us could cause us to incur substantial costs and could divert the time and attention of our management and other resources.

Treasury, which is the selling stockholder, is a federal agency and your ability to bring a claim against Treasury under the federal securities laws may be limited.

The doctrine of sovereign immunity, as limited by the Federal Tort Claims Act (the "FTCA"), provides that claims may not be brought against the United States of America or any agency or instrumentality thereof unless specifically permitted by act of Congress. The FTCA bars claims for fraud or misrepresentation. At least one federal court, in a case involving a federal agency, has held that the United States may assert its sovereign immunity to claims brought under the federal securities laws. In addition, Treasury and its officers, agents, and employees are exempt from liability for any violation or alleged violation of the anti-fraud provisions of Section 10(b) of the Exchange Act by virtue of Section 3(c) thereof. Accordingly, any attempt to assert such a claim against the officers, agents or employees of Treasury for a violation of the Securities Act of 1933, as amended (the "Securities Act") or the Exchange Act resulting from an alleged material misstatement in or material omission from this prospectus or the registration statement of which this prospectus is a part or resulting from any other act or omission in connection with the offering of the common stock by Treasury would likely be barred.

Table of Contents

SPECIAL NOTE REGARDING FORWARD-LOOKING STATEMENTS

We have made statements under the captions Prospectus Summary, Risk Factors, Management's Discussion and Analysis of Financial Condition and Results of Operations, Business and in other sections of this prospectus that may contain certain statements that constitute forward-looking statements within the meaning of the federal securities laws. The words expect, anticipate, estimate, forecast, initiative, objective, plan, project, outlook, priorities, target, intend, evaluate, pursue, seek, may, would, could, should, believe, potential, of these words or similar expressions are intended to identify forward-looking statements. All statements herein, other than statements of historical fact, including without limitation statements about future events and financial performance, are forward-looking statements that involve certain risks and uncertainties. You should not place undue reliance on any forward-looking statement and should consider all uncertainties and risks discussed in this prospectus, including those under the caption Risk Factors. Forward-looking statements apply only as of the date they are made, and Ally undertakes no obligation to update any forward-looking statement to reflect events or circumstances that arise after the date the forward looking statement is made. Factors that could cause our actual results to be materially different from our expectations include, among others, the risk factors set forth herein under the caption Risk Factors, and the following:

Maintaining the mutually beneficial relationship between the company and GM, and the company and Chrysler;

The profitability and financial condition of GM and Chrysler;

Securing low cost funding for us and ResCap;

Our ability to realize the anticipated benefits associated with being a bank holding company, and the increased regulation and restrictions that we are now subject to;

Any impact resulting from delayed foreclosure sales or related matters;

The potential for legal liability resulting from claims related to the sale of private-label mortgage-backed securities;

Risks related to potential repurchase obligations due to alleged breaches of representations and warranties in mortgage securitization transactions;

Changes in U.S. government-sponsored mortgage programs or disruptions in the markets in which our mortgage subsidiaries operate;

Continued challenges in the residential mortgage markets;

The continuing negative impact on ResCap and our mortgage business generally due to the recent decline in the U.S. housing market;

Uncertainty of our ability to enter into transactions or execute strategic alternatives to realize the value of our ResCap operations;

Edgar Filing: Ally Financial Inc. - Form S-1/A

The potential for deterioration in the residual value of off-lease vehicles;

Disruptions in the market in which we fund our operations, with resulting negative impact on our liquidity;

Table of Contents

Changes in our accounting assumptions that may require or that result from changes in the accounting rules or their application, which could result in an impact on earnings;

Changes in the credit ratings of Ally, ResCap, Chrysler, or GM;

Changes in economic conditions, currency exchange rates or political stability in the markets in which we operate; and

Changes in the existing or the adoption of new laws, regulations, policies or other activities of governments, agencies and similar organizations (including as a result of the Dodd-Frank Act).

Table of Contents

USE OF PROCEEDS

The selling stockholder is selling all of the shares of common stock in this offering and Ally will not receive any proceeds from the sale of the shares.

Table of Contents

DIVIDEND POLICY

We have no current plans to commence payment of a dividend on our common stock. Our payment of dividends on our common stock in the future will be determined by our Board of Directors in its sole discretion and will depend on business conditions, our financial condition, earnings and liquidity, and other factors. Our Series G preferred stock prohibits us from making dividend payments on our common stock before January 1, 2014 and allows dividend payments thereafter only if (1) our senior guaranteed notes issued on December 31, 2008 are rated investment grade and (2) the payment, together with other dividend payments we made since December 31, 2008, is less than 25% of the excess of our cumulative consolidated net income from January 1, 2014 to the most recently ended fiscal quarter for which financial statements are available at the time of such dividend payment. In addition, so long as any share of our Series A preferred stock remains outstanding, no dividend or distribution may be declared or paid on our common stock unless all accrued and unpaid dividends have been paid on such series of preferred stock.

Any plans to commence payment of dividends on our common stock in the future would, as announced by the FRB on March 18, 2011, with respect to the completion of its Comprehensive Capital Analysis and Review of the capital plans of the nineteen largest U.S. bank holding companies, including Ally, be subject to the FRB's review and absence of objection. *See* Business Certain Regulatory Matters Bank Holding Company Status .

Table of Contents**CAPITALIZATION**

The following table sets forth our capitalization as of March 31, 2011, actual and pro forma to reflect:

the concurrent conversion and exchange by Treasury of our Series F-2 preferred stock and the concurrent offering by Treasury of our Units (assuming no exercise by the underwriters of that offering of their over-allotment option and that the public offering price of our common stock in this offering will be \$ _____ per share (the midpoint of the price range set forth on the cover of this prospectus) for purposes of calculating the number of shares we issue to Treasury in the conversion), in each case as described under Concurrent Transactions, and

the _____-for-one stock split on shares of our common stock effected on _____, 2011.

This table should be read in conjunction with Selected Consolidated Financial Data and Management's Discussion and Analysis of Financial Condition and Results of Operations and the consolidated financial statements and notes thereto appearing elsewhere in this prospectus.

	As of March 31, 2011	
	Actual	Pro forma
	(\$ in millions)	
Cash and cash equivalents	\$ 12,946	\$
Short-term debt	7,395	
Long-term debt (1)	88,139	
Series A preferred stock, 1,021,764 shares issued and outstanding, actual and pro forma	1,021	
Series F-2 preferred stock, 118,750,000 shares issued and outstanding, actual and 0 shares issued and outstanding, pro forma (2)	5,685	
Series G preferred stock, 2,576,601 shares issued and outstanding, actual and pro forma	234	
Tangible Equity Units, 0 units issued and outstanding, actual and _____ units issued and outstanding, pro forma	0	
Common stock, \$0.01 par value per share, 1,330,970 shares issued and outstanding, actual, _____ shares issued and outstanding pro forma and additional paid-in capital (2)	19,668	
Accumulated deficit	(6,435)	
Accumulated other comprehensive income	234	
Total equity	20,407	
Total capitalization	\$ 115,941	\$

- (1) Since March 31, 2011, we have issued \$1.5 billion in aggregate principal amount of senior guaranteed notes due 2014. See Note 25 to the first quarter 2011 Condensed Consolidated Financial Statements (the "Condensed Consolidated Financial Statements").
- (2) In connection with this offering and the concurrent Units offering, Treasury has agreed to convert (the "conversion") 58,750,000 shares of Series F-2 preferred stock it holds into a number of shares of our common stock based on a conversion price equal to the common stock public offering price.

Because the conversion price in the conversion is based on the common stock public offering price, the number of shares of common stock we will issue to Treasury in connection with the conversion will depend on the common stock public offering price. The higher the common stock public offering price is, the fewer the number of shares of common stock Treasury will receive and the lower the common stock public offering price is, the greater the number of shares of common stock Treasury will receive. The following table sets forth the number of shares we will issue to Treasury in connection with the conversion for each common stock public offering price set forth below:

Public Offering Price	Number of Shares Issued to Treasury
\$	
\$	
\$	
\$	

Table of Contents**SELECTED CONSOLIDATED FINANCIAL DATA**

The following selected consolidated financial data of Ally should be read in conjunction with, and are qualified by reference to, Management's Discussion and Analysis of Financial Condition and Results of Operations and the consolidated financial statements and notes thereto included elsewhere in this prospectus. The consolidated statement of income data for the years ended December 31, 2010, 2009 and 2008 and the consolidated balance sheet data at December 31, 2010 and 2009 are derived from, and qualified by reference to, our audited consolidated financial statements included elsewhere in this prospectus and should be read in conjunction with those consolidated financial statements and notes thereto. The consolidated statement of income data for the years ended December 31, 2007 and 2006 and the consolidated balance sheet data at December 31, 2008, 2007 and 2006 are derived from our audited consolidated financial statements not included in this prospectus. The condensed consolidated statement of income data for the three months ended March 31, 2011 and 2010 and the condensed consolidated balance sheet data at March 31, 2011 and 2010 are derived from, and qualified by reference to, our unaudited condensed consolidated financial statements included elsewhere in this prospectus and should be read in conjunction with those condensed consolidated financial statements and notes thereto. In our opinion, the unaudited financial statements provided herein have been prepared on substantially the same basis as the audited historical consolidated financial statements and reflect all adjustments, consisting of normal recurring adjustments, necessary for a fair presentation of our financial position and results of operations for the periods presented. Our results for the three months ended March 31, 2011 are not necessarily indicative of those to be expected for the fiscal year.

Table of Contents

- (a) Total other revenue for 2008 includes \$12.6 billion of gains on the extinguishment of debt, primarily related to private exchange and cash tender offers settled during the fourth quarter. Total other revenue for 2006 includes realized capital gains of \$1.1 billion primarily related to the rebalancing of our investment portfolio at our Insurance operations.

- (b) Effective June 30, 2009, we converted from a limited liability company into a corporation and, as a result, became subject to corporate U.S. federal, state, and local taxes beginning in the third quarter of 2009. Our conversion to a corporation resulted in a change in tax status and a net deferred tax liability of \$1.2 billion was established through income tax expense. Effective November 28, 2006, we, along with certain of our U.S. subsidiaries, converted to LLCs and became pass-through entities for U.S. federal income tax purposes. Our conversion to an LLC resulted in a change in tax status and the elimination of a \$791 million net deferred tax liability through income tax expense. Refer to Note 24 to the Consolidated Financial Statements for additional information regarding our changes in tax status.

- (c) Core pretax income (loss) is not a financial measure defined by GAAP. We define core pretax income as earnings from continuing operations before income taxes, original issue discount amortization expense primarily associated with our 2008 bond exchange, and the gain on extinguishment of debt related to the 2008 bond exchange. We believe that the presentation of core pretax income (loss) is useful information for the users of our financial statements in understanding the earnings from our core businesses. In addition, core pretax income (loss) is the primary measure that management uses to assess the performance of our operations. We believe that core pretax income (loss) is a useful alternative measure of our ongoing profitability and performance, when viewed in conjunction with GAAP measures. The presentation of this additional information is not a substitute for net income (loss) determined in accordance with GAAP.

- (d) Primarily represents original issue discount amortization expense associated with the 2008 bond exchange, including \$30 million and \$101 million of accelerated amortization that was reported as a loss on extinguishment of debt in the first quarter 2011 Condensed Consolidated Statement of Income and fiscal year 2010 Consolidated Statement of Income, respectively.

- (e) Pro forma to reflect the -for-one stock split on our common stock effected on , 2011.

- (f) Effective June 30, 2009, we converted from a Delaware limited liability company into a Delaware corporation. Each unit of each class of common membership interest issued and outstanding immediately prior to the conversion was converted into an equivalent number of shares of common stock with substantially the same rights and preferences as the common membership interests. Upon conversion, holders of our preferred membership interests also received an equivalent number of shares of preferred stock with substantially the same rights and preferences as the former preferred membership interests.

- (g) The efficiency ratio equals total other noninterest expense divided by total net revenue. The core efficiency ratio equals total other noninterest expense divided by total net revenue excluding original issue discount amortization expense and gain on extinguishment of debt related to the 2008 bond exchange.

- (h) The 2011, 2010 and 2009 ratios were computed based on average assets and average equity using a combination of monthly and daily average methodologies. The 2008, 2007, and 2006 ratios have been computed based on period-end total assets and period-end total equity at December 31, 2008, 2007, and 2006.

- (i) Net interest spread represents the difference between the rate on total interest earning assets and the rate on total interest-bearing liabilities, excluding discontinued operations for the periods shown.

- (j) Not applicable at December 31, 2008, 2007, and 2006, as we did not become a bank holding company until December 24, 2008.

Table of Contents

- (k) Net yield on interest-earning assets represents net financing revenue as a percentage of total interest-earning assets.

- (l) Tier 1 capital generally consists of common equity, minority interests, qualifying preferred stock (including fixed rate cumulative preferred stock issued and sold to Treasury) and purchase contracts (including the purchase contracts that are components of the Units being offered in the concurrent offering) less goodwill and other adjustments.

- (m) Total risk-based capital is the sum of Tier 1 and Tier 2 capital. Tier 2 capital generally consists of preferred stock not qualifying as Tier 1 capital, limited amounts of subordinated debt and the allowance for loan losses, and other adjustments. The amount of Tier 2 capital may not exceed the amount of Tier 1 capital.

- (n) Tier 1 leverage equals Tier 1 capital divided by adjusted average total assets (which reflects adjustments for disallowed goodwill and certain intangible assets). The minimum Tier 1 leverage ratio is 3% or 4% depending on factors specified in the regulations.

- (o) We define Tier 1 common as Tier 1 capital less noncommon elements including qualified perpetual preferred stock, qualifying minority interest in subsidiaries, and qualifying trust preferred securities. However, the purchase contracts that are components of the Units being offered in the concurrent offering are not subtracted from Tier 1 capital to determine Tier 1 common. Ally considers various measures when evaluating capital utilization and adequacy, including the Tier 1 common equity ratio, in addition to capital ratios defined by banking regulators. This calculation is intended to complement the capital ratios defined by banking regulators for both absolute and comparative purposes. Because GAAP does not include capital ratio measures, Ally believes there are no comparable GAAP financial measures to these ratios. Tier 1 common equity is not formally defined by GAAP or codified in the federal banking regulations and, therefore, is considered to be a non-GAAP financial measure. Ally believes the Tier 1 common equity ratio is important because we believe analysts and banking regulators may assess our capital adequacy using this ratio. Additionally, presentation of this measure allows readers to compare certain aspects of our capital adequacy on the same basis to other companies in the industry.

- (p) Risk-weighted assets are defined by regulation and are determined by allocating assets and specified off-balance sheet financial instruments into several broad risk categories.

Table of Contents

**MANAGEMENT'S DISCUSSION AND ANALYSIS
OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS**

Overview

Ally Financial Inc. (formerly GMAC Inc.) is a leading, independent, globally diversified, financial services firm with \$172 billion in assets. Founded in 1919, we are a leading automotive financial services company with over 90 years experience providing a broad array of financial products and services to automotive dealers and their customers. We are also one of the largest residential mortgage companies in the United States. We became a bank holding company on December 24, 2008, under the BHC Act. Our banking subsidiary, Ally Bank, is an indirect wholly owned subsidiary of Ally Financial Inc. and a leading franchise in the growing direct (online and telephonic) banking market, with \$35.4 billion of deposits at March 31, 2011. Ally Bank's assets and operating results are divided between our Global Automotive Services and Mortgage operations based on its underlying business activities.

Our Business

Global Automotive Services

Our Global Automotive Services operations offer a wide range of financial services and insurance products to approximately 20,000 automotive dealers and their retail customers. We have deep dealer relationships that have been built over our 90-year history. Our dealer-focused business model makes us a preferred automotive finance company for many automotive dealers. Our broad set of product offerings and customer-focused marketing programs differentiate Ally in the marketplace and help drive higher product penetration in our dealer relationships. Our ability to generate attractive automotive assets is driven by our global platform and scale, strong relationships with automotive dealers, a full suite of dealer financial products, automotive loan-servicing capabilities, dealer-based incentive programs, and superior customer service.

Our automotive financial services include providing retail installment sales contracts, loans, and leases, offering term loans to dealers, financing dealer floorplans and other lines of credit to dealers, fleet leasing, and vehicle remarketing services. We also offer vehicle service contracts and commercial insurance primarily covering dealers' wholesale vehicle inventories in the United States and internationally. We are a leading provider of automobile vehicle service contracts with mechanical breakdown and maintenance coverages.

We have a longstanding relationship with GM and have developed strong relationships directly with GM-franchised dealers as well as gained extensive operating experience with GM-franchised dealers relative to other automotive finance companies. Since GM sold a majority interest in us in 2006, we have transformed ourselves to a market-driven independent automotive finance company. We continue to be a preferred financing provider to GM on incentivized retail loans. In May 2009, we became the preferred financing provider to Chrysler of incentivized retail loans and we have developed full product relationships, including wholesale financing for many of Chrysler's franchised dealers. We have further diversified our customer base by establishing agreements to become preferred financing providers with other manufacturers including Fiat (for North America), Spyker Cars N.V. (Saab), and Thor Industries (recreational vehicles) in 2010. Currently, a significant portion of our business is originated through GM- and Chrysler-franchised dealers and their customers.

As a result of the recessionary environment and disruption in the capital markets beginning in late 2008, we experienced significantly lower new asset originations in late 2008 and throughout 2009. Additionally, we recognized a \$1.2 billion impairment on our automotive operating lease portfolio in 2008 as a result of significant declines in used vehicle prices and separately realized higher loan loss provisions on our nonprime automotive loan portfolio. As a result, we significantly curtailed our leasing and nonprime automotive loan originations in late 2008, which resulted in a reduction in the size of these existing portfolios during 2009 and 2010.

Table of Contents

During 2009 and much of 2010 our primary emphasis has been on originating loans of higher credit tier borrowers. For this reason, our current operating results continue to reflect higher credit quality, lower yielding loans with lower credit loss experience. Ally however seeks to be an increasingly meaningful lender to a wide spectrum of borrowers. In 2010 we enhanced our risk management practices and efforts on risk-based pricing. We intend to gradually increase volumes in lower credit tiers in 2011. We have also selectively re-entered the leasing market with a more targeted product approach since late 2009. Both of these business opportunities are expected to gradually benefit net interest margin through time by earning higher yields on our assets.

We would also expect net financing revenue to increase and gains on the sale of automotive loans to decrease as we fund a greater proportion of our business through Ally Bank and reduce the amount of whole-loan sales. Additionally, we expect operating lease remarketing gains to diminish as a result of declines in the size of the operating lease portfolio and changes in used vehicle prices. We plan to continue to increase the proportion of our non-GM and Chrysler business, as we focus on maintaining and growing our dealer-customer base through our full suite of products, our dealer relationships, the scale of our platform, and our dealer-based incentive programs. We also expect a greater amount of non-GM and Chrysler consumer applications from dealers as we have recently joined a new credit application network, DealerTrack, which provides access to a more expansive universe of dealers.

Our international automotive lending operations currently originates loans in 15 countries with a focus on operations in five core markets: Germany, the United Kingdom, Brazil, Mexico, and China through our joint venture, GMAC-SAIC.

Our Insurance operations offer both consumer insurance products sold primarily through the automotive dealer channel and commercial insurance products sold to dealers. As part of our focus on offering dealers a broad range of products, we provide vehicle service contracts and mechanical breakdown coverages and underwrite selected commercial insurance coverages in the United States and internationally, primarily covering dealers' wholesale vehicle inventory as well as personal automobile insurance in certain countries outside of the United States. In 2010, we sold our U.S. personal automotive insurance and certain international insurance operations in order to focus on products that support automotive dealers.

Mortgage

We report our Mortgage operations as two distinct segments: (1) Origination and Servicing operations and (2) Legacy Portfolio and Other operations.

Our Origination and Servicing operations is one of the leading originators of conforming and government-insured residential mortgage loans in the United States. We also originate and purchase high-quality government-insured residential mortgage loans in Canada. We are one of the largest residential mortgage loan servicers in the United States, and we provide collateralized lines of credit to other mortgage originators, which we refer to as warehouse lending. We finance our mortgage loan originations primarily in Ally Bank in the United States and in ResMor Trust in Canada. We sell the conforming mortgages we originate or purchase in sales that take the form of securitizations guaranteed by Fannie Mae or Freddie Mac, and we sell government-insured mortgage loans we originate or purchase in securitizations guaranteed by the Government National Mortgage Association (Ginnie Mae) in the United States and sell the insured mortgages we originate in Canada as National Housing Act Mortgage-Backed Securities (NHA-MBS) issued under the Canada Mortgage and Housing Corporation's NHA-MBS program or through whole-loan sales. We also selectively originate prime jumbo mortgage loans in the United States.

Our Legacy Portfolio and Other operations primarily consist of loans originated prior to January 1, 2009, and includes noncore business activities including discontinued operations, portfolios in runoff, and cash held in the ResCap legal entity. These activities, all of which we have discontinued, include, among other things: lending to real estate developers and homebuilders in the United States and the United Kingdom; purchasing, selling and

Table of Contents

securitizing nonconforming residential mortgage loans (with the exception of U.S. prime jumbo mortgage loans) in both the United States and internationally; and certain conforming origination channels closed in 2008 and our mortgage reinsurance business.

We recently re-aligned our business model to focus on our Origination and Servicing operations in response to market developments and based on our strategic review of the mortgage business during 2009 and 2010. We have substantially eliminated nonconforming U.S. and international loan production (with the exception of U.S. prime jumbo mortgage loans) and have focused primarily on correspondent, direct, and warehouse-lending channels as opposed to high cost retail branch offices. Our origination platforms deliver products that have liquid market distribution and sales outlets and are structured to respond quickly as market conditions change. We have also consolidated our servicing operations to streamline our costs and align ourselves to capture future opportunities as mortgage servicing markets reform.

Additionally, we have implemented several strategic initiatives to reduce the risk related to our Legacy Portfolio and Other operations. These actions have included, but are not limited to, restructuring of ResCap debt in 2008, moving mortgage loans held-for-investment to held-for sale in 2009 while recording appropriate market value adjustments, the sale of legacy business platforms including our international operations in the United Kingdom and continental Europe, and other targeted asset dispositions including domestic and international mortgage loans and commercial finance receivables and loans. The consolidated assets of our Legacy Portfolio and Other operations have decreased to \$11.8 billion at March 31, 2011, from \$32.9 billion at December 31, 2008, due to these actions.

Mortgage loan origination volume is driven by the volume of home sales and prevailing interest rates. Our mortgage origination volume in 2010 was primarily driven by refinancings that were influenced by historically low interest rates. Refinancing originations are expected to decline in 2011 as a result of projected rising interest rates. Our focus in 2011 and future periods will be on sustaining our position as a leading originator and servicer of conforming and government-insured residential mortgage loans with limited expansion of our balance sheet while using agency securitizations to provide liquidity and continuing to align our origination and servicing platforms to take advantage of mortgage market reforms as they occur.

Corporate and Other

Corporate and Other includes our Commercial Finance Group, certain equity investments, the amortization of the discount associated with new debt issuances and bond exchanges, most notably from the December 2008 bond exchange, as well as the residual impacts of our corporate funds-transfer-pricing (FTP) and treasury asset liability management (ALM) activities. Refer to the section of this prospectus titled *Critical Accounting Estimates Private Debt Exchange and Cash Tender Offers* for additional information on the December 2008 bond exchange.

Loss from continuing operations before income tax expense for Corporate and Other was \$624 million, \$2.6 billion and \$2.5 billion for the three months ended March 31, 2011 and the years ended December 31, 2010 and 2009, respectively. These losses were primarily driven by net financing losses of \$522 million, \$2.1 billion and \$2.5 billion for the three months ended March 31, 2011 and the years ended December 31, 2010 and 2009, respectively. The net financing losses at Corporate and Other are largely driven by the amortization of original issue discount, primarily related to our 2008 bond exchange, and the net financing loss that results from our FTP methodology.

The net financing revenue of our Global Automotive Services and Mortgage operations includes the results of a FTP process that insulates these operations from interest rate volatility by matching assets and liabilities with similar interest rate sensitivity and maturity characteristics. The FTP process assigns charge rates to the assets and credit rates to the liabilities within our Global Automotive Services and Mortgage operations, respectively, based on anticipated maturity and a benchmark index plus an assumed credit spread. The assumed credit spread represents the cost of funds for each asset class based on a blend of funding channels available to the enterprise,

Table of Contents

including unsecured and secured capital markets, private funding facilities, and deposits. In addition, a risk-based methodology, which incorporates each operations credit, market, and operational risk components is used to allocate equity to these operations.

The negative residual impact of our FTP methodology that is realized in Corporate and Other primarily represents the cost of certain funding and liquidity management activities not allocated through our FTP methodology. Most notably, the net interest expense of maintaining our liquidity and investment portfolios, the value of which was approximately \$21.9 billion at March 31, 2011, is maintained in Corporate and Other and not allocated to the businesses through our FTP methodology. In addition, other unassigned funding costs, including the results of our ALM activities, are also not allocated to the businesses.

The following tables summarize the components of net financing losses for Corporate and Other reflecting bond exchange and conversion to a bank holding company in December 2008.

	Three months ended March 31,	
	2011	2010
	(\$ in millions)	
Original issue discount amortization (a)	\$ (299)	\$ (296)
Net impact of the FTP methodology		
Cost of carry on the cash and investment portfolio	(157)	(113)
ALM/FTP cost of funds mismatch	(110)	(72)
Net other unallocated interest income (costs)	15	(52)
Total net impact of the FTP methodology	(252)	(237)
Commercial Finance Group net financing revenue and other	29	23
Total net financing losses for Corporate and Other	\$ (522)	\$ (510)

- (a) The original issue discount associated with our 2008 bond exchange and cash tender offers in 2008 was \$286 million during both the three months ended March 31, 2011 and 2010. The remaining amount is attributable to new debt issuance discount amortization.

	Year ended December 31,	
	2010	2009
	(\$ in millions)	
Original issue discount amortization (a)	\$ (1,204)	\$ (1,143)
Net impact of the FTP methodology		
Cost of carry on the cash and investment portfolio	(504)	(543)
ALM / FTP cost of funds mismatch	(366)	(600)
Other unallocated interest costs	(130)	(294)
Total net impact of the FTP methodology	(1,000)	(1,437)
Commercial Finance Group net financing revenue and other	105	119
Total net financing losses for Corporate and Other	\$ (2,099)	\$ (2,461)

- (a) The original issue discount associated with our 2008 bond exchange and cash tender offers in 2008 was \$1,158 million and \$1,108 million during the year ended December 31, 2010 and 2009, respectively.

Table of Contents

The following table presents the amortization of the original issue discount.

	Year ended December 31,	
	2010	2009
	(\$ in millions)	
Original issue discount		
Outstanding balance	\$ 3,169	\$ 4,373
Total amortization (a)	1,204	1,143
2008 bond exchange amortization (b)	1,158	1,108

(a) Amortization is included as interest on long-term debt on the Consolidated Statement of Income.

(b) 2008 bond exchange amortization is included in total amortization.

The amortization of original issue discount will decline from what was recognized during 2010 and 2009. The following table presents the scheduled amortization of the original issue discount at March 31, 2011.

	Year ended December 31,					2016 and	Total
	2011(a)	2012	2013	2014	2015	thereafter	
	(\$ in millions)					(a)	
Original issue discount							
Outstanding balance	\$ 2,194	\$ 1,844	\$ 1,580	\$ 1,390	\$ 1,334	\$	
Total amortization (b)	646	350	264	190	56	1,334	\$ 2,840
2008 bond exchange amortization (c)	620	320	241	166	43	1,178	2,568

(a) Represents the remaining future original issue discount amortization expense to be taken during 2011.

(b) The maximum annual scheduled amortization for any individual year is \$158 million in 2030 of which \$152 million is related to 2008 bond exchange amortization.

(c) The amortization is included as interest on long-term debt on the Condensed Consolidated Statement of Income.

(d) 2008 bond exchange amortization is included in total amortization.

Ally Bank

Ally Bank, our direct banking platform, provides our Automotive Finance and Mortgage operations with a stable, low-cost funding source and facilitates prudent asset growth. Our focus is on building a stable deposit base driven by our compelling brand and strong value proposition. Ally Bank raises deposits directly from customers through a direct banking channel via the internet and by telephone. We have become a leader in direct banking with our recognizable brand, accessible 24/7 customer service, and competitively priced products.

Ally Bank offers a full spectrum of deposit product offerings including certificates of deposits, savings accounts, money market accounts, and an online checking product. In addition, brokered deposits are obtained through third-party intermediaries. At March 31, 2011, Ally Bank had \$35.4 billion of deposits, including \$23.5 billion of retail deposits. The growth of our retail deposit base from \$7.2 billion at the end of 2008 to \$23.5 billion at the end of the first quarter 2011 has enabled us to reduce our cost of funds during that period. The growth in deposits is primarily

Edgar Filing: Ally Financial Inc. - Form S-1/A

attributable to our retail deposits while our brokered deposits have remained at historical levels. Strong retention rates, reflecting the strength of the franchise, have materially contributed to our growth in retail deposits.

Growth in retail deposits is key to further reducing our cost of funds and decreasing our reliance on the capital markets and other sources of funding. We believe deposits provide a more stable, lower-cost source of

Table of Contents

funds than other funding sources by being less sensitive to interest rate changes, market volatility or changes in our credit ratings. As we have been successful in establishing Ally Bank and growing our retail deposit portfolio over the past two years, we have been able to also reduce rates on new retail deposits without having to offer any significant rate reductions against the broader market.

Ally Bank's objective is to reduce its overall cost of funds and build a stable deposit base. We believe that pricing is a key lever to acquiring new accounts but does not alone assure growth of our deposit base. Rather, a combination of consistently competitive rates, effective marketing and a quality customer experience are all critical ingredients for successful growth. Ally Bank does not aim to price at the top of the market or to drive deposit pricing across the industry. However, it is our strategy to consistently price products competitively without including promotional pricing or teaser rates.

We expect to continue to lower our cost of funds over time and diversify our overall funding as our deposit base grows.

Funding and Liquidity

Our funding strategy largely focuses on the development of diversified funding sources across a global investor base to meet all of our liquidity needs throughout different market cycles, including periods of financial distress. Prior to becoming a bank holding company, our funding largely came from the following sources.

Public unsecured debt capital markets;

Asset-backed securitizations, both public and private;

Asset sales;

Committed and uncommitted credit facilities; and

Brokered and retail deposits

The diversity of our funding sources enhances funding flexibility, limits dependence on any one source and results in a more cost-effective strategy over the long term. Throughout 2008 and 2009, the global credit markets experienced extraordinary levels of volatility and stress. As a result, access by market participants, including Ally, to the capital markets was significantly constrained and borrowing costs increased as a result. In response, numerous government programs were established aimed at improving the liquidity position of U.S. financial services firms. After converting to a bank holding company in late 2008, we participated in several of the programs, including Temporary Liquidity Guaranty Program (TLGP), Term Auction Facility (TAF), Commercial Paper Funding Facility (CPFF), and Term Asset-Backed Securities Loan Facility (TALF). Our diversification strategy and participation in these programs helped us to maintain sufficient liquidity during this period of financial distress to meet all maturing unsecured debt obligations and to continue our lending and operating activities.

During 2009, as part of our overall transformation from an independent financial services company to a bank holding company, we began to take actions to further diversify and develop more stable funding sources and, in particular, embark on initiatives to grow our consumer deposit-taking capabilities. In addition, we began distinguishing our liquidity management strategies between bank funding and nonbank funding.

Today, maximizing bank funding continues to be the cornerstone of our long-term liquidity strategy. We have made significant progress in migrating assets to Ally Bank and growing our retail deposit base since becoming a bank holding company. Deposits provide a low-cost source of funds that are less sensitive to interest rate changes, market volatility or changes in our credit ratings than other funding sources. At December 31, 2010, deposit liabilities totaled \$39.0 billion, which constituted 29% of our total funding. This compares to just 14% at December 31, 2008.

Table of Contents

In addition to building a larger deposit base, we continue to remain active in the securitization markets to finance our Ally Bank automotive loan portfolios. During 2010, we issued \$8.1 billion in secured funding backed by retail and dealer floorplan automotive loans of Ally Bank. While deposits provide for a more stable funding base, our efficiencies in securitizations and improving capital market conditions have resulted in a reduction in the cost of funds achieved through secured funding transactions, making them a very attractive source of funding. For retail loans and leases, the primary reason why securitizations are an attractive funding source is that the term structure locks in funding for a specified pool of loans and leases for the life of the underlying asset. Once a pool of retail automobile loans are selected and placed into a securitization, the underlying assets and corresponding debt amortize simultaneously resulting in committed funding for the life of the asset. Performance of the underlying assets will have no bearing on any incremental liquidity risk. We manage the execution risk arising from secured funding by maintaining a diverse investor base and maintaining committed secured facilities.

As we have shifted our focus to migrating assets to Ally Bank and growing our bank funding capabilities, our reliance on parent company liquidity has similarly been reduced. Funding sources at the parent company generally consist of longer-term unsecured debt, private credit facilities, and asset-backed securitizations notably to fund our automotive loan portfolios in Canada, Europe, and Latin America. Historically, the unsecured term debt markets were a key source of long-term financing for us. However, given our ratings profile and market environment, during the second half of 2007 and throughout 2008 and 2009 we chose not to target transactions in the unsecured term debt markets due to the expected high market rates and alternative funding sources. In 2010, we re-entered the unsecured long-term debt capital markets and issued over \$8.0 billion of unsecured debt globally through several issuances. At December 31, 2010, we had \$9.5 billion and \$12.6 billion of unsecured long-term debt with maturities in 2011 and 2012, respectively. To fund these maturities, we will continue to follow this approach of being aggressive, yet opportunistic, in the unsecured debt markets to prefund upcoming debt maturities.

The strategies described above have resulted in us achieving and maintaining a conservative liquidity position. Total available liquidity at the parent company was \$23.8 billion, and Ally Bank had \$7.5 billion of available liquidity at December 31, 2010. At the same time, these strategies have also resulted in a cost of funds improvement of approximately 100 basis points since becoming a bank holding company. Looking forward, as we seek to enhance our liquidity and capital position and improve credit ratings, we expect that our cost of funds will continue to improve over time.

Credit Strategy

We are a full spectrum automotive finance lender with most of our automotive loan originations underwritten within the prime-lending markets and with a plan to prudently expand further into nonprime markets. Our Mortgage Origination and Servicing operations now primarily focus on selling conforming mortgages we originate or purchase in sales that take the form of securitizations guaranteed by Fannie Mae or Freddie Mac and sells government-insured mortgage loans we originate or purchase in securitizations guaranteed by Ginnie Mae in the United States (collectively, the Government-sponsored Enterprises or GSEs).

During 2010, we noted significant improvement in our credit risk profile as a result of proactive credit risk initiatives that were taken in 2009 and 2010 and improvement in the overall economic environment. Risk initiatives undertaken included repositioning the loan portfolios from higher-risk, higher-yielding legacy assets to higher quality and lower risk assets. In addition, strategies were implemented to focus primarily on prime-lending markets, participation in mortgage loan modification programs, implementing tighter underwriting standards, and enhanced collection efforts. We discontinued and sold multiple nonstrategic operations, mainly in our international businesses, including our commercial construction portfolio. Within our Automotive Finance operations, we exited certain underperforming dealer relationships, curtailed leasing activities, and curtailed the origination of nonprime retail financings. Within our Mortgage operations, we reclassified certain legacy mortgage loans from held-for-investment to held-for-sale, which resulted in negative valuation adjustments.

Table of Contents

During the year ended December 31, 2010, the credit performance of our portfolios improved overall as we benefited from lower frequency and severity of losses within our automotive portfolios and stabilization of asset quality trends within our mortgage portfolios. Nonperforming loans and charge-offs declined, and our provision for loan losses decreased from \$5.6 billion in 2009 to \$442 million in 2010.

We continue to see signs of economic stabilization in the housing and vehicle markets, although our total credit portfolio will continue to be affected by sustained levels of high unemployment and continued uncertainty in the housing market.

Representation and Warranty Obligations

We have made significant progress in mitigating repurchase reserve exposure through both settlements with key counterparties and continuing to maintain an appropriate reserve for representation and warranty obligations. We have settled with both Fannie Mae and Freddie Mac, which resolve material repurchase obligations with each counterparty. We also settled with five counterparties related to whole-loan sales. Our representation and warranty expense decreased to \$670 million in 2010 from \$1.5 billion in 2009. The repurchase reserve of \$830 million at March 31, 2011, primarily represents exposure not related to the GSEs.

Outstanding claims during 2010 have remained relatively constant with GSE claim activity declining and monoline and other claims activity increasing. Typically, the obligations under representation and warranties provided to monolines and other whole-loan investors are not as comprehensive as those to the GSEs. As such, we believe a significant portion of these claims are ineligible for a repurchase.

Our Mortgage operations have issued private-label mortgage-backed securities infrequently since 2007. This exposure is notably different from GSE exposure since representation and warranties are not as comprehensive, collateral is segregated into different programs based on risk, and many transactions include overcollateralization. We have a limited amount of repurchase experience with these investors, and therefore it is currently not possible to estimate future obligations and any related range of loss.

Bank Holding Company and Treasury Investments

During 2008, and continuing into 2009, the credit, capital, and mortgage markets became increasingly disrupted. This disruption led to severe reductions in liquidity and adversely affected our capital position. As a result, Ally sought approval to become a bank holding company to obtain access to capital at a lower cost to remain competitive in our markets. On December 24, 2008, Ally and IB Finance Holding Company, LLC, the holding company of Ally Bank, were each approved as bank holding companies under the Bank Holding Company Act of 1956. At the same time, Ally Bank converted from a Utah-chartered industrial bank into a Utah-chartered commercial nonmember bank. Ally Bank as an FDIC-insured depository institution, is subject to the supervision and examination of the FDIC and the Utah DFI. Ally Financial Inc. is subject to the supervision and examination of the FRB. We are required to comply with regulatory risk-based and leverage capital requirements, as well as various safety and soundness standards established by the FRB, and are subject to certain statutory restrictions concerning the types of assets or securities that we may own and the activities in which we may engage.

As one of the conditions to becoming a bank holding company, the FRB required several actions of Ally, including meeting a minimum amount of regulatory capital. In order to meet this requirement, Ally took several actions, the most significant of which were the execution of private debt exchanges and cash tender offers to purchase and/or exchange certain of our and our subsidiaries outstanding notes held by eligible holders for a combination of cash, newly issued notes of Ally, and in the case of certain of the offers, preferred stock. The transactions resulted in an extinguishment of all notes tendered or exchanged into the offers and the new notes and stock were recorded at fair value on the issue date. This resulted in a pretax gain on extinguishment of debt of \$11.5 billion and a corresponding increase to our capital levels. The gain included a \$5.4 billion original issue

Table of Contents

discount representing the difference between the face value and the fair value of the new notes and is being amortized as interest expense over the term of the new notes. In addition, Treasury made an initial investment in Ally on December 29, 2008, pursuant to the Troubled Asset Relief Program (TARP) with a \$5.0 billion purchase of Ally perpetual preferred stock with a total liquidation preference of \$5.25 billion (Perpetual Preferred Stock).

On May 21, 2009, Treasury made a second investment of \$7.5 billion in exchange for Ally s mandatorily convertible preferred stock with a total liquidation preference of approximately \$7.9 billion (the Old MCP), which included a \$4 billion investment to support our agreement with Chrysler to provide automotive financing to Chrysler dealers and customers and a \$3.5 billion investment related to the FRB s Supervisory Capital Assessment Program requirements. Shortly after this second investment, on May 29, 2009, Treasury acquired 35.36% of Ally common stock when it exercised its right to acquire 190,921 shares of Ally common stock from General Motors Corporation (GM) as repayment for an \$884 million loan that Treasury had previously provided to GM.

On December 30, 2009, we entered into another series of transactions with Treasury under TARP, pursuant to which Treasury (i) converted 60 million shares of Old MCP (with a total liquidation preference of \$3.0 billion) into 259,200 shares of additional Ally common stock; (ii) invested \$1.25 billion in new Ally mandatorily convertible preferred stock with a total liquidation preference of approximately \$1.3 billion (the Series F-2 preferred stock); and (iii) invested \$2.54 billion in new trust preferred securities with a total liquidation preference of approximately \$2.7 billion (the Trust Preferred Securities). At this time, Treasury also exchanged all of its Perpetual Preferred Stock and remaining Old MCP (following the conversion of Old MCP described above) into additional Series F-2 preferred stock.

On December 30, 2010, Treasury converted 110 million shares of Series F-2 preferred stock (with a total liquidation preference of approximately \$5.5 billion) into 531,850 shares of additional Ally common stock. This action represented a critical step in our path to fully repay Treasury s investments. The conversion reduced dividends by approximately \$500 million per year, assisted with capital preservation, and is expected to improve profitability with a lower cost of funds.

On March 1, 2011, the Declaration of Trust and certain other documents related to the Trust Preferred Securities were amended, and all of the outstanding Trust Preferred Securities held by Treasury were designated 8.125% Fixed Rate / Floating Rate Trust Preferred Securities, Series 2. On March 7, 2011, Treasury sold 100% of the Series 2 Trust Preferred Securities in an offering registered with the SEC. Ally did not receive any proceeds from the sale.

Following the transactions described above, Treasury currently holds 73.8% of Ally common stock and approximately \$5.9 billion in aggregate liquidation preference amount of Series F-2 preferred stock. As a result of its current common stock investment, Treasury is entitled to appoint six of the eleven total members of the Ally Board of Directors.

The following table summarizes the investments in Ally made by Treasury in 2008 and 2009.

	Investment type	Date	Cash investment	Warrants (\$ in millions)	Total
TARP	Preferred equity	December 29, 2008	\$ 5,000	\$ 250	\$ 5,250
GM Loan Conversion (a)	Common equity	May 21, 2009	884		884
SCAP 1	Preferred equity (MCP)	May 21, 2009	7,500	375	7,875
SCAP 2	Preferred equity (MCP)	December 30, 2009	1,250	63	1,313
SCAP 2	Trust preferred securities	December 30, 2009	2,540	127	2,667
Total cash investments			\$ 17,174	\$ 815	\$ 17,989

Table of Contents

(a) In January 2009, Treasury loaned \$884 million to General Motors. In connection with that loan, Treasury acquired rights to exchange that loan for 190,921 shares. In May 2009, Treasury exercised that right.

The following table summarizes Treasury's investment in Ally at March 31, 2011 not reflecting the conversion or the exchange. See Concurrent Transactions.

	March 31, 2011	
	Book Value	Face Value
	(\$ in millions)	
MCP (a)	\$ 5,685	\$ 5,938
Common equity (b)		73.8%

(a) This reflects the exchange of face value of \$5.25 billion of Perpetual Preferred Stock to MCP in December 2009 and the conversion of face value of \$3.0 billion and \$5.5 billion of MCP to common equity in December 2009 and December 2010, respectively.

(b) Represents the current common equity ownership position by Treasury.

Discontinued Operations

During 2009 and 2010, we committed to sell certain operations of our International Automotive Finance operations, Insurance operations, Mortgage Legacy Portfolio and Other operations, and Commercial Finance Group, and have classified certain of these operations as discontinued. For all periods presented, all of the operating results for these operations have been removed from continuing operations. Refer to Note 2 to the Consolidated Financial Statements for more details.

Primary Lines of Business

Our primary lines of business are Global Automotive Services and Mortgage. The following tables summarize the operating results excluding discontinued operations of each line of business. Operating results for each of the lines of business are more fully described in the sections of this Management's Discussion and Analysis of Financial Condition and Results of Operations that follow.

First Quarter 2011 Compared to First Quarter 2010

We earned net income from continuing operations of \$170 million for the three months ended March 31, 2011, compared to \$151 million for the three months ended March 31, 2010. Continuing operations for the three months ended March 31, 2011, were favorably impacted by an increase in net servicing income, net derivative activity, our continued focus on cost reduction efforts, which resulted in lower operating expenses, and an income tax benefit resulting from the reversal of the valuation allowance in Canada. This favorability was partially offset by lower operating lease revenue (along with the related depreciation expense) related to a decline in the size of our operating lease portfolio and lower gains on the sale of loans related to the expiration of our automotive forward flow agreements during the fourth quarter of 2010.

Total financing revenue and other interest income decreased by 19% for the three months ended March 31, 2011, compared to the same period in 2010. Operating lease revenue (along with the related depreciation expense) at our Automotive Finance operations decreased as a result of a decline in the size of our operating lease portfolio due to our decision in late 2008 to significantly curtail leasing. The decrease at our

Table of Contents

Mortgage Legacy Portfolio and Other operations resulted from a decline in average asset levels due to loan sales, the deconsolidation of previous on-balance sheet securitizations, and portfolio runoff.

Net servicing income was \$284 million for the three months ended March 31, 2011, compared to \$252 million for the same period in 2010. The increase was primarily due to favorable net valuations related to market movement, partially offset by a fair value adjustment due to higher expected future servicing and foreclosure costs and a decline in production due to lower mortgage industry volume.

Insurance premiums and service revenue earned decreased 7% for the three months ended March 31, 2011, compared to the same period in 2010, primarily due to the sale of certain international insurance operations during the fourth quarter of 2010.

Gain on mortgage and automotive loans decreased 66% for the three months ended March 31, 2011, compared to the same period in 2010. The decrease was primarily due to the expiration of our automotive forward flow agreements during the fourth quarter of 2010 and lower gains from whole-loan mortgage sales and mortgage loan liquidations in 2011.

We incurred a loss on extinguishment of debt of \$39 million for the three months ended March 31, 2011, compared to \$118 million for the three months ended March 31, 2010. The activity in both periods related to the extinguishment of certain Ally debt, which for the three months ended March 31, 2011, included \$30 million of accelerated amortization of original issue discount.

Other gain on investments was \$84 million for the three months ended March 31, 2011, compared to \$143 million for the three months ended March 31, 2010. The decrease during the three months ended March 31, 2011, was primarily due to lower realized investment gains on our Insurance operations investment portfolio.

Other income, net of losses, increased \$134 million for the three months ended March 31, 2011, compared to the same period in 2010. The increase was primarily due to net derivative activity and a lower fair value option election adjustment at our Legacy Portfolio and Other operations due to lower assets resulting from deconsolidations and better performance of the remaining asset portfolio.

The provision for loan losses was \$113 million for the three months ended March 31, 2011, compared to \$144 million for the same period in 2010. The decrease for the three months ended March 31, 2011, was primarily due to improved credit quality and asset mix including the continued runoff and improved loss performance of our Nuvel nonprime automotive financing portfolio.

Insurance losses and loss adjustment expenses decreased 12% for the three months ended March 31, 2011, compared to the same period in 2010, primarily due to the sale of certain international insurance operations during the fourth quarter of 2010 and lower losses in our U.S. dealership-related products.

Other operating expenses decreased 12% for the three months ended March 31, 2011, compared to the same period in 2010. The improvement was primarily due to lower restructuring expense, lower mortgage representation and warranty reserve expense, lower insurance commissions, lower technology and communications expense, lower vehicle remarketing and repossession expense, and lower full-service leasing vehicle maintenance costs for the three months ended March 31, 2011. The favorable impacts during the three months ended March 31, 2011, were partially offset by increased advertising and marketing expense.

We recognized a consolidated income tax benefit from continuing operations of \$68 million for the three months ended March 31, 2011, compared to income tax expense of \$36 million for the same period in 2010. The decrease in income tax expense was primarily related to the income tax benefit resulting from a \$101 million reversal of valuation allowance in Canada related to modifications to the legal structure of our Canadian operations.

Table of Contents

The following table summarizes our consolidated operating results excluding discontinued operations for the periods shown. Refer to the sections of this prospectus entitled Global Automotive Services and Mortgage for a more complete discussion of operating results by line of business.

2010 Compared to 2009

We earned net income from continuing operations of \$1.0 billion for the year ended December 31, 2010, compared to a net loss from continuing operations of \$7.0 billion for the year ended December 31, 2009. Continuing operations for the year ended December 31, 2010, were favorably impacted by our strategic mortgage actions taken during 2009 to stabilize our consumer and commercial portfolios that resulted in a significant decrease in our provision for loan losses and our continued focus on cost reduction resulted in lower operating expenses. The year ended December 31, 2010, was also favorably impacted by an increase in net servicing income; higher gains on the sale of loans; and lower impairments on equity investments, lot option projects, model homes, and foreclosed real estate.

Total financing revenue and other interest income decreased by 13% for the year ended December 31, 2010, compared to 2009. Our International Automotive Finance operations experienced lower consumer and commercial asset levels due to adverse business conditions in Europe and the runoff of wind-down portfolios in certain international countries as we shifted our focus to five core international markets:

Germany, the United

Table of Contents

Kingdom, Brazil, Mexico, and China through our joint venture. A decline in asset levels in our Mortgage Legacy Portfolio and Other operations resulted from asset sales and portfolio runoff. Operating lease revenue (along with the related depreciation expense) at our North American Automotive Finance operations decreased as a result of a net decline in the size of our operating lease portfolio due to our decision in late 2008 to significantly curtail leasing. The decrease was partially offset by lease portfolio remarketing gains due to strong used vehicle prices and higher remarketing volume as well as an increase in consumer and commercial financing revenue related to the addition of non-GM automotive financing business.

Interest expense decreased 6% for the year ended December 31, 2010, compared to 2009. Interest expense decreased as a result of a change in our funding mix with an increased amount of funding coming from deposit liabilities as well as favorable trends in the securitization markets.

Net servicing income was \$1.2 billion for the year ended December 31, 2010, compared to \$445 million in 2009. The increase was primarily due to projected cash flow improvements related to slower prepayment speeds as well as higher Home Affordable Modification Program (HAMP) loss mitigation incentive fees compared to prior year unfavorable hedge performance with respect to mortgage servicing rights.

Insurance premiums and service revenue earned decreased 6% for the year ended December 31, 2010, compared to 2009. The decrease was primarily driven by lower earnings from our U.S. extended service contracts due to a decrease in domestic written premiums related to lower vehicle sales volume during the period 2007 to 2009. The decrease was partially offset by increased volume in our international operations.

Gain on mortgage and automotive loans increased 56% for the year ended December 31, 2010, compared to 2009. The increase was primarily related to unfavorable valuation adjustments taken during 2009 on our held-for-sale automobile loan portfolios, higher gains on mortgage whole-loan sales and securitizations in 2010 compared to 2009, higher gains on mortgage loan resolutions in 2010, and the recognition of a gain on the deconsolidation of an on-balance sheet securitization. The increase was partially offset by gains on the sale of wholesale automotive financing receivables during 2009 as there were no off-balance sheet wholesale funding transactions during 2010.

We incurred a loss on extinguishment of debt of \$123 million for the year ended December 31, 2010, compared to a gain of \$665 million for the year ended December 31, 2009. The activity in all periods related to the extinguishment of certain Ally debt that for the year ended December 31, 2010, included \$101 million of accelerated amortization of original issue discount.

Other gain on investments was \$505 million for the year ended December 31, 2010, compared to \$166 million in 2009. The increase was primarily due to higher realized investment gains driven by market repositioning and the sale of our tax-exempt securities portfolio. During the year ended December 31, 2009, we recognized other-than-temporary impairments of \$55 million.

Other income, net of losses, increased 81% for the year ended December 31, 2010, compared to 2009. The improvement in 2010 was primarily related to the absence of loan origination income deferral due to the fair value option election for our held-for-sale loans during the third quarter of 2009 and the impact of significant impairments recognized in 2009. In 2009, we recorded impairments on equity investments, lot option projects, model homes, and an \$87 million fair value impairment upon the transfer of our resort finance portfolio from held-for-sale to held-for-investment. Also in 2010, we recognized gains on the sale of foreclosed real estate compared to losses and impairments in 2009.

The provision for loan losses was \$442 million for the year ended December 31, 2010, compared to \$5.6 billion in 2009. The Mortgage Legacy Portfolio and Other provision decreased \$4.1 billion from the prior year due to an improved asset mix as a result of the strategic actions taken during the fourth quarter of 2009 to write-down and reclassify certain legacy mortgage loans from held-to-investment to held-for-sale. The decrease in provision was also driven by the continued runoff and improved loss performance of our Nuvel nonprime automotive financing portfolio.

Table of Contents

Insurance losses and loss adjustment expenses decreased 16% for the year ended December 31, 2010, compared to 2009. The decrease was primarily driven by lower loss experience in our Mortgage Legacy Portfolio and Other operations captive reinsurance portfolio.

Other operating expenses decreased 28% for the year ended December 31, 2010, compared to 2009, reflecting our continued expense reduction efforts. The improvements were primarily due to lower mortgage representation and warranty expenses, reduced professional service expenses, lower technology and communications expense, lower full-service leasing vehicle maintenance costs, lower insurance commissions, and lower advertising and marketing expenses for the year ended December 31, 2010.

Management focuses on efficiency ratio as an important measure to assess the performance of our operations. Throughout 2010, expense reduction was a strategic objective of management as we continued to focus on increasing operational efficiency by decreasing expenses as well as streamlining our operations through the disposition or wind-down of non-core businesses and related legacy infrastructure. We remain focused on efforts to control costs to support overall profitability while still investing in key customer-facing areas critical to our core franchises. Additionally, advertising and marketing expenses decreased in 2010 as compared to 2009. These reductions largely reflect higher expenses incurred in 2009 to establish the new Ally brand. Going-forward our advertising and marketing dollars will primarily be directed to customers and initiatives that we believe support our growth strategy.

We recognized consolidated income tax expense of \$153 million for the year ended December 31, 2010, compared to \$74 million in 2009. The increase was driven primarily by foreign taxes on higher pretax profits not subject to valuation allowance and U.S. state income taxes in states where profitable subsidiaries are required to file separately from other loss companies in the group or where the use of prior year losses is restricted.

2009 Compared to 2008

We reported a net loss from continuing operations of \$7.0 billion for the year ended December 31, 2009, compared to net income from continuing operations of \$4.9 billion for the year ended December 31, 2008. The 2009 results from continuing operations were adversely affected by strategic actions taken in the fourth quarter of 2009 to sell certain legacy mortgage assets resulting in the reclassification of these loans from held-for-investment to held-for-sale. These actions resulted in provision for loan losses of \$2.0 billion. Additionally, 2009 was adversely impacted by higher mortgage representation and warranty expense of \$1.2 billion compared to 2008 and a \$1.2 billion income tax expense impact related to our conversion from a limited liability company to a corporation effective June 30, 2009. The income tax expense related to our conversion was largely offset by income tax benefits resulting from the operating loss recognized in 2009. These adverse impacts were partially offset by a strengthening used vehicle market, which resulted in higher remarketing proceeds that favorably impacted depreciation expense and reduced the provision for loan losses as a result of higher collateral values that reduced our loss severity. Additionally, 2008 results benefited from an \$11.5 billion pretax gain from the extinguishment of debt related to our bond exchange.

Total financing revenue and other interest income decreased by 27% for the year ended December 31, 2009, compared to 2008, primarily due to lower asset levels at our Global Automotive Services and Mortgage Legacy Portfolio and Other operations as a result of lower asset origination levels and portfolio runoff. Consumer and operating lease revenue (along with the related depreciation expense) at our North American Automotive Finance operations and International Automotive Finance operations decreased as a result of our strategic decisions in late 2008 to significantly curtail leasing due to credit market dislocation, negative economic conditions, low consumer confidence, and decreasing lease residual values. In addition, our International Automotive Finance operations consumer and commercial asset levels were lower due to operations winding down in several countries. Declines in Legacy Mortgage asset levels resulted from asset sales and portfolio runoff. Additionally, we recognized lower yields on consumer mortgage loans as a result of higher delinquencies, increases in nonaccrual levels, and the impact of lower rates on adjustable-rate mortgage loans.

Interest expense was \$7.3 billion for the year ended December 31, 2009, compared to \$10.4 billion in 2008. Interest expense decreased at our North American Automotive Finance operations and at our International

Table of Contents

Automotive Finance operations primarily due to reductions in the average balance of interest-bearing liabilities consistent with lower average asset levels. The decrease at Mortgage was primarily due to a lower average cost of funds due to declining interest rates and lower average borrowings related to a reduction in asset levels and extinguishments of ResCap debt. These decreases were partially offset by the amortization of the original issue discount associated with the December 2008 bond exchange.

No impairment of investment in operating leases was recognized in 2009. In 2008 we recognized a \$1.2 billion impairment on our investment in operating leases that resulted from significant declines in used vehicle demand and used vehicle sales prices. The impairment consisted of \$1.2 billion within our North American Automotive Finance operations and \$26 million within our International Automotive Finance operations.

Net servicing income decreased 70% during the year ended December 31, 2009, compared to 2008. The decrease was mainly due to unfavorable mortgage servicing valuations reflecting a projected reduction in cash flows and increased prepayment assumptions as a result of lower market interest rates compared to favorable valuation adjustments due to decreasing prepayment trends in 2008. Additionally, we recognized unfavorable hedge performance due to changes in the spreads between our servicing assets and the derivative hedge portfolio, which is used to manage interest rate risk. Our ability to fully hedge interest rate risk and volatility was restricted in the latter half of 2008 and during the year ended December 31, 2009, by the limited availability of willing counterparties to enter into forward agreements and liquidity constraints hindering our ability to take positions in the option markets. Servicing fees also declined as a result of portfolio runoff and sales of certain servicing assets during the second half of 2008.

Insurance premiums and service revenue earned decreased 27% during the year ended December 31, 2009, compared to 2008. The decrease was primarily due to the sale of our U.S. reinsurance agency in November 2008. Additionally, lower earned premiums on extended service contracts written in current and prior periods, lower dealer inventory levels, and decreases within our international operations contributed to a decrease in revenue. These decreases were primarily due to the overall negative economic environment and lower dealership volumes.

The net gain on mortgage and automotive loans was \$811 million for the year ended December 31, 2009, compared to \$159 million for the year ended December 31, 2008. The net improvement in 2009 was primarily due to realized losses related to Legacy Mortgage asset sales in 2008. Additionally, we recognized improved margins on sales of loans in 2009 as a result of our focus on originating conforming and government-insured residential mortgage loans. Partially offsetting the improvement was decreased gains from lower whole-loan sales volumes and securitization transactions in our North American Finance Automotive operations due to a shift in our strategy to a deposit-based funding model through Ally Bank with less reliance on the securitization markets.

Gain on extinguishment of debt totaled \$665 million for the year ended December 31, 2009, compared to \$12.6 billion for the year ended December 31, 2008. The 2009 results were primarily driven by the recognition of a \$634 million gain on the extinguishment of certain debt as part of privately negotiated transactions. The 2008 results were impacted largely by the fourth quarter private debt exchange and cash tender offers that generated pretax gains of \$11.5 billion. The 2008 results also include additional debt extinguishment gains of \$1.1 billion recognized by Mortgage offset by losses of \$23 million recognized by Corporate and Other due to the repurchase and extinguishment of ResCap debt.

Other net gain on investments was \$166 million for the year ended December 31, 2009, compared to a net loss of \$378 million in 2008. The increase was primarily related to the write-off of certain investment securities in 2008 and lower other-than-temporary impairments on investment securities in 2009.

Other income, net of losses, increased \$1.7 billion for the year ended December 31, 2009, compared to 2008. The improvement was primarily related to the absence of certain 2008 events including a \$570 million full equity-method investment impairment due to the decline in credit market conditions and unfavorable asset

Table of Contents

revaluations, significant equity investment losses, and the recognition of a \$255 million impairment on the assets of our resort finance business in 2008. Additionally, the improvement was driven by lower losses on the sale of foreclosed real estate due to lower volume and severity and lower impairments on lot option projects and model homes, and lower losses on residual interests due to the write-down of home equity residuals in 2008. Partially offsetting these increases was a decrease in real estate brokerage fee income due to the 2008 sale of our business that provided brokerage and relocation services.

The provision for loan losses was \$5.6 billion for the year ended December 31, 2009, compared to \$3.1 billion in 2008. The Mortgage provision for loan losses increased \$2.6 billion for the year ended December 31, 2009. The increase was primarily due to strategic actions in the fourth quarter of 2009 as a result of the decision to sell certain legacy mortgage assets resulting in the reclassification of these assets from held-for-investment to held-for-sale and consequently the recognition of \$2.0 billion in expense. Additionally, we recognized higher provision for loan losses on the Ally Bank held-for-investment portfolio due to higher projected delinquencies and loss severities, as well as regulatory input. The increase was partially offset by lower provision for loan losses as a result of lower mortgage loan and lending receivables balances in 2009 compared to 2008. Our North American Automotive Finance operations provision decreased \$587 million for the year ended December 31, 2009, primarily due to a decrease in the provision for retail balloon contracts as a result of a strengthening used vehicle market in the United States and portfolio runoff as this product was curtailed in September 2008. Our Commercial Finance Group's provision increased \$481 million for the year ended December 31, 2009, due to an increase in provision for loan losses within the resort finance business and in our European operations.

Compensation and benefits expense decreased 18% for the year ended December 31, 2009, compared to 2008, primarily due to lower employee headcount.

Insurance losses and loss adjustment expenses decreased 26% for the year ended December 31, 2009, compared to 2008. The decrease was primarily driven by the sale of our U.S. reinsurance agency and lower loss experience in our dealership-related products as a result of lower volumes.

Other operating expenses increased 4% for the year ended December 31, 2009, compared to 2008. Other operating expenses were largely impacted by higher mortgage representation and warranty expense of \$1.2 billion in 2009 compared to 2008. Excluding the effects of mortgage representation and warranty expense, other operating expenses decreased 22% in 2009 compared to 2008. Contributing to this improvement was a decrease in insurance commissions, reduced restructuring expenses, reduced professional service expenses, and lower vehicle remarketing and repossession expenses.

We recognized consolidated tax expense of \$74 million for the year ended December 31, 2009, compared to a tax benefit of \$136 million in 2008. The increase in tax expense was primarily due to our conversion from a limited liability company to a corporation effective June 30, 2009, which resulted in the recognition of a \$1.2 billion net deferred tax liability through income tax expense. Additionally, we recognized higher valuation allowances in 2009 compared to 2008. Partially offsetting the increase in expense was higher tax benefits on operating losses as a result of our conversion to a corporation. Refer to Note 24 to the Consolidated Financial Statements for additional information regarding our change in tax status.

Global Automotive Services

Results for Global Automotive Services are presented by reportable segment, which includes our North American Automotive Finance operations, our International Automotive Finance operations, and our Insurance operations.

Automotive Finance Operations

Our North American Automotive Finance operations and our International Automotive Finance operations (Automotive Finance operations) provide automotive financing services to consumers and to automotive dealers.

Table of Contents

For consumers, we offer retail automobile financing and leasing for new and used vehicles, and through our commercial automotive financing operations, we fund dealer purchases of new and used vehicles through wholesale or floorplan financing.

Consumer Automotive Financing

Historically, we have provided two basic types of financing for new and used vehicles: retail automobile contracts (retail contracts) and automobile lease contracts. In most cases, we purchase retail contracts and leases for new and used vehicles from dealers when the vehicles are purchased or leased by consumers. In a number of markets outside the United States, we are a direct lender to the consumer. Our consumer automotive financing operations generate revenue through finance charges or lease payments and fees paid by customers on the retail contracts and leases. In connection with lease contracts, we also recognize a gain or loss on the remarketing of the vehicle at the end of the lease.

The amount we pay a dealer for a retail contract is based on the negotiated purchase price of the vehicle and any other products, such as service contracts, less any vehicle trade-in value and any down payment from the consumer. Under the retail contract, the consumer is obligated to make payments in an amount equal to the purchase price of the vehicle (less any trade-in or down payment) plus finance charges at a rate negotiated between the consumer and the dealer. In addition, the consumer is also responsible for charges related to past-due payments. When we purchase the contract, it is normal business practice for the dealer to retain some portion of the finance charge as income for the dealership. Our agreements with dealers place a limit on the amount of the finance charges they are entitled to retain. Although we do not own the vehicles we finance through retail contracts, we hold a perfected security interest in those vehicles. Due to funding challenges related to the general economic recession at the time, in January 2009, we ceased originating financing volume through Nuvel, which had focused on nonprime automotive financing through GM-affiliated dealers.

With respect to consumer leasing, we purchase leases (and the associated vehicles) from dealerships. The purchase price of consumer leases is based on the negotiated price for the vehicle less any vehicle trade-in and any down payment from the consumer. Under the lease, the consumer is obligated to make payments in amounts equal to the amount by which the negotiated purchase price of the vehicle (less any trade-in value or down payment) exceeds the projected residual value (including residual support) of the vehicle at lease termination, plus lease charges. The consumer is also generally responsible for charges related to past due payments, excess mileage, and excessive wear and tear. When the lease contract is entered into, we estimate the residual value of the leased vehicle at lease termination. We generally base our determination of the projected residual values on a guide published by an independent publisher of vehicle residual values, which is stated as a percentage of the manufacturer's suggested retail price. These projected values may be upwardly adjusted as a marketing incentive if the manufacturer or Ally considers above-market residual support necessary to encourage consumers to lease vehicles.

Consumer automobile leases are operating leases; therefore, credit losses on the operating lease portfolio are not as significant as losses on retail contracts because lease losses are limited to payments and assessed fees. Since some of these fees are not assessed until the vehicle is returned, these losses on the lease portfolio are correlated with lease termination volume. North American operating lease accounts past due over 30 days represented 2.36% and 3.12% of the total portfolio at December 31, 2010 and 2009, respectively. In late 2008, we significantly curtailed leasing due to distress in the capital markets and the significant decline in used vehicle prices that resulted in increased residual losses. We selectively re-entered the leasing market in 2009; however, originations are significantly lower than in past years. We did not receive residual support from GM or Chrysler on lease originations in 2010 or 2009.

Our standard U.S. leasing plan, SmartLease, requires a monthly payment by the consumer. We also offer an alternative leasing plan, SmartLease Plus, that requires one up-front payment of all lease amounts at the time the consumer takes possession of the vehicle. In addition to the SmartLease plans, prior to September 2008, we offered the SmartBuy plan through U.S. dealerships to consumers. SmartBuy combined certain features of a lease

Table of Contents

contract with those of a traditional retail contract. Under the SmartBuy plan, the customer pays regular monthly payments that are generally lower than would otherwise be owed under a traditional retail contract. At the end of the contract, the customer has several options including keeping the vehicle by making a final balloon payment, refinancing the balloon payment, or returning the vehicle to us and paying a disposal fee plus any applicable excess wear and excess mileage charges. Unlike a lease contract, during the course of a SmartBuy contract, the customer owns the vehicle, and we hold a perfected security interest in the vehicle. Effective September 2008, we ceased new originations of the SmartBuy product.

With respect to all financed vehicles, whether subject to a retail contract or a lease contract, we require that property damage insurance be obtained by the consumer. In addition, for lease contracts, we require that bodily injury and comprehensive and collision insurance be obtained by the consumer.

The consumer financing revenue of our Automotive Finance operations totaled \$3.4 billion, \$3.1 billion, and \$4.0 billion in 2010, 2009, and 2008, respectively.

Consumer Automotive Financing Volume

The following tables summarize our new and used vehicle consumer financing volume and our share of consumer sales.

	Ally consumer automotive financing volume Three months ended March 31,		% Share of consumer sales Three months ended March 31,	
	2011 (units in thousands)	2010	2011 (%)	2010

Edgar Filing: Ally Financial Inc. - Form S-1/A

- (a) Excludes financing volume and GM consumer sales of discontinued operations as well as GM consumer sales for other countries in which GM operates and in which we have no financing volume.

- (b) Includes all vehicles financed through our joint venture GMAC-SAIC. We own 40% of GMAC-SAIC alongside Shanghai Automotive Group Finance Company LTD and Shanghai General Motors Corporation LTD.

Table of Contents

Growth in consumer automotive financing volume and related penetration levels in 2011 compared to 2010 were primarily driven by the expansion of our retail originations platform, strong dealer relationships, and higher industry sales. Our first quarter 2011 penetration results reflect a high level of GM incentive programs that were available in the last two quarters. We expect that GM will moderate their use of incentives and, therefore, our penetration rate will not remain at this level in future quarters.

	Ally consumer automotive financing volume			% Share of consumer sales

(b) Includes vehicles financed through our joint venture GMAC-SAIC. We own 40% of GMAC-SAIC alongside Shanghai Automotive Group Finance Company LTD and Shanghai General Motors Corporation LTD.

Growth in consumer automotive financing volume and related penetration levels in 2010 compared to 2009 were primarily driven by higher industry sales, growth of our leasing business, and full implementation of Ally Dealer Rewards. Volume and penetration levels were also favorably impacted by the addition of Chrysler consumer automotive financing.

Manufacturer Marketing Incentives

Edgar Filing: Ally Financial Inc. - Form S-1/A

GM and Chrysler may elect to sponsor incentive programs (on both retail contracts and leases) by supporting finance rates below the standard market rates at which we purchase retail contracts. These marketing incentives are also referred to as rate support or subvention. When GM or Chrysler utilize these marketing incentives, we are compensated at contract inception for the present value of the difference between the customer rate and our standard rates, which we defer and recognize as a yield adjustment over the life of the contract.

GM historically provided incentives, referred to as residual support, on leases, although we currently do not have residual support arrangements on 2010 or 2009 originated leases. As previously mentioned, under these

Table of Contents

programs, we bear a portion of the risk of loss to the extent the value of a leased vehicle upon remarketing is below the projected residual value of the vehicle at the time the lease contract is signed. However, these projected values may be upwardly adjusted as a marketing incentive if GM considers an above-market residual appropriate to encourage consumers to lease vehicles. Residual support by GM results in a lower monthly lease payment for the consumer. GM reimburses us to the extent remarketing sales proceeds are less than the residual value set forth in the lease contract and no greater than our standard residual rates.

In addition to the residual support arrangement for leases originated prior to 2009, GM shares in residual risk on a significant portion of off-lease vehicles sold at auction. Specifically, we and GM share a portion of the loss when resale proceeds fall below the standard residual values on vehicles sold at auction. GM reimburses us for a portion of the difference to the extent that proceeds are lower than our standard residual values (limited to a cap).

Under what we refer to as GM-sponsored pull-ahead programs, consumers may be encouraged to terminate leases early in conjunction with the acquisition of a new GM vehicle. As part of these programs, we waive all or a portion of the customer's remaining payment obligation. Under most programs, GM compensates us for a portion of the foregone revenue from the waived payments partially offset to the extent that our remarketing sales proceeds are higher than otherwise would be realized if the vehicle had been remarketed at lease contract maturity.

On November 30, 2006, and in connection with the sale by GM of a 51% interest in Ally, GM and Ally entered into several service agreements that codified the mutually beneficial historic relationship between the companies. One such agreement was the United States Consumer Financing Services Agreement (the Financing Services Agreement). The Financing Services Agreement, among other things, provided that subject to certain conditions and limitations, whenever GM offers vehicle financing and leasing incentives to customers (e.g., lower interest rates than market rates), it would do so exclusively through Ally. This requirement was effective through November 2016, and in consideration for this, Ally paid to GM an annual exclusivity fee and was required to meet certain targets with respect to consumer retail and lease financings of new GM vehicles.

Effective December 29, 2008, and in connection with the approval of our application to become a bank holding company, GM and Ally modified certain terms and conditions of the Financing Services Agreement. Certain of these amendments include the following: (1) for a two-year period, GM can offer retail financing incentive programs through a third-party financing source under certain specified circumstances and, in some cases, subject to the limitation that pricing offered by the third party meets certain restrictions, and after the two-year period GM can offer any such incentive programs on a graduated basis through third parties on a nonexclusive, side-by-side basis with Ally, provided that the pricing of such third parties meets certain requirements; (2) Ally will have no obligation to provide operating lease financing products; and (3) Ally will have no targets against which it could be assessed penalties. The modified Financing Services Agreement will expire on December 31, 2013. After December 31, 2013, GM will have the right to offer retail financing incentive programs through any third-party financing source, including Ally, without restrictions or limitations. A primary objective of the Financing Services Agreement continues to be supporting distribution and marketing of GM products.

Table of Contents

The following table shows GM subvented retail and lease volume acquired by Ally.

	Three months ended		Year ended December 31,		
	2011	March 31, 2010	2010	2009	2008
GM subvented volume in North America					
As % of GM North American new retail and lease volume acquired by Ally	46%	52%	51%	69%	84%
As % of total North American new and used retail and lease volume acquired by Ally	25%	27%	27%	48%	59%
GM subvented International (excl. China) volume (a)					
As % of GM International new retail and lease volume acquired by Ally	61%	52%	55%	67%	48%
As % of total International new and used retail and lease volume acquired by Ally	54%	47%	50%	61%	37%
GM subvented volume in China (b)					
As % of GM China new retail and lease volume acquired by Ally	1%	1%	14%	1%	2%
As % of total China new and used retail and lease volume acquired by Ally	1%	%	8%	1%	2%

(a) Represents subvention for continuing operations only.

(b) Through our joint venture GMAC-SAIC. We own 40% of GMAC-SAIC alongside Shanghai Automotive Group Finance Company LTD and Shanghai General Motors Corporation LTD.

The following table shows Chrysler subvented retail and lease volume acquired by Ally.

	Three months ended		Year ended December 31,		
	2011	March 31, 2010	2010	2009	2008
Chrysler subvented volume North America					
As % of Chrysler North American new retail and lease volume acquired by Ally	48%	53%	57%	39%	0%
As % of total North American new and used retail and lease volume acquired by Ally	7%	12%	14%	4%	0%

Retail contracts acquired that included rate and residual subvention from GM and Chrysler decreased as a percentage of total new retail contracts acquired due to reductions in our standard rates, which allowed us to be more competitive with market pricing, coupled with a change in incentivized programs.

On August 6, 2010, we entered into an agreement with Chrysler LLC (Chrysler) to be the preferred provider of financial services for Chrysler vehicles. The agreement replaced and superseded the legally binding term sheet that we entered into with Chrysler on April 30, 2009, which contemplated this definitive agreement. We provide retail financing to Chrysler dealers and customers as we deem appropriate according to our credit policies and in our sole discretion. Chrysler is obligated to provide us with certain exclusivity privileges including the use of Ally for designated minimum threshold percentages of certain of Chrysler's retail financing subvention programs. The agreement extends through April 30, 2013, with automatic one-year renewals unless either we or Chrysler provides sufficient notice of nonrenewal.

Servicing

We have historically serviced all retail contracts and leases we retained on-balance sheet. We historically sold a portion of the retail contracts we originated and retained the right to service and earn a servicing fee for

Table of Contents

our servicing functions. Ally Servicing Inc., a wholly owned subsidiary, performs most servicing activities for U.S. retail contracts and consumer automobile leases.

Servicing activities consist largely of collecting and processing customer payments, responding to customer inquiries such as requests for payoff quotes, processing customer requests for account revisions (such as payment extensions and rewrites), maintaining a perfected security interest in the financed vehicle, monitoring vehicle insurance coverage, and disposing of off-lease vehicles. Servicing activities are generally consistent for our Automotive Finance operations; however, certain practices may be influenced by local laws and regulations.

Our U.S. customers have the option to receive monthly billing statements or coupon books, to remit payment by mail or through electronic fund transfers, or to establish online web-based account administration through the Ally Account Center. Customer payments are processed by regional third-party processing centers that electronically transfer payment data to customers' accounts.

Servicing activities also include initiating contact with customers who fail to comply with the terms of the retail contract or lease. These contacts begin with a reminder notice when the account is 5 to 15 days past due. Telephone contact typically begins when the account is 1 to 15 days past due. Accounts that become 20 to 30 days past due are transferred to special collection teams that track accounts more closely. The nature and timing of these activities depend on the repayment risk of the account.

During the collection process, we may offer a payment extension to a customer experiencing temporary financial difficulty. A payment extension enables the customer to delay monthly payments for 30, 60, or 90 days, thereby deferring the maturity date of the contract by the period of delay. Extensions granted to a customer typically do not exceed 90 days in the aggregate during any 12-month period or 180 days in aggregate over the life of the contract. If the customer's financial difficulty is not temporary and management believes the customer could continue to make payments at a lower payment amount, we may offer to rewrite the remaining obligation, extending the term and lowering the monthly payment obligation. In those cases, the principal balance generally remains unchanged while the interest rate charged to the customer generally increases. Extension and rewrite collection techniques help mitigate financial loss in those cases where management believes the customer will recover from financial difficulty and resume regularly scheduled payments or can fulfill the obligation with lower payments over a longer period. Before offering an extension or rewrite, collection personnel evaluate and take into account the capacity of the customer to meet the revised payment terms. Although the granting of an extension could delay the eventual charge-off of an account, typically we are able to repossess and sell the related collateral, thereby mitigating the loss. As an indication of the effectiveness of our consumer credit practices, of the total amount outstanding in the U. S. traditional retail portfolio at December 31, 2007, only 8.2% of the extended or rewritten accounts were subsequently charged off through December 31, 2010. A three-year period was utilized for this analysis as this approximates the weighted average remaining term of the portfolio. At December 31, 2010, 7.4% of the total amount outstanding in the servicing portfolio had been granted an extension or was rewritten.

Subject to legal considerations, in the United States we normally begin repossession activity once an account becomes greater than 60-days past due. Repossession may occur earlier if management determines the customer is unwilling to pay, the vehicle is in danger of being damaged or hidden, or the customer voluntarily surrenders the vehicle. Approved third-party repossession firms handle repossessions. Normally the customer is given a period of time to redeem the vehicle by paying off the account or bringing the account current. If the vehicle is not redeemed, it is sold at auction. If the proceeds do not cover the unpaid balance, including unpaid financing charges and allowable expenses, the resulting deficiency is charged off. Asset recovery centers pursue collections on accounts that have been charged off, including those accounts where the vehicle was repossessed, and skip accounts where the vehicle cannot be located.

At December 31, 2010 and 2009, our total consumer automotive serviced portfolio was \$78.8 billion and \$82.6 billion, respectively, compared to our consumer automotive on-balance sheet portfolio of \$60.4 billion at

Table of Contents

December 31, 2010, and our managed portfolio of \$63.1 billion at December 31, 2009. Prior to 2010, our managed portfolio included retail receivables held on-balance sheet for investment and receivables securitized and sold that we continued to service and in which we had a continuing involvement (i.e., in which we retain an interest or risk of loss in the underlying receivables). On January 1, 2010, we adopted ASU 2009-17, *Improvements to Financial Reporting by Enterprises Involved with Variable Interest Entities* (ASU 2009-17), that resulted in the consolidation of all receivables that had been considered off-balance sheet and included as part of our managed portfolio becoming on-balance sheet assets.

Remarketing and Sales of Leased Vehicles

When we acquire a consumer lease, we assume ownership of the vehicle from the dealer. Neither the consumer nor the dealer is responsible for the value of the vehicle at the time of lease termination. When vehicles are not purchased by customers or the receiving dealer at lease termination, the vehicle is returned to us for remarketing through an auction. We generally bear the risk of loss to the extent the value of a leased vehicle upon remarketing is below the projected residual value determined at the time the lease contract is signed. GM may share this risk with us for certain leased GM vehicles, as described previously under Manufacturer Marketing Incentives.

The following table summarizes our methods of vehicle sales in the United States at lease termination stated as a percentage of total lease vehicle disposals.

	Year ended December 31,		
	2010	2009	2008
Auction			
Internet	60%	57%	47%
Physical	18%	25%	38%
Sale to dealer	12%	11%	10%
Other (including option exercised by lessee)	10%	7%	5%

We primarily sell our off-lease vehicles through:

Internet auctions We offer off-lease vehicles to dealers and certain other third parties in the United States through our proprietary internet site (SmartAuction). This internet sales program maximizes the net sales proceeds from off-lease vehicles by reducing the time between vehicle return and ultimate disposition, reducing holding costs, and broadening the number of prospective buyers. We maintain the internet auction site, set the pricing floors on vehicles, and administer the auction process. We earn a service fee for every vehicle sold through SmartAuction.

Physical auctions We dispose of our off-lease vehicles not purchased at termination by the lease consumer or dealer or sold on an internet auction through traditional official manufacturer-sponsored auctions. We are responsible for handling decisions at the auction including arranging for inspections, authorizing repairs and reconditioning, and determining whether bids received at auction should be accepted.

Commercial Automotive Financing*Automotive Wholesale Dealer Financing*

One of the most important aspects of our dealer relationships is supporting the sale of vehicles through wholesale or floorplan financing. We primarily support automotive finance purchases by dealers of new and used vehicles manufactured or distributed before sale or lease to the retail customer. Wholesale automotive financing

Table of Contents

represents the largest portion of our commercial financing business and is the primary source of funding for dealers' purchases of new and used vehicles. During 2010, we financed an average of \$18.9 billion of new GM vehicles, representing an 86% share of GM's North American dealer inventory and a 75% share of GM's international dealer inventory in countries where GM operates and we had dealer inventory financing, excluding China. We also financed an average of \$5.8 billion of new Chrysler vehicles representing a 75% share of Chrysler's North American dealer inventory. In addition, we financed an average of \$2.4 billion of new non-GM/Chrysler vehicles.

On August 6, 2010, we entered into an agreement with Chrysler to provide automotive financing products and services to Chrysler dealers. The agreement replaced and superseded the legally binding term sheet that we entered into with Chrysler on April 30, 2009, which contemplated this definitive agreement. We are Chrysler's preferred provider of new wholesale financing for dealer inventory in the United States, Canada, Mexico, and other international markets upon the mutual agreement of the parties. We provide dealer financing and services to Chrysler dealers as we deem appropriate according to our credit policies and in our sole discretion. The agreement extends through April 30, 2013, with automatic one-year renewals unless either we or Chrysler provides sufficient notice of nonrenewal.

Wholesale credit is arranged through lines of credit extended to individual dealers. In general, each wholesale credit line is secured by all vehicles and by other assets owned by the dealer or the operator's or owner's personal guarantee. Additionally, to minimize our risk, both GM and Chrysler are bound by repurchase obligations that, under certain circumstances, require them to repurchase new vehicle inventory, such as dealer default. The amount we advance to dealers is equal to 100% of the wholesale invoice price of new vehicles, which includes destination and other miscellaneous charges, and with respect to vehicles manufactured by GM and other motor vehicle manufacturers, a price rebate, known as a holdback, from the manufacturer to the dealer in varying amounts stated as a percentage of the invoice price. Interest on wholesale automotive financing is generally payable monthly. Most wholesale automotive financing of our North American Automotive Finance operations is structured to yield interest at a floating rate indexed to the Prime Rate. The wholesale automotive financing of our International Automotive Finance operations is structured to yield interest at a floating rate indexed to benchmark rates specific to the relevant country. The rate for a particular dealer is based on, among other things, competitive factors, the amount and status of the dealer's creditworthiness, and various incentive programs.

Under the terms of the credit agreement with the dealer, we may demand payment of interest and principal on wholesale credit lines at any time; however, unless we terminate the credit line or the dealer defaults, we generally require payment of the principal amount financed for a vehicle upon its sale or lease by the dealer to the customer. Ordinarily, a dealer has between one and five days, based on risk and exposure of the account, to satisfy the obligation.

Under wholesale financing arrangements, we lend money to GM-franchised dealers to finance their vehicle inventory purchases from GM. We advance the loan proceeds directly to GM. Under an agreement with GM, the advances were made before the date the vehicles were expected to be delivered to the dealers. We earned \$178 million of interest under the terms of this arrangement during the year ended December 31, 2010. At the end of 2010 GM terminated this advance payment arrangement. We expect any remaining interest payments in 2011 in connection with the terminated arrangement to be minimal.

The commercial wholesale revenue of our Automotive Finance operations totaled \$1.4 billion, \$1.2 billion, and \$1.3 billion in 2010, 2009, and 2008, respectively.

Table of Contents**Commercial Wholesale Financing Volume**

The following table summarizes the average balances of our commercial wholesale floorplan finance receivables of new and used vehicles and share of dealer inventory in markets where we operate.

	Average balance Three months ended March 31, 2011 2010 (\$ in millions)		% Share of dealer inventory Three months ended March 31, 2011 2010 (%)	
	GM new vehicles			
North America (a)	\$ 15,413	\$ 13,691	84	86
International (excluding China) (b) (c)	3,830	3,125	80	75
China (b) (d)	884	953	75	81

International (excluding China)	135	81		
Total used vehicles financed	3,211	3,025		
Total commercial wholesale finance receivables	\$ 32,887	\$ 28,161		

(a) Share of dealer inventory based on end of period dealer inventory (excluding in-transit units).

(b) Share of dealer inventory based on wholesale financing share of GM shipments.

(c) Excludes commercial wholesale finance receivables and dealer inventory of discontinued and wind-down operations as well as dealer inventory for other countries in which GM operates and we had no commercial wholesale finance receivables.

(d) Includes vehicles financed through a joint venture in China in which Ally owns a minority interest.

Edgar Filing: Ally Financial Inc. - Form S-1/A

Commercial wholesale financing average balance increased for the three months ended March 31, 2011, compared to the same period in 2010 primarily due to increasing global automotive sales and the corresponding increase in dealer inventories in virtually every market.

Total used vehicles financed	3,402	2,656	3,610			
Total commercial wholesale finance receivables	\$ 30,544	\$ 27,803	\$ 37,585			

(a) Share of dealer inventory based on end of period dealer inventory.

(b) Share of dealer inventory based on wholesale financing share of GM shipments.

(c) Excludes commercial wholesale finance receivables and dealer inventory of discontinued operations as well as dealer inventory for other countries in which GM operates and in which we had no commercial wholesale finance receivables.

(d) Includes vehicles financed through a joint venture in China in which Ally owns a minority interest.

Commercial wholesale financing average volume increased during 2010 compared to 2009, primarily due to the addition of Chrysler wholesale automotive financing. The reduction in GM's wholesale volume reflects the elimination of the Hummer, Saturn, and Pontiac brands, along with the reduction of total GM dealers. North American penetration levels remained strong in 2010.

Other Commercial Automotive Financing

We also provide other forms of commercial financing for the automotive industry including automotive dealer term loans and automotive fleet financing. Automotive dealer term loans are loans that we make to dealers to finance other aspects of the dealership business. These loans are typically secured by real estate, other dealership assets, and the personal guarantees of the individual owners of the dealership. Automotive fleet financing may be obtained by dealers, their affiliates, and other companies and be used to purchase vehicles, which they lease or rent to others.

We generally have a security interest in these vehicles and in the rental payments; however, competitive factors may occasionally limit the security interest in this collateral.

Table of Contents

Servicing and Monitoring

We service all of the wholesale credit lines in our portfolio and the wholesale automotive finance receivables that we have securitized. A statement setting forth billing and account information is distributed on a monthly basis to each dealer. Interest and other nonprincipal charges are billed in arrears and are required to be paid immediately upon receipt of the monthly billing statement. Generally, dealers remit payments to Ally through wire transfer transactions initiated by the dealer through a secure web application.

Dealers are assigned a risk rating based on various factors, including capital sufficiency, operating performance, financial outlook, and credit and payment history. The risk rating affects the amount of the line of credit, the determination of further advances, and the management of the account. We monitor the level of borrowing under each dealer's account daily. When a dealer's balance exceeds the credit line, we may temporarily suspend the granting of additional credit or increase the dealer's credit line or take other actions following evaluation and analysis of the dealer's financial condition and the cause of the excess.

We periodically inspect and verify the existence of dealer vehicle inventories. The timing of the verifications varies, and no advance notice is given to the dealer. Among other things, verifications are intended to determine dealer compliance with the financing agreement and confirm the status of our collateral.

Table of Contents**North American Automotive Finance Operations****Results of Operations**

The following table summarizes the operating results of our North American Automotive Finance operations for the periods shown. North American Automotive Finance operations consist of automotive financing in the United States and Canada and include the automotive activities of Ally Bank and ResMor Trust. The amounts presented are before the elimination of balances and transactions with our other reportable segments.

First Quarter 2011 Compared to First Quarter 2010

Our North American Automotive Finance operations earned income before income tax expense of \$518 million for the three months ended March 31, 2011, compared to \$612 million for the three months ended March 31, 2010. The decrease in 2011 was primarily driven by a decrease in operating lease revenue (along with the related depreciation expense) related to the decline in the operating lease portfolio and the absence of

gains on the sale of automotive loans related to the expiration of our forward flow agreements during the fourth quarter

Table of Contents

of 2010. This decline was partially offset by increased consumer financing revenue driven by strong loan origination volume related to the improvement of automotive industry sales and automotive manufacturer penetration (primarily GM).

Consumer financing revenue increased 24% for the three months ended March 31, 2011, compared to the same period in 2010, due to an increase in consumer asset levels primarily related to strong loan origination volume during 2010 and 2011 resulting from the recovery of automotive industry sales. Additionally, we expanded our presence into the more fragmented market for used automotive financing and have also begun to prudently expand our origination volume further into the nonprime markets. The increase in consumer revenue was partially offset by a change in the consumer asset mix related to the runoff of the higher yielding NuveII nonprime automotive financing portfolio.

Loans held-for-sale financing revenue decreased \$69 million for the three months ended March 31, 2011, compared to the same period in 2010, due to the expiration of our automotive forward flow agreements during the fourth quarter of 2010. Subsequent to the expiration of these agreements, we have continued to retain consumer loan originations on-balance sheet utilizing deposit funding from Ally Bank and on-balance sheet securitization transactions.

Operating lease revenue decreased 41% for the three months ended March 31, 2011, compared to the same period in 2010. Operating lease revenue (along with the related depreciation expense) decreased due to a decline in the size of our operating lease portfolio. In 2008, we significantly curtailed leasing based on credit market dislocation and the significant decline in used vehicle prices that resulted in increasing residual losses and an impairment of our lease portfolio. During the latter half of 2009, we re-entered the leasing market with targeted lease product offerings and have continued to expand lease originations during 2010 and the first quarter of 2011. While the wind-down of our legacy lease portfolio has exceeded new origination volume, we anticipate that the declines in the size of our lease portfolio will begin to moderate as lease termination volumes decline, and we continue to support our new lease product offerings.

Interest and dividend income decreased 59% for the three months ended March 31, 2011, primarily due to lower FTP income related to lower rates and a change in funding mix.

Net gain on automotive loans decreased \$113 million for the three months ended March 31, 2011, compared to the same period in 2010. There were no gains on the sale of loans during the three months ended March 31, 2011, primarily due to the expiration of our forward flow agreements during the fourth quarter of 2010.

Other income increased 113% for the three months ended March 31, 2011, compared to the same period in 2010. The increase was primarily due to unfavorable swap mark-to-market activity related to the held-for-sale loan portfolio in 2010.

The provision for loan losses was \$46 million for the three months ended March 31, 2011, compared to \$101 million for the same period in 2010. The decrease for the three months ended March 31, 2011, was primarily due to decreased losses and runoff of the NuveII portfolio and improved loss performance in the consumer loan portfolio reflecting higher credit quality of recent originations and continued favorable pricing in the used vehicle market, partially offset by continued growth in the consumer loan portfolio.

2010 Compared to 2009

Our North American Automotive Finance operations earned income before income tax expense of \$2.3 billion for the year ended December 31, 2010, compared to \$1.6 billion for the year ended December 31, 2009. Results for the year ended December 31, 2010, were favorably impacted by increased loan origination volume related to improved economic conditions, the growth of our non-GM consumer and commercial automotive financing business, and favorable remarketing results, which reflected continued strength in the used vehicle market.

Total financing revenue and other interest income decreased 15% for the year ended December 31, 2010, compared to 2009. The decrease was primarily related to a decline in operating lease revenue, which exceeded the growth in consumer and commercial net financing revenue. Operating lease revenue (along with the related depreciation expense) decreased primarily due to a decline in the size of our operating lease portfolio resulting from our decision in late 2008 to significantly curtail leasing. This decision was based on the significant decline in used vehicle prices that resulted in increasing residual losses during 2008 and an impairment of our lease portfolio. During the latter half of 2009, we selectively re-entered the leasing market with more targeted lease

Table of Contents

product offerings. As a result, runoff of the legacy portfolio exceeded new origination volume. The decrease in operating lease revenue was largely offset by an associated decline in depreciation expense, which was also favorably impacted by remarketing gains as a result of continued strength in the used vehicle market and higher remarketing volume. Consumer financing revenue (combined with interest income on consumer loans held-for-sale) increased 15% during the year ended December 31, 2010, primarily due to an increase in consumer loan origination volume as a result of improved economic conditions and increased volume from non-GM channels. Additionally, consumer asset levels increased due to the consolidation of consumer loans included in securitization transactions that were previously classified as off-balance sheet. Refer to Note 11 to the Consolidated Financial Statements for further information regarding the consolidation of these assets. The increase was partially offset by a change in the consumer asset mix related to the runoff of the higher-yielding Nuvelly nonprime automotive financing portfolio. Commercial revenue increased 25%, compared to the year ended December 31, 2009, primarily due to an increase in dealer wholesale funding driven by improved economic conditions, the growth of non-GM wholesale floorplan business, and the recognition of all wholesale funding transactions on-balance sheet in 2010 compared to certain transactions that were off-balance sheet in 2009. Interest and dividend income decreased 45% for the year ended December 31, 2010, primarily due to a change in funding mix including lower levels of off-balance sheet securitizations.

Net gain on automotive loans increased 13% for the year ended December 31, 2010, compared to 2009. The increase was primarily related to higher levels of retail whole-loan sales in 2010, higher gains on the sale of loans during 2010, and unfavorable valuation adjustments taken during 2009 on the held-for-sale portfolio. The increase was partially offset by higher gains on the sale of wholesale receivables during 2009 as there were no off-balance sheet wholesale funding transactions during 2010.

Other income decreased 28% for the year ended December 31, 2010, compared to 2009. The decrease was primarily due to unfavorable swap mark-to-market activity related to the held-for-sale loan portfolio in 2010.

The provision for loan losses was \$286 million for the year ended December 31, 2010, compared to \$611 million in 2009. The decrease was primarily driven by the continued runoff of our Nuvelly portfolio and improved loss performance in the consumer loan portfolio reflecting improved pricing in the used vehicle market and higher credit quality of more recent originations.

Noninterest expense decreased 13% for the year ended December 31, 2010, compared to 2009. The decrease was primarily due to lower compensation and benefits expense primarily related to lower employee headcount resulting from rightsizing the cost structure with business volumes along with further productivity improvements, unfavorable foreign-currency movements during the year ended December 31, 2009, and lower IT and professional services costs due to continued focus on cost reduction.

2009 Compared to 2008

Our North American Automotive Finance operations earned income before income tax expense of \$1.6 billion for the year ended December 31, 2009, compared to a loss before income tax expense of \$322 million for the year ended December 31, 2008. The year ended December 31, 2009, was favorably impacted by a significant improvement in the used vehicle market, which resulted in higher remarketing proceeds that favorably impacted operating lease depreciation expense. Additionally, we incurred lower provision for loan losses related to our liquidating retail balloon portfolio as a result of higher collateral values that reduced our loss severity. Further, because of this improvement in the used vehicle market, we did not recognize operating lease impairments in 2009, compared to impairments of \$1.2 billion in 2008. These favorable items were partially offset by lower financing revenue related to a declining asset base resulting from reduced originations due to the economic recession and the dislocation in the capital and credit markets.

Table of Contents

Total financing revenue and other interest income decreased 22% for the year ended December 31, 2009, compared to 2008. Consumer financing revenue (combined with interest income on consumer loans held-for-sale) decreased 25% during the year ended December 31, 2009, primarily due to lower average consumer asset levels. These lower asset levels were driven by significantly lower originations beginning in late 2008 due to the general economic recession and significantly tighter credit markets in the United States and Canada as well as the runoff of the higher-yielding Nuvel nonprime automotive financing portfolio. The \$320 million of income on loans held-for-sale for the year ended December 31, 2009, related to interest on loans that are expected to be sold in whole-loan and full securitization transactions over the next twelve months. Commercial revenue increased 9%, compared to the year ended December 31, 2008, primarily due to an increase in average commercial loan balances that was primarily due to the growth in non-GM related wholesale floorplan business and the reconsolidation of certain off-balance sheet wholesale securitization transactions in 2009. Operating lease revenue (along with the related depreciation expense) decreased as new lease originations significantly declined due to our strategic decision in late 2008 to significantly curtail leasing. This decision was based on the significant decline in used vehicle prices that resulted in an impairment charge and increasing residual losses during 2008. The decrease in operating lease revenue was partially offset by remarketing gains resulting from higher used vehicle selling prices due to a strengthening used vehicle market in 2009. Interest and dividend income decreased 28% for the year ended December 31, 2009, primarily due to a change in funding mix including lower levels of off-balance sheet securitizations.

Interest expense decreased 33% for the year ended December 31, 2009, compared to 2008. The decrease was driven by lower funding requirements due to lower average asset levels in 2009.

No impairment of investment in operating leases was recognized in 2009. In 2008, we recognized a \$1.2 billion impairment that resulted from sharp declines in demand and used vehicle sale prices, which adversely affected vehicle remarketing proceeds.

Servicing fees decreased 19% for the year ended December 31, 2009, compared to 2008. The decrease in servicing fees related to declines in the serviced asset base primarily resulting from the runoff of the serviced lease portfolio.

We earned a net gain on automotive loans of \$220 million for the year ended December 31, 2009, compared to \$442 million for the year ended December 31, 2008. The decrease was primarily due to a shift in our strategy in 2009 to a deposit-based funding model through Ally Bank, with less reliance on the securitization markets. Lower whole-loan sales volumes and other off-balance sheet securitization transactions resulted in decreased gains on the sale of retail and wholesale loans.

The provision for loan losses decreased 49% for the year ended December 31, 2009, compared to 2008. The decrease was due primarily to decreases in the provision for retail balloon contracts primarily as a result of a strengthening used vehicle market and portfolio runoff as this product was curtailed in September 2008. A lower supply of used vehicles in 2009, among other factors, resulted in increased residual values and, in turn, lower provision for loan losses. Additionally, during 2008, the commercial provision had trended higher in response to concerns over GM and associated GM-dealer financial health. These favorable developments were partially offset by an increase in provision for loan loss expense related to unfavorable loss trends in consumer loans in the Nuvel portfolio, primarily in the second half of 2009.

Other noninterest expense decreased 7% for the year ended December 31, 2009, compared to 2008. The decrease was primarily driven by lower compensation and benefits expense and lower restructuring charges due to headcount reductions resulting from prior restructuring actions.

Table of Contents**International Automotive Finance Operations****Results of Operations**

The following table summarizes the operating results of our International Automotive Finance operations excluding discontinued operations for the periods shown. The amounts presented are before the elimination of balances and transactions with our other reportable segments and include eliminations of balances and transactions among our North American Automotive Finance operations and Insurance operations.

First Quarter 2011 Compared to First Quarter 2010

Our International Automotive Finance operations earned income from continuing operations before income tax expense of \$40 million during the three months ended March 31, 2011, compared to income from continuing operations before income tax expense of \$47 million during the three months ended March 31, 2010. Results for the three months ended March 31, 2011, were unfavorably impacted by increased provisions for loan losses.

Edgar Filing: Ally Financial Inc. - Form S-1/A

Total financing revenue and other interest income decreased 3% for the three months ended March 31, 2011, compared to the same period in 2010, primarily due to a decline in operating lease revenue. Operating lease revenue (along with the related depreciation expense) decreased primarily due to the continued runoff of the full-service leasing portfolio.

Table of Contents

Interest expense increased 11% for the three months ended March 31, 2011, compared to the same period in 2010. The increase was primarily due to the implementation of funds transfer pricing in certain countries.

Other income decreased 12% for the three months ended March 31, 2011, compared to the same period in 2010. The decrease was primarily due to favorable mark-to-market adjustments on derivatives during the first quarter of 2010.

The provision for loan losses increased \$16 million for the three months ended March 31, 2011, compared to the same period in 2010. The increase in provision is related to recent concerns with certain commercial credits.

Noninterest expense decreased 16% for the three months ended March 31, 2011, compared to the same period in 2010. The decrease was primarily due to lower expenses associated with the wind-down of operations in certain countries and our continued focus on cost reduction.

Table of Contents

2010 Compared to 2009

Our International Automotive Finance operations earned income from continuing operations before income tax expense of \$228 million during the year ended December 31, 2010, compared to a loss from continuing operations before income tax expense of \$157 million during the year ended December 31, 2009. Results for 2010 were favorably impacted by lower provision for loan losses and lower restructuring charges on wind-down operations.

Total financing revenue and other interest income decreased 18% for the year ended December 31, 2010, compared to 2009, primarily due to decreases in consumer and commercial asset levels as the result of adverse business conditions in Europe and the runoff of wind-down portfolios.

Interest expense decreased 21% for the year ended December 31, 2010, compared to 2009, primarily due to reductions in borrowing levels consistent with a lower asset base.

Depreciation expense on operating lease assets decreased 45% for the year ended December 31, 2010, compared to 2009, primarily due to the continued runoff of the full-service leasing portfolio.

Net gain on automotive loans was \$21 million for the year ended December 31, 2010, compared to a net loss of \$77 million for the year ended December 31, 2009. The losses for the year ended December 31, 2009, were due primarily to lower-of-cost or market adjustments on certain loans held-for-sale in certain wind down operations. The gains for the year ended December 31, 2010, were primarily due to the partial release of lower-of-cost or market adjustments on loans held-for-sale in wind-down operations due to improved market values.

The provision for loan losses was \$54 million for the year ended December 31, 2010, compared to \$230 million in 2009. The decrease was primarily due to improved loss performance on the consumer portfolio reflecting higher origination quality in 2009 and 2010 and the improving financial position of our dealer customers in Europe.

Noninterest expense decreased 20% for the year ended December 31, 2010, compared to 2009. The decrease was primarily due to lower compensation and benefits expense primarily related to lower employee headcount resulting from restructuring activities, unfavorable foreign-currency movements during the year ended December 31, 2009, and lower IT and professional service costs due to continued focus on cost reduction.

2009 Compared to 2008

Our International Automotive Finance operations incurred a loss from continuing operations before income tax expense of \$157 million during the year ended December 31, 2009, compared to income from continuing operations before income tax expense of \$102 million during the year ended December 31, 2008. The year ended December 31, 2009, was unfavorably impacted by lower financing revenue related to a declining asset base. The asset base decline resulted from reduced originations due to the wind-down of operations in several countries and lower GM sales volume due to the general economic recession. The decrease was partially offset by lower funding costs commensurate with a lower asset base.

Total financing revenue and other interest income decreased 28% for the year ended December 31, 2009, compared to 2008. Consumer financing revenue decreased 21% during the year ended December 31, 2009, primarily due to lower consumer asset levels as a result of significantly lower originations due to the general economic recession, lower GM vehicle sales volume in 2009, and the wind-down of operations in several countries. Consumer asset levels at December 31, 2009, decreased \$3.7 billion, or 24%, compared to December 31, 2008. Commercial revenue decreased 40% during 2009 compared to 2008, primarily due to lower commercial asset levels resulting from decreased GM sales volume and the wind-down of operations in several

Table of Contents

countries. Operating lease revenue decreased due to the significant curtailment of the lease product beginning in late 2008 and the runoff of assets in the full-service leasing portfolio. Interest and dividend income decreased 72% during the year ended December 31, 2009, primarily due to lower intercompany income resulting from a decline in intercompany-lending activity with our Commercial Finance Group and the reclassification of interest income on a one-time Brazil judicial deposit in 2008. Additionally, total financing revenue and other interest income were unfavorably impacted by foreign-currency movements as a result of the strengthening of the U.S. dollar in 2009 compared to 2008.

Interest expense decreased 35% for the year ended December 31, 2009, compared to 2008. The decrease was driven by reductions in the average balance of interest-bearing liabilities consistent with a lower asset base and favorable foreign-currency movements.

No impairment of investment in operating leases was recognized in 2009. The \$26 million recognized for the year ended December 31, 2008, related to the full-service leasing portfolio and resulted from declines in demand and used vehicle sale prices.

We incurred a net loss on automotive loans of \$77 million for the year ended December 31, 2009, compared to a net gain of \$2 million for the year ended December 31, 2008. The loss for the year ended December 31, 2009, was primarily due to the recognition of a \$61 million lower-of-cost or fair value adjustment on the held-for-sale Spanish consumer portfolio. Additionally, during 2009, we recognized a \$16 million loss on the sale of our India portfolio.

Other income decreased 6% for the year ended December 31, 2009, compared to 2008. The decrease was primarily related to lower full-service leasing fees as a result of asset runoff and the absence of a U.K. value added tax (VAT) refund received in 2008. The decrease was partially offset by favorable mark-to-market adjustments on derivatives and increased vehicle remarketing income on full-service leasing vehicles resulting from a stronger used vehicle market.

Other noninterest expense decreased 4% for the year ended December 31, 2009, compared to 2008. The 2009 results were favorably impacted by the reclassification of interest income on a one-time Brazil judicial deposit in 2008 and lower IT and marketing expenses. The decrease in expense was partially offset by unfavorable foreign-currency movements and higher severance and restructuring expenses.

Insurance

Our Insurance operations offer consumer insurance products sold primarily through dealers and commercial insurance products sold to dealers. As part of our focus on offering dealers a broad range of products, we provide vehicle extended service contracts and we underwrite selected commercial insurance coverages, primarily covering dealers' wholesale vehicle inventory in the United States and internationally. We also sell vehicle extended service contracts with mechanical breakdown and maintenance coverages.

Table of Contents

The following tables show premium and service revenue written by insurance product.

	Three months ended March 31,	
	2011	2010
	(\$ in millions)	
Vehicle service contracts		
New retail	\$ 90	\$ 69
Used retail	104	106
Total vehicle service contracts	194	175
Wholesale	22	27
Other finance and insurance (a)	30	24
North American operations	246	226
International operations (b)	165	197
Total	\$ 411	\$ 423

(a) Other finance and insurance includes GAP insurance, excess wear and tear, and other ancillary products.

(b) International operations for the three months ended March 31, 2010, includes \$40 million of written premium from certain international insurance operations that were sold during the fourth quarter of 2010.

Insurance premiums and service revenue written was \$411 million for the three months ended March 31, 2011, compared to \$423 million for the same period in 2010. Insurance premiums and service revenue written decreased due to the sale of certain international insurance operations during the fourth quarter of 2010. This decrease was partially offset by higher written premiums in our U.S. dealership-related products, particularly our vehicle service contract products. Vehicle service contract revenue is earned over the life of the service contract on a basis proportionate to the expected loss pattern. As such, the majority of earnings from vehicle service contracts written during the three months ended March 31, 2011, will be recognized as income in future periods.

	Year ended December 31,		
	2010	2009	2008
	(\$ millions)		
Vehicle service contracts			
New retail	\$ 315	\$ 281	\$ 431
Used retail	426	384	546
Total vehicle service contracts	741	665	977
Wholesale	103	100	137
Other finance and insurance (a)	113	75	80
Wind-down		2	242
North American operations	957	842	1,436
International operations	631	594	722
Total	\$ 1,588	\$ 1,436	\$ 2,158

(a) Other finance and insurance includes GAP insurance, excess wear and tear and other ancillary products. Dealers who receive wholesale financing are eligible for wholesale insurance incentives, such as automatic eligibility and increased financial incentives within our rewards programs.

Underwriting and Risk Management

We determine the premium pricing for our vehicle service contracts and rates for our insurance policies based upon an analysis of expected losses using historical experience and anticipated future trends. For example,

Table of Contents

in pricing our vehicle service contracts, we make assumptions as to the price of replacement parts and repair labor rates in the future.

In underwriting our vehicle service contracts and insurance policies, we assess the particular risk involved and determine the acceptability of the risk as well as the categorization of the risk for appropriate pricing. We base our determination of the risk on various assumptions tailored to the respective insurance product. With respect to automotive service contracts, assumptions include the quality of the vehicles produced and new model introductions.

In some instances, ceded reinsurance is used to reduce the risk associated with volatile businesses, such as catastrophe risk in U.S. dealer vehicle inventory insurance or smaller businesses, such as Canadian automobile or European-dealer vehicle inventory insurance. Our commercial products business is covered by traditional catastrophe protection, aggregate stop loss protection, and an extension of catastrophe coverage for hurricane events. In addition, loss control techniques, such as hail nets or storm path monitoring to assist dealers in preparing for severe weather, help to mitigate loss potential.

We mitigate losses by the active management of claim settlement activities using experienced claims personnel and the evaluation of current period reported claims. Losses for these events may be compared to prior claims experience, expected claims, or loss expenses from similar incidents to assess the reasonableness of incurred losses.

Cash and Investments

A significant aspect of our Insurance operations is the investment of proceeds from premiums and other revenue sources. We use these investments to satisfy our obligations related to future claims at the time these claims are settled. Our Insurance operations have an Investment Committee, which develops guidelines and strategies for these investments. The guidelines established by this committee reflect our risk tolerance, liquidity requirements, regulatory requirements, and rating agency considerations, among other factors.

The following table summarizes the composition of our Insurance operations cash and investment portfolio at fair value.

	March 31, 2011	December 31, 2010 2009 (\$ in millions)	
Cash			
Noninterest-bearing cash	\$ 36	\$ 28	\$ 17
Interest-bearing cash	866	1,168	104
Total cash	902	1,196	121

Total cash and securities	\$ 5,537	\$ 5,351	\$ 4,775

Table of Contents**Loss Reserves**

In accordance with industry and accounting practices and applicable insurance laws and regulatory requirements, we maintain reserves for reported losses, losses incurred but not reported, and loss adjustment expenses. These reserves are based on various estimates and assumptions and are maintained both for business written on a current basis and policies written and fully earned in prior years to the extent there continues to be outstanding and open claims in the process of resolution. Refer to *Critical Accounting Estimates* and Note 18 to the Consolidated Financial Statements for further discussion. The estimated values of our prior reported loss reserves and changes to the estimated values are routinely monitored by credentialed actuaries. Our reserve estimates are regularly reviewed by management; however, since the reserves are based on estimates and numerous assumptions, the ultimate liability may differ from the amount estimated.

Results of Operations

The following table summarizes the operating results of our Insurance operations excluding discontinued operations for the periods shown. The amounts presented are before the elimination of balances and transactions with our other operating segments.

First Quarter 2011 Compared to First Quarter 2010

	Three months ended March 31,		
	2011	2010	Favorable/ (unfavorable) % change
	(\$ in millions)

Total assets	\$ 9,024	\$ 9,083	(1)
Insurance premiums and service revenue written	\$ 411	\$ 423	(3)
Combined ratio (a)	88.0%	91.3%	

(a) Management uses combined ratio as a primary measure of underwriting profitability with its components measured using accounting principles generally accepted in the United States of America. Underwriting profitability is indicated by a combined ratio under 100% that is calculated as the sum of all incurred losses and expenses (excluding interest and income tax expense) divided by the total of premiums and service revenues earned and other income.

Our Insurance operations earned income from continuing operations before income tax expense of \$134 million for the three months ended March 31, 2011, compared to \$183 million for the three months ended March 31, 2010. The decrease was primarily attributable to lower realized investment gains and lower insurance premiums and service revenue earned.

Table of Contents

Insurance premiums and service revenue earned decreased 7% for the three months ended March 31, 2011, compared to the same period in 2010, primarily due to the sale of certain international insurance operations during the fourth quarter of 2010.

Investment income totaled \$80 million for the three months ended March 31, 2011, compared to \$141 million for the same period in 2010. The decrease during the three months ended March 31, 2011, was primarily due to lower realized investment gains. The fair value of the investment portfolio was \$4.6 billion and \$4.5 billion at March 31, 2011 and 2010, respectively.

The insurance losses and loss adjustment expenses totaled \$173 million for the three months ended March 31, 2011, compared to \$196 million for the three months ended March 31, 2010. The decrease is primarily due to the sale of certain international insurance operations during the fourth quarter of 2010 and lower losses in our U.S. dealership-related products.

Acquisition and underwriting expense decreased 12% for the three months ended March 31, 2011, compared to the same period in 2010. The decrease was primarily due to the sale of certain international insurance operations during the fourth quarter of 2010 and lower commissions expense in our U.S. dealership-related products matching our decrease in earned premiums. The decrease was partially offset by increased expenses within our international insurance operations to match the increase in earned premiums.

Table of Contents

2010 Compared to 2009

Our Insurance operations earned income from continuing operations before income tax expense of \$569 million for the year ended December 31, 2010, compared to \$329 million for the year ended December 31, 2009. The increase was primarily due to higher realized investment gains driven by overall market improvement and reduced expenses.

Insurance premiums and service revenue earned was \$1.8 billion for the year ended December 31, 2010, compared to \$1.9 billion in 2009. Insurance premiums and service revenue earned decreased primarily due to lower earnings from our U.S. extended service contracts due to a decrease in domestic written premiums related to lower vehicle sales volume from 2007 to 2009. The decrease was partially offset by increased volume in our international operations.

Investment income totaled \$451 million for the year ended December 31, 2010, compared to \$266 million in 2009. The increase was primarily due to higher realized investment gains driven by market repositioning. During the year ended December 31, 2009, we realized other-than-temporary impairments of \$55 million. The increase in investment income was also slightly offset by reductions in the average size of the investment portfolio throughout the year and a decrease in the average security investment yield. The fair value of the investment portfolio was \$4.2 billion and \$4.7 billion at December 31, 2010 and 2009, respectively.

Acquisition and underwriting expense decreased 11% for the year ended December 31, 2010, compared to 2009. The decrease was primarily due to lower expenses in our U.S. dealership-related products matching our decrease in earned premiums. The decrease was partially offset by increased expenses within our international operations to match the increase in earned premiums.

Insurance premiums and service revenue written was \$1.6 billion for the year ended December 31, 2010, compared to \$1.4 billion in 2009. Insurance premiums and service revenue written increased due to higher written premiums in our U.S. dealership-related products, particularly our vehicle service contract products. Vehicle service contract revenue is earned over the life of the service contract on a basis proportionate to the expected loss pattern. As such, the majority of earnings from vehicle service contracts written during the year ended December 31, 2010, will be recognized as income in future periods.

2009 Compared to 2008

Our Insurance operations earned income from continuing operations before income tax expense of \$329 million for the year ended December 31, 2009, compared to \$499 million for 2008. Income from continuing operations before income tax expense decreased primarily due to unfavorable underwriting results, principally driven by decreases in premiums earned, and a \$93 million gain on the sale of our U.S. reinsurance agency in 2008. These negative impacts were offset by higher realized investment gains during 2009 compared to realized investment losses taken in 2008.

Insurance premiums and service revenue earned decreased 27% for the year ended December 31, 2009, compared to 2008. Insurance premiums and service revenue earned decreased primarily due to the sale of our U.S. reinsurance agency in November 2008. Additionally, decreases were recognized due to lower earned premiums on extended service contracts written in 2009 and prior periods, lower dealer inventory levels, and decreases in international operations. These decreases were primarily due to the overall negative economic environment.

Investment income totaled \$266 million for the year ended December 31, 2009, compared to \$112 million in 2008. Investment income increased primarily due to the recognition of \$79 million of realized capital gains during 2009 compared to \$139 million of realized capital losses in 2008, which were driven by unfavorable investment market volatility. The increase was offset by a reduction in the size of the investment portfolio

Table of Contents

primarily driven by the sale of our U.S. reinsurance agency. The value of the investment portfolio was \$4.7 billion and \$5.1 billion at December 31, 2009 and 2008, respectively. Additionally, during the year ended December 31, 2009, other-than-temporary impairments of \$55 million were recognized on certain investment securities due to unfavorable market conditions.

Other income totaled \$72 million for the year ended December 31, 2009, compared to \$183 million in 2008. The decrease was primarily due to a \$93 million gain recognized in 2008 related to the sale of our U.S. reinsurance agency.

Insurance losses and loss adjustment expenses decreased 33% for the year ended December 31, 2009, compared to 2008. The decrease was primarily driven by the sale of our U.S. reinsurance agency and lower loss experience in our dealership-related products as a result of lower volumes.

Acquisition and underwriting expense decreased 7% for the year ended December 31, 2009, compared to 2008. The decrease was primarily due to the sale of our U.S. reinsurance agency and lower volumes, which was partially offset by an increase in corporate overhead allocations.

Mortgage

Our Mortgage operations include the ResCap legal entity, the mortgage operations of Ally Bank, and the Canadian mortgage operations of ResMor Trust. Results for our Mortgage operations are presented by reportable segment, which includes our Origination and Servicing operations and our Legacy Portfolio and Other operations.

Loan Production

U.S. Mortgage Loan Production Channels

We have two primary channels for residential mortgage loan production: the origination of loans through our direct-lending network and the purchase of loans in the secondary market (primarily from Ally Bank correspondent lenders).

Correspondent lender and secondary market purchases Loans purchased from correspondent lenders are originated or purchased by the correspondent lenders and subsequently sold to us. All of the purchases from correspondent lenders are conducted through Ally Bank. We qualify and approve any correspondent lenders who participate in the loan purchase programs.

Direct-lending network Our direct-lending network consists of internet (including through the ditech.com brand) and telephone-based call center operations as well as our virtual retail network. During 2009 and 2010, virtually all of the residential mortgage loans of this channel are brokered to Ally Bank.

Table of Contents

The following tables summarize domestic consumer mortgage loan production by channel for our Origination and Servicing operations.

	Three months ended March 31, 2011		2010	
	No. of loans	Dollar amount of loans (\$ in millions)	No. of loans	Dollar amount of loans

Mortgage Loan Production by Type

Consistent with our focus on GSE loan products, we primarily originate prime conforming and government-insured residential mortgage loans. In addition, we originate and purchase high-quality nonconforming jumbo loans, mostly from correspondent lenders, for the Ally Bank held-for-investment portfolio. Our mortgage loans are categorized as follows.

Edgar Filing: Ally Financial Inc. - Form S-1/A

Prime conforming mortgage loans Prime credit quality first-lien mortgage loans secured by single-family residences that meet or conform to the underwriting standards established by the GSEs for inclusion in their guaranteed mortgage securities programs.

Prime nonconforming mortgage loans Prime credit quality first-lien mortgage loans secured by single-family residences that either (1) do not conform to the underwriting standards established by the GSEs because they had original principal amounts exceeding GSE limits, which are commonly referred

Table of Contents

to as jumbo mortgage loans, or (2) have alternative documentation requirements and property or credit-related features (e.g., higher loan-to-value or debt-to-income ratios) but are otherwise considered prime credit quality due to other compensating factors.

Prime second-lien mortgage loans Open- and closed-end mortgage loans secured by a second or more junior-lien on single-family residences, which include home equity mortgage loans and lines of credit.

Government mortgage loans First-lien mortgage loans secured by single-family residences that are insured by the Federal Housing Administration (the FHA) or guaranteed by the Veterans Administration (the VA).

Nonprime mortgage loans First-lien and certain junior-lien mortgage loans secured by single-family residences made to individuals with credit profiles that do not qualify for a prime loan, have credit-related features that fall outside the parameters of traditional prime mortgage products, or have performance characteristics that otherwise exposes us to comparatively higher risk of loss. Nonprime includes mortgage loans the industry characterizes as subprime, as well as high combined loan-to-value second-lien loans that fell out of our standard loan programs due to noncompliance with one or more criteria.

International loans Consumer mortgage loans originated in Canada and Mexico.

The following tables summarize consumer mortgage loan production by type for our Origination and Servicing operations.

	Three months ended March 31,			
	2011		2010	
	Number of loans	Dollar amount of loans (\$ in millions)	Number of loans	Dollar amount of loans

(a) International mortgage loan production represents high-quality government-insured residential mortgages in Canada.

Table of Contents**U.S. Warehouse Lending**

We are a provider of warehouse-lending facilities to correspondent lenders and other mortgage originators in the United States. These facilities enable lenders and originators to finance residential mortgage loans until they are sold in the secondary mortgage loan market. We provide warehouse-lending facilities principally for prime conforming and government mortgage loans. We have continued to refine our warehouse-lending portfolio, offering such lending only to current Ally Bank correspondent clients. Advances under warehouse-lending facilities are collateralized by the underlying mortgage loans and bear interest at variable rates. At December 31, 2010, we had total warehouse line of credit commitments of \$2.9 billion, against which we had \$1.5 billion of advances outstanding. We also have \$42 million of warehouse-lending receivables outstanding related to other offerings at December 31, 2010. We purchased approximately 44% of the mortgage loans financed by our warehouse-lending facilities in 2010.

Loans Outstanding

Consumer mortgage loans held-for-sale for our Origination and Servicing operations were as follows.

	March 31, 2011	December 31, 2010 2009 (\$ in millions)

Edgar Filing: Ally Financial Inc. - Form S-1/A

At March 31, 2011, December 31, 2010 and 2009, the carrying value of mortgage loans held-for-investment relating to securitization transactions accounted for as on-balance sheet securitizations and pledged as collateral totaled \$971 million, \$1.0 billion and \$1.5 billion, respectively. The investors in these on-balance sheet securitizations have no recourse to our other assets beyond the loans pledged as collateral other than market customary representation and warranty provisions.

ASU 2009-17 became effective on January 1, 2010, and required the prospective consolidation of certain securitization assets and liabilities that were previously held off-balance sheet. The adoption on day one resulted

Table of Contents

in \$1.2 billion in off-balance sheet consumer mortgage loans being brought on-balance sheet. Refer to Note 1 to the Consolidated Financial Statements for further information regarding the adoption of ASU 2009-17.

Mortgage Loan Servicing

While we sell most of the residential mortgage loans we originate or purchase, we generally retain the rights to service these loans. The retained mortgage servicing rights consist of primary and master-servicing rights. When we act as primary servicer, we collect and remit mortgage loan payments, respond to borrower inquiries, account for principal and interest, hold custodial and escrow funds for payment of property taxes and insurance premiums, counsel or otherwise work with delinquent borrowers, supervise foreclosures and property dispositions, and generally administer the loans. When we act as master servicer, we collect mortgage loan payments from primary servicers and distribute those funds to investors in mortgage-backed and mortgage-related asset-backed securities and whole-loan packages. Key services in this regard include loan accounting, claims administration, oversight of primary servicers, loss mitigation, bond administration, cash flow waterfall calculations, investor reporting, and tax-reporting compliance. In return for performing primary and master-servicing functions, we receive servicing fees equal to a specified percentage of the outstanding principal balance of the loans being serviced and may also be entitled to other forms of servicing compensation, such as late payment fees or prepayment penalties. Servicing compensation also includes interest income or the float earned on collections that are deposited in various custodial accounts between their receipt and the scheduled/contractual distribution of the funds to investors.

The value of mortgage servicing rights is sensitive to changes in interest rates and other factors. We have developed and implemented an economic hedge program to, among other things, mitigate the overall risk of loss due to a change in the fair value of our mortgage servicing rights. Accordingly, we hedge the change in the total fair value of our mortgage servicing rights. The effectiveness of this economic hedging program may have a material effect on the results of operations. Refer to [Critical Accounting Estimates](#) for further discussion.

The following table summarizes the primary consumer mortgage loan-servicing portfolio.

	2010		December 31, 2009		2008	
	No. of loans	Dollar amount of loans	No. of loans	Dollar amount of loans (\$ in millions)	No. of loans	Dollar amount of loans

(a) Excludes loans for which we acted as a servicer. Serviced loans totaled \$23.4 billion, \$24.2 billion, \$28.7 billion and \$35.5 billion at March 31, 2011, and December 31, 2010, 2009 and 2008, respectively.

Temporary Suspension of Mortgage Foreclosure Sales and Evictions and Consent Order

Refer to Note 24 to the Condensed Consolidated Financial Statements for information related to this matter.

Table of Contents**Origination and Servicing Operations****Results of Operations**

The following table summarizes the operating results for our Origination and Servicing operations for the periods shown. Our Origination and Servicing operations principal activities include originating, purchasing, selling, and securitizing conforming and government-insured residential mortgage loans in the United States and Canada; servicing residential mortgage loans for ourselves and others; and providing collateralized lines of credit to other mortgage originators, which we refer to as warehouse lending. We also originate high-quality prime jumbo mortgage loans in the United States. We finance our mortgage loan originations primarily in Ally Bank in the United States and in our trust company, ResMor Trust, in Canada.

First Quarter 2011 Compared to First Quarter 2010

Our Origination and Servicing operations earned income before income tax expense of \$73 million for the three months ended March 31, 2011, compared to \$71 million for the three months ended March 31, 2010. The 2011 results were primarily driven by consistent servicing fees and favorable servicing asset valuation, net of hedge.

Net financing loss was \$30 million for the three months ended March 31, 2011, compared to \$11 million for the same period in 2010. Net financing loss was unfavorably impacted by higher interest expense related to Ginnie Mae repurchases and an increase in average borrowings commensurate with a higher asset base.

Net servicing income was \$240 million for the three months ended March 31, 2011, compared to \$193 million for the same period in 2010. The increase was primarily due to favorable net valuations related to market movement, partially offset by a fair value adjustment due to higher than expected future servicing and foreclosure costs.

Table of Contents

Other income, net of losses, was \$37 million for the three months ended March 31, 2011, compared to \$67 million for the same period in 2010. The decrease in other income was primarily related to lower mortgage processing fee income resulting from lower origination volume due to lower industry volume and higher interest rates and the write-down of retained interests.

Total noninterest expense decreased 6% for the three months ended March 31, 2011, compared to the same period in 2010, primarily due to higher representation and warranty reserve expense in 2010 related to expected repurchases.

2010 Compared to 2009

Our Origination and Servicing operations earned income before income tax expense of \$917 million for the year ended December 31, 2010, compared to \$39 million for the year ended December 31, 2009. The 2010 results were primarily driven by strong production and margins as a result of increased refinancings, higher net servicing income, lower provision for loan losses, and lower noninterest expense.

Net financing loss was \$26 million for the year ended December 31, 2010, compared to \$58 million in 2009. During 2010, net financing loss was favorably impacted by an increase in interest income primarily due to an increase in the average balance driven by an increase in our jumbo mortgage loan originations, which we resumed originating in the middle part of 2009, and a larger average loans held-for-sale portfolio due to an increase in production. Partially offsetting the increase was higher interest expense driven primarily by higher borrowings due to increased production and higher cost of funds.

Edgar Filing: Ally Financial Inc. - Form S-1/A

Net servicing income was \$946 million for the year ended December 31, 2010, compared to \$209 million in 2009. The increase was primarily due to projected cash flow improvements related to slower prepayment speeds as well as higher HAMP loss mitigation incentive fees compared to prior year unfavorable hedge performance with respect to mortgage servicing rights.

Table of Contents

The net gain on mortgage loans was \$616 million for the year ended December 31, 2010, compared to \$708 million in 2009. The decrease was primarily due to unfavorable mark-to-market movement on the mortgage pipeline and a favorable mark-to-market taken in 2009 on released lower-of-cost or market adjustments related to implementation of fair value accounting on the held-for-sale portfolio.

Other income, net of losses, increased 86% for the year ended December 31, 2010, compared to 2009, primarily due to favorable mortgage processing fees related to the absence of loan origination income deferral in 2010 due to the fair value option election for our held-for-sale loans during the third quarter of 2009.

Total noninterest expense decreased 1% for the year ended December 31, 2010, compared to 2009. The decrease was primarily driven by lower representation and warranty expense, a decrease in compensation and benefits expense related to lower headcount, and a decrease in professional services expense.

2009 Compared to 2008

Our Origination and Servicing operations earned income before income tax expense of \$39 million for the year ended December 31, 2009, compared to \$462 million for the year ended December 31, 2008. Results in 2009 were impacted by unfavorable mortgage servicing valuations, net of hedge, partially offset by improved margins on conforming and government-insured residential mortgage loans sales, a slower pace of decline in the home prices, and lower interest expense related to a declining interest rate environment.

Net financing loss was \$58 million for the year ended December 31, 2009, compared to \$149 million in 2008. Interest expense declined at a faster rate than financing revenue and other interest income reflecting the favorable cost of funding impacts resulting from a declining interest rate environment and reduced reliance on higher rate unsecured debt. Partially offsetting the favorability was a decrease in interest income related to a lower LIBOR rate on interest-bearing cash balances and a decrease in trading securities interest income due to the runoff of trading positions in early 2009.

Net servicing income was \$209 million for the year ended December 31, 2009, compared to \$1.2 billion in 2008. The decrease was due to unfavorable mortgage servicing valuations reflecting reduced cash flows and increased prepayment assumptions resulting from lower market mortgage interest rates as compared to favorable 2008 valuations due to decreasing prepayment trends in 2008. Additionally, we recognized unfavorable hedge performance due to changes in the spreads between our servicing assets and the derivatives used to manage our interest rate risk. Our ability to fully hedge interest rate risk and volatility was restricted during the latter half of 2008 and early 2009 by the limited availability of willing counterparties to enter into forward agreements and liquidity constraints hindering our ability to take positions in the option markets. Servicing fees also declined as a result of portfolio runoff and the sales of certain servicing assets during the second half of 2008.

Gain on mortgage loans, net, was \$708 million for the year ended December 31, 2009, compared to \$324 million in 2008. In 2009, we recognized improved margins due to shifts in our product mix to conforming and government-insured residential mortgage loan securitizations guaranteed by the GSEs. Contributing to the increase was higher commitment volume due to increased market size as a result of lower mortgage rates.

Other income, net of losses, was \$146 million for the year ended December 31, 2009, compared to a loss of \$222 million in 2008. The increase in income was primarily due to lower losses on the sale of servicing advances and higher mortgage processing fees due to higher production and loan fees as a result of a change in product mix.

Total noninterest expense increased 40% during the year ended December 31, 2009, compared to 2008. The increase resulted primarily from higher corporate overhead allocations related to a change in the allocation methodology and the build-out of new corporate functions, an increase in representation and warranty expense, and higher compensation and benefits expense due to the elimination of our loan origination deferral upon election of the fair value option for our held-for-sale loans during the third quarter of 2009. The increase was partially offset by lower advertising expense due to cost reduction initiatives.

Table of Contents**Legacy Portfolio and Other Operations****Results of Operations**

The following table summarizes the operating results for our Legacy Portfolio and Other operations excluding discontinued operations for the periods shown. Our Legacy Portfolio and Other operations primarily consists of loans originated prior to January 1, 2009, and includes noncore business activities, portfolios in runoff, our mortgage reinsurance business, and cash held in the ResCap legal entity. These activities, all of which we have discontinued, included, among other things: lending to real estate developers and homebuilders in the United States and United Kingdom; and purchasing, selling, and securitizing nonconforming residential mortgage loans (with the exception of U.S. prime jumbo mortgage loans) in both the United States and internationally.

First Quarter 2011 Compared to First Quarter 2010

Our Legacy Portfolio and Other operations incurred a loss from continuing operations before income tax expense of \$39 million for the three months ended March 31, 2011, compared to income from continuing operations before income tax expense of \$85 million for the three months ended March 31, 2010. The decrease in 2011 was primarily due to lower financing revenue related to a decrease in asset levels and a lower net gain on the sale of mortgage loans.

Net financing revenue was \$78 million for the three months ended March 31, 2011, compared to \$193 million in 2010. The decrease was driven by lower financing revenue and other interest income due primarily to a decline in average asset levels due to loan sales, the deconsolidation of

Edgar Filing: Ally Financial Inc. - Form S-1/A

previous on-balance sheet securitizations, and portfolio runoff. The decrease was partially offset by lower interest expense related to a reduction in average borrowings commensurate with a smaller asset base.

Table of Contents

The net gain on mortgage loans was \$18 million for the three months ended March 31, 2011, compared to \$65 million in 2010. The decrease during 2011 was primarily due to lower gains from whole-loan sales and mortgage loan liquidations.

Other income, net of losses, was a loss of \$4 million for the three months ended March 31, 2011, compared to a loss of \$40 million in 2010. The improvement in 2011 compared to 2010 was primarily due to a lower fair value adjustment and better performance of the remaining asset portfolio.

The provision for loan losses was \$45 million for the three months ended March 31, 2011, compared to \$6 million in 2010. The provision for the three months ended March 31, 2011, was the result of continued portfolio seasoning. The provision for the three months ended March 31, 2010, benefited from the improved asset mix as a result of the strategic actions taken during the fourth quarter of 2009 to write down and reclassify certain legacy mortgage loans from held-for-investment to held-for-sale.

Total noninterest expense decreased 33% for the three months ended March 31, 2011, compared to 2010. The decrease was primarily driven by lower real estate owned expense due to fewer foreclosures, lower balances, favorable average real estate owned values, and lower taxes related to real estate owned properties as well as lower data processing expenses.

Table of Contents

2010 Compared to 2009

Our Legacy Portfolio and Other operations incurred a loss from continuing operations before income tax expense of \$254 million for the year ended December 31, 2010, compared to \$6.3 billion for the year ended December 31, 2009. The 2010 results from continuing operations were primarily driven by the stabilization of our loan portfolio resulting in a decrease in provision for loan losses, lower representation and warranty expense, and gains on the sale of domestic legacy assets.

Net financing revenue was \$605 million for the year ended December 31, 2010, compared to \$626 million in 2009. The decrease was driven by lower financing revenue and other interest income due primarily to a decline in average asset levels due to loan sales, on-balance deconsolidations, and portfolio runoff. The decrease was partially offset by lower interest expense related to a reduction in average borrowings commensurate with a smaller asset base.

The net gain on mortgage loans was \$380 million for the year ended December 31, 2010, compared to a loss of \$40 million in 2009. The increase was primarily due to higher gains on loan sales in 2010 compared to 2009, higher gains on loan resolutions in 2010, and the recognition of a gain on the deconsolidation of an on-balance sheet securitization. Refer to Note 11 to the Consolidated Financial Statements for information on the deconsolidation.

Other income, net of losses, was a loss of \$112 million for the year ended December 31, 2010, compared to a loss of \$648 million in 2009. The improvement from 2009 was primarily related to the recognition of gains on the sale of foreclosed real estate in 2010 compared to losses and impairments in 2009 and impairments and higher losses on trading securities in 2009. Additionally, during the year ended December 31, 2009, we recognized significant impairments on equity investments, lot option projects, and model homes.

The provision for loan losses was \$173 million for the year ended December 31, 2010, compared to \$4.2 billion in 2009. The provision decreased \$4.1 billion due to the improved asset mix as a result of the strategic actions taken during the fourth quarter of 2009 to write down and reclassify certain legacy mortgage loans from held-for-investment to held-for-sale. Additionally, the higher provision in 2009 was driven by significant increases in delinquencies and severity in our domestic mortgage loan portfolio and higher reserves were recognized against our commercial real estate-lending portfolio.

Total noninterest expense decreased 53% for the year ended December 31, 2010, compared to 2009. The decrease was driven by lower representation and warranty expense related to an increase in reserve in 2009 related to higher repurchase demands and loss severity. The decrease was also impacted by a decrease in compensation and benefits expense related to lower headcount and a decrease in professional services expense related to cost reduction efforts. During 2009, our captive reinsurance portfolio experienced deterioration due to higher delinquencies, which drove higher insurance reserves. The decrease in 2010 was partially offset by unfavorable foreign-currency movements on hedge positions.

2009 Compared to 2008

Our Legacy Portfolio and Other operations incurred a net loss from continuing operations before income tax expense of \$6.3 billion for the year ended December 31, 2009, compared to \$3.1 billion for the year ended December 31, 2008. The 2009 results from continuing operations were driven by our strategic actions taken in the fourth quarter of 2009 to sell certain legacy mortgage assets resulting in the reclassification of these loans from held-for-investment to held-for-sale. These actions resulted in provision for loan losses of \$2.0 billion. Refer to Notes to the Consolidated Financial Statements for further information. Results were also adversely impacted by an increase in mortgage representation and warranty reserve expense of \$1.2 billion related to higher repurchase demand requests and loss severity.

Table of Contents

Net financing revenue increased 23% for the year ended December 31, 2009, compared to 2008. Interest expense decreased significantly due to a reduction in average borrowings in association with a smaller asset base and through ResCap debt extinguishments. Interest expense declined at a faster rate than financing revenue and other interest income reflecting the favorable cost of funding impacts resulting from a declining interest rate environment and reduced reliance on higher-rate unsecured debt. Our total financing revenue and other interest income decreased significantly in comparison to 2008 due to a decline in legacy mortgage asset levels resulting from asset sales and portfolio runoff. Additionally, we earned lower yields as a result of higher delinquencies, increases in nonaccrual loan levels, and the impact of lower rates on adjustable-rate mortgage loans.

Gain on mortgage loans, net, was a loss of \$40 million for the year ended December 31, 2009, compared to a loss of \$609 million in 2008. Results in 2008 were significantly impacted by realized losses related to legacy mortgage asset sales and valuation losses on certain held-for-sale assets.

Gain on extinguishment of debt was \$4 million for the year ended December 31, 2009, compared to \$1.9 billion for the year ended December 31, 2008. The debt extinguishment gains in 2008 included \$1.1 billion following our contribution to ResCap of ResCap notes obtained through open-market repurchase (OMR) transactions or debt tender and exchange offerings and \$757 million related to the private debt exchange and cash tender offers completed during the fourth quarter of 2008. Refer to Critical Accounting Estimates for further discussion related to the private debt exchange and cash tender offers.

Other income, net of losses, was a loss of \$648 million for the year ended December 31, 2009, compared to a loss of \$1.1 billion in 2008. The decrease in the loss was driven by lower losses on the sale of foreclosed real estate due to lower volume and severity, the recognition of a \$255 million impairment on the resort finance business in 2008, lower impairments on lot option projects and model homes, and lower losses on residual interests due to the write-down of home equity residuals in 2008. The 2009 results were adversely impacted by a \$220 million impairment of our equity investments and lower real estate brokerage fee income due to the 2008 sale of our brokerage and relocation services business.

The provision for loan losses was \$4.2 billion for the year ended December 31, 2009, compared to \$1.7 billion in 2008. The increase in provision expense was primarily related to our strategic actions in the fourth quarter of 2009 as a result of the decision to sell certain legacy mortgage assets resulting in the reclassification of these assets from held-for-investment to held-for-sale. These actions resulted in negative valuation adjustments of \$2.0 billion. Additionally, we recognized higher provision expenses on the Ally Bank held-for-investment portfolio due to higher delinquencies and loss severities as well as regulatory input. The increase was partially offset by lower provision for loan losses as a result of lower mortgage loan and lending receivables balances in 2009 compared to 2008.

Total noninterest expense decreased 3% during the year ended December 31, 2009, compared to 2008. The decrease was driven primarily by a decrease in compensation and benefits expense primarily due to lower headcount associated with our restructuring efforts, favorable foreign-currency movements, a reduction in professional fees primarily due to advisory and legal fees related to ResCap's debt restructuring in 2008, and lower severance and other restructuring charges. The decrease was offset significantly by higher representation and warranty reserve expense due to higher repurchase demand requests and loss severity and higher expenses as a result of higher corporate overhead allocations related to a change in allocation methodology and the build-out of new corporate functions.

Table of Contents**Corporate and Other**

The following table summarizes the activities of Corporate and Other excluding discontinued operations for the periods shown. Corporate and Other includes our Commercial Finance Group, certain equity investments, the amortization of the discount associated with new debt issuances and bond exchanges, most notably from the December 2008 bond exchange, as well as, the residual impacts of our corporate FTP and treasury ALM, and reclassifications and eliminations between the reportable operating segments.

Total net financing losses for Corporate and Other	\$ (522)	\$ (510)

(a) The original issue discount associated with our 2008 bond exchange and cash tender offers in 2008 was \$286 million during both the three months ended March 31, 2011 and 2010. The remaining amount is attributable to new debt issuance discount amortization.

The following table presents the scheduled remaining amortization of the original issue discount at March 31, 2011.

	Year ended December 31,					2016 and thereafter	Total
	2011 (a)	2012	2013	2014	2015	(b)	
	(\$ in millions)						
Original issue discount							
Outstanding balance	\$ 2,194	\$ 1,844	\$ 1,580	\$ 1,390	\$ 1,334	\$	
Total amortization (c)	646	350	264	190	56	1,334	\$ 2,840
2008 bond exchange amortization (d)	620	320	241	166	43	1,178	2,568

(a) Represents the remaining future original issue discount amortization expense to be taken during 2011.

(b) The maximum annual scheduled amortization for any individual year is \$158 million in 2030 of which \$152 million is related to 2008 bond exchange amortization.

(c) Amortization is included as interest on long-term debt on the Condensed Consolidated Statement of Income.

(d) 2008 bond exchange amortization is included in total amortization.

First Quarter 2011 Compared to First Quarter 2010

Loss from continuing operations before income tax expense for Corporate and Other was \$624 million for the three months ended March 31, 2011, compared to \$811 million for the three months ended March 31, 2010. Corporate and Other's loss from continuing operations before income tax expense for both periods was primarily due to net financing losses, which primarily represented original issue discount

Edgar Filing: Ally Financial Inc. - Form S-1/A

amortization expense and the net impact of our FTP methodology. The net impact of our FTP methodology included the unallocated cost of maintaining our liquidity and investment portfolios and other unassigned funding costs and unassigned equity.

The improvement in the loss from continuing operations before income tax expense for the three months ended March 31, 2011, was primarily due to favorable net derivative activity, a lower loss related to the extinguishment of certain Ally debt (which included \$30 million of accelerated amortization of original discount during the three months ended March 31, 2011), and lower restructuring expense. This favorable activity was partially offset by an increase in unsecured interest expense related to the 2010 and 2011 debt issuances and higher marketing expenses.

Table of Contents

Corporate and Other also includes the results of our Commercial Finance Group. Our Commercial Finance Group earned income from continuing operations before income tax expense of \$51 million for the three months ended March 31, 2011, compared to \$13 million for the three months ended March 31, 2010. The increase was primarily due to a decline in provision for loan losses due to European-based recoveries.

- (b) The amortization is included as interest on long-term debt on the Consolidated Statement of Income.
- (c) 2008 bond exchange amortization is included in total amortization.

Table of Contents**2010 Compared to 2009**

Loss from continuing operations before income tax expense for Corporate and Other was \$2.6 billion for the year ended December 31, 2010, compared to \$2.5 billion for the year ended December 31, 2009. The losses in 2010 and 2009 were driven by \$1.2 billion and \$1.1 billion of original issue discount amortization expenses primarily related to our 2008 bond exchange and the net impact of our FTP methodology. The net financing revenue of our Global Automotive Services and Mortgage operations includes the results of a FTP process that insulates these operations from interest rate volatility by matching assets and liabilities with similar interest rate sensitivity and maturity characteristics. The FTP process assigns charge rates to the assets and credit rates to the liabilities within our Global Automotive Services and Mortgage operations, respectively, based on anticipated maturity and a benchmark index plus an assumed credit spread. The assumed credit spread represents the cost of funds for each asset class based on a blend of funding channels available to the enterprise, including unsecured and secured capital markets, private funding facilities, and deposits. In addition, a risk-based methodology, which incorporates each operation's credit, market, and operational risk components, is used to allocate equity to these operations. The residual net impact of the FTP methodology is realized in our Corporate and Other results. This residual net impact primarily represents the unallocated cost of maintaining our liquidity and investment portfolios and other unassigned funding costs, like the results of our ALM activities, as well as any unassigned equity. The unfavorable results for 2010 were also impacted by net derivative activity, higher marketing expenses, and higher FDIC fees. Additionally, we recognized a \$123 million loss related to the extinguishment of certain Ally debt, which includes \$101 million of accelerated amortization of original issue discount compared to a \$661 million gain in the prior year. Partially offsetting the unfavorable results were lower professional and legal fees.

Corporate and Other also includes the results of our Commercial Finance Group. Our Commercial Finance Group earned income from continuing operations before income tax expense of \$177 million for the year ended December 31, 2010, compared to a net loss from continuing operations before income tax expense of \$537 million for the year ended December 31, 2009. The increase in income was primarily due to significant provision for loan losses in 2009. The \$533 million decrease in provision expense from 2009 was driven by lower specific reserves in both the resort finance portfolio and in our European operations. In addition, we recognized a recovery in 2010 from the sale of the resort finance portfolio. Additionally, the favorable variance was impacted by the absence of an \$87 million fair value impairment recognized upon transfer of the resort finance portfolio from held-for-sale to held-for-investment during 2009 and lower interest expense related to a reduction in borrowing levels consistent with a lower asset base.

2009 Compared to 2008

Loss from continuing operations before income tax expense for Corporate and Other was \$2.5 billion for the year ended December 31, 2009, compared to income from continuing operations before income tax expense of \$7.1 billion for the year ended December 31, 2008. The decrease was primarily due to a \$10.7 billion pretax gain in 2008 that resulted from the December 2008 private debt exchange offers and cash tender offers. Refer to Critical Accounting Estimates and Note 1 to the Consolidated Financial Statements for further information related to the private debt exchange and cash tender offers. The 2009 results were favorably impacted by a \$634 million gain related to privately negotiated transactions that extinguished certain debt during 2009, a decrease in total noninterest expense primarily due to increased corporate overhead allocation reimbursements, and lower equity investment losses. In 2008, we recognized equity investment net losses of \$176 million and a full impairment on an equity investment of \$570 million, primarily attributed to the decline in credit market conditions and unfavorable asset revaluations. Additionally, we experienced an increase in the fair value of asset-backed securities due to improvements in credit spreads used to value the notes. The improved credit spreads result from improving conditions in the asset-backed securities market. Interest expense for the year decreased due to lower debt levels and rates, and lower allocated funds-transfer-pricing charges, offset by the amortization of the original issue discount associated with the December 2008 bond exchange.

Table of Contents

For the year ended December 31, 2009, our Commercial Finance Group had a loss from continuing operations before income tax expense of \$537 million compared to income from continuing operations before income tax expense of \$55 million in 2008. The results were primarily impacted by an increase of \$481 million in provision for loan losses in the resort finance business and our European operations and the absence of a \$29 million gain recognized during July 2008 related to the sale of operations in Poland. The results were also impacted by an \$87 million fair value impairment recognized upon transfer of the resort finance business assets from held-for-sale to held-for-investment during 2009. Additionally, we recognized lower fee income and interest expense resulting from lower factored sales volume and lower asset levels.

Cash and Securities

The following table summarizes the composition of the cash and securities portfolio held at fair value by Corporate and Other.

	March 31, 2011	December 31, 2010 (\$ in millions)	
Cash

(a) Includes intersegment eliminations.

Risk Management

Managing the risk to reward trade-off is a fundamental component of operating our businesses. Our risk management process is overseen by the Ally Board of Directors (the Board), various risk committees, and the executive leadership team. The Board sets the risk appetite across our company while the risk committees and executive leadership team monitor potential risks and manage the risk to be within our risk appetite. The

Edgar Filing: Ally Financial Inc. - Form S-1/A

primary risks include credit, market, operational, liquidity, and legal and compliance risk.

Credit risk The risk of loss arising from a borrower not meeting its financial obligations to our firm.

Table of Contents

Market risk The risk of loss arising from changes in the fair value of our assets or liabilities (including derivatives) caused by movements in market variables, such as interest rates, foreign-exchange rates, and equity and commodity prices.

Operational risk The risk of loss arising from inadequate or failed processes or systems, human factors, or external events.

Liquidity risk The risk of loss arising from the failure to recognize or address changes in market conditions affecting both asset and liability flows (see Liquidity Management, Funding, and Regulatory Capital).

Legal and compliance risk The risk of legal or regulatory sanctions, financial loss, or damage to reputation resulting from failure to comply with laws, regulations, rules, other regulatory requirements, or codes of conduct and other standards of self-regulatory organizations.

While risk oversight is ultimately the responsibility of the Board, our governance structure starts within each line of business where committees are established to oversee risk in their respective areas. The lines of business are responsible for executing on risk strategies, policies, and controls that are compliant with global risk management policies and with applicable laws and regulations. The line of business risk committees, which report to various global risk committees, monitor the performance within each portfolio and determine whether to amend any credit risk practices based upon portfolio trends.

In addition, the Global Risk Management and Compliance organizations are accountable for independently monitoring, measuring, and reporting on the various risks. They are also responsible for monitoring that risk remains within the tolerances established by the Board, developing and maintaining policies, and implementing risk management methodologies.

All lines of business and global functions are subject to full and unrestricted audits by Corporate Audit. Corporate Audit reports to the Ally Audit Committee and is primarily responsible for assisting the Audit Committee in fulfilling its governance and oversight responsibilities. Corporate Audit is granted free and unrestricted access to any and all of our records, physical properties, technologies, management, and employees.

In addition, our Global Loan Review Group provides an independent assessment of the quality of Ally's credit risk portfolios and credit risk management practices. This group reports its findings directly to the Ally Risk and Compliance Committee, which includes independent members of the Board. The findings of this group help to strengthen our risk management practices and processes throughout the organization.

Table of Contents**Loan and Lease Exposure**

The following table summarizes the exposures from our loan and lease activities.

	March 31, 2011	December 31, 2010	December 31, 2009
	(\$ in millions)

Corporate and Other	2,204	2,448	3,282
Total serviced loans and leases	\$ 480,866	\$ 478,573	\$ 492,697

(a) Includes primary mortgage loan-servicing portfolio only.

The risks inherent in our loan and lease exposures are largely driven by changes in the overall economy and its impact to our borrowers. The potential financial statement impact of these exposures varies depending on the accounting classification and future expected disposition strategy. We retain the majority of the automobile loans that we originate as they complement our core business model. We primarily originate mortgage loans with the intent to sell them and, as such, retain only a small percentage of the loans that we originate or purchase. Loans that we do not intend to retain are sold to investors, primarily securitizations guaranteed by the GSEs. However, we may retain an interest or right to service these loans. We ultimately manage the associated risks based on the underlying economics of the exposure.

Finance receivables and loans Loans that we have the intent and ability to hold for the foreseeable future or to maturity or loans associated with an on-balance sheet securitization classified as secured financing. These loans are recorded at the principal amount outstanding, net of unearned income and premiums and discounts. Probable credit-related losses inherent in our finance receivables and loans

Table of Contents

carried at historical cost are reflected in our allowance for loan losses and recognized in current period earnings. We manage the economic risks of these exposures, including credit risk, by adjusting underwriting standards and risk limits, augmenting our servicing and collection activities (including loan modifications), and optimizing our product and geographic concentrations. Additionally, we have elected to carry certain mortgage loans at fair value. Changes in the fair value of these loans are recognized in a valuation allowance separate from the allowance for loan losses and are reflected in current period earnings. We use market-based instruments, such as derivatives, to hedge changes in the fair value of these loans. Refer to Critical Accounting Estimates and Note 1 to the Consolidated Financial Statements for further information.

Held-for-sale loans Loans that we have the intent to sell. These loans are recorded on our balance sheet at the lower-of-cost or estimated fair value and are evaluated by portfolio and product type. Changes in the recorded value are recognized in a valuation allowance and reflected in current period earnings. We manage the economic risks of these exposures, including market and credit risks, in various ways including the use of market-based instruments such as derivatives. Additionally, for mortgage, we provide representations and warranties to the purchaser or facility regarding the characteristics of the underlying transferred assets. We estimate the fair value of our liability for representations and warranties when we sell loans and update our estimate quarterly. Refer to Critical Accounting Estimates and Note 1 to the Consolidated Financial Statements for further information.

Off-balance sheet securitized loans Loans that we transferred off-balance sheet to variable interest entities. While these loans are not consolidated on our balance sheet, we typically retain an interest in these loans. The interests retained in the financial asset transfers are recorded at the estimated fair value and are generally classified as trading securities or other assets at fair value. Changes in the fair value of retained interests are recorded as valuation adjustments and reported through earnings. Similar to finance receivables and loans, we manage the economic risks of these exposures, including credit risk, through activities including servicing and collections. Refer to Critical Accounting Estimates and Note 1 to the Consolidated Financial Statements for further information.

Operating lease assets The net book value of the automobile assets we lease are based on the expected residual value upon remarketing the vehicle at the end of the lease. An impairment to the carrying value of the assets may be deemed necessary if there is an unfavorable change in the value of the recorded asset. We are exposed to the fluctuations in the expected residual value upon remarketing the vehicle at the end of the lease, and as such, we manage the risks of these exposures at inception by setting minimum lease standards for projected residual values. We periodically receive support from automotive manufacturers for certain residual deficiencies. Refer to Critical Accounting Estimates and Note 1 to the Consolidated Financial Statements for further information.

Serviced loans and leases Loans that we service on behalf of our customers or another financial institution. As such, these loans can be on or off our balance sheet. For our mortgage servicing rights, we record an asset or liability (at fair value) based on whether the expected servicing benefits will exceed the expected servicing costs. Changes in the fair value of the mortgage servicing rights are recognized in current period earnings. We also service consumer automobile loans. We do not record servicing rights assets or liabilities for these loans because we either receive an upfront fee that adequately compensates us for the servicing costs or because the loan is of a short-term revolving nature. We manage the economic risks of these exposures, including market and credit risks, through market-based instruments such as derivatives and securities. Refer to Critical Accounting Estimates and Note 1 to the Consolidated Financial Statements for further information.

Table of Contents

Credit Risk Management

Credit risk is defined as the potential failure to receive payments when due from a borrower in accordance with contractual obligations. Therefore, credit risk is a major source of potential economic loss to us. To mitigate the risk, we have implemented specific processes across all lines of business utilizing both qualitative and quantitative analyses. Credit risk management is overseen through our risk committee structure and by the Risk organization, which reports to the Ally Risk and Compliance Committee. Together they establish the minimum standards for managing credit risk exposures in a safe-and-sound manner by identifying, measuring, monitoring, and controlling the risks while also permitting acceptable variations for a specific line of business with proper approval. In addition, our Global Loan Review Group provides an independent assessment of the quality of our credit risk portfolios and credit risk management practices.

During the first three months of 2011, the economy continued to expand modestly as the labor market further recovered. Within the automotive markets, encouraging trends included stronger pricing in used vehicle markets and higher industry sales. However, we continue to be cautious, in part due to uncertainty emanating from the crisis in Japan and the effect it could have on automotive sales through the remainder of the year, higher average gasoline prices and their possible effects on automotive sales, and the renewed weakness in the housing market. As a result, this underlying uncertainty may continue to affect our loan portfolio through the upcoming periods.

During 2010, the financial markets experienced some improvement; however, high unemployment and the distress in the housing market persisted, creating uncertainty for the financial services sector. Since the onset of this turbulent economic cycle, we saw both the housing and vehicle markets significantly decline affecting the credit quality for both our consumer and commercial segments. We have seen signs of economic stabilization in some housing, vehicle, and manufacturing markets and have also seen improvement in our loan portfolio as a result of our proactive credit risk initiatives. However, we anticipate the economic uncertainty will continue to affect our loan portfolio through upcoming periods.

We have policies and practices that are committed to maintaining an independent and ongoing assessment of credit risk and quality. Our policies require an objective and timely assessment of the overall quality of the consumer and commercial loan portfolios. This includes the identification of relevant trends that affect the collectability of the portfolios, segments of the portfolios that are potential problem areas, loans and leases with potential credit weaknesses, and assessment of the adequacy of internal credit risk policies and procedures to monitor compliance with relevant laws and regulations.

We manage credit risk based on the risk profile of the borrower, the source of repayment, the underlying collateral, and current market conditions. Our business is focused on consumer automobile loans and leases and mortgage loans in addition to automobile-related commercial lending. We classify these loans as either consumer or commercial and analyze credit risk in each. We monitor the credit risk profile of individual borrowers and the aggregate portfolio of borrowers either within a designated geographic region or a particular product or industry segment. To mitigate risk concentrations, we take part in loan sales and syndications.

In response to the dynamic credit environment and other market conditions, we continued to follow a more conservative lending policy across our lines of business, generally focusing our lending to more creditworthy borrowers. For example, our Mortgage operations eliminated production of new home equity loans in 2009. During 2010, we also significantly limited production of loans that do not conform to the underwriting guidelines of the GSEs. In addition, effective January 2009, we ceased originating nonprime automotive financing volume through Nuvel, which commenced in 2002 and primarily focused on non-GM dealers.

Additionally, we have implemented numerous initiatives in an effort to mitigate loss and provide ongoing support to customers in financial distress. For automobile loans, we offer several types of assistance to aid our customers. Loss mitigation includes changing the due date, extending payments, and rewriting the loan terms.

Table of Contents

We have implemented these actions with the intent to provide the borrower with additional options in lieu of repossessing their vehicle.

For mortgage loans, as part of our participation in certain governmental programs, we may offer mortgage loan modifications to our borrowers. Generally these modifications provide the borrower with some form of concession and, therefore, are deemed to be troubled debt restructurings (TDRs). Refer to Note 1 to the Consolidated Financial Statements for additional information on TDRs. Furthermore, we have internally designed proprietary programs aimed at homeowners at risk of foreclosure. Each program has unique qualification criteria for the borrower to meet as well as associated modification options that we analyze to determine the best solution for the borrower. We have also implemented periodic foreclosure moratoriums that are designed to provide borrowers with extra time to sort out their financial difficulties while allowing them to stay in their homes.

On-balance Sheet Portfolio

Our on-balance sheet portfolio includes both finance receivables and loans and held-for-sale loans. At March 31, 2011 and December 31, 2010, this primarily included \$93.1 billion and \$86.9 billion of automobile finance receivables and loans and \$19.9 billion and \$24.8 billion of mortgage finance receivables and loans, respectively. Within our on-balance sheet portfolio, we have elected to account for certain mortgage loans at fair value. The valuation allowance recorded on fair value-elected loans is separate from the allowance for loan losses. Changes in the fair value of loans are classified as gain on mortgage and automotive loans, net, in the Consolidated Statement of Income.

During the three months ended March 31, 2011 and the year ended December 31, 2010, we further executed on our strategy of discontinuing and selling or liquidating nonstrategic operations. Refer to Note 2 to the Consolidated Financial Statements for additional information on specific actions taken. Additionally, in September 2010, we completed the sale of our resort finance portfolio, primarily consisting of loans related to timeshare resorts throughout North America.

In 2009, we executed various changes and strategies throughout our lending operations that had a significant positive impact on our current period credit quality and ultimately our year-over-year comparisons. Some of our strategies included focusing primarily on the prime-lending market, participating in several loan modification programs, implementing tighter underwriting standards, and enhanced collection efforts. Additionally, we discontinued and sold multiple nonstrategic operations. Within our Automotive Finance operations, we exited certain underperforming dealer relationships and added the majority of Chrysler dealers. We see the results of these efforts as our overall credit risk profile has improved; however, our total loan portfolio continues to be affected by sustained levels of high unemployment and continued housing weakness.

On January 1, 2010, we adopted ASU 2009-17, which resulted in \$18.3 billion of off-balance sheet loans being consolidated on-balance sheet. This included \$7.2 billion of consumer automobile finance receivables and loans recorded at historical cost. We recorded an initial allowance for loan loss reserve of \$222 million on those loans. The remaining loans consolidated on-balance sheet were mortgage loans and included \$9.9 billion classified as operations held-for-sale (refer to Note 2 to the Consolidated Financial Statements for additional information) and \$1.2 billion of finance receivables and loans recorded at fair value.

Table of Contents

The following table presents our total on-balance sheet consumer and commercial finance receivables and loans reported at carrying value before allowance for loan losses.

	Outstanding		Nonperforming (a)		Accruing past due 90 days or more (b)	
	March 31, 2011	December 31, 2010	March 31, 2011	December 31, 2010	March 31, 2011	December 31, 2010
(\$ in millions)						
Consumer						
Finance receivables and loans						
Loans at historical cost	\$ 67,436	\$ 62,002	\$ 599	\$ 768	\$ 5	\$ 6
Loans at fair value	971	1,015	246	260		
Total finance receivables and loans	68,407	63,017	845	1,028	5	6
Loans held-for-sale	7,490	11,411	3,152	3,273	28	25
Total consumer loans	75,897	74,428	3,997	4,301	33	31
Commercial						
Finance receivables and loans						
Loans at historical cost	39,052	39,396	645	740		
Loans at fair value						
Total finance receivables and loans	39,052	39,396	645	740		
Loans held-for-sale	6					
Total commercial loans	39,058	39,396	645	740		
Total on-balance sheet loans	\$ 114,955	\$ 113,824	\$ 4,642	\$ 5,041	\$ 33	\$ 31

(a) Includes nonaccrual troubled debt restructured loans of \$654 million and \$684 million at March 31, 2011, and December 31, 2010, respectively.

(b) Includes troubled debt restructured loans classified as 90 days past due and still accruing of \$17 million and \$13 million at March 31, 2011, and December 31, 2010, respectively.

Total on-balance sheet loans outstanding at March 31, 2011, increased \$1.1 billion to \$115.0 billion from December 31, 2010, reflecting an increase of \$1.5 billion in the consumer portfolio and a decrease of \$338 million in the commercial portfolio. The increase in total on-balance sheet loans outstanding from December 31, 2010, was the result of increased automobile originations, which outpaced portfolio runoff, due to strengthened industry sales and improved automotive manufacturer penetration. The increase was partially offset by a decrease in mortgage originations in our consumer mortgage business and lower line utilization in our commercial mortgage business driven in part by higher interest rates.

The total TDRs outstanding at March 31, 2011, increased \$77 million to \$1.5 billion from December 31, 2010. This increase was driven primarily by our continued foreclosure prevention and loss mitigation procedures. We have participated in a variety of government modification programs, such as the Home Affordable Modification Program (HAMP), as well as internally developed modification programs.

Total nonperforming loans at March 31, 2011, decreased \$399 million to \$4.6 billion from December 31, 2010, reflecting a decrease of \$304 million of consumer nonperforming loans and a decrease of \$95 million of commercial nonperforming loans. The decrease in total nonperforming loans from December 31, 2010, was largely due to seasonal improvement within our mortgage portfolio and improved dealer performance in the commercial automotive portfolio.

Table of Contents

The following table includes consumer and commercial net charge-offs from finance receivables and loans at historical cost and related ratios reported at carrying value before allowance for loan losses.

	Three months ended March 31,			
	Net charge-offs		Net charge-off ratios (a)	
	2011	2010	2011	2010
	(\$ in millions)			
Consumer				
Finance receivables and loans at historical cost	\$ 169	\$ 255	1.0%	2.1%
Commercial				
Finance receivables and loans at historical cost	20	61	0.2	0.7
Total finance receivables and loans at historical cost	\$ 189	\$ 316	0.7	1.5

(a) Net charge-off ratios are calculated as annualized net charge-offs divided by average outstanding finance receivables and loans excluding loans measured at fair value and loans held-for-sale during the year for each loan category.

Our net charge-offs were \$189 million for the three months ended March 31, 2011, compared to \$316 million for the three months ended March 31, 2010. This decrease in net charge-offs was primarily driven by improvement within our consumer automotive portfolio and the workout of certain commercial real estate assets in prior periods. Loans held-for-sale are accounted for at the lower of cost or fair value, and therefore we do not record charge-offs.

The following table presents our total on-balance sheet consumer and commercial finance receivables and loans reported at carrying value before allowance for loan losses.

	Outstanding		Nonperforming (a)(b)		Accruing past due 90 days or more (c)	
	December 31,		December 31,		December 31,	
	2010	2009	2010	2009	2010	2009
	(\$ in millions)					
Consumer

Edgar Filing: Ally Financial Inc. - Form S-1/A

Total on-balance sheet loans	\$ 113,824	\$ 98,326	\$ 5,041	\$ 6,588	\$ 31	\$ 43
------------------------------	------------	-----------	----------	----------	-------	-------

- (a) Nonperforming loans are loans placed on nonaccrual status in accordance with internal loan policies. Refer to the Nonaccrual Loans section of Note 1 to the Consolidated Financial Statements for additional information.
- (b) Includes nonaccrual troubled debt restructured loans of \$684 million and \$1.0 billion at December 31, 2010 and 2009, respectively.

Table of Contents

(c) Includes troubled debt restructured loans classified as 90 days past due and still accruing of \$13 million and \$0 million at December 31, 2010 and 2009, respectively.

Total on-balance sheet loans outstanding at December 31, 2010, increased \$15.5 billion to \$113.8 billion from December 31, 2009, reflecting an increase of \$11.1 billion in the consumer portfolio and \$4.4 billion in the commercial portfolio. The increase in total on-balance sheet loans outstanding from December 31, 2009, was the result of increased automobile originations due to strengthened automotive industry sales and improved automotive manufacturer penetration, increased retention of originated automobile loans, and the impact of adopting ASU 2009-17. The increase was partially offset by certain mortgage legacy asset sales, automobile whole-loan sales, and the deconsolidation of certain mortgage legacy assets that no longer qualified under ASU 2009-17.

Total TDRs outstanding at December 31, 2010, increased \$411 million to \$1.5 billion from December 31, 2009. This increase was driven primarily by our continued foreclosure prevention and loss mitigation procedures. We participated in a variety of government modification programs, such as HARP and HAMP, as well as internally developed modification programs.

Total nonperforming loans at December 31, 2010, decreased \$1.5 billion to \$5.0 billion from December 31, 2009, reflecting a decrease of \$404 million of consumer nonperforming loans and a decrease of \$1.1 billion of commercial nonperforming loans. The decrease in commercial nonperforming loans from December 31, 2009, was largely due to sale of the resort finance portfolio and improved dealer performance. Partially offsetting the improvement in nonperforming loans was the impact of adopting ASU 2009-17, continued housing weakness, and seasoning of first mortgage loans remaining within our portfolio.

The following table includes consumer and commercial net charge-offs from finance receivables and loans at historical cost and related ratios adjusted for one-time charge-offs related to transfers to held-for-sale reported at carrying value before allowance for loan losses.

	Net charge offs		Net charge off ratios (a)	
	Year ended December 31, 2010	Year ended December 31, 2009	Year ended December 31, 2010	Year ended December 31, 2009
	(\$ in millions)		(%)	
Consumer				
Finance receivables and loans at historical cost	\$ 796	\$ 6,082	1.5%	11.2%
Commercial				
Finance receivables and loans at historical cost	402	1,017	1.1	2.8
Total finance receivables and loans at historical cost	1,198	7,099	1.3	7.9
Transfers to held-for-sale (b)		(3,438)		
Adjusted total finance receivables and loans at historical cost	\$ 1,198	\$ 3,661	1.3	4.1

(a) Net charge-off ratios are calculated as net charge-offs divided by average outstanding finance receivables and loans excluding loans measured at fair value, conditional repurchase loans, and loans held-for-sale during the year for each loan category.

(b) The year ended December 31, 2009, includes \$3.4 billion and \$10 million of net charge offs related to transfers to held-for-sale for consumer and commercial, respectively.

Our net charge-offs were \$1.2 billion for the year ended December 31, 2010, compared to \$7.1 billion for the year ended December 31, 2009. This decline was driven primarily by portfolio composition changes as a result of strategic actions including the write-down and reclassification of certain legacy mortgage loans during the fourth quarter of 2009 and improvement in our Nuvel portfolio during 2010, partially offset by charge-offs

Table of Contents

taken on our resort finance portfolio recorded in 2009 and 2010. Loans held-for-sale are accounted for at the lower-of-cost or fair value, and therefore, we do not record charge-offs.

The Consumer Credit Portfolio and Commercial Credit Portfolio discussions that follow relate to consumer and commercial credit finance receivables and loans recorded at historical cost. Finance receivables and loans recorded at historical cost have an associated allowance for loan losses. Finance receivables and loans measured at fair value were excluded from these discussions since those exposures do not carry an allowance.

Consumer Credit Portfolio

Our consumer portfolio primarily consists of automobile loans, first mortgages, and home equity loans, with a focus on serving the prime secured consumer credit market. Loan losses in our consumer portfolio are influenced by general business and economic conditions including unemployment rates, bankruptcy filings, and home and used vehicle prices. Additionally, our consumer credit exposure is significantly concentrated in automotive lending (primarily through GM and Chrysler dealerships). Due to our GM and Chrysler subvention relationships, we are able to mitigate some interest income exposure to certain consumer defaults by receiving a rate support payment directly from the automotive manufacturers at origination.

Credit risk management for the consumer portfolio begins with the initial underwriting and continues throughout a borrower's credit cycle. We manage consumer credit risk through our loan origination and underwriting policies, credit approval process, and servicing capabilities. We use credit-scoring models to differentiate the expected default rates of credit applicants enabling us to better evaluate credit applications for approval and to tailor the pricing and financing structure according to this assessment of credit risk. We regularly review the performance of the credit scoring models and update them for historical information and current trends. These and other actions mitigate but do not eliminate credit risk. Improper evaluations of a borrower's creditworthiness, fraud, and changes in the applicant's financial condition after approval could negatively affect the quality of our receivables portfolio, resulting in loan losses.

Our servicing activities are another key factor in managing consumer credit risk. Servicing activities consist largely of collecting and processing customer payments, responding to customer inquiries such as requests for payoff quotes, and processing customer requests for account revisions (such as payment extensions and refinancings). Servicing activities are generally consistent across our operations; however, certain practices may be influenced by local laws and regulations.

During the three months ended March 31, 2011, the credit performance of the consumer portfolio continued to improve overall as our finance receivables and loans increased and nonperforming finance receivables and loans and charge-offs declined. For information on our consumer credit risk practices and policies regarding delinquencies, nonperforming status, and charge-offs, refer to Note 1 to our Consolidated Financial Statements.

Table of Contents

The following table includes consumer finance receivables and loans recorded at historical cost reported at carrying value before allowance for loan losses.

	Outstanding		Nonperforming (a)		Accruing past due 90 days or more (b)	
	March 31, 2011	December 31, 2010	March 31, 2011	December 31, 2010	March 31, 2011	December 31, 2010
	(\$ in millions)

Home equity						
Total foreign	17,293	17,040	143	190	3	5
Total consumer finance receivables and loans	\$ 67,436	\$ 62,002	\$ 599	\$ 768	\$ 5	\$ 6

(a) Includes nonaccrual troubled debt restructured loans of \$175 million and \$204 million at March 31, 2011, and December 31, 2010, respectively.

(b) There were no troubled debt restructured loans classified as 90 days past due and still accruing at March 31, 2011, and December 31, 2010. Total consumer outstanding finance receivables and loans increased \$5.4 billion at March 31, 2011, compared with December 31, 2010. The increase in domestic automobile outstandings was driven by increased originations, which outpaced portfolio run-off, due to strengthened industry sales and improved automotive manufacturer penetration.

Total consumer nonperforming finance receivables and loans at March 31, 2011, decreased \$169 million to \$599 million from December 31, 2010, reflecting a decrease of \$149 million of consumer mortgage nonperforming finance receivables and loans and a decrease of \$20 million of consumer automotive nonperforming finance receivables and loans. Nonperforming consumer mortgage finance receivables and loans decreased primarily due to seasonal improvements. Nonperforming consumer automotive finance receivables and loans decreased primarily due to increased quality of newer vintages and normal seasonal trends. Nonperforming consumer finance receivables and loans as a percentage of total outstanding consumer finance receivables and loans were 0.9% and 1.2% at March 31, 2011, and December 31, 2010, respectively.

Consumer domestic automotive loans accruing and past due 30 days or more decreased \$212 million to \$590 million at March 31, 2011, compared with December 31, 2010, primarily due to increased quality of newer vintages and normal seasonal trends.

During the year ended December 31, 2010, the credit performance of the consumer portfolio continued to improve overall as nonperforming loans and charge-offs declined. The decline in nonperforming loans was primarily driven by improvement in our Nuvel portfolio due to enhanced collection efforts. The year-over-year decline in net charge-offs was driven by the improved asset mix as the result of strategic actions that included the

Table of Contents

write-down and reclassification of certain legacy mortgage loans in the fourth quarter of 2009 as well as improvement in our Nuvell portfolio.

The following table includes consumer finance receivables and loans recorded at historical cost reported at carrying value before allowance for loan losses.

	Outstanding December 31,		Nonperforming (a) December 31,		Accruing past due 90 days or more (b) December 31,

Total foreign	17,040	18,137	190	152	5	6
Total consumer finance receivables and loans	\$ 62,002	\$ 41,458	\$ 768	\$ 816	\$ 6	\$ 7

(a) Includes nonaccrual troubled debt restructured loans of \$204 million and \$263 million at December 31, 2010 and 2009, respectively.

(b) There were no troubled debt restructured loans classified as 90 days past due and still accruing at December 31, 2010 and 2009. Total outstanding consumer finance receivables and loans increased \$20.5 billion at December 31, 2010, compared with December 31, 2009. The increase in domestic automobile outstandings was driven by the consolidation of previously off-balance sheet loans due to the adoption of ASU 2009-17, increased originations due to strengthened automotive industry sales and improved automotive manufacturer penetration, increased retention of automobile originated loans, and the adoption of ASU 2009-17. The decrease in foreign automobile outstandings was driven by continued exit and liquidations in nonstrategic countries and overall market contraction in Europe.

Total consumer nonperforming loans at December 31, 2010, decreased \$48 million to \$768 million from December 31, 2009, reflecting a decrease of \$179 million of consumer automobile nonperforming loans and an increase of \$131 million of consumer mortgage nonperforming loans. Nonperforming consumer automobile loans decreased primarily due to enhanced collection efforts, increased quality of newer vintages and a change to our Nuvell portfolio nonaccrual policy to be consistent with our other automobile nonaccrual policies. Nonperforming consumer mortgage loans increased due to seasoning of the first mortgage loans remaining in our portfolio subsequent to the strategic actions taken in late 2009. Nonperforming consumer finance receivables and loans as a percentage of total outstanding consumer finance receivables and loans were 1.2% and 2.0% at December 31, 2010 and 2009, respectively.

Consumer domestic automobile loans accruing and past due 30 days or more, included in outstandings in the table above, decreased \$32 million to \$802 million at December 31, 2010, compared with December 31, 2009.

Table of Contents

The decrease was primarily due to an improvement in our Nuvell portfolio as a result of enhanced collection efforts in addition to an increased quality of newer vintages in the overall automobile portfolio.

The following table includes consumer net charge-offs from finance receivables and loans at historical cost and related ratios reported at carrying value before allowance for loan losses.

	Three months ended March 31,			
	Net charge-offs		Net charge-off ratios (a)	
	2011	2010	2011	2010
	(\$ in millions)			
Domestic				
Consumer automobile	\$ 89	\$ 184	1.0%	3.5%

Home equity				
Total foreign	23	43	0.5	1.0
Total consumer finance receivables and loans	\$ 169	\$ 255	1.0	2.1

(a) Net charge-off ratios are calculated as annualized net charge-offs divided by average outstanding finance receivables and loans excluding loans measured at fair value and loans held-for-sale during the year for each loan category.

Our net charge-offs from total consumer automobile finance receivables and loans decreased \$113 million for the three months ended March 31, 2011, compared to the same period in 2010. The decrease in net charge-offs was primarily due to lower loss frequency, improvements in loss severity as a result of improved pricing in the used vehicle market, and improved loss performance in our Nuvell portfolio primarily due to enhanced collection efforts.

Our net charge-offs from total consumer mortgage and home equity finance receivables and loans were \$57 million for the three months ended March 31, 2011, compared to \$30 million for the same period in 2010. The increase was driven by net charge-offs within our consumer legacy mortgage portfolio as those finance receivables and loans continue to season.

Table of Contents

The following table includes consumer net charge-offs from finance receivables and loans at historical cost and related ratios reported at carrying value before allowance for loan losses.

	Net charge-offs Year ended December 31, 2010 2009 (\$ in millions)		Net charge-off ratios Year ended December 31, 2010 2009 (%)	
	Domestic			
Consumer automobile	\$ 457	\$ 823	1.7%	5.8%
Consumer mortgage				
1 st Mortgage	128	2,433	1.8	23.0
Home equity	85	1,579	2.4	24.6
Total domestic	670	4,835	1.8	15.5
Foreign				
Consumer automobile	123	301	0.8	1.5
Consumer mortgage				
1 st Mortgage	3	946	0.8	25.1
Home equity				
Total foreign	126	1,247	0.8	5.4
Total consumer finance receivables and loans	796	6,082	1.5	11.2
Transfers to held-for-sale		(3,428)		
Adjusted total consumer finance receivables and loans	\$ 796	\$ 2,654	1.5	4.9

Our net charge-offs from total consumer automobile loans decreased \$544 million for the year ended December 31, 2010, compared to 2009. The decrease in net charge-offs was primarily due to one-time charge-offs taken in 2009, as we aligned our internal policies to Federal Financial Institutions Examination Council (FFIEC) guidelines. Also contributing to the decrease in net charge-offs were improvements in loss severity driven by improved pricing in the used vehicle market and in loss frequency and customer recoveries due to enhanced collection efforts, primarily with our Nuvell portfolio.

Our net charge-offs from total consumer mortgage and home equity loans were \$216 million for the year ended December 31, 2010, compared to \$5.0 billion in 2009. The significant decrease was driven by portfolio composition changes as a result of strategic actions that included the write-down and reclassification of certain legacy mortgage loans from finance receivables and loans to held-for-sale during the fourth quarter of 2009.

Table of Contents

The following table summarizes the total consumer loan originations at unpaid principal balance for the periods shown. Total consumer loan originations include loans classified as finance receivables and loans held-for-sale during the period.

	Three months ended March 31,	
	2011	2010
	(\$ in millions)	
Domestic		
Consumer automobile	\$ 9,384	\$ 5,296
Consumer mortgage		
1st Mortgage	11,847	12,968
Home equity		
Total domestic	21,231	18,264
Foreign		
Consumer automobile	2,052	1,702
Consumer mortgage		
1st Mortgage	312	292
Home equity		
Total foreign	2,364	1,994
Total consumer loan originations	\$ 23,595	\$ 20,258

Total domestic automobile-originated loans increased \$4.1 billion for the three months ended March 31, 2011, compared to the same period in 2010, primarily due to strengthened industry sales and improved automotive manufacturer penetration.

Total domestic mortgage-originated loans decreased \$1.1 billion for the three months ended March 31, 2011. The decrease for the three months ended March 31, 2011, was due in part to higher interest rates.

Consumer loan originations retained on-balance sheet as held-for-investment were \$11.8 billion for the three months ended March 31, 2011, and \$5.7 billion for the three months ended March 31, 2010, respectively. The increase was primarily due to strengthened automotive industry sales, improved automotive manufacturer penetration, and increased balance sheet retention.

Table of Contents

The following table summarizes the total consumer loan originations at unpaid principal balance for the periods shown. Total consumer loan originations include loans classified as finance receivables and loans held-for-sale during the period.

	Year ended December 31,	
	2010	2009
	(\$ in millions)	
Domestic		
Consumer automobile	\$ 27,681	\$ 18,091
Consumer mortgage		
Ist Mortgage	69,542	64,731
Home equity		
Total domestic	97,223	82,822
Foreign		
Consumer automobile	8,818	5,843
Consumer mortgage		
Ist Mortgage	1,503	1,405
Home equity		
Total foreign	10,321	7,248
Total consumer loan originations	\$ 107,544	\$ 90,070

Total domestic automobile loan originations increased \$9.6 billion for the year ended December 31, 2010, compared to 2009, primarily due to the improved automotive market as well as the addition of Chrysler automotive financing business. Domestic automobile originations continue to reflect tightened underwriting standards, and most of these originations for 2010 were retained on-balance sheet as finance receivables and loans. Total foreign automobile originations increased \$3.0 billion for the year ended December 31, 2010, compared to 2009 driven by improved Canadian automobile sales.

Total domestic mortgage loan originations increased \$4.8 billion for the year ended December 31, 2010. The increase was due primarily to increased refinancing as customers continued to take advantage of historically low interest rates.

Consumer loan originations retained on-balance sheet as finance receivables and loans increased \$24.9 billion to \$35.1 billion at December 31, 2010, compared to 2009. The increase was primarily due to strengthened automotive industry sales, improved automotive manufacturer penetration, and increased retention of automobile-originated loans.

Table of Contents

The following table shows consumer finance receivables and loans recorded at historical cost reported at carrying value before allowance for loan losses by state and foreign concentration. Total automobile loans were \$56.9 billion, \$51.3 billion and \$30.2 billion at March 31, 2011, December 31, 2010 and 2009, respectively. Total mortgage and home equity loans were \$10.6 billion, \$10.7 billion and \$11.2 billion at March 31, 2011, December 31, 2010 and 2009, respectively.

	March 31, 2011 (a)		2010		December 31, 2009

Total consumer loans	100.0%	100.0%	100.0%	100.0%	100.0%	100.0%

(a) Presentation is in descending order as a percentage of total consumer finance receivables and loans at March 31, 2011. We monitor our consumer loan portfolio for concentration risk across the geographies in which we lend. The highest concentrations of loans in the United States are in California and Texas, which represent an aggregate of 16.4% of our total outstanding consumer loans at March 31, 2011. Our domestic concentrations in the automobile portfolio increased due to the adoption of ASU 2009-17 and higher retained originations.

Concentrations in our mortgage portfolio are closely monitored given the volatility of the housing markets. Our consumer mortgage loan concentrations in California, Florida, and Michigan receive particular attention as the real estate value depreciation in these states has been the most severe.

Repossessed and Foreclosed Assets

We classify an asset as repossessed or foreclosed (included in other assets on the Consolidated Balance Sheet) when physical possession of the collateral is taken. For more information on repossessed and foreclosed assets, refer to Note 1 to the Consolidated Financial Statements.

Repossessed assets in our automotive finance operations at March 31, 2011, increased \$3 million to \$49 million from December 31, 2010. Foreclosed mortgage assets at March 31, 2011, decreased \$21 million to \$117 million from December 31, 2010.

Repossessed assets in our Automotive Finance operations at December 31, 2010, decreased \$4 million to \$46 million from December 31, 2009. Foreclosed mortgage assets at December 31, 2010, decreased \$12 million to \$138 million from December 31, 2009.

Table of Contents*Higher-risk Mortgage Loans*

During the three months ended March 31, 2011 and the year ended December 31, 2010, we primarily focused our origination efforts on prime conforming and government-insured residential mortgages in the United States and high-quality government-insured residential mortgages in Canada. In June 2010, we ceased offering interest-only jumbo mortgage loans given the continued volatility of the housing market and the delayed principal payment feature of that loan product. We continued to hold mortgage loans that have features that expose us to potentially higher credit risk including high original loan-to-value mortgage loans (prime or nonprime), payment-option adjustable-rate mortgage loans (prime nonconforming), interest-only mortgage loans (classified as prime conforming or nonconforming for domestic production and prime nonconforming or nonprime for international production), and teaser-rate mortgages (prime or nonprime).

In circumstances when a loan has features such that it falls into multiple categories, it is classified to a category only once based on the following hierarchy: (1) high original loan-to-value mortgage loans, (2) payment-option adjustable-rate mortgage loans, (3) interest-only mortgage loans, and (4) below-market rate (teaser) mortgages. Given the continued stress within the housing market, we believe this hierarchy provides the most relevant risk assessment of our nontraditional products.

High loan-to-value mortgages Defined as first-lien loans with original loan-to-value ratios equal to or in excess of 100% or second-lien loans that when combined with the underlying first-lien mortgage loan result in an original loan-to-value ratio equal to or in excess of 100%. We ceased originating these loans with the intent to retain during 2009.

Payment-option adjustable rate mortgages Permit a variety of repayment options. The repayment options include minimum, interest-only, fully amortizing 30-year, and fully amortizing 15-year payments. The minimum payment option generally sets the monthly payment at the initial interest rate for the first year of the loan. The interest rate resets after the first year, but the borrower can continue to make the minimum payment. The interest-only option sets the monthly payment at the amount of interest due on the loan. If the interest-only option payment would be less than the minimum payment, the interest-only option is not available to the borrower. Under the fully amortizing 30- and 15-year payment options, the borrower's monthly payment is set based on the interest rate, loan balance, and remaining loan term. We ceased originating these loans during 2008.

Interest-only mortgages Allow interest-only payments for a fixed time. At the end of the interest-only period, the loan payment includes principal payments and can increase significantly. The borrower's new payment, once the loan becomes amortizing (i.e., includes principal payments), will be greater than if the borrower had been making principal payments since the origination of the loan. We ceased originating these loans with the intent to retain during 2010.

Below-market rate (teaser) mortgages Contain contractual features that limit the initial interest rate to a below-market interest rate for a specified time period with an increase to a market interest rate in a future period. The increase to the market interest rate could result in a significant increase in the borrower's monthly payment amount. We ceased originating these loans during 2008.

Table of Contents

The following tables summarize the higher-risk mortgage loan originations at unpaid principal balance for the periods shown. These higher-risk mortgage loans are classified as finance receivables and loans and are recorded at historical cost.

	Three months ended March 31,	
	2011	2010
	(\$ in millions)	
High original loan-to-value (greater than 100%) mortgage loans	\$	\$
Payment-option adjustable-rate mortgage loans

Commercial Credit Portfolio

Our commercial portfolio consists of automotive loans (wholesale floorplan, dealer term loans, and automotive fleet financing), commercial real estate loans, and other commercial finance loans. In general, the credit risk of our commercial portfolio is impacted by overall economic conditions in the countries in which we operate. Further, our commercial credit exposure is concentrated in automotive dealerships (primarily GM and Chrysler). In 2009, we entered into an agreement with Chrysler to provide automotive financing products and services to Chrysler dealers and customers. Both GM and Chrysler are bound by repurchase obligations that, under certain circumstances, such as dealer default, require them to repurchase new vehicle inventory.

Our credit risk on the commercial portfolio is markedly different from that of our consumer portfolio. Whereas the consumer portfolio represents smaller-balance homogeneous loans that exhibit fairly predictable and stable loss patterns, the commercial portfolio exposures can be less predictable. We utilize an internal credit risk rating system that is fundamental to managing credit risk exposure consistently across various types of commercial borrowers and captures critical risk factors simultaneously for each borrower. The ratings are used for many areas of credit risk management, such as loan origination, portfolio risk monitoring, management reporting, and loan loss reserves analyses. Therefore, the rating

system is critical to an effective and consistent credit risk management framework.

Table of Contents

During the three months ended March 31, 2011, the credit performance of the commercial portfolio improved as nonperforming finance receivables and loans and net charge-offs declined.

For information on our commercial credit risk practices and policies regarding delinquencies, nonperforming status, and charge-offs, refer to Note 1 to the Consolidated Financial Statements .

The following table includes total commercial finance receivables and loans reported at carrying value before allowance for loan losses.

	Outstanding		Nonperforming (a)		Accruing past due 90 days or more (b)	
	March 31, 2011	December 31, 2010	March 31, 2011	December 31, 2010	March 31, 2011	December 31, 2010
	(\$ in millions)

Total commercial finance receivables and loans	\$ 39,052	\$ 39,396	\$ 645	\$ 740	\$	\$

(a) Includes nonaccrual troubled debt restructured loans of \$2 million and \$9 million at March 31, 2011, and December 31, 2010, respectively.

(b) There were no troubled debt restructured loans classified as 90 days past due and still accruing at March 31, 2011, and December 31 2010.

(c) Other commercial primarily includes senior secured commercial lending.

Total commercial finance receivables and loans outstanding decreased \$344 million to \$39.1 billion at March 31, 2011, from December 31, 2010. Domestic commercial and industrial outstandings decreased driven primarily by mortgage warehouse lending declines in line utilization due in part to higher interest rates. Foreign commercial and industrial outstandings increased primarily due to growth in our Canadian automobile portfolio, partially offset by dealer exits and continued portfolio runoff within exited countries.

Edgar Filing: Ally Financial Inc. - Form S-1/A

Total commercial nonperforming finance receivables and loans were \$645 million, a decrease of \$95 million compared to December 31, 2010, primarily due to improvement in dealer performance and continued mortgage asset dispositions. Total nonperforming commercial finance receivables and loans as a percentage of outstanding commercial finance receivables and loans were 1.7% and 1.9% at March 31, 2011, and December 31, 2010, respectively.

Table of Contents

During the year ended December 31, 2010, the credit performance of the commercial portfolio improved as nonperforming loans and net charge-offs declined. The decline in nonperforming loans was primarily driven by the sale of the resort finance portfolio, some improvement in dealer performance, and continued commercial mortgage asset dispositions. The decline in charge-offs in 2010 was primarily attributed to improved portfolio composition compared to 2009 due to the workout of certain commercial real estate assets and the strategic exit of underperforming automotive dealers.

The following table includes total commercial finance receivables and loans reported at carrying value before allowance for loan losses.

	Outstanding		Nonperforming (a) December 31,		Accruing past due 90 days or more (b)	
	2010	2009	2010	2009	2010	2009

Total commercial finance receivables and loans	\$ 39,396	\$ 34,852	\$ 740	\$ 1,883	\$	\$ 3

(a) Includes nonaccrual troubled debt restructured loans of \$9 million and \$59 million at December 31, 2010 and 2009, respectively.

(b) There were no troubled debt restructured loans classified as 90 days past due and still accruing at December 31, 2010 and 2009, respectively.

(c) Other commercial primarily includes senior secured commercial lending. Additionally, amounts at December 31, 2009, include the resort finance portfolio with an outstanding balance of \$843 million, a nonperforming balance of \$779 million, and an accruing past due 90 days or more balance of \$0 million. We sold our resort finance portfolio during the third quarter of 2010.

Total commercial finance receivables and loans outstanding increased \$4.5 billion to \$39.4 billion at December 31, 2010, from December 31, 2009. Commercial and industrial outstandings increased \$4.7 billion due to the addition of the Chrysler automotive financing business and improved automotive industry sales with a corresponding increase in inventories partially offset by the sale of the resort finance portfolio. Commercial real estate outstandings decreased \$146 million from December 31, 2009, due to continued asset dispositions.

Table of Contents

Total commercial nonperforming loans were \$740 million, a decrease of \$1.1 billion compared to December 31, 2009, primarily due to the sale of the resort finance portfolio, some improvement in dealer performance, and continued mortgage asset dispositions. Total nonperforming commercial finance receivables and loans as a percentage of outstanding commercial finance receivables and loans were 1.9% and 5.4% at December 31, 2010 and 2009, respectively.

The following table includes total commercial net charge-offs from finance receivables and loans at historical cost and related ratios reported at carrying value before allowance for loan losses.

(a) Net charge-off ratios are calculated as annualized net charge-offs divided by average outstanding finance receivables and loans excluding loans measured at fair value and loans held-for-sale during the year for each loan category.

Table of Contents

Our net charge-offs from commercial finance receivables and loans totaled \$20 million for the three months ended March 31, 2011, compared to \$61 million for the same period in 2010. The decreases in net charge-offs were largely driven by an improved mix of loans in the existing portfolio driven by the workout of certain commercial real estate assets in prior periods.

The following table includes total commercial net charge-offs from finance receivables and loans at historical cost and related ratios reported at carrying value before allowance for loan losses.

	Net charge-offs (recoveries)		Net charge-off ratios	
	Year ended December 31,		2010	
	2010	2009	2010	2009
	(\$ in millions)		(%)

Commercial real estate				
Automobile	2		1.0	
Mortgage	48	12	38.7	5.9
Total foreign	138	71	1.5	0.7
Total commercial finance receivables and loans	\$ 402	\$ 1,017	1.1	2.8

(a) Amounts include the resort finance portfolio with net charge-offs of \$148 million and \$61 million and net charge-off ratios of 29.0% and 7.1% for the years ended December 31, 2010 and 2009, respectively. We sold our resort finance portfolio during the third quarter of 2010. Our net charge-offs of total commercial finance receivables and loans totaled \$402 million for the year ended December 31, 2010, compared to \$1.0 billion in 2009. The overall decrease in net charge-offs was largely due to the resolution and workout of certain domestic and foreign commercial real estate assets. Increased net charge-offs within our commercial and industrial portfolios were driven by the domestic resort finance and U.K. commercial finance lending portfolios.

Commercial Real Estate

The commercial real estate portfolio consists of loans issued primarily to automotive dealers, homebuilders, and commercial real estate firms. Commercial real estate finance receivables and loans were \$2.4 billion, \$2.4 billion and \$2.5 billion at March 31, 2011, December 31, 2010 and 2009, respectively.

Table of Contents

The following table shows the percentage of total commercial real estate finance receivables and loans by geographic region and property type. These finance receivables and loans are reported at carrying value before allowance for loan losses.

Commercial Criticized Exposure

Exposures deemed criticized are loans classified as special mention, substandard, or doubtful. These classifications are based on regulatory definitions and generally represent finance receivables and loans within our portfolio that have a higher default risk or have already defaulted. These loans require additional monitoring and review including specific actions to mitigate our potential economic loss.

Table of Contents

The following table shows the percentage of total commercial criticized finance receivables and loans by industry concentrations. These finance receivables and loans are reported at carrying value before allowance for loan losses.

	March 31, 2011	December 31, 2010 2009	
Industry			
Automotive	72.0%	66.5%	49.7%
Real estate (a)	10.1	12.1	23.4
Health/medical	5.2	7.3	7.9
Manufacturing	4.2	3.5	3.1
Hardgoods	1.7	1.8	1.1
Services	1.5	1.9	2.1
Retail	1.1	1.5	2.6
Electronics	1.1	1.2	1.6
All other	3.1	4.2	8.5
Total commercial criticized finance receivables and loans	100.0%	100.0%	100.0%

(a) Includes resort finance, which represented 17.3% of the portfolio at December 31, 2009.

Total criticized exposures were \$3.7 billion and \$3.6 billion at March 31, 2011, and December 31, 2010, respectively, as automotive criticized exposure increased due to risk rating process enhancements. The increase was partially offset by health/medical and real estate improvements.

Total criticized exposure decreased \$1.3 billion to \$3.6 billion from December 31, 2009 to December 31, 2010, primarily due to the sale of the resort finance portfolio, improvement in dealer credit quality, and continued mortgage asset dispositions. The increase in our automotive criticized concentration rate was due to the significant decrease in the overall criticized amounts outstanding at December 31, 2010, compared to December 31, 2009.

Selected Loan Maturity and Sensitivity Data

The table below shows the commercial finance receivables and loans portfolio and the distribution between fixed and floating interest rates based on the stated terms of the commercial loan agreements. The table does not include the impact of derivative instruments utilized to hedge certain loans. This portfolio is reported at carrying value before allowance for loan losses.

Table of Contents

(a) Includes adjustment to the allowance due to adoption of ASU 2009-17, *Improvements to Financial Reporting by Enterprises Involved with Variable Interest Entities*.

(b) Coverage percentages are based on the allowance for loan losses related to finance receivables and loans excluding those loans held at fair value as a percentage of the unpaid principal balance, net of premiums and discounts.

The allowance for consumer loan losses at March 31, 2011, declined \$275 million compared to March 31, 2010, reflecting an improved asset mix with higher quality recent vintages, the continued runoff of Nuveel and other liquidating portfolios, as well as improved loss performance.

The allowance for commercial loan losses declined \$399 million at March 31, 2011, compared to March 31, 2010, primarily related to the sale of the resort finance portfolio and improved portfolio credit quality due to improved dealer performance.

The following tables present an analysis of the activity in the allowance for loan losses on finance receivables and loans.

	Consumer automobile	Consumer mortgage	Total consumer (\$ in millions)	Commercial	Total

Ratio of allowance for loans losses to net charge-offs at December 31, 2009	0.9	0.1	0.3	0.8	0.3

- (a) Coverage percentages are based on the allowance for loan losses related to finance receivables and loans excluding those loans held at fair value as a percentage of the unpaid principal balance, net of premiums and discounts.

The allowance for consumer loan losses was \$1.6 billion at December 31, 2010, compared to \$1.7 billion at December 31, 2009. The decline reflected the improved asset mix resulting from the strategic actions taken in late 2009 related to legacy mortgage loans and the continued runoff of Nuvel and other liquidating portfolios. Partially offsetting this decline was an increase in the allowance due to increased loans outstanding in the nonliquidating automobile portfolio.

The allowance for commercial loan losses was \$323 million at December 31, 2010, compared to \$781 million at December 31, 2009. The decline was primarily related to the sale of the resort finance portfolio, runoff in our commercial real estate portfolio, and improved portfolio credit quality due to improved dealer performance, strategic dealer exits, and the wind-down of operations in several nonstrategic countries.

Table of Contents

Lease Residual Risk Management

We are exposed to residual risk on vehicles in the consumer lease portfolio. This lease residual risk represents the possibility that the actual proceeds realized upon the sale of returned vehicles will be lower than the projection of these values used in establishing the pricing at lease inception. The following factors most significantly influence lease residual risk.

Used vehicle market We are at risk due to changes in used vehicle prices. General economic conditions, used vehicle supply and demand, and new vehicle market prices most heavily influence used vehicle prices.

Residual value projections We establish risk adjusted residual values at lease inception by consulting independently published guides and periodically reviewing these residual values during the lease term. These values are projections of expected values in the future (typically between two and four years) based on current assumptions for the respective make and model. Actual realized values often differ.

Remarketing abilities Our ability to efficiently process and effectively market off-lease vehicles affects the disposal costs and the proceeds realized from vehicle sales.

Manufacturer vehicle and marketing programs Automotive manufacturers influence lease residual results in the following ways:

The brand image of automotive manufacturers and consumer demand for their products affect residual risk as our lease portfolio consists primarily of these vehicles.

Automotive manufacturer marketing programs may influence the used vehicle market for those vehicles through programs such as incentives on new vehicles, programs designed to encourage lessees to terminate their leases early in conjunction with the acquisition of a new vehicle (referred to as pull-ahead programs), and special rate used vehicle programs.

Automotive manufacturers may provide support to us for certain residual deficiencies.

The following table summarizes the volume of serviced lease terminations in the United States over recent periods. It also summarizes the average sales proceeds on 24, 36, and 48 month scheduled lease terminations for those same periods at auction. The mix of terminated vehicles in 2010 was used to normalize results over previous periods to more clearly demonstrate market pricing trends.

	Year ended December 31,		
	2010	2009	2008
Off-lease vehicles remarketed (in units)	376,203	369,981	425,567
Sales proceeds on scheduled lease terminations (\$ per unit)			
24-month	\$ 28,008	\$ 25,192	\$ 21,866
36-month	19,226	17,327	13,828
48-month	14,722	12,384	10,641

Proceeds in 2009 and 2010 increased as market conditions for used vehicles improved. The improvement in proceeds was driven partly by lower used vehicle supply and increased consumer demand for used vehicles as the weakened U.S. economy drove consumer preference for used vehicles over higher cost new vehicles.

Country Risk

Edgar Filing: Ally Financial Inc. - Form S-1/A

We have exposures to obligors domiciled in foreign countries; and therefore, our portfolio is subject to country risk. Country risk is the risk that conditions in a foreign country will impair the value of our assets,

Table of Contents

restrict our ability to repatriate equity or profits, or adversely impact the ability of the guarantor to uphold their obligations to us. Country risk includes risks arising from the economic, political, and social conditions prevalent in a country, as well as the strengths and weaknesses in the legal and regulatory framework. These conditions may have potentially favorable or unfavorable consequences for our investments in a particular country.

Country risk is measured by determining our cross-border outstandings in accordance with FFIEC guidelines. Cross-border outstandings are reported as assets within the country of which the obligor or guarantor resides. Furthermore, outstandings backed by tangible collateral are reflected under the country in which the collateral is held. For securities received as collateral, cross-border outstandings are assigned to the domicile of the issuer of the securities. Resale agreements are presented based on the domicile of the counterparty.

The following tables list all countries in which cross-border outstandings exceed 1.0% of consolidated assets.

	Banks	Public	Other	Net local country assets (\$ in millions)	Derivatives	Total cross- border outstandings
2010						
Canada	\$ 343	\$ 361	\$ 349	\$ 4,678	\$ 19	\$ 5,750
Germany	587	40	111	3,485	76	4,299

2009						
Germany	\$ 281	\$ 66	\$ 1,459	\$ 3,057	\$ 304	\$ 5,167
United Kingdom	123	285	307	4,226	74	5,015
Canada	581	42	71	2,755	187	3,636

Market Risk

Our automotive financing, mortgage, and insurance activities give rise to market risk representing the potential loss in the fair value of assets or liabilities and earnings caused by movements in market variables, such as interest rates, foreign-exchange rates, equity prices, market perceptions of credit risk, and other market fluctuations that affect the value of securities and assets held-for-sale. We are primarily exposed to interest rate risk arising from changes in interest rates related to financing, investing, and cash management activities. More specifically, we have entered into contracts to provide financing, to retain mortgage servicing rights, and to retain various assets related to securitization activities all of which are exposed in varying degrees to changes in value due to movements in interest rates. Interest rate risk arises from the mismatch between assets and the related liabilities used for funding. We enter into various financial instruments, including derivatives, to maintain the desired level of exposure to the risk of interest rate fluctuations. Refer to Note 23 to the Consolidated Financial Statements for further information.

We are also exposed to foreign-currency risk arising from the possibility that fluctuations in foreign-exchange rates will affect future earnings or asset and liability values related to our global operations. We may enter into hedges to mitigate foreign exchange risk.

We also have exposure to equity price risk, primarily in our Insurance operations, which invests in equity securities that are subject to price risk influenced by capital market movements. We enter into equity options to economically hedge our exposure to the equity markets.

Although the diversity of our activities from our complementary lines of business may partially mitigate market risk, we also actively manage this risk. We maintain risk management control systems to monitor interest rates, foreign-currency exchange rates, equity price risks, and any of their related hedge positions. Positions are monitored using a variety of analytical techniques including market value, sensitivity analysis, and value at risk models.

Table of Contents**Fair Value Sensitivity Analysis**

The following table and subsequent discussion presents a fair value sensitivity analysis of our assets and liabilities using isolated hypothetical movements in specific market rates. The analysis assumes adverse instantaneous, parallel shifts in market exchange rates, interest rate yield curves, and equity prices. The analysis does not consider the financial offsets available through derivative activities. Additionally, since only adverse fair value impacts are included, the natural offset between asset and liability rate sensitivities that arise within a diversified balance sheet, such as ours, is not considered.

	December 31,

(a) Includes our trading securities. Refer to Note 6 to the Consolidated Financial Statements for additional information on our trading portfolio.

(b) Refer to the section below titled *Net Interest Income Sensitivity Analysis* for information on the interest rate sensitivity of our nontrading financial instruments.

The fair value of our foreign-currency exchange-rate sensitive financial instruments increased during the year ended December 31, 2010, compared to the same period in 2009, due to declines in our foreign denominated debt. This decline consequently drove the increase in the fair value estimate and associated adverse 10% change in rates impact. The increase in the fair value of our equity price sensitive financial instruments was driven by a change in mix within our investment portfolio. This change in equity exposure drove our increased sensitivity to a 10% decrease in equity prices.

Net Interest Income Sensitivity Analysis

We use net interest income sensitivity analysis to measure and manage the interest rate sensitivities of our nontrading financial instruments rather than the fair value approach. Interest rate risk represents the most significant market risk to the nontrading exposures. We actively monitor the level of exposure so that movements in interest rates do not adversely affect future earnings. Simulations are used to estimate the impact on our net interest income in numerous interest rate scenarios. These simulations measure how the interest rate scenarios will impact net interest income on the financial instruments on the balance sheet including debt securities, loans, deposits, debt, and derivative instruments. The simulations incorporate assumptions about future balance sheet changes including loan and deposit pricing, changes in funding mix, and asset/liability repricing, prepayments, and contractual maturities.

We prepare forward-looking forecasts of net interest income, which take into consideration anticipated future business growth, asset/liability positioning, and interest rates based on the implied forward curve. Simulations are used to assess changes in net interest income in multiple interest rates scenarios relative to the baseline forecast. The changes in net interest income relative to the baseline are defined as the sensitivity. The

Table of Contents

net interest income sensitivity tests measure the potential change in our pretax net interest income over the following twelve months. A number of alternative rate scenarios are tested including immediate parallel shocks to the forward yield curve, nonparallel shocks to the forward yield curve, and stresses to certain term points on the yield curve in isolation to capture and monitor a number of risk types.

Our twelve-month pretax net interest income sensitivity based on the forward-curve was as follows.

	Year ended December 31,	
	2010	2009
	(\$ in millions)	
Parallel rate shifts		
- 100 basis points	\$ 54	\$ 15
+100 basis points	(99)	(129)
+200 basis points	(28)	(137)

Our net interest income was liability sensitive to a parallel move in interest rates at both years ended 2010 and 2009. The change in net interest income sensitivity from December 31, 2009, was due to the change in the level of forward short-term interest rates and the resultant impact on certain interest rate floors on commercial finance receivables and loans. Additionally, we reduced our net receive fixed interest rate swaps hedging the debt portfolio as part of our normal ALM activities, which contributed to the change.

Operational Risk

We define operational risk as the risk of loss resulting from inadequate or failed processes or systems, human factors, or external events. Operational risk is an inherent risk element in each of our businesses and related support activities. Such risk can manifest in various ways, including errors, business interruptions, and inappropriate behavior of employees, and can potentially result in financial losses and other damage to us.

To monitor and control such risk, we maintain a system of policies and a control framework designed to provide a sound and well-controlled operational environment. This framework employs practices and tools designed to maintain risk governance, risk and control assessment and testing, risk monitoring, and transparency through risk reporting mechanisms. The goal is to maintain operational risk at appropriate levels in view of our financial strength, the characteristics of the businesses and the markets in which we operate, and the related competitive and regulatory environment.

Notwithstanding these risk and control initiatives, we may incur losses attributable to operational risks from time to time, and there can be no assurance these losses will not be incurred in the future.

Liquidity Management, Funding, and Regulatory Capital**Overview**

Liquidity management involves forecasting funding requirements driven by asset growth and liability maturities. The goal of liquidity management is to ensure we maintain adequate funds to meet changes in loan and lease demand, debt maturities, unexpected deposit withdrawals, and other seen and unforeseen corporate needs. Our primary funding objective is to ensure we maintain access to stable and diverse liquidity sources throughout all market cycles including periods of financial distress. Sources of liquidity include both retail and brokered deposits and secured and unsecured market-based funding across maturities, interest rate characteristics, currencies, and investor profiles. Further liquidity is available through committed facilities as well as funding programs supported by the Federal Reserve and the Federal Home Loan Bank of Pittsburgh (FHLB).

Liquidity risk arises from the failure to recognize or address changes in market conditions affecting both asset and liability flows. Effective liquidity risk management is critical to the viability of financial institutions to

Table of Contents

ensure an institution has the ability to meet contractual and contingent financial obligations. The ability to manage liquidity needs and contingent funding exposures has been essential to the solvency of financial institutions.

ALCO, the Asset-Liability Committee, is responsible for monitoring Ally's liquidity position, funding strategies and plans, contingency funding plans, and counterparty credit exposure arising from financial transactions. ALCO delegates the planning and execution of liquidity management strategies to Corporate Treasury. We manage liquidity risk at the business segment, legal entity, and consolidated levels. Each reporting segment, along with Ally Bank and ResMor Trust, prepares periodic forecasts depicting anticipated funding needs and sources of funds with oversight and monitoring by Corporate Treasury. Corporate Treasury manages liquidity under baseline projected economic scenarios as well as more severe economically stressed environments. Corporate Treasury, in turn, plans and executes our funding strategies.

In addition, we have established internal management committees to assist senior leadership in monitoring and managing our liquidity positions and funding plans. The Liquidity Risk Council is responsible for monitoring liquidity risk tolerance while maintaining adequate liquidity and analyzing liquidity risk measurement standards, liquidity position and investment alternatives, funding plans, forecasted liquidity needs and related risks and opportunities, liquidity buffers, stress testing, and contingency funding. The Structured Funding Risk Council is responsible for assisting senior leadership in the execution of its structured funding strategy and risk management accountabilities.

We maintain available liquidity in the form of cash, highly liquid unencumbered securities and available credit facility capacity that, taken together, are intended to allow us to operate and to meet our contractual obligations in the event of market-wide disruptions and enterprise-specific events. We maintain available liquidity at various entities, including Ally Bank and Ally Financial Inc., the parent company, and consider regulatory and tax restrictions that may limit our ability to transfer funds across entities. At March 31, 2011 and December 31, 2010, we maintained \$22.0 billion and \$23.8 billion of total available parent company liquidity and \$11.4 billion and \$7.5 billion of total available liquidity at Ally Bank, respectively. To optimize cash and secured facility capacity between entities, the parent company lends cash to Ally Bank from time to time under an intercompany loan agreement. At March 31, 2011 and December 31, 2010, \$2.3 billion and \$3.7 billion, respectively, was outstanding under the intercompany loan agreement. Amounts outstanding are repayable to the parent company at any time, subject to five days notice. As a result, this amount is included in the parent company available liquidity and excluded from the available liquidity at Ally Bank in the above figures. For this purpose, parent company includes our consolidated operations less our Insurance operations, ResCap, and Ally Bank.

Funding Strategy

Our liquidity and ongoing profitability are largely dependent on our timely access to funding and the costs associated with raising funds in different segments of the capital markets. We continue to be extremely focused on maintaining and enhancing our liquidity. Our funding strategy primarily focuses on the development of diversified funding sources across a global investor base to meet all our liquidity needs and to ensure an appropriate maturity profile. These funding sources include unsecured debt capital markets, asset-backed securitizations, whole-loan sales, domestic and international committed and uncommitted bank lines, brokered certificates of deposits, and retail deposits. We also supplement these sources with short-term borrowings, including Demand Notes, unsecured bank loans, and repurchase arrangements. Creating funding from a wide range of sources across geographic locations strengthens our liquidity position and limits dependence on any single source. We evaluate funding markets on an ongoing basis to achieve an appropriate balance of unsecured and secured funding sources and the maturity profiles of both. In addition, we further distinguish our funding strategy between bank funding and holding company or nonbank funding.

Throughout 2009 and 2010, we have been directing new bank-eligible assets in the United States to Ally Bank in order to reduce and minimize our nonbanking exposures and funding requirements. We expect that this development will further allow us to use bank funding for a wider array of our automotive finance assets and to

Table of Contents

provide a sustainable long-term funding channel for the business. As a result of the conversion of \$5.5 billion of Ally Mandatorily Convertible Preferred (MCP) stock held by Treasury into common stock on December 30, 2010, and consequent reduction of the equity interests held by General Motors and the GM Trust, the Federal Reserve has determined that GM will no longer be considered an affiliate of Ally Bank for purposes of Sections 23A and 23B of the Federal Reserve Act, which imposes limitations on transactions between banks and their affiliates. Transactions between Ally Bank and GM will continue to be subject to regulation and examination by the bank's primary federal regulator, the Federal Deposit Insurance Corporation.

Ally Bank

Ally Bank raises deposits directly from customers through the direct banking channel via the internet and over the telephone. Ally Bank provides our automotive finance and mortgage loan operations with a stable and low cost funding source. Ally Bank funded 56% and 64% of our U.S. retail automotive loans during the three months ended March 31, 2011 and December 31, 2010, respectively. At March 31, 2011 and December 31, 2010, we had \$35.4 billion and \$33.9 billion of deposits including \$23.5 billion and \$21.8 billion of retail deposits sourced by Ally Bank, respectively. The growth of our retail deposit base from \$7.2 billion at the end of 2008 to \$23.5 billion at March 31, 2011 enabled us to reduce our cost of funds during that period. We expect to continue to lower our cost of funds as our deposit base grows.

At March 31, 2011, Ally Bank maintained cash liquidity of \$3.7 billion and highly liquid U.S. federal government and U.S. agency securities of \$5.0 billion, excluding certain securities that were encumbered at March 31, 2011. In addition, at March 31, 2011, Ally Bank had unused capacity in committed secured funding facilities of \$4.9 billion, including an equal allocation of shared unused capacity of \$3.9 billion from a facility also available to the parent company. At December 31, 2010, Ally Bank maintained cash liquidity of \$3.1 billion and highly liquid U.S. federal government and U.S. agency securities of \$4.4 billion, excluding certain securities that were encumbered at December 31, 2010. In addition, at December 31, 2010, Ally Bank had unused capacity in committed secured funding facilities of \$3.8 billion, including an equal allocation of the unused capacity from a \$4.1 billion shared facility also available to the parent company. Our ability to access this unused capacity depends on having eligible assets to collateralize the incremental funding and, in some instances, the execution of interest rate hedges.

Maximizing bank funding is the cornerstone of our long-term liquidity strategy. We have made significant progress in migrating assets to Ally Bank and growing our retail deposit base since becoming a bank holding company. Growth in retail deposits is key to further reducing our cost of funds and decreasing our reliance on the capital markets and other sources of funding. We believe deposits provide a low-cost source of funds that are less sensitive to interest rate changes, market volatility, or changes in our credit ratings than other funding sources. We have continued to expand our deposit gathering efforts through our direct and indirect marketing channels. Current retail product offerings consist of a variety of savings products including certificates of deposits (CDs), savings accounts, and money market accounts, as well as an online checking product. In addition, we have brokered deposits, which are obtained through third-party intermediaries. In the first quarter of 2011, the deposit base at Ally Bank grew \$1.5 billion, ending the quarter at \$35.4 billion from \$33.9 billion at December 31, 2010. In 2010, the deposit base at Ally Bank grew \$5.1 billion, ending the year at \$33.9 billion from \$28.8 billion at December 31, 2009. The growth in deposits was primarily attributable to our retail deposit portfolio. Strong retention rates materially contributed to our growth in retail deposits during 2010. In the first quarter of 2011 and the fourth quarter of 2010, we retained 86% and 85% of CD balances up for renewal during the same period, respectively. In addition to retail and brokered deposits, Ally Bank had access to funding through a variety of other sources including FHLB advances, the Federal Reserve's Discount Window, public securitizations and private funding arrangements. At March 31, 2011 and December 31, 2010, debt outstanding from the FHLB totaled \$4.8 billion and \$5.3 billion, respectively, with no debt outstanding from the Federal Reserve. Also, as part of our liquidity and funding plans, Ally Bank utilizes certain securities as collateral to access funding from repurchase agreements with third parties. Repurchase agreements are generally short-term and often occur overnight. Funding from repurchase agreements was accounted for as debt on our Consolidated Balance Sheet.

Table of Contents

At March 31, 2011, December 31, 2010 and 2009, Ally Bank had no debt outstanding under repurchase agreements.

In addition to building a larger deposit base, we continue to remain active in the securitization markets to finance our Ally Bank automotive loan portfolios. During the first quarter of 2011, Ally Bank completed four transactions and raised \$3.4 billion of secured funding backed by retail and dealer floorplan automotive loans, as well as consumer leases. While deposits provide for a more stable funding base, our efficiencies in securitizations and improving capital market conditions have resulted in a reduction in the cost of funds achieved through secured funding transactions, making them a very attractive source of funding. For retail automotive loans and leases, the primary reason why securitizations are an attractive funding source is that the term structure locks in funding for a specified pool of loans and leases for the life of the underlying asset. Once a pool of retail automotive loans are selected and placed into a securitization, the underlying assets will have no bearing on any incremental liquidity risk. We manage the execution risk arising from secured funding by maintaining a diverse investor base and maintaining committed secured facilities. In the first quarter of 2011, we renewed our syndicated revolving credit facility that is secured by automotive retail loans, leases, and dealer floorplan automotive loans. The facility size was increased from \$7.0 billion to \$7.5 billion and the tenor for half of the facility size was extended to two years, with the other half remaining at a 364-day maturity. At March 31, 2011, the total credit commitments capable of financing Ally Bank's automobile loan portfolios were \$12.9 billion, which included \$4.1 billion of commitments available to Ally Bank or the parent company.

Refer to Note 15 to the Consolidated Financial Statements for a summary of deposit funding by type.

The following table shows Ally Bank's number of accounts and deposit balances by type as of the end of each quarter since 2009.

	1st Quarter 2011	4th Quarter 2010	3rd Quarter 2010	2nd Quarter 2010	1st Quarter 2010 (\$ in millions)	4th Quarter 2009	3rd Quarter 2009	2nd Quarter 2009	1st Quarter 2009
Number of accounts	798,622	726,104	676,419	616,665	573,388	535,301	506,313	461,229	362,776
Deposits									
Retail	\$ 23,469	\$ 21,817	\$ 20,504	\$ 18,690	\$ 17,672	\$ 16,926	\$ 15,901	\$ 14,464	\$ 11,026
Brokered	9,836	9,992	9,978	9,858	9,757	10,149	9,151	8,141	9,072
Other (1)	2,064	2,108	2,538	2,267	1,914	1,767	2,331	2,194	1,950
Total deposits	\$ 35,369	\$ 33,917	\$ 33,020	\$ 30,815	\$ 29,343	\$ 28,842	\$ 27,383	\$ 24,799	\$ 22,048

(1) Other deposits include mortgage escrow and other deposits (excluding intercompany deposits).

Nonbank Funding

At March 31, 2011, the parent company maintained cash liquidity of \$7.6 billion and unused capacity in committed credit facilities of \$10.9 billion, including an equal allocation of shared unused capacity of \$3.9 billion from a facility also available to Ally Bank. At December 31, 2010, the parent company maintained cash liquidity in the amount of \$6.7 billion and unused capacity in committed credit facilities of \$11.1 billion, including an equal allocation of the unused capacity from a \$4.1 billion shared facility also available to Ally Bank. Our ability to access unused capacity in secured facilities depends on having eligible assets to collateralize the incremental funding and, in some instances, the execution of interest rate hedges. As we shift our focus to growing bank funding capabilities in line with increasing asset originations at Ally Bank, we are similarly focused on minimizing uses of our parent company liquidity and reducing the amount of assets funded outside the bank. Funding sources at the parent company generally consist of longer-term unsecured debt, private credit facilities, asset-backed securitizations, and a modest amount of short-term borrowings.

Table of Contents

We continue to access the unsecured debt markets to further strengthen the parent company liquidity position. During the first quarter of 2011, we completed an offering of \$2.3 billion in aggregate principal amount of unsecured term debt with a tenor of three years. In April, we completed a \$1.5 billion offering, which included both fixed and floating rate notes with a tenor of approximately three years. In addition to funding in the debt capital markets, we have offered short-term and long-term unsecured debt through a retail debt program known as SmartNotes. SmartNotes are floating-rate instruments with fixed-maturity dates ranging from 9 months to 30 years that we have issued through a network of participating broker-dealers. There were \$9.7 billion and \$9.8 billion and \$10.9 billion of SmartNotes outstanding at March 31, 2011, and December 31, 2010 and 2009, respectively. For the remainder of 2011, we expect to continue to follow this approach of being aggressive, yet opportunistic in the unsecured debt markets to prefund upcoming debt maturities.

During 2010, we completed transactions in the unsecured debt markets to further strengthen the parent company liquidity position. We raised over \$8.0 billion in the unsecured bond markets including a \$1.0 billion issuance in the fourth quarter. Of the \$8.0 billion issued this year, \$3.7 billion had a term of 10 years while the remaining amount had a term of 5 or 7 years.

We also obtain short-term unsecured funding from the sale of floating-rate demand notes under our Demand Notes program. The holder has the option to require us to redeem these notes at any time without restriction. Demand Notes outstanding were \$2.3 billion at March 31, 2011, \$2.0 billion at December 31, 2010, and \$1.3 billion at December 31, 2009. Unsecured short-term bank loans also provide short term funding. At March 31, 2011, we had \$4.6 billion in short-term unsecured debt outstanding, an increase of \$0.4 billion from December 31, 2010. At December 31, 2010, we had \$4.2 billion in short-term unsecured debt outstanding, an increase of \$1.0 billion from December 31, 2009. Refer to Note 16 and Note 17 to the Consolidated Financial Statements for additional information about our outstanding short-term borrowings and long-term unsecured debt, respectively.

Secured funding continues to be a significant source of financing at the parent company. Internationally, we will continue to remain active in both the public and private securitization markets. During the first quarter of 2011, we completed a Canadian public term securitization transaction backed by retail automotive loans that resulted in \$748 million of funding. In the United States, new automotive term securitization transactions were issued through Ally Bank only, which is consistent with our broader strategy of directing new bank-eligible assets to Ally Bank in order to reduce and minimize our nonbanking exposures and funding requirements at the parent company. We still maintain significant credit capacity in North America to fund automotive-related assets, including a \$7.5 billion syndicated facility that was renewed in March 2011 and funds U.S. and Canadian automotive retail and commercial loans, as well as leases. The tenor for half of the facility is two years with the other half having a 364-day maturity. In addition to this facility, there was \$9.5 billion of committed capacity available exclusively for the parent company in various secured facilities around the globe at March 31, 2011.

Recent Funding Developments

In summary, during the first quarter of 2011, we completed funding transactions totaling over \$7 billion, and we renewed over \$16 billion of key existing funding facilities as we realized ready access to both the public and private markets. Key funding highlights from the first quarter of 2011 were as follows:

We issued \$2.3 billion of unsecured debt that matures in 2014.

We raised \$4.6 billion from the sale of asset-backed securities publicly and privately in the United States and Canada. Ally Bank completed four transactions and raised \$3.4 billion of secured funding backed by retail and dealer floorplan automotive loans, as well as leases. We completed a public term securitization transaction in Canada that raised approximately \$748 million. Also in March 2011, ResCap completed the sale of \$450 million of securities backed by mortgage servicer advances.

Table of Contents

In March 2011, we completed the refinancing of \$15 billion in credit facilities at both the parent company and Ally Bank with a syndicate of 21 lenders. The \$15 billion funding capacity can be used to fund retail, lease and dealer floorplan automotive assets and is allocated to two separate \$7.5 billion facilities, one of which is available to the parent company and a Canadian subsidiary while the other is available to Ally Bank. Each new facility replaces existing facilities that were due to mature in the second quarter of 2011. Half the capacity will mature in two years with the other half remaining as a 364-day maturity.

We also renewed, extended, and completed multiple private credit facilities that provide \$1.8 billion of funding capacity.

In March, we completed a key first step in our plan to repay the U.S. taxpayer. The U.S. Department of Treasury (Treasury) was repaid \$2.7 billion from the sale of all the Trust Preferred Securities that Treasury held with Ally. This represented the full value of Treasury's investment in these securities. Ally did not receive any proceeds from the offering of the Trust Preferred Securities. In summary, during 2010, we completed funding transactions totaling almost \$36 billion and we renewed key existing funding facilities as we realized ready access to both the public and private markets. Key funding highlights from 2010 are as follows:

We issued over \$8.0 billion of unsecured debt, which included issuances in both the U.S. and European markets. Of the \$8.0 billion issued in 2010, \$3.7 billion had a term of 10 years while the remaining amount had a term of 5 or 7 years. In the fourth quarter of 2010, we issued \$1.0 billion of unsecured long-term debt with a maturity of 7 years. In 2011, we raised an additional \$2.25 billion of unsecured debt with a tenor of three years.

We raised over \$15 billion from the sale of asset-backed securities publicly and privately in multiple jurisdictions. In the United States, we completed Ally Bank-sponsored transactions totaling \$8.1 billion, of which \$2.0 billion was completed in the fourth quarter. We also completed \$674 million of issuance supported by mortgage servicer advances and mortgage loans. Outside the United States, we issued \$6.2 billion through public and private automotive securitization transactions.

We created more than \$12 billion of new committed credit capacity including \$8.3 billion solely dedicated to fund automotive assets at Ally Bank and new mortgage facilities in the United States that provide committed credit capacity of \$725 million. In the fourth quarter, we entered into new committed secured auto facilities in Canada and Brazil that provide total capacity of \$1.4 billion.

We renewed over \$8 billion of key private funding facilities at our Automotive Finance operations and Mortgage operations.

As a result of the conversion of \$5.5 billion of Ally Mandatorily Convertible Preferred (MCP) stock held by Treasury into common stock on December 30, 2010, the dividend payments payable to our preferred shareholders will be reduced by approximately \$500 million annually. This is expected to improve long-term profitability with a lower cost of funds and enhances capital preservation.

Table of Contents**Funding Sources**

The following table summarizes debt and other sources of funding and the amount outstanding under each category for the periods shown.

As a result of our funding strategy to maximize funding sources at Ally Bank and grow our retail deposit base, the percentage of funding sources from Ally Bank has increased in 2011 from 2010 levels. In addition, deposits represent a larger portion of the overall funding mix.

<i>(\$ in millions)</i>	Bank	Nonbank	Total	%

(a) Primarily includes \$9,784 million and \$10,878 million of Ally SmartNotes at December 31, 2010 and 2009, respectively.

(b) Excludes fair value adjustment as described in Note 27 to the Consolidated Financial Statements.

(c) Bank deposits include deposits at Ally Bank, excluding mortgage escrow and intercompany deposits. Nonbank deposits include deposits at ResMor Trust and dealer wholesale deposits.

Refer to Note 17 to the Consolidated Financial Statements for a summary of the scheduled maturity of long-term debt at December 31, 2010.

Funding Facilities

We utilize both committed and uncommitted credit facilities. The financial institutions providing the uncommitted facilities are not legally obligated to advance funds under them. The amounts outstanding under our various funding facilities are included on our Consolidated Balance Sheet.

Table of Contents

As of March 31, 2011, Ally Bank had exclusive access to \$8.8 billion of funding capacity from committed credit facilities. Ally Bank also has access to a \$4.1 billion committed facility that is shared with the parent company. Funding programs supported by the Federal Reserve and the FHLB complement Ally Bank's private committed facilities.

In 2010, Ally Bank entered into its first committed credit facilities. These facilities are secured by automotive receivables and have given Ally Bank exclusive access to \$8.3 billion of funding capacity. Ally Bank also has access to a \$4.1 billion committed facility that is shared with the parent company. Funding programs supported by the Federal Reserve and the FHLB complement Ally Bank's private committed facilities. Growth in total capacity at Ally Bank has been offset by reductions in the parent company's committed capacity, which is consistent with our asset origination strategy. The reduction in committed capacity for the parent company has been coupled with a reduction in debt outstanding under the facilities, such that the unused capacity and related funding available solely to the parent company increased marginally year-over-year to \$9.1 billion.

The total capacity in our committed funding facilities is provided by banks through private transactions. The committed secured funding facilities can be revolving in nature and allow for additional funding during the commitment period, or they can be amortizing and do not allow for any further funding after the closing date. At March 31, 2011, \$29.3 billion of our \$32.1 billion of committed capacity was revolving. Many of our revolving facilities have a tenor of 364 days and are renewed annually, but recently, we have been able to establish \$9.4 billion of committed funding capacity with a tenor greater than 364 days.

Bank Funding Facilities*Facilities for Automotive Finance Operations Secured*

Ally Bank's largest facility is a \$7.5 billion revolving syndicated credit facility secured by automotive receivables. At March 31, 2011, the amount outstanding under this facility was \$5.1 billion. Ally Bank's other committed facilities are also available to fund automotive receivables. During the first quarter of 2011, we successfully renewed the \$7.5 billion facility as well as a \$500 million credit facility. The tenor of half of the \$7.5 billion facility was extended to two years, with the other half remaining at a 364-day maturity. In total, Ally Bank maintained committed credit facilities that provide capacity of \$12.9 billion at March 31, 2011, including \$4.1 billion of commitments available to Ally Bank or the parent company. In the event these facilities are not renewed, the outstanding debt will be repaid over time as the underlying collateral amortizes.

Nonbank Funding Facilities*Facilities for Automotive Finance Operations Unsecured*

Revolving credit facilities At March 31, 2011 and December 31, 2010, we maintained \$486 million of commitments in our U.S. unsecured revolving credit facility maturing June 2012. This facility was fully drawn. We also maintained \$281 million and \$274 million of committed unsecured bank facilities in Canada and \$49 million and \$47 million in Europe at March 31, 2011 and December 31, 2010, respectively. The Canadian facilities expire in June 2012 and the European facility expires in March 2012.

Facilities for Automotive Finance Operations Secured

The parent company's largest facility is a \$7.5 billion revolving syndicated credit facility secured by U.S. and Canadian automotive receivables. This facility was renewed in March 2011 with the tenor for half of the facility extended to two years and with the other half remaining as a 364-day maturity. In the event this facility is not renewed at maturity, the outstanding debt will be repaid over time as the underlying collateral amortizes. At March 31, 2011, there was no debt outstanding under this facility.

In addition to our syndicated revolving credit facility, we also maintain various bilateral and multilateral secured credit facilities in multiple countries that fund our Automotive Finance operations. These are primarily

Table of Contents

private securitization facilities that fund a specific pool of automotive assets. Many of the facilities have revolving commitments and allow for the funding of additional assets during the commitment period. In total, the parent company maintained \$17.0 billion of committed secured credit facilities to fund automotive assets at the end of the first quarter of 2011, excluding \$4.1 billion of commitments available to Ally Bank or the parent company.

Facilities for Mortgage Operations Secured

At March 31, 2011, we had capacity of \$500 million to fund eligible mortgage servicing rights and capacity of \$350 million to fund mortgage servicer advances. At December 31, 2010, we had capacity of \$550 million to fund eligible mortgage servicing rights and capacity of \$475 million to fund mortgage servicer advances. At March 31, 2011, we also maintained an additional \$515 million of committed capacity to fund mortgage loans.

Cash Flows

Net cash provided by operating activities was \$3.1 billion for the three months ended March 31, 2011, compared to \$7.4 billion for the same period in 2010. During the three months ended March 31, 2011, the net cash inflow from sales and repayment of mortgage and automotive loans held-for-sale exceeded cash outflow from new originations and purchases of such loans by \$3.2 billion. During the three months ended March 31, 2010, this activity resulted in a net cash inflow of \$5.6 billion.

Net cash provided by operating activities was \$11.6 billion for the year ended December 31, 2010, compared to net cash used in operating activities of \$5.1 billion in 2009. During the year ended December 31, 2010, the net cash inflow from sales and repayments of mortgage and automobile loans held-for-sale exceeded cash outflow from new originations and purchases of such loans by \$6.3 billion. During the year ended December 31, 2009, such activity resulted in cash outflow of \$9.6 billion. The favorable increase was primarily due higher levels of automobile loans classified as held-for-investment rather than held for sale at origination during 2010.

Net cash used in investing activities was \$3.6 billion for the three months ended March 31, 2011, compared to \$69 million for the same period in 2010. Net cash flows from finance receivables and loans decreased \$1.9 billion for the three months ended March 31, 2011, compared to the same period in 2010. The cash outflow to purchase operating lease assets exceeded cash inflows from disposals of such assets by \$51 million for the three months ended March 31, 2011. These activities resulted in a net cash inflow of \$1.4 billion for the three months ended March 31, 2010. The shift in net cash flow attributable to leasing activities compared to the prior year was primarily due to a year over year increase in lease origination activity. Cash received from sales and maturities of available-for-sale investment securities, net of purchases, decreased \$753 million during the three months ended March 31, 2011, compared to the same period in 2010.

Net cash used in investing activities was \$7.6 billion for the year ended December 31, 2010, compared to net cash provided of \$17.1 billion in 2009. Net cash flows from finance receivables and loans, including notes receivable from GM, decreased \$29.5 billion for the year ended December 31, 2010, compared to 2009. The cash outflow to purchase available-for-sale investment securities, net of proceeds from sales and maturities, totaled \$1.7 billion in 2010, compared to a net cash outflow of \$6.5 billion in 2009.

Net cash provided by financing activities for the three months ended March 31, 2011, totaled \$2.2 billion, compared to net cash used of \$8.4 billion in the same period in 2010. Cash generated from long-term debt issuances replaced cash used to repay such debt for the three months ended March 31, 2011. For the comparable period in 2010, cash repayments exceeded proceeds from new issuances of long-term debt by \$6.6 billion. Additionally, contributing to the increase in cash inflow was an increase in short-term debt obligations of \$2.7 billion and an increase in cash inflow from bank deposits of \$918 million for the three months ended March 31, 2011, compared to the same period in 2010.

Table of Contents

Net cash used in financing activities for the year ended December 31, 2010, totaled \$8.0 billion, compared to \$11.0 billion in 2009. New equity issuances decreased \$10.0 billion because no such issuances were made during 2010. Proceeds from issuance of long-term debt increased \$8.3 billion during the year ended December 31, 2010, while cash used to repay debt decreased \$12.0 billion. Cash provided by deposits was \$6.6 billion for the year ended December 31, 2010, compared to \$10.7 billion for the year ended December 31, 2009.

Regulatory Capital

Refer to Note 22 to the Notes to Consolidated Financial Statements for a description of our regulatory capital.

Comprehensive Capital Analysis and Review

The Comprehensive Capital Analysis and Review (CCAR) involves the FRB's forward-looking evaluation of the internal capital planning processes of large, complex bank holding companies and their proposals to undertake capital actions in 2011, such as increasing dividend payments or repurchasing or redeeming stock. In November 2010, the FRB issued guidelines to provide a common, conservative approach to ensure that bank holding companies hold adequate capital to maintain ready access to funding, continue operations, and meet their obligations to creditors and counterparties, and continue to serve as credit intermediaries, even under adverse conditions. As a large bank holding company, we submitted a comprehensive capital plan and additional supervisory information to the FRB during the first quarter of 2011 in conjunction with CCAR. At this time, our capital plan is still under review by the FRB.

Credit Ratings

The cost and availability of unsecured financing are influenced by credit ratings, which are intended to be an indicator of the creditworthiness of a particular company, security, or obligation. Lower ratings result in higher borrowing costs and reduced access to capital markets. This is particularly true for certain institutional investors whose investment guidelines require investment-grade ratings on term debt and the two highest rating categories for short-term debt (particularly money market investors).

Nationally recognized statistical rating organizations have rated substantially all our debt. The following table summarizes our current ratings and outlook by the respective nationally recognized rating agencies.

Rating agency	Commercial paper	Senior debt	Outlook	Date of last action
Fitch	B	BB	Stable	February 2, 2011(a)
Moody's	Not-Prime	B1	Stable	February 7, 2011(b)
S&P	C	B+	Stable	May 4, 2011(c)
DBRS	R-4	BB-Low	Positive	February 4, 2011(d)

- (a) Fitch upgraded our senior debt rating to BB from B, affirmed the commercial paper rating of B, and changed the outlook to Stable on February 2, 2011.
- (b) Moody's upgraded our senior debt rating to B1 from B3, affirmed the commercial paper rating of Not Prime, and affirmed the outlook of Stable on February 7, 2011.
- (c) Standard & Poor's upgraded our senior debt rating to B+ from B, affirmed the commercial paper rating of C, and affirmed the outlook of Stable on May 4, 2011.
- (d) DBRS affirmed our senior debt rating of BB-Low, affirmed the commercial paper rating of R-4, and changed the outlook to Positive on February 4, 2011.

Table of Contents

Insurance Financial Strength Ratings

Substantially all of our U.S. Insurance operations have a Financial Strength Rating (FSR) and an Issuer Credit Rating (ICR) from A.M. Best Company. The FSR is intended to be an indicator of the ability of the insurance company to meet its senior most obligations to policyholders. Lower ratings generally result in fewer opportunities to write business as insureds, particularly large commercial insureds, and insurance companies purchasing reinsurance have guidelines requiring high FSR ratings. Our Insurance operations outside the United States are not rated.

On July 20, 2010, A.M. Best removed our U.S. Insurance companies from under review with developing implications and affirmed the FSR of B++ (good) and the ICR of BBB.

Off-balance Sheet Arrangements

Refer to Note 11 to the Consolidated Financial Statements for a description of our off-balance sheet arrangements.

Securitization

As part of our ongoing operations and overall funding and liquidity strategy, we primarily securitize consumer automobile finance retail contracts, wholesale loans, automobile leases, and mortgage loans. Securitization of assets allows us to diversify funding sources by enabling us to convert assets into cash earlier than what would have occurred in the normal course of business and to support the core activities of our Global Automotive Services and Mortgage operations relative to originating and purchasing finance receivables and loans. Termination of our securitization activities would reduce funding sources for both our Global Automotive Services and Mortgage operations, adversely affecting our operating results.

Information regarding our securitization activities is further described in Note 11 to the Consolidated Financial Statements. As part of these activities, assets are generally sold to securitization entities. These securitization entities are separate legal entities that assume the risk and reward of ownership of the receivables. Neither we nor those subsidiaries are responsible for the other entities' debts, and the assets of the subsidiaries are not available to satisfy our claim or those of our creditors. In turn, the securitization entities establish separate trusts to which they transfer the assets in exchange for the proceeds from the sale of asset- or mortgage-backed securities issued by the trust. The trusts' activities are generally limited to acquiring the assets, issuing asset- or mortgage-backed securities, making payments on the securities, and periodically reporting to the investors. We may account for the transfer of assets as a sale if we either do not hold a significant variable interest or do not provide servicing or asset management functions for the financial assets held by the securitization entity.

Certain of our securitization transactions, while similar in legal structure to the transaction described in the foregoing do not meet the required criteria to be accounted for as off-balance sheet arrangements; therefore, they are accounted for as secured financings. As secured financings, the underlying automobile finance retail contracts, wholesale loans, automobile leases, or mortgage loans remain on our Consolidated Balance Sheet with the corresponding obligation (consisting of the beneficial interests issued by the securitization entity) reflected as debt. We recognize interest income on the finance receivables, automobile leases and loans, and interest expense on the beneficial interests issued by the securitization entity; and we provide for loan losses on the finance receivables and loans as incurred or adjust to fair value for fair value-elected loans. At December 31, 2010 and 2009, \$72.6 billion and \$81.1 billion of our total assets, respectively, were related to secured financings. Refer to Note 17 to the Consolidated Financial Statements for further discussion.

The decrease in the amount of finance receivables and loans carried in off-balance sheet facilities reflects our decreased use of private-label mortgage securitization transactions, the amortization of the existing transactions, and the implementation of ASU 2009-17, which was effective on January 1, 2010, and required us to bring certain of our off balance sheet securitizations onto the balance sheet at that date. See Note 1 to the Consolidated Financial Statements for additional information.

Table of Contents

As part of our securitization activities, we typically agree to service the transferred assets for a fee, and we may earn other related ongoing income. The amount of the fees earned is disclosed in Note 12 to the Consolidated Financial Statements. We may also retain a portion of senior and subordinated interests issued by the trusts; these interests are reported as trading securities, investment securities, or other assets on our Consolidated Balance Sheet and are disclosed in Notes 6, 7, and 14 to the Consolidated Financial Statements. For secured financings, retained interests are not recognized as a separate asset on our Consolidated Balance Sheet. Subordinate interests typically provide credit support to the more highly rated senior interest in a securitization transaction and may be subject to all or a portion of the first loss position related to the sold assets.

The FDIC, which regulates Ally Bank, promulgated a new safe harbor regulation for securitizations by banks which took effect on January 1, 2011. Compliance with this regulation requires the sponsoring bank to retain either five percent of each class of beneficial interests issued in the securitization or a representative sample of similar financial assets equal to five percent of the securitized financial assets. The retained interests or assets must be held for the life of the securitization and may not be sold, pledged or hedged, except that interest rate and currency hedging is permitted. This risk retention requirement adversely affects the efficiency of securitizations, because it reduces the amount of funds that can be raised against a given pool of financial assets.

We sometimes use derivative financial instruments to facilitate securitization activities, as further described in Note 23 to the Consolidated Financial Statements.

Our economic exposure related to the securitization trusts is generally limited to cash reserves, our other interests retained in financial asset sales, and our customary representation and warranty provisions described in Note 11 to the Consolidated Financial Statements. The trusts have a limited life and generally terminate upon final distribution of amounts owed to investors or upon exercise by us, as servicer of a cleanup call option, when the servicing of the sold contracts becomes burdensome. In addition, the trusts do not invest in our equity or in the equity of any of our affiliates.

Purchase Obligations

Certain of the structures related to whole-loan sales, securitization transactions, and other off-balance sheet activities contain provisions that are standard in the whole-loan sale and securitization markets where we may (or, in certain limited circumstances, are obligated to) purchase specific assets from entities. Our obligations are as follows.

Loan Repurchases and Obligations Related to Loan Sales

Overview Our Mortgage operations sell loans that take the form of securitizations guaranteed by the GSEs and to whole-loan investors. We have issued private-label mortgage-backed securities infrequently since 2007. In prior years our volume of private-label securitization issuances were considerably larger and they included securitized loans where monolines have insured the related bonds. We have settled with both Fannie Mae and Freddie Mac, limiting our remaining exposure with the GSEs. In connection with securitizations and loan sales, investors are provided various representations and warranties related to the loans sold. The specific representations and warranties vary among different transactions and investors but typically relate to, among other things, the ownership of the loan, the validity of the lien securing the loan, the loan's compliance with the criteria for inclusion in the transaction including compliance with underwriting standards or loan criteria established by the buyer, the ability to deliver required documentation and compliance with applicable laws. In general, the representations and warranties described above may be enforced at any time unless a sunset provision is in place. ResCap assumes all of the customary representation and warranty obligations for loans purchased from Ally Bank and subsequently sold into the secondary market, generally through securitizations guaranteed by the GSEs. In the event ResCap fails to meet these obligations, Ally Financial Inc. has provided Ally Bank a guaranteed coverage of liability. Upon a breach of a representation, the breach is corrected in a manner conforming to the provisions of the sale agreement. This may require us either to repurchase the loan or indemnify the investor for incurred losses.

Table of Contents

Originations We believe our exposure to representation and warranty claims is most significant for loans sold between 2004 through 2008, specifically during 2006 and 2007 that were originated and sold prior to enhanced underwriting standards and risk-mitigation actions implemented in 2008 and forward including product offerings, which are more conservative. Since 2009, we have focused primarily on prime conforming and government-insured residential mortgages in the United States and high-quality government-insured residential mortgages in Canada. In addition, we ceased offering interest-only jumbo mortgages in 2010. Our representation and warranty risk-mitigation strategies include, but are not limited to, pursuing settlements with investors where economically beneficial in order to resolve a pipeline of demands in lieu of loan by loan assessments that could result in us repurchasing loans, aggressively contesting claims we do not consider valid (rescinding claims), or actively seeking recourse against correspondent lenders from whom we purchased loans.

The following table summarizes domestic loans sold with contractual representation and warranty obligations by counterparty (original unpaid principal balance).

	Three months ended		Year ended December 31,					
	March 31, 2011	2010	2009	2008	2007	2006	2005	2004
	(\$ in billions)							
GSEs								
Fannie Mae and Freddie Mac	\$ 12.8	\$ 51.0	\$ 29.9	\$ 37.2	\$ 47.1	\$ 46.1	\$ 47.9	\$ 44.2
Ginnie Mae	2.2	16.2	24.9	12.5	3.2	3.6	4.2	4.8
Nonagency								
Insured (monolines)					6.5	10.7	10.4	15.1
Uninsured		0.3			29.1	63.6	53.5	35.9
Other		1.6	0.1	2.2	8.2	23.9	17.4	10.9
Total sales	\$ 15.0	\$ 69.1	\$ 54.9	\$ 51.9	\$ 94.1	\$ 147.9	\$ 133.4	\$ 110.9

Repurchase Process As soon as practical, after receiving a claim under representation and warranty obligations, we evaluate the request and take appropriate action. Historically, repurchase demands were related to loans that became delinquent within the first few years following origination and varied by investor. As a result of market developments over the past several years, repurchase demand behavior has changed significantly. GSEs are more likely to submit claims for loans at any point in their life cycle based on their internal audit findings. Direct and whole-loan investors are more likely to submit claims for loans that become delinquent at any time while a loan is outstanding or when a loan incurs a loss. Actual incurred losses more significantly drive monoline investor behavior, which can significantly extend the period over which claims are likely to be presented. This occurs because insurance claims paid by the monolines are not required until over-collateralization is depleted, and the monolines are not incented to request loan repurchases until they have paid the insurance claims. Representation and warranty claims are generally reviewed on a loan by loan basis to validate if there has been a breach requiring a potential repurchase or indemnification payment. We actively contest claims to the extent we do not consider them valid. We are not required to either repurchase the loan or provide an indemnification payment where claims are not valid.

Table of Contents

During the three months ended March 31, 2011, we experienced a decrease in new claims compared to 2010, in part due to settlements with key counterparties. In addition, the level of unresolved repurchase demands also decreased throughout 2010 as a result of our focus on reaching economically beneficial settlements versus loan-by-loan assessments. The following table presents new claims by vintage (original unpaid principal balance).

	Three months ended March, 31	
	2011	2010
	(\$ in millions)

We seek to manage the risk of repurchase and the associated credit exposure through our underwriting and quality assurance practices and by servicing mortgage loans to meet investor standards. We believe that, in general, the longer a loan performs prior to default the less likely it is that an alleged breach of representation and warranty will have a material impact on the loan's performance. When we do repurchase loans, we bear the subsequent credit loss on the loans. Repurchased loans are classified as held-for-sale and initially recorded at fair value. While investors repurchase and demand behavior has changed given the recent market conditions, we continue to maintain constructive relationships with the GSEs and other investors.

Refer to Note 30 to the Consolidated Financial Statements for additional information related to representation and warranties.

Table of Contents

The following table summarizes the unpaid principal balance and accrued interest on mortgage loans repurchased under representation and warranty obligations.

	Three months ended March 31, 2011		Year ended December 31, 2010	
			2009	
	(\$ in millions)			
GSEs	\$ 43	\$ 147	\$ 389	\$ 343
Monolines		1	13	30
Other	5	28	82	83
Total loan repurchases	\$ 48	\$ 176	\$ 484	\$ 456

The following table summarizes indemnification payments associated with representation and warranty obligations.

	Three months ended March 31, 2011		Year ended December 31, 2010	
			2009	
	(\$ in millions)			
GSEs	\$ 15	\$ 73	\$ 228	\$ 123
Monolines	2	1	27	14
Other		4	11	23
Total indemnification payments	\$ 17	\$ 78	\$ 266	\$ 160

The following table presents the unpaid principal balance and number of loans related to unresolved repurchases.

	March 31, 2011		December 31, 2010		2009	
			(\$ in millions)			
	No. of loans	Dollar amount of loans	No. of loans	Dollar amount of loans	No. of loans	Dollar amount of loans
GSEs (a)	431	\$ 98	833	\$ 170	1,360	\$ 296
Monolines	8,246	667	8,206	661	7,197	553
Other	517	73	392	88	668	70
Total unpaid principal balance	9,194	\$ 838	9,431	\$ 919	9,225	\$ 919

(a) Includes claims that we have requested to be rescinded but which have not yet been confirmed by the counterparty. This amount is gross of any loans that would be removed due to the Fannie Mac settlement. During the three months ended March 31, 2011, management determined that \$48 million of outstanding claims at December 31, 2010, were covered under the settlement agreement.

Representation and Warranty Obligation Reserve Methodology The reserve for representation and warranty obligations reflects management's best estimate of probable lifetime loss. We consider historical and recent demand trends in establishing the reserve. The methodology used to

estimate the reserve considers a variety of assumptions including borrower performance (both actual and estimated future defaults), repurchase demand behavior, historical loan defect experience, and historical and estimated future loss experience, which includes projections of future home price changes as well as other qualitative factors including investor behavior. In cases where we do not have or have limited current or historical demand experience with an investor, it is

Table of Contents

difficult to predict and estimate the level and timing of any potential future demands. As such, losses cannot currently be reasonably estimated and a liability is not recognized. Management monitors the adequacy of the overall reserve and makes adjustments to the level of reserve, as necessary, after consideration of other qualitative factors including ongoing dialogue with counterparties.

At the time a loan is sold, an estimate of the fair value of the liability is recorded and classified in accrued expenses and other liabilities on our Consolidated Balance Sheet and recorded as a component of gain (loss) on mortgage and automotive loans, net, in our Consolidated Statement of Income. We recognize changes in the reserve when additional relevant information becomes available. Changes in the liability are recorded as other operating expenses in our Consolidated Statement of Income. The repurchase reserve at March 31, 2011, and December 31, 2010, primarily represents non-GSE exposure.

Government-sponsored Enterprises Between 2004 and 2008, we sold \$250.8 billion of loans. Each GSE has specific guidelines and criteria for sellers and servicers of loans underlying their securities. In addition, the risk of credit loss of the loan sold was generally transferred to investors upon sale of the securities into the secondary market. Conventional conforming loans were sold to either Freddie Mac or Fannie Mae, and government-insured loans were securitized with Ginnie Mae. For the three months ended March 31, 2011, we have received \$102 million in repurchase claims of which \$49 million are associated with the 2004 through 2008 vintages of loans sold to the GSEs. Overall, we resolved \$174 million claims, including \$133 million in settlements, repurchases, or indemnification payments and \$41 million related to rescinded claims. For the year ended December 31, 2010, we have received \$842 million in repurchase claims of which \$784 million are associated with the 2004 through 2008 vintages of loans sold to the GSEs. We resolved \$968 million claims, including \$756 million in either settlements, repurchases, or indemnification payments and \$212 million related to rescinded claims. Our representation and warranty obligation liability with respect to the GSEs takes into account the existing unresolved claims and our best estimate of future claims we might receive. We consider our experiences with each GSE in evaluating our liability. During 2010, we reached agreements with Freddie Mac and Fannie Mae that resolve material repurchase obligations with each counterparty.

In March 2010, certain of our mortgage subsidiaries entered into an agreement with Freddie Mac under which we made a one-time payment to Freddie Mac for the release of repurchase obligations relating to most of the mortgage loans sold to Freddie Mac prior to January 1, 2009. The agreement does not cover any violation of servicing obligations related to any failure to comply with any requirements of law applicable to foreclosing on property serving as collateral for any applicable mortgage loan. This agreement does not release any of our obligations with respect to loans where our subsidiary, Ally Bank, is the owner of the servicing.

On December 23, 2010, certain of our mortgage subsidiaries entered into an agreement with Fannie Mae under which we made a one-time payment to Fannie Mae for the release of repurchase obligations, including private-label securitization exposure, related to most of the mortgage loans we sold to Fannie Mae prior to June 30, 2010. We continue to be responsible for other contractual obligations we have with Fannie Mae, including all indemnification obligations that may arise in connection with the servicing of the mortgages. The agreement does not cover any violation of servicing obligations related to any failure to comply with any requirements of law applicable to foreclosing on property serving as collateral for any applicable mortgage loan. This agreement does not release any of our obligations with respect to loans where our subsidiary, Ally Bank, is the owner of the servicing. Refer to Exhibit 10.9 for additional information.

The FHFA, as conservator of Fannie Mae and Freddie Mac, announced on July 12, 2010, that it issued 64 subpoenas to various entities seeking documents related to private label mortgage-backed securities in which Fannie Mae and Freddie Mac had invested. Certain of these subpoenas were directed at our mortgage subsidiaries. In connection with the agreement reached with Fannie Mae, the FHFA has agreed to withdraw those subpoenas that relate to Fannie Mae while the subpoenas that relate to Freddie Mac remain open.

Table of Contents

The following tables summarize the changes in our unpaid principal balance related to unresolved repurchase demands on our GSE exposure.

	Three months ended March 31,	
	2011	2010
	(\$ in millions)	
Balance at January 1,	\$ 170	\$ 296
New claims	102	324
Realized losses (a)	(133)	(326)
Rescinded claims	(41)	(64)
Balance at March 31,	\$ 98	\$ 230

(a) Losses include settlements, repurchases, and indemnification payments.

	Year ended December 31,	
	2010	2009
	(\$ in millions)	
Balance at January 1,	\$ 296	\$ 146
New claims	842	699
Realized losses (a)	(756)	(419)
Rescinded claims	(212)	(130)
Balance December 31,	\$ 170	\$ 296

(a) Losses include settlements, repurchases, and indemnification payments.

Whole-loan Sales In addition to the settlements with the GSEs noted earlier, we have settled with several whole-loan investors concerning alleged breaches of underwriting standards. For the three months ended March 31, 2011, we have received \$16 million in repurchase claims of which \$14 million are associated with the 2004 through 2008 vintages of loans sold to whole-loan investors. We resolved \$31 million of claims, including \$7 million in either settlements, repurchases, or indemnification payments and \$24 million related to rescinded claims. For the year ended December 31, 2010, we have received \$126 million in repurchase claims of which \$120 million are associated with the 2004 through 2008 vintages of loans sold to whole-loan investors. We resolved \$108 million of claims, including \$44 million in either settlements, repurchases, or indemnification payments and \$64 million related to rescinded claims.

The following tables summarize the changes in our unpaid principal balance related to unresolved repurchase demands on our whole-loan exposure.

	Three months ended March 31,	
	2011	2010
	(\$ in millions)	
Balance at January 1,	\$ 88	\$ 70
New claims	16	13
Realized losses (a)	(7)	(11)

Rescinded claims	(24)	(33)
Balance at March 31,	\$ 73	\$ 39

(a) Losses include settlements, repurchases, and indemnification payments.

Table of Contents

	Year ended December 31,	
	2010	2009
	(\$ in millions)	
Balance at January 1,	\$ 70	\$ 146
New claims	126	103
Realized losses (a)	(44)	(118)
Rescinded claims	(64)	(61)
Balance December 31,	\$ 88	\$ 70

(a) Losses include settlements, repurchases, and indemnification payments.

Monoline Insurers Historically, our Mortgage operations have securitized whole loans where the monolines have insured all or some of the related bonds and have guaranteed the timely repayment of bond principal and interest when an issuer defaults. Overall, the representation and warranty obligations to monoline insurers are not as stringent as those to the GSEs and impose a higher burden of proof on the insurer.

Typically, any alleged breach requires the insurer to have both the ability to assert a claim as well as evidence that a defect has had a material adverse effect on the interest of the security holders or the insurer. For the period 2004 through 2008, we sold \$42.7 billion of loans into these monoline-wrapped securitizations. For the three months ended March 31, 2011, we have received \$14 million in repurchase claims from the monolines associated with the 2004 through 2008 securitizations. We have resolved \$8 million of the total unresolved repurchase demands through indemnification payments. For the year ended December 31, 2010, we have received \$151 million in repurchase claims from the monolines associated with the 2004 through 2008 securitizations. We have resolved \$43 million of the claims, including \$36 million of indemnification payments and \$7 million related to rescinded claims.

Unlike the repurchase protocols and experience established with the GSEs, experience with monolines has not been as predictable. A significant portion of the outstanding unresolved monoline repurchase claims are with one insurer, with whom we are currently in litigation.

The following tables summarize the changes in our unpaid principal balance related to unresolved repurchase demands on our monoline exposure.

	Three months ended March 31,	
	2011	2010
	(\$ in millions)	
Balance at January 1,	\$ 661	\$ 553

Table of Contents

Private-label Securitization Historically, our Mortgage operations were very active in the securitization market selling whole loans into special-purpose entities and selling these private-label mortgage-backed securities to investors.

The following table summarizes the unpaid principal balance (the UPB) of our domestic private-label securitization activity by product type and current UPB for securitizations completed during 2004 through 2007. We have issued private-label mortgage-backed securities infrequently since 2007.

	Original UPB (a)	At March 31, 2011 Current UPB (\$ in billions)	At December 31, 2010 UPB
Prime Jumbo (RFMSI)	\$ 21.7	\$ 9.6	\$ 10.0
Alt-A (RALI)	66.7	29.5	30.7
Scratch and dent and other (RAMP)	51.8	14.5	13.8
Subprime (RASC)	36.8	8.9	9.0
Second-lien (RFMSII)	0.9	0.3	0.3
GMACMI	4.1		1.2
Total	\$ 182.0	\$ 62.8	\$ 65.0

(a) Excludes \$42.7 billion of monoline wrapped transactions of which the majority were from the RAMP or RFMSII platforms.

In general, representations and warranties provided as part of our securitization activities are less rigorous than those provided to the GSEs and generally impose higher burdens on investors seeking repurchase. In order to successfully assert a claim an investor must prove a breach of the representations and warranties that materially and adversely affects the interest of all investors. Securitization documents typically provide the investors with a right to request that the trustee investigate and initiate a repurchase claim. However, a class of investors generally are required to coordinate with other investors in that class comprising not less than 25% of the voting rights in securities for that class issued by the trust to pursue claims for breach of representations and warranties. In addition, our private-label securitizations generally require that the servicer or trustee give notice to the other parties whenever it becomes aware of facts or circumstances that reveal a breach of representation that materially and adversely affects the interest of the certificate holders. If, for example, we as servicer became aware of such facts and circumstances, we would typically be required to initiate a repurchase at that time. The GSEs were among the purchasers of securities in our private-label securitizations. As such, they are covered by the same representations and warranties as other investors.

Regarding our securitization activities, we have exposure to potential loss primarily through two avenues. First, investors may request that we repurchase loans or make the investor whole for losses incurred if it is determined that we violated representations and warranties made at the time of the sale. Contractual representations and warranties are different based on the specific deal structure and investor. Second, investors in securitizations may attempt to achieve rescission of their investments or damages through litigation by claiming that the applicable offering documents were materially deficient. If an investor properly made and proved its allegations, the investor might attempt to claim that damages could include loss of market value on the investment even if there were little or no credit loss in the underlying loans. We have a limited amount of repurchase experience with these investors, and therefore it is not currently possible to estimate future repurchase obligations and any related loss or range of loss.

Guarantees

Guarantees are defined as contracts or indemnification agreements that contingently require us to make payments to third parties based on changes in an underlying agreement that is related to a guaranteed party. Our guarantees include standby letters of credit and certain contract provisions regarding securitizations and sales.

Table of Contents

Refer to Note 30 to the Consolidated Financial Statements for more information regarding our outstanding guarantees to third parties.

Aggregate Contractual Obligations

The following table provides aggregated information about our outstanding contractual obligations disclosed elsewhere in our Consolidated Financial Statements.

Description of obligation	Total	Payments due by period December 31, 2010			
		Less than 1 year	1-3 years (\$ in millions)	3-5 years	More than 5 years
Long-term debt					
Total (a)	\$ 89,334	\$ 23,131	\$ 32,484	\$ 11,459	\$ 22,260
Scheduled interest payments for fixed-rate long-term debt	29,627	3,582	5,710	4,248	16,087
Estimated interest payments for variable-rate long-term debt (b)	535	248	244	42	1
Estimated net payments under interest rate swap agreements (b)	287			24	263
Originate/purchase mortgages or securities	7,735	7,545			190
Commitments to provide capital to investees	76	40		2	34
Home equity lines of credit	2,749	104	761	637	1,247
Lending commitments	3,419	1,871	720	810	18
Lease commitments	356	85	121	90	60
Purchase obligations	818	291	324	194	9
Bank certificates of deposit	26,118	12,842	9,386	3,890	
Total	\$ 161,054	\$ 49,739	\$ 49,750	\$ 21,396	\$ 40,169

(a) Total amount reflects the remaining principal obligation and excludes original issue discount of \$3.2 billion related to the December 2008 bond exchange and fair value adjustments of \$447 million related to fixed-rate debt designated as a hedged item.

(b) Estimate utilized a forecasted variable interest model, when available, or the applicable variable interest rate as of the most recent reset date prior to December 31, 2010.

The foregoing table does not include our reserves for insurance losses and loss adjustment expenses, which total \$862 million at December 31, 2010. While payments due on insurance losses are considered contractual obligations because they related to insurance policies issued by us, the ultimate amount to be paid and the timing of payment for an insurance loss is an estimate subject to significant uncertainty. Furthermore, the timing on payment is also uncertain; however, the majority of the balance is expected to be paid out in less than five years. Similarly, due to uncertainty in the timing of future cash flows related to our unrecognized tax benefits, the contractual obligations detailed above do not include \$214 million in unrecognized tax benefits.

The following provides a description of the items summarized in the preceding table of contractual obligations.

Long-term Debt

Amounts represent the scheduled maturity of long-term debt at December 31, 2010, assuming that no early redemptions occur. The maturity of secured debt may vary based on the payment activity of the related secured assets. Debt issuances redeemable at or above par during the callable period are presented by stated maturity

Table of Contents

date. The amounts presented are before the effect of any unamortized discount or fair value adjustment. Refer to Note 16 and Note 17 to the Consolidated Financial Statements for additional information on our debt obligations.

Originate/Purchase Mortgages or Securities

As part of our Mortgage operations, we enter into commitments to originate and purchase mortgages and mortgage-backed securities. Refer to Note 30 to the Consolidated Financial Statements for additional information.

Commitments to Provide Capital to Investees

As part of arrangements with specific private equity funds, we are obligated to provide capital to investees. Refer to Note 30 to the Consolidated Financial Statements for additional information.

Home Equity Lines of Credit

We are committed to fund the future remaining balance on unused lines of credit on mortgage loans. The funding is subject to customary lending conditions, such as a satisfactory credit rating, delinquency status, and adequate home equity value. Refer to Note 30 to the Consolidated Financial Statements for additional information.

Lending Commitments

Our Automotive Finance operations, Mortgage operations, and Commercial Finance Group have outstanding revolving lending commitments with customers. The amounts presented represent the unused portion of those commitments at December 31, 2010. Refer to Note 30 to the Consolidated Financial Statements for additional information.

Lease Commitments

We have obligations under various operating lease arrangements (primarily for real property) with noncancelable lease terms that expire after December 31, 2010. Refer to Note 30 to the Consolidated Financial Statements for additional information.

Purchase Obligations

We enter into multiple contractual arrangements for various services. The arrangements represent fixed payment obligations under our most significant contracts and primarily relate to contracts with information technology providers. Refer to Note 30 to the Consolidated Financial Statements for additional information.

Bank Certificates of Deposit

Refer to Note 15 to the Consolidated Financial Statements for additional information.

Critical Accounting Estimates

Accounting policies are integral to understanding our Management's Discussion and Analysis of Financial Condition and Results of Operations. The preparation of financial statements in accordance with GAAP requires management to make certain judgments and assumptions, on the basis of information available at the time of the financial statements, in determining accounting estimates used in the preparation of these statements. Our significant accounting policies are described in Note 1 to the Consolidated Financial Statements; critical accounting estimates are described in this section. An accounting estimate is considered critical if the estimate requires management to make assumptions about matters that were highly uncertain at the time the accounting

Table of Contents

estimate was made. If actual results differ our judgments and assumptions it may have an adverse impact on the results of operations and cash flows. Our management has discussed the development, selection, and disclosure of these critical accounting estimates with the Audit Committee of the Board, and the Audit Committee has reviewed our disclosure relating to these estimates.

Fair Value Measurements

We use fair value measurements to record fair value adjustments to certain instruments and to determine fair value disclosures. Refer to Note 27 to the Consolidated Financial Statements for description of valuation methodologies used to measure material assets and liabilities at fair value and details of the valuation models, key inputs to those models, and significant assumptions utilized. We follow the fair value hierarchy set forth in Note 27 to the Consolidated Financial Statements in order to prioritize the inputs utilized to measure fair value. We review and modify, as necessary, our fair value hierarchy classifications on a quarterly basis. As such, there may be reclassifications between hierarchy levels.

The following table summarizes assets and liabilities measured at fair value and the amounts measured using Level 3 inputs. The table includes recurring and nonrecurring measurements.

	Three months	Year ended December 31,	
	ended	(\$ in millions)	
	March 31,	2010	2009
	2011		
Assets at fair value	\$ 28,776	\$ 33,001	\$ 34,730
As a percentage of total assets	17%	19%	20%
Liabilities at fair value	\$ 4,297	\$ 4,832	\$ 3,189
As a percentage of total liabilities	3%	3%	2%
Assets at fair value using Level 3 inputs	\$ 6,842	\$ 6,969	\$ 13,672
As a percentage of assets at fair value	24%	21%	39%
Liabilities at fair value using Level 3 inputs	\$ 1,006	\$ 1,090	\$ 1,626
As a percentage of liabilities at fair value	23%	23%	51%

Level 3 assets declined by \$6.6 billion primarily due to the \$4.6 billion decline in loans held-for-sale measured at fair value on a nonrecurring basis at December 31, 2010, compared to December 31, 2009. During 2009, we reclassified mortgage loans with an unpaid principal balance of \$8.5 billion from finance receivables and loans, net, to loans held-for-sale, net. Upon reclassification, we recognized a \$3.4 billion valuation loss when we adjusted these loans to fair value on a nonrecurring basis, which established their new cost basis for 2010. Also contributing to the decline in Level 3 assets were fewer nonrecurring fair value measurements related to our commercial finance receivables and loans and a decline in trading securities because ASU 2009-17 eliminated certain retained interests we had held. Finally, the decline in Level 3 assets was also attributable to deconsolidation of consumer finance receivables and loans, net, which we elected to measure at fair value under the fair value option election. As the value of these assets declined, the value of the related on-balance sheet securitization debt also declined, which we also elected to measure the fair value under the fair value option election. The decline in fair value of on-balance sheet securitization debt and derivative liabilities caused the Level 3 liabilities to decline at December 31, 2010, compared to December 31, 2009.

We have numerous internal controls in place to ensure the appropriateness of fair value measurements. Significant fair value measures are subject to detailed analytics and management review and approval. We have an established model validation policy and program in place that covers all models used to generate fair value measurements. This model validation program ensures a controlled environment is used for the development, implementation, and use of the models and change procedures. Further, this program uses a risk-based approach to select models to be reviewed and validated by an independent internal risk group to ensure the models are consistent with their intended use, the logic within the models is reliable, and the inputs and outputs from these models are appropriate. Additionally, a wide array of operational controls are in place to ensure the fair value

Table of Contents

measurements are reasonable, including controls over the inputs into and the outputs from the fair value measurement models. For example, we backtest the internal assumptions used within models against actual performance. We also monitor the market for recent trades, market surveys, or other market information that may be used to benchmark model inputs or outputs. Certain valuations will also be benchmarked to market indices when appropriate and available. We have scheduled model and/or input recalibrations that occur on a periodic basis but will recalibrate earlier if significant variances are observed as part of the backtesting or benchmarking noted above.

Considerable judgment is used in forming conclusions from market observable data used to estimate our Level 2 fair value measurements and in estimating inputs to our internal valuation models used to estimate our Level 3 fair value measurements. Level 3 inputs such as interest rate movements, prepayment speeds, credit losses, and discount rates are inherently difficult to estimate. Changes to these inputs can have a significant effect on fair value measurements. Accordingly, our estimates of fair value are not necessarily indicative of the amounts that could be realized or would be paid in a current market exchange.

Allowance for Loan Losses

We maintain an allowance for loan losses (the allowance) to absorb probable loan credit losses inherent in the held-for-investment portfolio, excluding those measured at fair value in accordance with applicable accounting standards. The allowance is maintained at a level that management considers to be adequate based upon ongoing quarterly assessments and evaluations of collectability and historical loss experience in our lending portfolio. The allowance is management's estimate of incurred losses in our lending portfolio and involves significant judgment. Management performs quarterly analysis of these portfolios to determine if impairment has occurred and to assess the adequacy of the allowance based on historical and current trends and other factors affecting credit losses. Additions to the allowance are charged to current period earnings through the provision for loan losses; amounts determined to be uncollectible are charged directly against the allowance, while amounts recovered on previously charged-off accounts increase the allowance. Determining the appropriateness of the allowance requires management to exercise significant judgment about matters that are inherently uncertain, including the timing, frequency, and severity of credit losses that could materially affect the provision for loan losses and, therefore, net income. The methodology for determining the amount of the allowance differs between the consumer automobile, consumer mortgage, and commercial portfolio segments. For additional information regarding our portfolio segments and classes, refer to Note 9 to the Consolidated Financial Statements. While we attribute portions of the allowance across our lending portfolios, the entire allowance is available to absorb probable loan losses inherent in our total lending portfolio.

The consumer portfolio segments consist of smaller-balance, homogeneous loans. Excluding certain loans that are identified as individually impaired, the allowance for each consumer portfolio segment (automobile and mortgage) is evaluated collectively. The allowance is based on aggregated portfolio segment evaluations that begin with estimates of incurred losses in each portfolio segment based on various statistical analyses. We leverage proprietary statistical models, including vintage and migration analyses, based on recent loss trends, to develop a systematic incurred loss reserve. These statistical loss forecasting models are utilized to estimate incurred losses and consider several credit quality indicators including, but not limited to, historical loss experience, estimated foreclosures or defaults based on observable trends, delinquencies, and general economic and business trends. Management believes these factors are relevant to estimate incurred losses and are updated on a quarterly basis in order to incorporate information reflective of the current economic environment, as changes in these assumptions could have a significant impact. In order to develop our best estimate of probable incurred losses inherent in the loan portfolio, management reviews and analyzes the output from the models and may adjust the reserves to take into consideration environmental, qualitative and other factors that may not be captured in the models. These adjustments are documented and reviewed through our risk management processes. Management reviews, updates, and validates its systematic process and loss assumptions on a periodic basis. This process involves an analysis of loss information, such as a review of loss and credit trends, a retrospective evaluation of actual loss information to loss forecasts, and other analyses.

Table of Contents

The commercial loan portfolio segment is primarily composed of larger-balance, nonhomogeneous exposures within our Automotive Finance operations, Commercial Finance Group, and Mortgage operations. These loans are primarily evaluated individually and are risk-rated based on borrower, collateral, and industry-specific information that management believes is relevant in determining the occurrence of a loss event and measuring impairment. A loan is considered impaired when it is probable that we will be unable to collect all amounts due according to the contractual terms of the loan agreement based on current information and events. Management establishes specific allowances for commercial loans determined to be individually impaired based on the present value of expected future cash flows, discounted at the loans' effective interest rate, observable market price or the fair value of collateral, whichever is determined to be the most appropriate. Estimated costs to sell or realize the value of the collateral on a discounted basis are included in the impairment measurement, when appropriate. In addition to the specific allowances for impaired loans, nonimpaired loans are grouped into pools based on similar risk characteristics and collectively evaluated. These allowances are based on historical loss experience, concentrations, current economic conditions, and performance trends within specific geographic locations. The commercial historical loss experience is updated quarterly to incorporate the most recent data reflective of the current economic environment.

The determination of the allowance is influenced by numerous assumptions and many factors that may materially affect estimates of loss, including volatility of loss given default, probability of default, and rating migration. The critical assumptions underlying the allowance include: (1) segmentation of each portfolio based on common risk characteristics; (2) identification and estimation of portfolio indicators and other factors that management believes are key to estimating incurred credit losses; and (3) evaluation by management of borrower, collateral, and geographic information. Management monitors the adequacy of the allowance and makes adjustments as the assumptions in the underlying analyses change to reflect an estimate of incurred loan losses at the reporting date, based on the best information available at that time. In addition, the allowance related to the commercial portfolio segment is influenced by estimated recoveries from automotive manufacturers relative to guarantees or agreements with them to repurchase vehicles used as collateral to secure the loans. If an automotive manufacturer is unable to fully honor its obligations, our ultimate loan losses could be higher. To the extent that actual outcomes differ from our estimates, additional provision for credit losses may be required that would reduce earnings.

Valuation of Automobile Lease Assets, Residuals and Allowance for Lease Losses

We have significant investments in vehicles in our operating lease portfolio. In accounting for operating leases, management must make a determination at the beginning of the lease contract of the estimated realizable value (i.e., residual value) of the vehicle at the end of the lease. Residual value represents an estimate of the market value of the vehicle at the end of the lease term, which typically ranges from two to four years. Historically, we established residual values by using independently published residual values. Since re-entry into the lease market in August 2009, we established risk adjusted residual values based on independently published residuals. Risk adjustments are determined at lease inception and are based on current auction results adjusted for key variables that historically have shown an impact on auction values (as further described in Lease Residual Risk Management). The customer is obligated to make payments during the term of the lease for the difference between the purchase price and the contract residual value. However, since the customer is not obligated to purchase the vehicle at the end of the contract, we are exposed to a risk of loss to the extent the value of the vehicle is below the residual value estimated at contract inception. Management periodically performs a detailed review of the estimated realizable value of leased vehicles to assess the appropriateness of the carrying value of lease assets.

To account for residual risk, we depreciate automobile operating lease assets to estimated realizable value on a straight-line basis over the lease term. The estimated realizable value is initially based on the residual value established at contract inception. Over the life of the lease, management evaluates the adequacy of the estimate of the realizable value and may make adjustments to the extent the expected value of the vehicle at lease termination changes. Any adjustments would result in a change in the depreciation rate of the lease asset, thereby

Table of Contents

affecting the carrying value of the operating lease asset. Overall business conditions (including the used vehicle markets), our remarketing abilities, and automotive manufacturer vehicle and marketing programs may cause management to adjust initial residual projections (as further described in *Lease Residual Risk Management*).

In addition to estimating the residual value at lease termination, we must also evaluate the current value of the operating lease assets and test for impairment to the extent necessary in accordance with applicable accounting standards. Impairment is determined to exist if the undiscounted expected future cash flows (including the expected residual value) are lower than the carrying value of the asset. Certain triggering events necessitated impairment reviews in the second, third, and fourth quarters of 2008. There were no such impairment charges in 2010 or 2009. Refer to Note 10 for a discussion of the impairment charges recognized in 2008.

Our depreciation methodology on operating lease assets considers management's expectation of the value of the vehicles upon lease termination, which is based on numerous assumptions and factors influencing used vehicle values. The critical assumptions underlying the estimated carrying value of automobile lease assets include: (1) estimated market value information obtained and used by management in estimating residual values, (2) proper identification and estimation of business conditions, (3) our remarketing abilities, and (4) automotive manufacturer vehicle and marketing programs. Changes in these assumptions could have a significant impact on the value of the lease residuals. Expected residual values include estimates of payments from GM related to residual support and risk-sharing agreements. To the extent GM is not able to fully honor its obligation relative to these agreements, our depreciation expense would be negatively impacted.

Valuation of Mortgage Servicing Rights

Mortgage servicing rights represent the capitalized value of the right to receive future cash flows from the servicing of mortgage loans for others. Mortgage servicing rights are a significant source of value derived from the sale or securitization of mortgage loans. They may also be purchased. Because residential mortgage loans typically contain a prepayment option, borrowers may often elect to prepay their mortgage loans by refinancing at lower rates during declining interest rate environments. When this occurs, the stream of cash flows generated from servicing the original mortgage loan is terminated. As such, the market value of mortgage servicing rights has historically been very sensitive to changes in interest rates and tends to decline as market interest rates decline and increase as interest rates rise.

We capitalize mortgage servicing rights on residential mortgage loans that we have originated and purchased based on the fair market value of the servicing rights associated with the underlying mortgage loans at the time the loans are sold or securitized. GAAP requires that the value of mortgage servicing rights be determined based on market transactions for comparable servicing assets, if available. In the absence of representative market trade information, valuations should be based on other available market evidence and modeled market expectations of the present value of future estimated net cash flows that market participants would expect from servicing. When observable prices are not available, management uses internally developed discounted cash flow models to estimate the fair value. These internal valuation models estimate net cash flows based on internal operating assumptions that we believe would be used by market participants, combined with market-based assumptions for loan prepayment rate, interest rates, default rates and discount rates that management believes approximate yields required by investors for these assets. Servicing cash flows primarily include servicing fees, escrow account income, ancillary income and late fees, less operating costs to service the loans. The estimated cash flows are discounted using an option-adjusted spread-derived discount rate. Management considers the best available information and exercises significant judgment in estimating and assuming values for key variables in the modeling and discounting process. All of our mortgage servicing rights are carried at estimated fair value.

We use the following key assumptions in our valuation approach.

Prepayment The most significant drivers of mortgage servicing rights value are actual and forecasted portfolio prepayment behavior. Prepayment speeds represent the rate at which borrowers repay their

Table of Contents

mortgage loans prior to scheduled maturity. As interest rates rise, prepayment speeds generally slow, and as interest rates decline, prepayment speeds generally accelerate. When mortgage loans are paid or expected to be paid earlier than originally estimated, the expected future cash flows associated with servicing such loans are reduced. We primarily use third-party models to project residential mortgage loan payoffs. In other cases, we estimate prepayment speeds based on historical and expected future prepayment rates. We measure model performance by comparing prepayment predictions against actual results at both the portfolio and product level.

Discount rate The cash flows of our mortgage servicing rights are discounted at prevailing market rates, which include an appropriate risk-adjusted spread.

Base mortgage rate The base mortgage rate represents the current market interest rate for newly originated mortgage loans. This rate is a key component in estimating prepayment speeds of our portfolio because the difference between the current base mortgage rate and the interest rates on existing loans in our portfolio is an indication of the borrower's likelihood to refinance.

Cost to service In general, servicing cost assumptions are based on internally projected actual expenses directly related to servicing. These servicing cost assumptions are compared to market-servicing costs when market information is available. Our servicing cost assumptions include expenses associated with our activities related to loans in default.

Volatility Volatility represents the expected rate of change of interest rates. The volatility assumption used in our valuation methodology is intended to estimate the range of expected outcomes of future interest rates. We use implied volatility assumptions in connection with the valuation of our mortgage servicing rights. Implied volatility is defined as the expected rate of change in interest rates derived from the prices at which options on interest rate swaps, or swaptions, are trading. We update our volatility assumptions for the change in implied swaptions volatility during the period, adjusted by the ratio of historical mortgage to swaption volatility.

We also periodically perform a series of reasonableness tests as we deem appropriate, including the following.

Review and compare data provided by an independent third-party broker. We evaluate and compare our fair value price, multiples and underlying assumptions to data provided by independent third-party broker.

Review and compare pricing of publicly traded interest-only securities. We evaluate and compare our fair value to publicly traded interest-only stripped mortgage-backed securities by age and coupon for reasonableness.

Review and compare fair value price/multiples. We evaluate and compare our fair value price/multiples to market fair value price/multiples quoted in external surveys produced by third parties.

Compare actual monthly cash flows to projections. We reconcile actual monthly cash flows to those projected in the mortgage servicing rights valuation. Based on the results of this reconciliation, we assess the need to modify the individual assumptions used in the valuation. This process ensures the model is calibrated to actual servicing cash flow results.

Review and compare recent bulk mortgage servicing right acquisition activity. We evaluate market trades for reliability and relevancy and then consider, as appropriate, our estimate of fair value of each significant transaction to the traded price. Currently, there is a lack of comparable transactions between willing buyers and sellers in the bulk acquisition market, which are the best indicators of fair value. However, we continue to monitor and track market activity on an ongoing basis.

Table of Contents

We generally expect our valuation to be within a reasonable range of that implied by these tests. Changes in these assumptions could have a significant impact on the determination of fair market value. In order to develop our best estimate of fair value, management reviews and analyzes the output from the models and may adjust the reserves to take into consideration other factors that may not be captured. If we determine our valuation has exceeded the reasonable range, we may adjust it accordingly.

The assumptions used in modeling expected future cash flows of mortgage servicing rights have a significant impact on the fair value of mortgage servicing rights and potentially a corresponding impact to earnings. Refer to Note 12 to the Consolidated Financial Statements for sensitivity analysis. At December 31, 2010, based on the market information obtained, we determined that our mortgage servicing rights valuations and assumptions used to value those servicing rights were reasonable and consistent with what an independent market participant would use to value the asset.

Goodwill

The accounting for goodwill is discussed in Note 14 to the Consolidated Financial Statements. Goodwill is reviewed for potential impairment at the reporting unit level on an annual basis, as of August 31, or in interim periods if events or circumstances indicate a potential impairment. Goodwill is allocated to the reporting units at the date the goodwill is initially recorded. Once goodwill has been allocated to the reporting units, it generally no longer retains its identification with a particular acquisition, but instead becomes identified with the reporting unit as a whole. As a result, all of the fair value of each reporting unit is available to support the value of goodwill allocated to the unit. Goodwill impairment testing is performed at the reporting unit level, one level below the business segment. For more information on our segments, refer to Note 28 to the Consolidated Financial Statements.

Goodwill impairment testing involves managements judgment, requiring an assessment of whether the carrying value of the reporting unit can be supported by the fair value of the individual reporting unit using widely accepted valuation techniques, such as the market approach (earnings, transaction, and/or pricing multiples) and discounted cash flow methods. In applying these methodologies we utilize a number of factors, including actual operating results, future business plans, economic projections, and market data. A combination of methodologies is used and weighted appropriately for each reporting unit. If actual results differ from these estimates, it may have an adverse impact on the valuation of goodwill that could result in a reduction of the excess over carrying value and possible impairment of goodwill. At December 31, 2010, we did not have material goodwill at our reporting units that is at risk of failing Step 1 of the goodwill impairment test.

Determination of Reserves for Insurance Losses and Loss Adjustment Expenses

Our Insurance operations include an array of insurance underwriting, including automotive service contracts and consumer products that create a liability for unpaid losses and loss adjustment expenses incurred (further described in Insurance). The reserve for insurance losses and loss adjustment expenses represents an estimate of our liability for the unpaid cost of insured events that have occurred as of a point in time but have not yet been paid. More specifically, it represents the accumulation of estimates for reported losses and an estimate for losses incurred, but not reported, including claims adjustment expenses at the end of any given accounting period.

Our Insurance operations claim personnel estimate reported losses based on individual case information or average payments for categories of claims. An estimate for current incurred, but not reported, claims is also recorded based on the actuarially determined expected loss ratio for a particular product, which also considers significant events that might change the expected loss ratio, such as severe weather events and the estimates for reported claims. These estimates of the reserves are reviewed regularly by product line management, by actuarial and accounting staffs, and ultimately, by senior management.

Table of Contents

Our Insurance operations actuaries assess reserves for each business at the lowest meaningful level of homogeneous data in each type of insurance, such as general or product liability and automobile physical damage. The purpose of these assessments is to confirm the reasonableness of the reserves carried by each of the individual subsidiaries and product lines and, thereby, the Insurance operations overall carried reserves. The selection of an actuarial methodology is judgmental and depends on variables such as the type of insurance, its expected payout pattern, and the manner in which claims are processed. Special characteristics such as deductibles, reinsurance recoverable, or special policy provisions are also considered in the reserve estimation process. Estimates for salvage and subrogation recoverable are recognized at the time losses are incurred and netted against the provision for losses. Our reserves include a liability for the related costs that are expected to be incurred in connection with settling and paying the claim. These loss adjustment expenses are generally established as a percentage of loss reserves. Our reserve process considers the actuarially calculated reserves based on prior patterns of claim incurrence and payment and the degree of incremental volatility associated with the underlying risks for the types of insurance; it represents management's best estimate of the ultimate liability. Since the reserves are based on estimates, the ultimate liability may be more or less than our reserves. Any necessary adjustments, which may be significant, are included in earnings in the period in which they are deemed necessary. These changes may be material to our results of operations and financial condition and could occur in a future period.

Our determination of the appropriate reserves for insurance losses and loss adjustment expenses for significant business components is based on numerous assumptions that vary based on the underlying business and related exposure.

Automotive service contracts Automotive service contract losses in the United States and abroad are generally reported and settled quickly through dealership service departments resulting in a relatively small balance of outstanding claims at any point in time relative to the volume of claims processed annually. Mechanical service contract claims are primarily composed of parts and labor for repair or replacement of the affected components or systems. Changes in the cost of replacement parts and labor rates will affect the cost of settling claims. Considering the short time frame between a claim being incurred and paid, changes in key assumptions (e.g., part prices, labor rates) would have a minimal impact on the loss reserve as of a point in time. The loss reserve amount is influenced by the estimate of the lag between vehicles being repaired at dealerships and the claim being reported by the dealership.

Personal automobile Automobile insurance losses are principally a function of the number of occurrences (e.g., accidents or thefts) and the severity (e.g., the ultimate cost of settling the claim) for each occurrence. The number of incidents is generally driven by the demographics and other indicators or predictors of loss experience of the insured customer base including geographic location, number of miles driven, age, sex, type and cost of vehicle, and types of coverage selected. The severity of each claim, within the limits of the insurance purchased, is generally random and settles to an average over a book of business, assuming a broad distribution of risks. Changes in the severity of claims have an impact on the reserves established at a point in time. Changes in bodily injury claim severity are driven primarily by inflation in the medical sector of the economy. Changes in automobile physical damage claim severity are caused primarily by inflation in automobile repair costs, automobile parts prices, and used car prices. However, changes in the level of the severity of claims paid may not necessarily match or track changes in the rate of inflation in these various sectors of the economy.

At December 31, 2010, we concluded that our insurance loss reserves were reasonable and appropriate based on the assumptions and data used in determining the estimate. However, because insurance liabilities are based on estimates, the actual claims ultimately paid may vary from the estimates.

Table of Contents***Loan Repurchase and Obligations Related to Loan Sales***

The liability for representation and warranty obligations reflects management's best estimate of probable lifetime loss. We consider historic and recent demand trends in establishing the reserve. The methodology used to estimate the reserve considers a variety of assumptions including borrower performance (both actual and estimated future defaults), repurchase demand behavior, historic loan defect experience, historic and estimated future loss experience, which includes projections of future home price changes as well as other qualitative factors including investor behavior. In cases where we do not have or have limited current or historical demand experience with an investor, because of the inherent difficulty in predicting the level and timing of future demands, if any, losses cannot currently be reasonably estimated, and a liability is not recognized. Management monitors the adequacy of the overall reserve and makes adjustments to the level of reserve, as necessary, after consideration of other qualitative factors including ongoing dialogue with counterparties.

Determination of Provision for Income Taxes

As of June 30, 2009, we converted from a LLC to a Delaware corporation, thereby ceasing to be a pass-through entity for income tax purposes. As a result, we adjusted our deferred tax assets and liabilities to reflect the estimated future corporate effective tax rate. Our banking, insurance, and foreign subsidiaries were generally always corporations and continued to be subject to tax and provide for U.S. federal, state, and foreign income taxes.

Our income tax expense, deferred tax assets and liabilities, and reserves for unrecognized tax benefits reflect management's best assessment of estimated future taxes to be paid. We are subject to income taxes in both the United States and numerous foreign jurisdictions. Significant judgments and estimates are required in determining the consolidated income tax expense.

Deferred income taxes arise from temporary differences between the tax and financial statement recognition of revenue and expense. In evaluating our ability to recover our deferred tax assets within the jurisdiction from which they arise we consider all available positive and negative evidence including scheduled reversals of deferred tax liabilities, projected future taxable income, tax planning strategies and recent financial operations. In projecting future taxable income, we begin with historical results adjusted for the results of discontinued operations and changes in accounting policies and incorporate assumptions including the amount of future state, federal and foreign pretax operating income, the reversal of temporary differences, and the implementation of feasible and prudent tax planning strategies. These assumptions require significant judgment about the forecasts of future taxable income and are consistent with the plans and estimates we are using to manage the underlying businesses. In evaluating the objective evidence that historical results provide, we consider three years of cumulative operating income (loss). For the years ended December 31, 2010 and 2009, we have concluded that the negative evidence is more objective and therefore outweighs the positive evidence, and therefore we have recorded total valuation allowances on net deferred tax assets of \$2.0 billion and \$2.5 billion, respectively. For additional information regarding our provision for income taxes, refer to Note 24 to the Consolidated Financial Statements.

Private Debt Exchange and Cash Tender Offers

In 2008, we commenced separate private exchange and cash tender offers to purchase and/or exchange certain of outstanding notes held by eligible holders for cash, newly issued notes of Ally, and in some cases preferred stock of a wholly owned Ally subsidiary. Refer to Note 17 to the Consolidated Financial Statements for further details.

In evaluating the accounting for the private debt exchange and cash tender offers (the *Offers*) in December 2008, management was required to make a determination as to whether the *Offers* should be

Table of Contents

accounted for as a TDR or an extinguishment of Ally and ResCap debt. In concluding on the accounting, management evaluated applicable accounting guidance. The relevant accounting guidance required us to determine whether the exchanges of debt instruments should be accounted for as a TDR. A TDR results when it is determined, evaluating six factors considered to be indicators of whether a debtor is experiencing financial difficulties, that the debtor is experiencing financial difficulties and the creditors grant a concession; otherwise, such exchanges should be accounted for as an extinguishment or modification of debt. The assessment of this critical accounting estimate required management to apply a significant amount of judgment in evaluating the inputs, estimates, and internally generated forecast information to conclude on the accounting for the Offers.

One of these factors was whether we had the ability with entity-specific cash flows to service the contractual terms of existing debt agreements through maturity based on estimates and projections that only encompassed the current business capabilities. Our assessment considered internal analyses such as our short-term and long-term liquidity projections, net income forecasts, and runoff projections. These analyses were based on our consolidated financial condition and our comprehensive ability to service both Ally and ResCap obligations and were based only on our then current business capabilities and funding sources. In addition to our baseline projections, these analyses incorporated stressed scenarios reflecting continued deterioration of the credit markets, further GM financial distress, and significant curtailments of loans originations. Management assigned probability weights to each scenario to determine an overall risk-weighted projection of our ability to meet our consolidated obligations as they come due. These analyses indicated that we could service all Ally and ResCap obligations as they came due in the normal course of business.

Our assessment also considered capital market perceptions of our financial condition, such as our credit agency ratings, market values for our debt, analysts' reports, and public statements made by us and our stakeholders. Due to the rigor applied to our internal projections, management placed more weight on our internal projections and less weight on capital market expectations.

Based on this analysis and after the consideration of the applicable accounting guidance, management concluded the Offers were not deemed to be a TDR. As a result of this conclusion, the Offers were accounted for as an extinguishment of debt.

Applying extinguishment accounting, we recognized a gain at the time of the exchange for the difference between the carrying value of the exchanged notes and the fair value of the newly issued securities. In accordance with applicable fair value accounting guidance related to Level 3 fair value measures, we performed various analyses with regard to the valuation of the newly issued instruments. Level 3 fair value measures are valuations that are derived primarily from unobservable inputs and rely heavily on management assessments, assumptions, and judgments. In determining the fair value of the newly issued instruments, we performed an internal analysis using trading levels on the trade date, December 29, 2008, of existing Ally unsecured debt, adjusted for the features of the new instruments. We also obtained bid-ask spreads from brokers attempting to make a market in the new instruments.

Based on the determined fair values, we recognized a pretax gain upon extinguishment of \$11.5 billion and reflected the newly issued preferred shares at their fair value, which was estimated to be \$234 million on December 29, 2008. The majority of costs associated with the Offers were deferred in the basis of newly issued bonds. In the aggregate, the Offers resulted in an \$11.7 billion increase to our consolidated equity position.

If management had concluded that TDR accounting was applicable, a significant portion of the \$11.5 billion pretax gain, estimated to be \$8.4 billion, would not have been recognized at the time of the exchange. A gain of \$3.1 billion would have been recognized immediately, and an additional contractual discount of \$3.0 billion would have been deferred and accreted as an offset to interest expense over the term of the newly issued bonds. Additionally, costs associated with the Offers would have been recognized immediately as an expense rather than deferred in the basis of the newly issued bonds.

Table of Contents

The Offers were a significant component of our strategy to satisfy the condition for a minimum amount of regulatory capital in connection with our application to become a bank holding company. If the Offers had been accounted for as a TDR, regulatory capital would have been \$8.4 billion lower, which may have affected the Federal Reserve's consideration of our application.

Recently Issued Accounting Standards

Refer to Note 1 to the Consolidated Financial Statements for further information related to recently issued accounting standards.

Statistical Tables

The accompanying supplemental information should be read in conjunction with the more detailed information, including our Consolidated Financial Statements and the notes thereto, which appear elsewhere in this prospectus.

Table of Contents**Net Interest Margin Table**

The following tables present an analysis of net interest margin excluding discontinued operations for the periods shown.

	2011		Three months ended March 31,				2010			Increase (decrease) due to (a)		
	Average balance (b)	Interest income/expense	Yield/rate	Average balance (b)	Interest income/expense	Yield/rate	Volume	Yield/rate	Total

Table of Contents

- (a) Changes in interest not solely due to volume or yield/rate are allocated in proportion to the absolute dollar amount of change in volume and yield/rate.
- (b) Average balances are calculated using a combination of monthly and daily average methodologies.
- (c) Excludes income on equity investments of \$5 million and \$3 million at March 31, 2011 and 2010, respectively. Yields on available-for-sale debt securities are based on fair value as opposed to historical cost.
- (d) Nonperforming finance receivables and loans are included in the average balances. For information on our accounting policies regarding nonperforming status refer to Note 1 to our Consolidated Financial Statements.
- (e) Includes gains on sale of \$118 million and \$184 million during the three months ended March 31, 2011 and 2010, respectively. Excluding these gains on sale, the annualized yield would be 12.56% and 8.80% at March 31, 2011 and 2010, respectively.
- (f) Includes the effects of derivative financial instruments designated as hedges.
- (g) Average balance includes \$3,000 million and \$4,247 million related to original issue discount at March 31, 2011 and 2010, respectively. Interest expense includes original issue discount amortization of \$299 million and \$296 million during the three months ended March 31, 2011 and 2010, respectively.
- (h) Excluding original issue discount the rate on long-term debt was 5.00% and 4.90% at March 31, 2011 and 2010, respectively.
- (i) Excluding original issue discount the rate on total interest-bearing liabilities was 4.22% and 4.31% at March 31, 2011 and 2010, respectively.
- (j) Excluding original issue discount the rate on total funding sources was 4.16% and 4.25% at March 31, 2011 and 2010, respectively.
- (k) Net interest spread represents the difference between the rate on total interest-earning assets and the rate on total interest-bearing liabilities.
- (l) Net yield on interest-earning assets represents net financing revenue as a percentage of total interest-earning assets.

Table of Contents

- (a) Changes in interest not solely due to volume or yield/rate are allocated in proportion to the absolute dollar amount of change in volume and yield/rate.
- (b) Average balances are calculated using a combination of monthly and daily average methodologies.
- (c) Excludes income on equity investments of \$17 million and \$10 million at December 31, 2010 and 2009, respectively. Yields on available-for-sale debt securities are based on fair value as opposed to historical cost.
- (d) Nonperforming finance receivables and loans are included in the average balances. For information on our accounting policies regarding nonperforming status refer to Note 1 to the Consolidated Financial Statements.
- (e) Includes other interest income of \$1 million and \$86 million at December 31, 2010 and 2009, respectively.
- (f) Includes gains on sale of \$704 million and \$516 million during the year ended December 31, 2010 and 2009, respectively. Excluding these gains on sale, the yield would be 8.67% and 6.77% at December 31, 2010 and 2009, respectively.
- (g) Includes the effects of derivative financial instruments designated as hedges.
- (h) Average balance includes \$3,710 million and \$4,804 million related to original issue discount at December 31, 2010 and 2009, respectively. Interest expense includes original issue discount amortization of \$1,204 million and \$1,143 million during the year ended December 31, 2010 and 2009, respectively.
- (i) Excluding original issue discount the rate on long-term debt was 4.97% and 4.74% at December 31, 2010 and 2009, respectively.
- (j) Excluding original issue discount the rate on total interest bearing liabilities was 4.27% and 4.50% at December 31, 2010 and 2009, respectively.
- (k) Net interest spread represents the difference between the rate on total interest earning assets and the rate on total interest-bearing liabilities.
- (l) Net yield on interest earning assets represents net financing revenue as a percentage of total interest earning assets.

BUSINESS

General

Ally Financial Inc. (formerly GMAC Inc.) is a leading, independent, globally diversified, financial services firm with \$174 billion in assets and operations in 37 countries. Founded in 1919, we are a leading automotive financial services company with over 90 years of experience providing a broad array of financial products and services to automotive dealers and their customers. We are also one of the largest residential mortgage companies in the United States. We became a bank holding company on December 24, 2008, under the BHC Act. Our banking subsidiary, Ally Bank, is an indirect wholly owned subsidiary of Ally Financial Inc. and a leading franchise in the growing direct (online and telephonic) banking market, with \$35.4 billion of deposits at March 31, 2011.

Our Business

Global Automotive Services and Mortgage are our primary lines of business. Our global automotive business is centered around our strong and longstanding relationships with automotive dealers and supports our automotive manufacturing partners and their marketing programs. Our Global Automotive Services business serves approximately 20,000 dealers globally with a wide range of financial services and insurance products. We believe our dealer-focused business model makes us the preferred automotive finance company for thousands of our automotive dealer customers. We have specialized incentive programs that are designed to encourage dealers to direct more of their business to us. In addition, we believe our longstanding relationship with GM has resulted in particularly strong relationships between us and thousands of dealers and extensive operating experience relative to other automotive finance companies.

Our mortgage business is a leading originator and servicer of residential mortgage loans in the United States and Canada.

Ally Bank, our direct banking platform, provides our Automotive Finance and Mortgage operations with a stable, low-cost funding source and facilitates prudent asset growth. Our focus is on building a stable deposit base driven by our compelling brand and strong value proposition. Ally Bank raises deposits directly from customers through a direct banking channel over the internet and by telephone. Ally Bank offers a full spectrum of deposit product offerings including certificates of deposit, savings accounts, and money market accounts, as well as an online checking product. Ally Bank's assets and operating results are divided between our North American Automotive Finance operations and Mortgage operations based on its underlying business activities.

Table of Contents

The following table reflects the primary products and services offered by the continuing operations of each of our lines of business.

Global Automotive Services

Global Automotive Services includes our North American Automotive Finance operations, International Automotive Finance operations, and Insurance operations. Our Global Automotive Services business had \$113.0 billion of assets at March 31, 2011, and generated \$1.7 billion and \$7.4 billion of total net revenue in the first quarter of 2011 and fiscal year 2010.

Ally's primary customers are automotive dealers, which are independently owned businesses. As part of the process of selling a vehicle, automotive dealers typically originate loans and leases to their retail customers. Dealers then select Ally or another automotive finance provider to which they sell loans and leases.

Our Global Automotive Services operations offer a wide range of financial services and insurance products to approximately 20,000 automotive dealerships and their retail customers. We have deep dealer relationships that have been built over our 90-year history. Our dealer-focused business model encourages dealers to use our broad range of products through incentive programs like our Ally Dealer Rewards program, which rewards individual dealers based on the depth and breadth of our relationship. During the first quarter of 2011 and fiscal year 2010, over 62% and 60%, respectively, of our U.S. dealer customers received benefits under the Ally Dealer Rewards program which was initiated in 2009. We expect even higher participation levels going forward as all of our dealer customers are eligible to participate in the program. Our automotive finance services include providing retail installment sales contracts, loans, and leases, offering term loans to dealers, financing dealer floorplans and other lines of credit to dealers, fleet leasing, and vehicle remarketing services. We also offer vehicle service contracts and commercial insurance primarily covering dealers' wholesale vehicle inventories in the United States and internationally. We are a leading provider of vehicle service contracts with mechanical breakdown and maintenance coverages.

Global Automotive Services is supported by approximately 9,300 employees worldwide. A significant portion of our Global Automotive Services business is conducted with or through GM- and Chrysler-franchised dealers and their customers.

Table of Contents

Automotive Finance

Our North American Automotive Finance operations consist of our automotive finance operations in the United States and Canada. At March 31, 2011, our North American Automotive Finance operations had \$87.7 billion of assets and generated \$927 million and \$4.0 billion of total net revenue in the first quarter of 2011 and fiscal year 2010, respectively. According to Experian Automotive, we were the largest independent provider of new retail automotive loans in the United States during 2010. We funded one out of every ten new car purchases that were financed in the United States during 2010. In the United States and Canada alone, we have approximately 2,200 automotive finance and insurance employees in five regions focused on serving the needs of our dealer customers with finance and insurance products, expanding the number of overall dealer and automotive manufacturer relationships, and supporting our dealer lending and underwriting functions. In addition, we have over 2,400 employees that support our North American servicing operations. We manage commercial account servicing for over 5,000 dealers in the United States that utilize our floorplan inventory lending or other commercial loans. In the United States and Canada, we provide consumer asset servicing for a \$72 billion portfolio at March 31, 2011. The extensive infrastructure and experience of our servicing operation are important to our ability to minimize our loan losses and enable us to deliver favorable customer experience to both our dealers and their retail customers.

Our International Automotive Finance operations are in Europe, Latin America, and Asia. At March 31, 2011, our International Automotive Finance operations had \$16.3 billion of assets and generated \$246 million and \$1.0 billion of total net revenue in the first quarter of 2011 and fiscal year 2010, respectively. Through our longstanding relationship with GM, we have extensive experience operating in international markets and broad global capabilities. We currently originate loans in 15 countries (other than the U.S. and Canada). During 2010 and 2009, we significantly streamlined our international presence to focus on strategic operations in five core markets: Germany, the United Kingdom, Brazil, Mexico, and China through our joint venture, GMAC-SAIC. In China, GMAC-SAIC is a leading automotive finance company with broad geographic coverage and a full suite of products. We own 40% of GMAC-SAIC. The other joint venture partners include Shanghai Automotive Group Finance Company LTD and Shanghai General Motors Corporation Limited. In both Brazil and Mexico, we offer a full product line and have strong positions in the automotive dealer channel. Germany and the United Kingdom remain our core markets in Europe with \$5.7 billion of total finance receivables and loans at March 31, 2011. To improve operational efficiency, certain of our servicing and lending activities in Europe have been consolidated in Germany.

Our success as an automotive finance provider is driven by the consistent and broad range of products and services we offer to dealers who originate loans and leases to their retail customers who are acquiring new and used automobiles. In the United States and Canada, Ally and other automotive finance providers purchase these loans and leases from automotive dealers. In other countries, we offer retail installment loans and leases directly to retail customers of the dealers. Automotive dealers are independently owned businesses and are our primary customer.

Automotive dealers require a full range of financial products, including new and used vehicle inventory financing, inventory insurance, working capital and capital improvement loans, and vehicle remarketing services to conduct their respective businesses as well as service contracts and guaranteed asset protection (GAP) insurance to offer their customers. We have consistently provided this full suite of products to dealers.

For consumers, we offer retail automotive financing for new and used vehicles and leasing for new vehicles. In the United States, retail financing for the purchase of vehicles takes the form of installment sale financing. References to consumer automobile loans in this prospectus include retail installment sales financing unless the context suggests otherwise. During the first quarter of 2011 and fiscal year 2010, we originated a total of 616 thousand and 1.9 million automotive loans and leases worldwide totaling approximately \$14.3 billion and \$43.0 billion, respectively. We provided financing for 51% and 30% of GM's and Chrysler's North American retail sales including leases, respectively, and 24% of GM's international retail sales including leases in countries where both GM and we operate and we had retail financing volume, excluding China. For additional information

Table of Contents

about our relationship and business transactions with GM, refer to Note 26 to the Consolidated Financial Statements and the section of this prospectus entitled "Certain Relationships and Related Party Transactions."

Our consumer automotive financing operations also generate revenue through finance charges or lease payments and fees paid by customers on the retail contracts and leases. We also recognize a gain or loss on the remarketing of the vehicles financed through lease contracts. When the lease contract is originated, we estimate the residual value of the leased vehicle at lease termination. At lease termination, our actual sales proceeds from remarketing the vehicle may be higher or lower than the original estimate, which may be revised over time.

GM or Chrysler may elect as a marketing incentive to sponsor special financing programs for retail sales of their respective vehicles. The manufacturer can lower the financing rate paid by the customer on either a retail contract or a lease by paying us the present value of the difference between the customer rate and our standard market rates at contract inception. These marketing incentives are referred to as rate support or subvention. GM may also from time to time offer lease pull-ahead programs, which encourage consumers to terminate existing leases early if they acquire a new GM vehicle. As part of these programs, we waive all or a portion of the customer's remaining payment obligation. In most cases, GM compensates us for a portion of the foregone revenue from those waived payments after consideration of the extent that our remarketing sale proceeds are higher than otherwise would be realized if the vehicle had been remarketed at lease contract maturity. Historically, the manufacturer elected to lower a customer's lease payments through a residual support incentive program; in these instances, the manufacturer and we agreed to increase the projected value of the vehicle at the time the lease contract was signed, and the manufacturer reimbursed us if the remarketing sales proceeds were less than the adjusted residual value. We have not had any residual support incentive programs of material size on leases originated in 2009 or 2010 with any manufacturers.

Our commercial automotive financing operations primarily fund dealer purchases of new and used vehicles through floorplan financing. During 2010, we financed an average of \$30.5 billion of dealer vehicle inventory worldwide through floorplan financings. We financed 84% and 68% of GM's and Chrysler's North American dealer inventory, respectively, during the first quarter of 2011, and 75% of GM's international dealer inventory in countries where GM operates and we provide dealer inventory financing, excluding China. Additional commercial offerings include automotive dealer term loans, revolving lines of credit, and dealer fleet financing. We provide comprehensive automotive remarketing services, including the use of SmartAuction, our online auction platform, which efficiently supports dealer-to-dealer and other commercial wholesale car transactions. In 2010, we and others utilized SmartAuction to sell 412,000 vehicles to dealers and other commercial customers. SmartAuction served as the remarketing channel for over 60% of Ally's off lease vehicles.

Wholesale automotive financing represents the largest portion of our commercial automotive financing business. We extend lines of credit to individual dealers. In general, each wholesale credit line is secured by all the vehicles financed and, in some instances, by other assets owned by the dealer or by a personal guarantee. The amount we advance to dealers is equal to 100% of the wholesale invoice price of new vehicles. Interest on wholesale automotive financing is generally payable monthly and is usually indexed to a floating rate benchmark. The rate for a particular dealer is based on the dealer's creditworthiness and eligibility for various incentive programs, among other factors.

Manufacturer Relationships

On November 30, 2006, we entered into an agreement with GM that stated, subject to certain conditions and limitations, whenever GM offers vehicle financing and leasing incentives to customers, it would do so exclusively through Ally. Most recently, this agreement was modified on May 22, 2009. As a result of these modifications: (1) through December 31, 2010, GM could offer retail financing incentive programs through a third-party financing source under certain specified circumstances and, in some cases, subject to the limitation that pricing offered by the third party meets certain restrictions, and after December 31, 2010, GM can offer any

Table of Contents

incentive programs on a graduated basis through third parties on a nonexclusive, side-by-side basis with Ally provided that the pricing of the third parties meets certain requirements; (2) Ally will have no obligation to provide operating lease financing products; and (3) Ally will have no targets against which it could be assessed penalties. The modified agreement will expire on December 31, 2013. A primary objective of Ally under the agreement continues to be supporting distribution and marketing of GM products.

On August 6, 2010, we entered into an agreement with Chrysler (which replaced a term sheet that was originally effective on April 30, 2009) to make available automotive financing products and services to Chrysler dealers and customers. We are Chrysler's preferred provider of new wholesale financing for dealer inventory in the United States, Canada, and Mexico, along with other international markets upon the mutual agreement of the parties. We provide dealer financing and services and retail financing to qualified Chrysler dealers and customers as we deem appropriate according to our credit policies and in our sole discretion. Chrysler is obligated to provide us with certain exclusivity privileges including the use of Ally for designated minimum threshold percentages of certain Chrysler retail financing subvention programs. The agreement extends through April 30, 2013, with automatic one-year renewals unless either we or Chrysler provides sufficient notice of nonrenewal. During 2010, Chrysler also selected Ally to be the preferred financing provider for Fiat vehicles in the United States. Under this agreement, our North American Automotive Finance operations will offer retail financing, leasing, wholesale financing, working capital and facility loans, and remarketing services for Fiat vehicles in the United States.

Subvented loans, originated through our preferred financing relationships, represented 33% and 41% of our first quarter 2011 and fiscal year 2010 North American new retail loan and lease origination volume, respectively, compared to 52% in 2009 and 60% in 2008. For non-subvented retail loan originations, we successfully compete at the dealer-level based on our strong dealer relationships, competitive pricing, full suite of products and comprehensive service.

In 2010, we also further diversified our Global Automotive Services customer base by establishing agreements with other manufacturers. In March 2010, we were selected by Spyker Cars N.V., which purchased Saab Automobile from GM, as the preferred source of wholesale and retail financing for qualified Saab dealers and customers in North America and internationally. Additionally, in November 2010, we were selected as the recommended provider of finance and insurance products and services for Saab dealerships in the United States. In April 2010, we were selected by Thor Industries, Inc. (Thor) as the preferred financial provider for its recreational vehicles. Thor is the world's largest manufacturer of recreation vehicles, including brands such as Damon, Four Winds, Airstream, Dutchmen, Komfort, Breckenridge, CrossRoads, General Coach, and Keystone RV.

Insurance

Our Insurance operations offer both consumer insurance products sold primarily through the automotive dealer channel and commercial insurance products sold to dealers. As part of our focus on offering dealers a broad range of products, we provide vehicle service contracts, mechanical breakdown and maintenance coverages. We also underwrite selected commercial insurance coverages which primarily insure dealers wholesale vehicle inventory in the United States and internationally, as well as personal automobile insurance in certain countries outside the United States. We sell vehicle service contracts with mechanical breakdown and maintenance coverages. Our Insurance operations had \$9.0 billion of assets at March 31, 2011, and generated \$520 million and \$2.4 billion of total net revenue in the first quarter of 2011 and fiscal year 2010.

Our vehicle service contracts for retail customers offer owners and lessees mechanical repair protection and roadside assistance for new and used vehicles beyond the manufacturer's new vehicle warranty. These vehicle service contracts are marketed to the public through automotive dealerships and on a direct response basis in the United States and Canada. The vehicle service contracts cover virtually all vehicle makes and models. We also offer GAP products, which allow the recovery of a specified economic loss beyond the covered vehicle's value in the event the vehicle is damaged and declared a total loss. Our U.K.-based Car Care Plan subsidiary provides vehicle service contracts and GAP products in Europe and Latin America.

Table of Contents

Wholesale vehicle inventory insurance for dealers provides physical damage protection for dealers' floorplan vehicles. Dealers are generally required to maintain this insurance by their floorplan finance provider. We offer vehicle inventory insurance in the United States to virtually all new car franchised dealerships. We sell insurance products to over 4,000 dealers in the United States. Among U.S. GM dealers to whom we provide wholesale financing, our wholesale insurance product penetration rate is approximately 80%. Dealers who receive wholesale financing from Ally are eligible for wholesale insurance incentives, such as automatic eligibility in our preferred insurance programs and increased financial benefits. International operations also manage a fee-focused insurance program through which commissions are earned from third-party insurers offering insurance products primarily to Ally customers worldwide.

Our ABA Seguros subsidiary provides personal automobile insurance and certain commercial insurance in Mexico. We also provide personal automobile insurance in Canada.

A significant aspect of our Insurance operations is the investment of proceeds from premiums and other revenue sources. We will use these investments to satisfy our obligations related to future claims at the time these claims are settled. Our Insurance operations have an Investment Committee, which develops guidelines and strategies for these investments. The guidelines established by this committee reflect our risk tolerance, liquidity requirements, regulatory requirements, and rating agency considerations, among other factors.

Mortgage

Our Mortgage operations are now reported as two distinct segments: (1) Origination and Servicing operations and (2) Legacy Portfolio and Other operations. These operations are conducted through the mortgage operations of Ally Bank in the United States, ResMor Trust in Canada, and subsidiaries of ResCap legal entity in the United States. Our Mortgage operations had \$31.0 billion of assets at March 31, 2011, and generated \$411 million and \$2.7 billion of total net revenue in the first quarter of 2011 and fiscal year 2010, respectively.

Origination and Servicing

Our Origination and Servicing operations is one of the leading originators of conforming and government-insured residential mortgage loans in the United States. We also originate and purchase high-quality government-insured residential mortgage loans in Canada. We are one of the largest residential mortgage loan servicers in the United States and we provide collateralized lines of credit to other mortgage originators, which we refer to as warehouse lending. We finance our mortgage loan originations primarily in Ally Bank in the United States and in ResMor Trust in Canada. During 2010, we originated or purchased approximately 300,000 mortgage loans totaling \$69.5 billion in the United States: \$61.5 billion through our network of correspondents and \$8.0 billion through our retail and direct network, which includes our Ditech branded direct-to-consumer channel. We sell the conforming mortgages we originate or purchase in sales that take the form of securitizations guaranteed by the Fannie Mae or Freddie Mac, and sell government-insured mortgage loans we originate or purchase in securitizations guaranteed by Ginnie Mae in the United States and sell the insured mortgages we originate in Canada as NHA-MBS issued under the Canada Mortgage and Housing Corporation's NHA-MBS program or through whole-loan sales. Fannie Mae, Freddie Mac, and Ginnie Mae are collectively known as the Government-sponsored Enterprises or GSEs. We also selectively originate prime jumbo mortgage loans in the United States. In 2010, we sold \$67.8 billion of mortgage loans guaranteed by the GSEs, or 94.6% of total loans sold by us. At December 31, 2010, we were the primary servicer of 2.4 million mortgage loans with an unpaid principal balance of \$361 billion. Our Originating and Servicing operations had \$19.2 billion of assets at March 31, 2011, and generated \$321 million and \$1.8 billion of total net revenue during the quarter ended March 31, 2011 and the year ended December 31, 2010, respectively.

Legacy Portfolio and Other

Our Legacy Portfolio and Other operations primarily consists of loans originated prior to January 1, 2009, and includes noncore business activities including discontinued operations, portfolios in runoff, and cash held in the ResCap legal entity. These activities, all of which we have discontinued, include, among other things: lending

Table of Contents

to real estate developers and homebuilders in the United States and the United Kingdom; purchasing, selling and securitizing nonconforming residential mortgage loans (with the exception of U.S. prime jumbo mortgage loans) in both the United States and internationally; certain conforming origination channels closed in 2008 and our mortgage reinsurance business. During 2009 and 2010, we performed a strategic review of our mortgage business. As a result of the review, we exited the European mortgage market through the sale of our United Kingdom and continental Europe operations. The sale of these operations was completed on October 1, 2010. We have substantially reduced the risk in our Mortgage operations since the onset of the housing crisis through a significant reduction in total assets, primarily through the runoff and divestiture of noncore businesses and assets. In 2010, we sold \$1.6 billion in domestic legacy mortgage loans to investors through nonagency securitizations. At March 31, 2011, our Legacy Portfolio and Other operations had total assets of \$11.8 billion that included \$1.4 billion of nonrecourse assets and cash, mortgage loans held-for-investment with a net carrying value of \$8.5 billion, and mortgage loans held-for-sale with a net carrying value of \$1.9 billion, which have been marked to their fair value at 47% of their unpaid principal balance on average. In addition, we have reached agreements with Freddie Mac and Fannie Mae, significantly limiting our repurchase obligations with each counterparty. Our Mortgage operations holds reserves of \$830 million at March 31, 2011, for potential repurchase obligations related to potential breaches of representations and warranties.

Corporate and Other

Our Commercial Finance Group is included within Corporate and Other. Our Commercial Finance Group provides senior secured commercial lending products to small and medium sized businesses primarily in the United States. Corporate and Other also includes certain equity investments, the amortization of the discount associated with new debt issuances and bond exchanges, most notably from the December 2008 bond exchange, as well as the residual impacts of our corporate FTP and treasury ALM activities.

Ally Bank

Ally Bank raises deposits directly from customers through the direct banking channel via the internet and over the telephone. We have quickly become a leader in direct banking with our recognizable brand, accessible 24/7 customer service, and competitively priced deposit products. We have distinguished our direct bank with our *Talk Straight, Do Right, Be Obviously Better* branding and products that are *Easy to Use* with *No Fine Print, Hidden Fees, Rules or Penalties* .

Ally Bank provides our automotive finance and mortgage loan operations with a stable and low-cost funding source and facilitates prudent asset growth. At March 31, 2011, we had \$35.4 billion of deposits including \$23.5 billion of retail deposits sourced by Ally Bank. The focus on retail deposits and growth in our deposit base from \$19.2 billion at the end of 2008 to \$35.4 billion at March 31, 2011, combined with improving capital markets and a lower interest rate environment have contributed to a reduction in our cost of funds of approximately 100 basis points since the first quarter of 2009. We believe our retail deposits at Ally Bank will continue to provide a diversified, low-cost funding source for our automotive and mortgage assets. Ongoing, our cost of funds will be influenced by changes in the level of deposits as well as the interest rate environment and the state of capital markets.

Consumer preferences for the online banking model have grown consistently over the past several years. We believe internet banking is now the preferred banking channel by consumers. According to a 2010 American Bankers Association survey, the number of bank customers who prefer to do their banking online increased from 21% to 36% between 2007 and 2010, while those who prefer branch banking has declined from 39% to 25% over the same period. We believe that Ally Bank is well-positioned to take advantage of the consumer-driven shift from branch to direct banking.

Table of Contents

Competition

The markets for automotive and mortgage financing and providing insurance services are highly competitive. We compete with other financial services providers including captive automotive finance companies, banks, savings and loan associations, credit unions, finance companies, mortgage banking companies, and insurance companies. Our insurance business faces significant competition from insurance carriers, reinsurers, third-party administrators, brokers, and other insurance-related companies. Many of our competitors have substantial positions nationally or in the markets in which they operate. Some of our competitors have lower cost structures, have lower costs of capital, and are less reliant on securitization and sale activities. We believe we can compete effectively by continuing to expand and deepen our relationships with dealers through our dedicated sales force, breadth of product offering and competitive incentive programs.

The market for deposit products is also highly competitive. We compete with other direct banking institutions as well as traditional branch based banks, thrifts and credit unions. We seek to distinguish ourselves from the competition on superior customer service, competitive pricing and innovative products.

Our Strengths

Automotive financial services category leader with full product suite.

We are one of the largest providers of retail and wholesale automotive financing in the world and are an integral part of the automotive industry. We believe that our 90-year history has provided us extensive knowledge of the automotive industry and the financial services needs of its dealers, automotive manufacturers, and retail consumers.

Our full suite of financing and insurance products and extensive on-site service relationships differentiate us from most of our competitors. As of March 31, 2011, over 5,000 of our automotive dealer customers utilized four or more of our products. We use incentive programs, such as our Ally Dealer Rewards program, to increase the volume of business and number of products used by our dealer customers. During the first quarter of 2011 and fiscal year 2010, over 62% and 60%, respectively, of our U.S. dealer customers received benefits under the Ally Dealer Rewards program which was initiated in 2009.

Implementation of our market-driven strategies since 2008 has enabled us to grow our Global Automotive Services business within our existing dealer relationships and expand into new relationships with dealers of various manufacturers. Since 2008, we have successfully added preferred provider agreements, including Chrysler (U.S., Canada and Mexico), Fiat (U.S. and Mexico), Saab (U.S. and Europe), American Suzuki (U.S.) and Thor (U.S.). Our strong relationships with manufacturers have allowed us to offer more products, expand our dealer base and strengthen our existing network of dealer relationships. We have increased our new non-GM retail originations from \$1.0 billion in 2006 to \$9.5 billion in 2010 and from \$1.7 billion in the first quarter of 2010 to \$2.6 billion in the first quarter of 2011.

We believe that the combination of our full suite of products, service standards, global platform, incentive programs, and funding strategy put us in a strong position relative to competing financial institutions and future entrants to the market.

Table of Contents

Scalable platform with significant growth opportunities.

We are well-positioned for growth as the U.S. economy recovers and U.S. SAAR of vehicle sales rebounds from its 2008-2009 recessionary levels. Consumer and business spending on automobiles has recovered from recent lows but remains well below historical average levels. The chart below shows historical consumer, business and government spending on automobiles as a percentage of U.S. GDP.

Source: Bureau of Economic Analysis, U.S. Department of Commerce

The chart below shows historical and projected U.S. SAAR (in millions):

Source: Bureau of Economic Analysis as to 2006-2010 data and Blue Chip Economic Indicators, Vol. 35, No. 10/Vol. 36, No. 5, as to projected 2011-2013 data.

In the United States and Canada, we have approximately 2,200 automotive finance and insurance employees dedicated to dealer sales, product support, lending and underwriting. This infrastructure allows us to accommodate our growing volume of business and support our existing customers. We maintain a dedicated sales force, which meets the needs of our existing dealer customers, expands our market penetration in the dealer network and supports our existing and new automotive manufacturing partners. Our sales force consists of direct dealer account relationship professionals, supplemental product support coverage professionals, and primary manufacturer relationship account professionals.

Table of Contents

We also have invested significantly in our technology infrastructure and other initiatives to support our automotive financing and banking services platforms to further enhance our dealer and retail customer relationships and increase business volumes. This focus has resulted in increased credit application flow and originations from dealers representing various manufacturers, including GM and Chrysler. We are now able to access applications from almost all U.S. automotive dealerships under any brand. The combination of our extensive infrastructure, our relationships with finance and insurance departments of dealers, and our participation in the major credit application on-line networks, provides us with a strong platform to efficiently grow our consumer business volumes across a broad mix of automotive dealers.

In addition, we expect our incentive programs, such as Ally Dealer Rewards and other market-driven strategies, to increase business volumes and the number of products used by dealers. Other major initiatives underway such as dealer diversification strategies and additional preferred relationships with other manufacturers should increase our consumer retail, lease, and dealer funding volumes. The used vehicle financing market is highly fragmented and we believe this provides us with a growth opportunity within our franchised dealer relationships. We believe our significant presence in attractive markets such as China and Brazil also supports our growth opportunity internationally.

Leading direct banking franchise.

We believe Ally Bank is well-positioned for continued growth within the direct banking market. The Ally Bank brand has attained strong recognition since it was launched in 2009. Ally Bank provides us with a diversified source of stable, low-cost funding. The bank's assets primarily consist of high quality commercial and consumer automotive finance receivables and conforming and government-insured residential mortgage loans originated through our automotive and mortgage businesses, respectively. We believe there are opportunities to deliver other products to our growing banking customer base, in addition to our full suite of deposit, savings and checking products.

Complementary mortgage origination and servicing operations.

Our Origination and Servicing business is one of the largest participants in the U.S. residential mortgage loan market and provides us with an additional source of profitability. It is now focused on the segments of the mortgage loan market that have remained profitable for us during the housing crisis. We believe our Origination and Servicing operations are well-positioned as a result of our strong market position, scalable platform, well-known brands and extensive experience.

Strong balance sheet, liquidity position and risk management.

We believe that the consumer automotive loans on our balance sheet reflect the significantly tighter underwriting standards across the credit spectrum that we adopted since 2008. Our underwriting process utilizes a robust combination of credit metrics, including, among others, FICO scores, loan-to-value ratios, debt-to-income ratios and proprietary scoring models. The average FICO score at origination of the U.S. new retail loans in our outstanding portfolio as of March 31, 2011 was 733. We are prudently expanding automotive originations across the credit spectrum in accordance with our underwriting standards. During the first quarter of 2011 and fiscal year 2010, the loss rate on our U.S. consumer automotive portfolio was 0.95% and 1.73%, respectively.

Our commercial automotive financing business consists primarily of wholesale financing in which credit is extended to individual dealers and is secured by vehicles in inventory and, in some circumstances, other assets owned by the dealer or by a personal guarantee. We manage risk in our commercial automotive financing business through our rigorous credit underwriting process, which utilizes our proprietary dealer credit evaluation system, our ongoing risk monitoring program, and vehicle inventory audits to verify collateral and dealer compliance with lending agreements. During the first quarter of 2011 and fiscal year 2010, the loss rate on our U.S. commercial automotive portfolio was 0.04% and 0.27%, respectively.

Table of Contents

The loans originated in our mortgage operations are currently comprised primarily of high credit quality conforming, government-insured and prime jumbo residential mortgage loans. We have substantially reduced and derisked our legacy mortgage exposure of nonconforming assets through writedowns, run-offs and divestitures over the last three years. We have also settled with Fannie Mae and Freddie Mac, as well as several other counterparties, which resolved material repurchase obligations with each counterparty. At March 31, 2011, we held reserves of \$830 million for potential repurchase obligations for loans we sold to counterparties.

We have demonstrated strong access to funding and liquidity that are critical to our business. In the first quarter of 2011 and full year 2010, we raised over \$7 billion and nearly \$36 billion of secured and unsecured funding in the capital markets. We also have significant liquidity available beyond capital markets funding with access to \$33.4 billion of liquidity in the form of cash, highly liquid unencumbered securities, and available committed credit facility capacity at March 31, 2011.

Our access to deposits is an important source of diversified funding. Approximately 30% of our funding at the end of the first quarter of 2011 came from deposits compared to 14% at the end of 2008. We believe Ally Bank gives us the stable, low-cost benefits of deposit funding with a direct-to-consumer delivery model. Ally Bank's leadership in direct banking, recognizable brand and compelling customer value proposition position us well for consistent growth.

Our balance sheet is well capitalized. At March 31, 2011, we had a Tier 1 capital ratio of 14.68%, and a Tier 1 common ratio of % pro forma for this offering. We believe this capitalization compares favorably to our peers and positions us well for the future.

Experienced management team.

Our senior management team is comprised of financial professionals with deep operating experience in automotive and consumer finance and extensive experience managing some of the largest and most successful financial institutions in the world. Our senior management team has successfully led our return to profitability and the development of our strong liquidity and capital position following the financial crisis. Our management team has taken significant actions to make our automotive finance business more efficient and better positioned for growth opportunities. Substantial actions have also been taken to materially reduce the legacy risk in our mortgage operations. Our capital structure and prudent liquidity actions by management have positioned us for growth as the automotive industry and overall economy continue to rebound.

Our Business Strategy

Expand our position as a leading global provider of automotive financial services products.

We believe that our dealer-focused business model, global platform, full range of product offerings and sales organization position us to further broaden our relationships with existing and new dealers and automotive manufacturers, and to originate attractive retail automotive loans and leases for our portfolio in addition to other products. Our market-driven strategies, including incentive programs, have been designed and implemented to drive higher business volumes with our dealer relationships. Furthermore, we have dedicated resources to the underwriting and financing of used vehicle sales that should allow us to expand loan origination volume with our existing dealer base. We are also leveraging our existing dealer relationships, product suite, and extensive operating experience to expand our diversified dealer network and facilitate financing relationships with additional automotive manufacturers. We intend to continue to strongly support our financing relationships with GM and Chrysler by providing dependable new car inventory and consumer financing through all economic cycles. We will continue to utilize our international infrastructure to build upon our strong presence in attractive, developing markets such as China, Brazil and Mexico. Our objective is to generate incremental profitability and asset growth without straying from our core competencies in automotive finance.

Table of Contents

Continue to generate consistent results through our Mortgage operations.

Our Mortgage Origination and Servicing operations, which primarily originate and service high credit quality mortgage loans, provide a complementary source of consumer assets and a diversified source of profitability. The vast majority of our mortgage loans are originated, financed, and sold without significant balance sheet growth.

We plan to prudently expand our direct lending origination channel to complement our existing origination platform. Our servicing operations are fee-based and do not expose us to significant credit risk. We expect to sell the vast majority of our mortgage loans soon after origination, thereby reducing funding requirements.

Reduce our funding costs and continue funding diversification.

We continue to expand and diversify our funding in order to improve our profitability and enhance our competitiveness. Our success at developing our franchise at Ally Bank has supported the growth of our retail deposit base to \$23.5 billion at March 31, 2011 from \$7.2 billion at the end of 2008. Our retail deposit growth has enabled us to diversify and reduce our cost of funds since 2008. Our strategy is to continue to increase our retail deposit base through the delivery of our full suite of deposit products and continued investment in the Ally Bank brand name.

Our objective is to attain investment grade credit ratings from the rating agencies. We believe that improved ratings will help us to reduce our cost of funds further and improve our ability to compete even more effectively with other large banks and financial institutions across all products. We believe that the stable performance of our asset base, strong capitalization, demonstrated access to diversified funding markets, and the ability to operate profitably will help us reach this goal over time.

By continuing to diversify our funding sources and lower our overall cost of funding, including the prudent growth of Ally Bank, we believe that we can provide even more efficient and consistent funding for our dealers and their retail customers through various economic cycles.

Maintain a strong balance sheet through disciplined origination, servicing and risk management.

We will continue to focus primarily on originating and managing secured automotive and mortgage loans and related products. The types of secured commercial and consumer automotive loans that we originate performed well through the recent financial crisis. Our Mortgage Origination and Servicing operations originate conforming, government-insured residential and prime jumbo residential mortgage loans, which we believe have an attractive risk return profile. We believe we have significantly reduced our risk profile and improved our profitability by divesting and discontinuing a number of noncore activities.

We believe that we maintain strong levels of capital and liquidity relative to other bank holding companies. Our strategy is to materially increase our volume of automotive finance assets within our existing infrastructure and with prudent underwriting criteria which we believe will allow us to efficiently utilize our capital and enhance our profitability.

Improve our shareholder return profile.

We seek to enhance our returns for shareholders by prudently originating loans and leases across the credit spectrum. We have also recently increased our focus on offering financing for used vehicles through our franchised dealer relationships. We have invested significant capital in risk management and technology to manage this expansion. By prudently expanding automotive originations across broad credit segments and with continued diversification, we believe we can increase asset yields and generate attractive risk-adjusted returns in a variety of interest rate and credit environments. We plan to continue to decrease our overall costs by increasing productivity, adding retail deposits, and efficiently accessing secured and unsecured wholesale markets as certain higher-cost legacy funding matures. The combination of higher asset yields and lower operating and funding costs with an efficient capital structure will provide opportunities for us to improve returns to our shareholders.

Table of Contents
Certain Regulatory Matters

We are subject to various regulatory, financial, and other requirements of the jurisdictions in which our businesses operate. In light of recent conditions in the global financial markets, regulators have increased their focus on the regulation of the financial services industry. As a result, proposals for legislation that could increase the scope and nature of regulation of the financial services industry are possible. The following is a description of some of the primary laws and regulations that currently affect our business.

Bank Holding Company Status

On December 24, 2008, and in connection with the conversion of Ally Bank (formerly GMAC Bank) from a Utah-chartered industrial bank into a Utah-chartered commercial state nonmember bank, Ally and IB Finance Holding Company, LLC (IB Finance) were each approved as bank holding companies under the BHC Act. IB Finance is the direct holding company for Ally's FDIC-insured depository institution, Ally Bank. As a result, we are subject to the supervision and examination of the FRB. As a bank holding company, Ally must comply with various reporting requirements by the FRB and is subject to supervision and examination by the FRB. Ally must also comply with regulatory risk-based and leverage capital requirements, as well as various safety and soundness standards imposed by the FRB, and is subject to certain statutory restrictions concerning the types of assets or securities it may own and the activities in which it may engage. The FRB has the authority to issue orders to bank holding companies to cease and desist from unsafe or unsound banking practices and from violations of laws, rules, regulations, or conditions imposed in writing by the FRB. The FRB is also empowered to assess civil monetary penalties against institutions or individuals who violate any laws, regulations, orders, or written agreements with the FRB; to order termination of certain activities of bank holding companies or their subsidiaries; and to order termination of ownership and control of a nonbanking subsidiary by a bank holding company. In addition, as a bank that is not a member of the Federal Reserve System, Ally Bank is subject to regulation and examination primarily by the FDIC and the UDFI. This regulatory oversight is established to protect depositors, the FDIC's Deposit Insurance Fund, and the banking system as a whole, not security holders. Ally's nonbank subsidiaries generally are subject to regulation by their functional regulators including the applicable state insurance regulatory agencies in the case of our insurance subsidiaries, and the SEC, the Financial Industry Regulatory Authority, and/or state securities regulators in the case of our securities subsidiaries, as well as by the FRB. Our foreign subsidiaries are subject to regulation by applicable foreign regulatory agencies.

Permitted Activities As a bank holding company, subject to certain exceptions, we are not permitted to acquire more than 5% of any class of voting shares of any nonaffiliated FDIC-insured depository institution or more than 25% of any other company without first obtaining FRB approval. Furthermore, the activities of Ally must be generally limited to banking or to managing or controlling banks or other companies engaged in activities deemed closely related to banking or otherwise permissible under the BHC Act. Likewise, Ally generally may not hold more than 5% of any class of voting shares of any company unless that company's activities conform with the above requirements. Upon our bank holding company approval on December 24, 2008, we were permitted an initial two-year grace period to bring our activities and investments into conformity with these restrictions. This initial grace period expired in December 2010; however, the FRB has granted a one-year extension expiring in December 2011. We will be permitted to apply to the FRB for two additional one year extensions. Absent further extensions, certain of Ally's existing activities and investments deemed impermissible under the BHC Act must be terminated or disposed of by the expiration of the grace period and any extensions. For further information, refer to the section of this prospectus entitled Risk Factors.

Gramm-Leach-Bliley Act The enactment of the Gramm-Leach-Bliley Act of 1999 (GLB Act) eliminated large parts of a regulatory framework that had its origins in the Depression era of the 1930s. Effective with its enactment, new opportunities became available for banks, other depository institutions, insurance companies, and securities firms to enter into combinations that permit a single

Table of Contents

financial services organization to offer customers a more comprehensive array of financial products and services. To further this goal, the GLB Act amended the BHC Act by providing a new regulatory framework applicable to financial holding companies, which are bank holding companies that meet certain qualifications and elect financial holding company status. The FRB regulates, supervises, and examines financial holding companies, as it does all bank holding companies. However, insurance and securities activities conducted by a financial holding company or its nonbank subsidiaries are regulated primarily by functional regulators. As a bank holding company, we are eligible to elect financial holding company status subject to satisfying certain regulatory requirements applicable to us and to Ally Bank (and any depository institution subsidiary that we may acquire in the future). As a financial holding company, Ally would then be permitted to engage in a broader range of financial and related activities than those that are permissible for bank holding companies, in particular, securities, insurance, and merchant banking activities. However, we have not yet elected to become a financial holding company.

Dodd-Frank Wall Street Reform and Consumer Protection Act On July 21, 2010, the President of the United States signed into law the Dodd-Frank Act. The Dodd-Frank Act will have material implications for Ally and the entire financial services industry. Among other things, it will or potentially could:

result in Ally being subject to enhanced oversight and scrutiny as a result of being a bank holding company with \$50 billion or more in consolidated assets;

result in the appointment of the FDIC as receiver of Ally in an orderly liquidation proceeding, if the Secretary of Treasury, upon recommendation of two-thirds of the FRB and the FDIC and in consultation with the President of the United States, finds Ally to be in default or danger of default;

affect the levels of capital and liquidity with which Ally must operate and how it plans capital and liquidity levels;

subject Ally to new and/or higher fees paid to various regulatory entities, including but not limited to deposit insurance fees to the FDIC;

impact Ally's ability to invest in certain types of entities or engage in certain activities;

impact a number of Ally's business and risk management strategies;

restrict the revenue that Ally generates from certain businesses; and

subject Ally to a new Consumer Financial Protection Bureau, which will have very broad rule-making and enforcement authorities.

Capital Adequacy Requirements Ally and Ally Bank are subject to various guidelines as established under FRB and FDIC regulations. Refer to Note 22 to the Consolidated Financial Statements for additional information. See also Basel Capital Accord below.

Limitations on Bank Holding Company Dividends and Capital Distributions Utah law (and, in certain instances, federal law) places restrictions and limitations on the amount of dividends or other distributions payable by our banking subsidiary, Ally Bank, to Ally. With respect to dividends payable by Ally to its shareholders, it is the policy of the FRB that bank holding companies should pay

Edgar Filing: Ally Financial Inc. - Form S-1/A

cash dividends on common stock only out of current operating earnings and only if prospective earnings retention is consistent with the organization's expected future needs and financial conditions. The

Table of Contents

federal bank regulatory agencies are also authorized to prohibit a banking subsidiary or bank holding company from engaging in unsafe or unsound banking practices and, depending upon the circumstances, could find that paying a dividend or making a capital distribution would constitute an unsafe or unsound banking practice.

In addition, on March 18, 2011, the FRB announced the completion of its CCAR, a cross-institution study of the capital plans, including proposals for increased dividends, share repurchases and repayments of government capital, of the nineteen largest U.S. bank holding companies, including Ally. Under the CCAR, five main aspects of each bank holding company's capital plans for a two-year planning period through the end of 2012 were assessed by the FRB: (i) capital adequacy processes; (ii) capital distribution policy; (iii) any plan for repayment of any U.S. government investment; (iv) stress scenario analysis; and (v) plans for meeting the regulatory capital requirements of Basel III and the Dodd-Frank Act. The FRB also consulted with each bank holding company's primary federal bank regulator and with the FDIC for any bank holding company with outstanding Temporary Liquidity Guarantee Program debt.

The FRB has announced that each bank holding company's capital plans will be subject to the following supervisory expectations:

the bank holding company must demonstrate its ability to remain a viable financial intermediary, even under stressed conditions;

the bank holding company is expected to continue to increase its capital base;

in 2011, any bank holding company paying dividends is expected to limit dividends to 30% or less of anticipated earnings;

any planned share repurchases will be reviewed if a bank holding company's capital is not increasing as anticipated; and

the FRB may require modification of capital plans if there is a sharp deterioration in economic conditions.

The FRB expects each of the nineteen largest bank holding companies to undergo a CCAR on an annual basis.

While we have no current plans to commence payment of a dividend on our common stock, we anticipate that the FRB would require us to meet the same or similar expectations listed above in order to take capital actions in the future, including the payment of dividends.

Transactions with Affiliates Certain transactions between Ally Bank and any of its nonbank affiliates, including but not limited to Ally and ResCap, are subject to federal statutory and regulatory restrictions. Pursuant to these restrictions, unless otherwise exempted, covered transactions including Ally Bank's extensions of credit to and asset purchases from its nonbank affiliates, generally (1) are limited to 10% of Ally Bank's capital stock and surplus with an aggregate limit of 20% of Ally Bank's capital stock and surplus for all such transactions; (2) in the case of certain credit transactions, are subject to stringent collateralization requirements; (3) in the case of asset purchases by Ally Bank, may not involve the purchase of any asset deemed to be a low quality asset under federal banking guidelines; and (4) must be conducted in accordance with safe- and sound- banking practices (collectively, the Affiliate Transaction Restrictions). Under the Dodd-Frank Act, among other changes to Sections 23A and 23B of the Federal Reserve Act, credit exposures resulting from derivatives transactions and securities lending and borrowing transactions will be treated as

Table of Contents

covered transactions. These changes are expected to become effective in July 2012. Furthermore, there is an attribution rule that provides that a transaction between Ally Bank and a third party will be treated as a transaction between Ally Bank and a nonbank affiliate to the extent that the proceeds of the transaction are used for the benefit of or transferred to a nonbank affiliate of Ally Bank. Because Ally controls Ally Bank, Ally is an affiliate of Ally Bank for purposes of the Affiliate Transaction Restrictions. Thus, retail financing transactions by Ally Bank involving vehicles for which Ally Financial provided floorplan financing are subject to the Affiliate Transaction Restrictions because the proceeds of the retail financings are deemed to benefit, and are ultimately transferred to, Ally Financial.

The FRB is authorized to exempt, in its discretion, transactions or relationships from the requirements of these rules if it finds such exemptions to be in the public interest and consistent with the purposes of the rules. The FRB has granted several such exemptions to Ally Bank. However, the existing exemptions are subject to various conditions and any requests for future exemptions may not be granted. Moreover, these limited exemptions generally do not encompass consumer leasing or used vehicle financing. Since there is no assurance that Ally Bank will be able to obtain future exemptions or waivers with respect to these restrictions, the ability to grow Ally Bank's business will be affected by the Affiliate Transaction Restrictions and the conditions set forth in the existing exemption letters.

Source of Strength Pursuant to FRB policy and regulations, the Federal Deposit Insurance Act (effective as of July 21, 2011), and under the Parent Company Agreement (the "PA") and the Capital and Liquidity Maintenance Agreement (the "CLMA") as described in Note 22 to the Consolidated Financial Statements, Ally is expected to act as a source of strength to Ally Bank and is required to commit necessary capital and liquidity to support Ally Bank. This support may be required at inopportune times for Ally.

Basel Capital Accord

The minimum risk-based capital requirements adopted by the federal banking agencies follow the Capital Accord ("Capital Accord") of the Bank for International Settlements Basel Committee on Banking Supervision (the "Basel Committee"). The Capital Accord was published in 1988 and generally applies to depository institutions and their holding companies in the United States. In 2004, the Basel Committee published a revision to the Capital Accord ("Basel II"). The goal of the Basel II capital rules is to provide more risk-sensitive regulatory capital calculations and promote enhanced risk management practices among large, internationally active banking organizations. U.S. banking regulators published final Basel II rules in December 2007. Ally is required to comply with the Basel II rules as implemented by the U.S. banking regulators. Prior to full implementation of the Basel II rules, Ally is required to complete a qualification period that includes four consecutive quarters during which it needs to demonstrate that it meets the requirements of the rules to the satisfaction of its primary U.S. banking regulator. The U.S. implementation timetable consists of this qualification period followed by a minimum transition period of three years. During the transition period, Basel II risk-based capital requirements cannot fall below certain floors based on pre-existing capital regulations ("Basel I"). Ally is currently in the qualification period and expects to be in compliance with all relevant Basel II rules within the established timelines.

In addition to Basel II, the Basel Committee adopted new capital, leverage, and liquidity guidelines under the Base Accord ("Basel III"), which when implemented in the United States may have the effect of raising capital requirements beyond those required by current law and the Dodd-Frank Act. Basel III increases the minimum Tier 1 common equity ratio from 2.0% to 4.5%, net of regulatory deductions, and introduces a capital conservation buffer of an additional 2.5% of common equity to risk-weighted assets raising the target minimum common equity ratio to 7.0%. Basel III increases the minimum Tier 1 capital ratio to 8.5% inclusive of the capital conservation buffer, increases the minimum total capital ratio to 10.5% inclusive of the capital buffer, and introduces a countercyclical capital buffer of up to 2.5% of common equity or other fully loss absorbing capital for periods of excess credit growth. Basel III also introduces a nonrisk adjusted Tier 1 leverage ratio of 3%,

Table of Contents

based on a measure of the total exposure rather than total assets, and new liquidity standards. The Basel III capital, leverage, and liquidity standards will be phased in over a multiyear period. The Basel III rules, when implemented, will also impose a 15% cap on the amount of Tier 1 capital that can be met, in the aggregate, through significant investments in the common shares of unconsolidated financial subsidiaries, MSRs, and deferred tax assets through timing differences, as well as a 10% cap on the amount of each of the three individual items that may be included in Tier I Capital. In addition, under Basel III rules, after a ten-year phase out period beginning on January 1, 2013, trust preferred and other hybrid securities will no longer qualify as Tier 1 capital. However, under the Dodd-Frank Act, subject to certain exceptions, trust preferred and other hybrid securities are phased out from Tier I capital in a three-year period starting January 1, 2013. At March 31, 2011, Ally had \$3.4 billion of MSRs and \$2.5 billion of trust preferred securities, which were included as Tier 1 capital. Ally currently has no other hybrid securities outstanding. The Base III rules, when implemented, will impose limits on Ally's ability to meet its regulatory capital requirements through the use of MSRs, trust preferred securities, or other hybrid securities, if applicable.

Troubled Asset Relief Program

As part of the Automotive Industry Financing Program created under the Troubled Asset Relief Program (TARP) established by Treasury under the Emergency Economic Stabilization Act of 2008 (the EESA), Ally entered into agreements pursuant to which Treasury purchased preferred stock and trust preferred securities of Ally. As a result of these investments, subject to certain exceptions, Ally and its subsidiaries are generally prohibited from paying certain dividends or distributions on, or redeeming, repurchasing, or acquiring any common stock without consent of Treasury. Ally has further agreed that until Treasury ceases to hold investments in Ally, Ally will comply with certain restrictions on executive privileges and compensation. Ally must also take all necessary action to ensure that its corporate governance and benefit plans with respect to its senior executive officers comply with Section 111(b) of the EESA as implemented by any guidance or regulation under the EESA, as amended by the American Recovery and Reinvestment Act of 2009, which was signed into law on February 17, 2009, as implemented by the Interim Final Rule issued by Treasury on June 15, 2009. For further details regarding these restrictions on compensation as a result of TARP investments, refer to the section of this prospectus entitled Executive Compensation.

Depository Institutions

On December 24, 2008, Ally Bank received approval from the UDFI to convert from an industrial bank to a commercial nonmember state-chartered bank. Ally Bank's deposits are insured by the FDIC, and Ally Bank is required to file periodic reports with the FDIC concerning its financial condition. Total assets of Ally Bank were \$70.3 billion and \$55.3 billion at December 31, 2010 and 2009, respectively.

As a commercial nonmember bank chartered by the State of Utah, Ally Bank is subject to various regulatory capital adequacy requirements administered by state and federal banking agencies. Failure to meet minimum capital requirements can initiate certain mandatory and discretionary actions by regulators that, if undertaken, could have a direct material effect on Ally Bank's results of operations and financial condition. At December 31, 2010, we were in compliance with our regulatory capital requirements. For an additional discussion of capital adequacy requirements, refer to Note 22 to the Consolidated Financial Statements.

International Banks, Finance Companies and Other Non-U.S. Operations

Certain of our foreign subsidiaries operate in local markets as either banks or regulated finance companies and are subject to regulatory restrictions. These regulatory restrictions, among other things, require that our subsidiaries meet certain minimum capital requirements and may restrict dividend distributions and ownership of certain assets. Total assets of our regulated international banks and finance companies were approximately \$14.5 billion and \$13.6 billion at December 31, 2010 and 2009, respectively. In addition, the BHC Act imposes restrictions on Ally's ability to invest equity abroad without FRB approval. Many of our other operations are also heavily regulated in many jurisdictions outside the United States.

Table of Contents

U.S. Mortgage Business

Our U.S. mortgage business is subject to extensive federal, state, and local laws, rules, and regulations in addition to judicial and administrative decisions that impose requirements and restrictions on this business. As a Federal Housing Administration lender, certain of our U.S. mortgage subsidiaries are required to submit audited financial statements to the Department of Housing and Urban Development on an annual basis. It is also subject to examination by the Federal Housing Commissioner to assure compliance with Federal Housing Administration regulations, policies, and procedures. The federal, state, and local laws, rules, and regulations to which our U.S. mortgage business is subject, among other things, impose licensing obligations and financial requirements; limit the interest rates, finance charges, and other fees that can be charged; regulate the use of credit reports and the reporting of credit information; impose underwriting requirements; regulate marketing techniques and practices; require the safeguarding of nonpublic information about customers; and regulate servicing practices, including the assessment, collection, foreclosure, claims handling, and investment and interest payments on escrow accounts. In addition, proposals have been enacted in the U.S. Congress and are under consideration by various regulatory authorities that would affect the manner in which GSEs conduct their business. Recently, the Obama administration released a report that recommended winding down Fannie Mae and Freddie Mac.

Insurance Companies

Our Insurance operations are subject to certain minimum aggregate capital requirements, net asset restrictions, and dividend restrictions under applicable state and foreign insurance law, and the rules and regulations promulgated by various U.S. and foreign regulatory agencies. Under various state and foreign insurance regulations, dividend distributions may be made only from statutory unassigned surplus with approvals required from the regulatory authorities for dividends in excess of certain statutory limitations. In addition, the BHC Act imposes restrictions on our ability to invest equity abroad without FRB approval.

Other Regulations

Some of the other more significant regulations that we are subject to include:

Privacy The GLB Act imposes additional obligations on us to safeguard the information we maintain on our customers and permits customers to opt-out of information sharing with third parties. Regulations have been issued by several agencies that establish obligations to safeguard information. In addition, several states have enacted even more stringent privacy legislation. If a variety of inconsistent state privacy rules or requirements are enacted, our compliance costs could increase substantially.

Fair Credit Reporting Act The Fair Credit Reporting Act provides a national legal standard for lenders to share information with affiliates and certain third parties and to provide firm offers of credit to consumers. In late 2003, the Fair and Accurate Credit Transactions Act was enacted, making this preemption of conflicting state and local law permanent. The Fair Credit Reporting Act was also amended to place further restrictions on the use of information sharing between affiliates, to provide new disclosures to consumers when risk-based pricing is used in the credit decision, and to help protect consumers from identity theft. All of these provisions impose additional regulatory and compliance costs on us and reduce the effectiveness of our marketing programs.

Truth in Lending Act The Truth in Lending Act (TILA), as amended, and the Federal Reserve's Regulation Z, which implements TILA, require lenders to provide borrowers with uniform, understandable information concerning terms and conditions in certain credit transactions. These rules apply to Ally and its subsidiaries in transactions in which they extend credit to consumers and require, in the case of certain mortgage and automotive financing transactions, conspicuous disclosure of the finance charge and annual percentage rate, if any. In addition, if an advertisement for credit states specific credit terms, Regulation Z requires that such advertisement state only those terms that actually are or will be arranged or offered by the creditor. Failure to comply with TILA can result in criminal and civil penalties.

Table of Contents

Sarbanes-Oxley Act The Sarbanes-Oxley Act of 2002 implements a broad range of corporate governance and accounting measures designed to promote honesty and transparency in corporate America. The principal provisions of the act include, among other things, (1) the creation of an independent accounting oversight board; (2) auditor independence provisions that restrict nonaudit services that accountants may provide to their audit clients; (3) additional corporate governance and responsibility measures including the requirement that the chief executive officer and chief financial officer certify financial statements; (4) the forfeiture of bonuses or other incentive-based compensation and profits from the sale of an issuer's securities by directors and senior officers in the twelve-month period following initial publication of any financial statements that later require restatement; (5) an increase in the oversight of and enhancement of certain requirements relating to audit committees and how they interact with the independent auditors; (6) requirements that audit committee members must be independent and are barred from accepting consulting, advisory, or other compensatory fees from the issuer; (7) requirements that companies disclose whether at least one member of the audit committee is a financial expert (as defined by the SEC) and, if not, why the audit committee does not have a financial expert; (8) a prohibition on personal loans to directors and officers, except certain loans made by insured financial institutions, on nonpreferential terms and in compliance with other bank regulatory requirements; (9) disclosure of a code of ethics; (10) requirements that management assess the effectiveness of internal control over financial reporting and that the Independent Registered Public Accounting firm attest to the assessment; and (11) a range of enhanced penalties for fraud and other violations.

USA PATRIOT Act/Anti-Money-Laundering Requirements In 2001, the Uniting and Strengthening America by Providing Appropriate Tools Required to Intercept and Obstruct Terrorism Act (USA PATRIOT Act) was signed into law. Title III of the USA PATRIOT Act amends the Bank Secrecy Act and contains provisions designed to detect and prevent the use of the U.S. financial system for money laundering and terrorist financing activities by, among other things, imposing additional compliance obligations on bank holding companies, banks, trust companies, and securities broker-dealers. Pursuant to these laws, it is the obligation of covered institutions to identify their clients, monitor for and report on suspicious transactions, respond to requests for information by regulatory authorities and law enforcement agencies, and share information with other financial institutions. To comply with applicable obligations, we have implemented necessary internal practices, procedures, and controls.

Other Our Mortgage operations have subsidiaries that are required to maintain regulatory capital requirements under agreements with the GSEs and the Department of Housing and Urban Development.

Employees

We had approximately 14,400 employees worldwide at December 31, 2010.

Segment and Geographic Information

Operating segment and principal geographic area data for the years ended December 31, 2010, 2009, and 2008 are summarized in Note 28 to the Consolidated Financial Statements.

Properties

Our principal corporate offices are located in Detroit, Michigan; New York, New York; and Charlotte, North Carolina. In Detroit, we lease approximately 247,000 square feet from GM pursuant to a lease agreement expiring in November 2016. In New York, we lease approximately 24,000 square feet of office space under a lease that expires in July 2015 and approximately 18,000 square feet of office space under a lease that expires in July 2011. In Charlotte, we lease approximately 133,000 square feet of office space under a lease expiring in December 2015.

Table of Contents

The primary offices for our Global Automotive Services operations are located in Detroit, Michigan, and Southfield, Michigan. The primary office for our North American Automotive Finance operations is located in Detroit, Michigan, and is included in the totals referenced above. Our International Automotive Finance operations leased space in 27 countries totaling approximately 490,000 square feet. The largest location is in United Kingdom with office space under lease of approximately 143,000 square feet. The primary office for our U.S. Insurance operations is located in Southfield, Michigan, where we lease approximately 91,000 square feet of office space under leases expiring in April 2011. Our Insurance operations also has leased offices in Mexico.

The primary offices for our Mortgage operations are located in Fort Washington, Pennsylvania, and Minneapolis, Minnesota. In Fort Washington, we lease approximately 450,000 square feet of office space pursuant to a lease that expires in November 2019. In Minneapolis, we lease approximately 84,000 square feet of office space expiring in March 2014. Our Mortgage operations also has significant leased offices in Texas and California.

In addition to the properties described above, we lease additional space throughout the United States and in the 37 countries in which we have operations, including Canada, Germany, and the United Kingdom. We believe our facilities are adequate for us to conduct our present business activities.

Legal Proceedings

We are subject to potential liability under various governmental proceedings, claims, and legal actions that are pending or otherwise asserted against us. We are named as defendants in a number of legal actions, and we are occasionally involved in governmental proceedings arising in connection with our respective businesses. Some of the pending actions purport to be class actions. We establish reserves for legal claims when payments associated with the claims become probable and the costs can be reasonably estimated. The actual costs of resolving legal claims may be higher or lower than any amounts reserved for the claims. On the basis of information currently available, advice of counsel, available insurance coverage, and established reserves, it is the opinion of management that the eventual outcome of the actions against us will not have a material adverse effect on our consolidated financial condition, results of operations, or cash flows. However, in the event of unexpected future developments, it is possible that the ultimate resolution of legal matters, if unfavorable, may be material to our consolidated financial condition, results of operations, or cash flows. Certain of these existing actions include claims related to various mortgage-backed securities offerings, which are described in more detail below.

Mortgage-backed Securities Litigation

There are twelve cases relating to various private-label mortgage-backed securities (MBS) offerings that are currently pending. Plaintiffs in these cases include Cambridge Place Investment Management Inc. (two cases pending in Suffolk County Superior Court, Massachusetts, filed on July 9, 2010, and February 11, 2011, respectively); The Charles Schwab Corporation (case pending in San Francisco County Superior Court, California, filed on August 2, 2010); Federal Home Loan Bank of Boston (case pending in Suffolk County Superior Court, Massachusetts, filed on April 20, 2011); Federal Home Loan Bank of Chicago (case pending in Cook County Circuit Court, Illinois, filed on October 15, 2010); Federal Home Loan Bank of Indianapolis (case filed in Marion County Superior Court, Indiana, on October 15, 2010, and removed to the Southern District of Indiana); Massachusetts Mutual Life Ins. Co. (case pending in federal court in the District of Massachusetts, filed on February 9, 2011); Allstate Insurance Co., et al. (case pending in Hennepin County District Court, Minnesota, filed on February 18, 2011); New Jersey Carpenters Health Fund, et al. (a putative class action, filed on September 22, 2008, in which certification has been denied, pending in federal court in the Southern District of New York); West Virginia Investment Management Board (case pending in Kanawha County Circuit Court, West Virginia, filed on March 4, 2010); Thrivent Financial for Lutherans, et al. (case pending in Hennepin County District Court, Minnesota, filed on March 28, 2011); and Union Central Life Insurance, et al. (case pending in federal court in the Southern District of New York, filed on April 28, 2011). Each of the above cases

Table of Contents

include as defendants certain of our mortgage subsidiaries, and the New Jersey Carpenters, Massachusetts Mutual, and Union Central cases also include as defendants certain current and former employees. The plaintiffs in all cases have alleged that the various defendant subsidiaries made misstatements and omissions in registration statements, prospectuses, prospectus supplements, and other documents related to MBS offerings. The alleged misstatements and omissions typically concern underwriting standards. Plaintiffs claim that such misstatements and omissions constitute violations of state and/or federal securities law and common law including negligent misrepresentation and fraud. Plaintiffs seek monetary damages and rescission.

There are two additional cases (filed on December 4, 2008, and April 1, 2010) pending in the New York County Supreme Court where MBIA Insurance Corp. (MBIA) has alleged that two of our mortgage subsidiaries breached their contractual representations and warranties relating to the characteristics of the mortgage loans contained in certain insured MBS offerings. MBIA further alleges that the defendant subsidiaries failed to follow certain remedy procedures set forth in the contracts and improperly serviced the mortgage loans. Along with claims for breach of contract, MBIA also alleges fraud.

All of the matters described above are at various procedural stages of litigation.

Table of Contents**MANAGEMENT**

The following table presents information regarding directors, executive officers, and other significant employees of Ally.

Name	Age	Position
Franklin W. Hobbs	63	Director (Chairman of the Board)
Robert T. Blakely	69	Director (Chairman of Audit Committee)
Mayree C. Clark	53	Director (Member of Audit Committee)
John D. Durrett	62	Director
Stephen A. Feinberg	50	Director
Kim S. Fennebresque	60	Director
Marjorie Magner	61	Director (Member of Audit Committee)

Directors, Executive Officers, and Other Significant Employees

Franklin W. Hobbs Director of Ally since May 2009. He currently serves as Chairman of the board. Since 2004, he has been an advisor to One Equity Partners LLC, which manages investments and commitments for JPMorgan Chase & Co. in direct private equity transactions. He was previously the CEO of Houlihan Lokey Howard & Zukin. In that role, he oversaw all operations, which included advisory services for mid-market companies involved in mergers and acquisitions and corporate restructurings. He previously was Chairman of UBS AG's Warburg Dillon, Read & Co. Inc. unit. Prior to that, he was President and CEO of Dillon, Read & Co. Inc. Hobbs earned his bachelor's degree from Harvard College and master's degree in business administration from Harvard Business School. He serves as a director on the Boards of the Lord Abbett & Company and Molson Coors Brewing Company.

Robert T. Blakely Director of Ally since May 2009. With his years of managerial experience, Blakely brings to the board demonstrated management ability at senior levels. He is a trustee of the Financial Accounting Foundation, the oversight board for the Financial Accounting Standards Board. Blakely is the former executive vice president and chief financial officer of Fannie Mae. In this role, he led the financial restatement and implementation of SOX controls. He was previously the chief financial officer of WorldCom/MCI, Lyondell Chemical, Tenneco, and US Synthetic Fuels Corporation where he gained valuable experience dealing with accounting principles and financial reporting rules and regulations, evaluating financial results, and generally overseeing the financial reporting processes of large corporations. Blakely received his PhD from Massachusetts Institute of Technology and his master's and bachelor's degrees from Cornell University.

Mayree C. Clark Director of Ally since May 2009. Clark also serves as a member of the investment committee for Aetos Capital Asia, which manages the firm's investments in Japanese and Chinese real estate, and is a director of the Stanford Management Company, which manages the University's endowment. Clark is a former partner and member of the executive committee at AEA Holdings. Clark held a variety of executive positions at Morgan Stanley over a span of nearly 25 years, serving as Global Research Director, Director of Global Private Wealth Management, and nonexecutive chairman of MSCI-Barra. Inc. Clark earned a

Table of Contents

bachelor's degree from the University of Southern California and a master's degree in business administration from Stanford University Graduate School of Business.

John D. Durrett Director of Ally since February 2011. Durrett currently serves as a strategic advisor to Serent Capital, a San Francisco-based private equity firm, and sits on the boards of two of Serent's portfolio companies. Durrett is a director emeritus of McKinsey & Co., Inc., and completed his 27-year career with the firm in 2007. He served in numerous senior leadership positions during his tenure at McKinsey and also served as a member of the firm's Shareholder's Council and chaired its Finance and Infrastructure Committee. Durrett was also a long-time member of McKinsey's Compensation Committee and the Director's and Principal's Review Committees. Durrett received a bachelor's degree from Millsaps College, a juris doctorate from Emory University and a master's degree in business administration from the Wharton School of the University of Pennsylvania.

Stephen A. Feinberg Director of Ally since March 2009. Feinberg founded Cerberus Capital Management in November 1992. He also founded or cofounded the other Cerberus general partners/management companies and investment funds and is the Chief Executive Officer of an affiliated loan origination company. Feinberg began his career at Drexel Burnham Lambert where he was actively involved in trading large pools of firm capital. From 1985 to 1992, after leaving Drexel Burnham Lambert, he managed money in separate accounts, most of which was firm capital of Gruntal & Co., Inc. Feinberg has over 25 years of experience in distressed investing, including investments in the financial services industry, and he has served as a control party in connection with investments in numerous financial institutions, including various lending institutions. Feinberg is a 1982 graduate of Princeton University.

Kim S. Fennebresque Director of Ally since May 2009. Fennebresque is a senior advisor at Cowen Group, Inc. He previously served as its chairman, president, and chief executive officer where he oversaw all aspects of the management and operations of the company. Fennebresque has extensive business experience and has served as an investment banker for over three decades. He has demonstrated leadership capability and has extensive knowledge of the management of a publicly traded company. The depth and breadth of his exposure to areas of compensation, legal, accounting, and regulatory issues make him a skilled advisor. Prior to joining Cowen Group, Fennebresque served as head of the Corporate Finance and Mergers & Acquisitions departments at UBS. He also was a general partner and cohead of Investment Banking at Lazard Frères & Co. and held various positions at The First Boston Corporation. Fennebresque is a graduate of Trinity College and Vanderbilt Law School. He is currently on the boards of TEAK Fellowship, Fountain House, and Common Good.

Marjorie Magner Director of Ally since May 2010. She also serves on the Audit Committee and Risk and Compliance Committee. Magner is a founding member and partner of Brysam Global Partners. Previously, she served as chairman and chief executive officer of the Global Consumer Group at Citigroup. In this position, she was responsible for the company's operations serving consumers through retail banking, credit cards, and consumer finance. She earned a bachelor's degree in psychology from Brooklyn College and a master's degree from Krannert School of Management, Purdue University. Magner also serves on the boards of Accenture Ltd., Gannett Company, Inc., and the Brooklyn College Foundation. She is a member of the dean's advisory council for the Krannert School of Management.

John J. Stack Director of Ally since April 2010. He also serves on the Audit Committee and Risk and Compliance Committee. Stack served as chairman and chief executive officer of Ceska Sporitelna, a.s., the largest bank in the Czech Republic, from 2000 to 2007, leading its purchase from the government and transformation to the best performing bank in the country. Prior to that, he spent 22 years in retail banking in various roles at Chemical Bank and then later at Chase Bank. Stack began his career in government working in staff roles in the New York City Mayor's Office and then the New York City Courts System. He earned a bachelor's degree from Iona College and a master's degree from Harvard Graduate School of Business Administration. He also serves on the boards of Erste Bank Group, Mutual of America, and ShoreBank International.

Table of Contents

Michael A. Carpenter Chief Executive Officer of Ally since November 2009 and a member of the Ally Board of Directors since May 2009. He oversees all Ally strategy and operations to focus on strengthening the core businesses, while positioning the company for long-term growth. Carpenter has broad and deep experience in banking, capital markets, turnarounds, and corporate strategy. Most recently, he founded Southgate Alternative Investments in 2007. From 2002 to 2006, he was chairman and chief executive officer of Citigroup Alternative Investments overseeing \$60 billion of proprietary capital and customer funds globally in various alternative investment vehicles. From 1998 to 2002, Carpenter was chairman and chief executive officer of Citigroup's Global Corporate & Investment Bank with responsibility for Salomon Smith Barney Inc. and Citibank's corporate banking activities globally. Carpenter was named chairman and CEO of Salomon Smith Barney in 1998, shortly after the merger that created Citigroup, and led the first ever successful integration of a commercial and investment bank. Prior to Citigroup, he was chairman and CEO of Travelers Life & Annuity and vice chairman of Travelers Group Inc. responsible for strategy and business development. From 1989 to 1994, he was chairman of the board, president, and CEO of Kidder Peabody Group Inc., a wholly owned subsidiary of General Electric Company. From 1986 to 1989, Carpenter was executive vice president of GE Capital Corporation. He first joined GE in 1983 as vice president of Corporate Business Development and Planning and was responsible for strategic planning and development as well as mergers and acquisitions. Earlier in his career, Carpenter spent nine years as vice president and director of the Boston Consulting Group consulting to major companies on corporate strategy and three years with Imperial Chemical Industries of the United Kingdom. Carpenter received a bachelor of science degree from the University of Nottingham, England, and an MBA from the Harvard Business School where he was a Baker Scholar. He also holds an honorary degree of Doctor of Laws from the University of Nottingham. He serves on the boards of US Retirement Partners and the New York City Investment Fund and has been a board member of the New York Stock Exchange, General Signal, Loews Cineplex, and various other private and public companies.

James G. Mackey Interim Chief Financial Officer of Ally since April 2010. In this role, he is responsible for the oversight of the company's financial analysis, controls and reporting, accounting, business planning, and corporate strategy. Mackey joined the company in 2009 as group vice president and senior finance executive responsible for financial planning and analysis, investor relations, corporate treasury finance, and banking subsidiary financial departments. He maintains oversight of these responsibilities. Previously, Mackey served as chief financial officer for the corporate investments, corporate treasury, and private equity divisions at Bank of America. Earlier in his tenure at Bank of America, he served as managing director within the global structured products group. Prior to Bank of America, Mackey served in the financial institutions practice group at PricewaterhouseCoopers LLP, specializing in capital markets accounting and consulting. He holds a bachelor's degree in business administration and a master's degree in accounting from the University of North Carolina at Chapel Hill. He is also a registered certified public accountant in North Carolina.

Barbara Yastine Chief Administrative Officer of Ally since May 2010. In this role, she has oversight for the risk, compliance, legal and technology functions. Yastine is a seasoned executive with diverse experience at financial services companies. Prior to joining Ally, she served as a principal of Southgate Investment Partners, LLC. Before that, she was chief financial officer for Credit Suisse First Boston from 2002 to 2004 and had responsibility for controllership, treasury, risk management, strategy, mergers and acquisitions, and tax. She was with Citigroup and its predecessors for 15 years with her last position being as chief financial officer of Citigroup's global corporate and investment bank. During her time at Citigroup, she also served as chief auditor, chief administrative officer of the global consumer group, and as executive vice president of what is now CitiFinancial. Yastine began her career at Travelers as the head of investor relations. Yastine chairs the Audit Committee of the board of directors of Symphony Services, a portfolio company of private equity firm Symphony Technology Group. She is also a member of the board of trustees of Phoenix House where she chairs the Finance and Audit Committee and serves on the Compensation and Succession Planning Committees. She also serves on the board of Primerica Inc. Barbara is a former trustee of the Financial Accounting Foundation. She holds a bachelor's of arts degree in journalism and a master's degree in finance, both from New York University.

Table of Contents

Jeffrey J. Brown Corporate Treasurer of Ally since March 2009. He is responsible for all global treasury activities, including funding and balance sheet management. Prior to joining Ally, Brown was the corporate treasurer for Bank of America where he had responsibility for the core treasury functions for funding the company and managing interest rate risk. Brown was at Bank of America for 10 years, beginning his career in finance and later joining the balance sheet management division. Brown previously served as the bank's deputy treasurer and oversaw balance sheet management and the company's corporate funding division. He was also a member of the company's Asset/Liability Management Committee. He received a bachelor's degree in economics from Clemson University and an executive master's degree in business from Queens University in Charlotte. He serves on the advisory board of the College of Business and Behavioral Sciences at Clemson University and on the advisory board of McColl School of Business at Queen's University in Charlotte.

William F. Muir President of Ally since 2004, Chairman of Ally Insurance Group since June 1999, and a Member of the Ally Commercial Finance and Ally Bank Boards of Directors since February 2002 and March 2004, respectively. Prior to that time, Muir served as executive vice president and chief financial officer from February 1998 to 2004. From 1996 to 1998, Muir served as executive-in-charge of operations and then executive director of planning at Delphi Automotive Systems, a former subsidiary of GM. Prior to serving at Delphi Automotive Systems, Muir served in various executive capacities with Ally since first joining Ally in 1992. He also served in a number of capacities with GM since joining that company in 1983.

David J. DeBrunner Vice President, Chief Accounting Officer, and Controller of Ally since September 2007. DeBrunner joined Ally from Fifth Third Bancorp (Fifth Third) where he was senior vice president, corporate controller, and chief accounting officer from January 2002 to August 2007. Prior to that position, he served as the chief financial officer for the commercial division of Fifth Third beginning in December 1999. DeBrunner joined Fifth Third in 1992 and held various financial leadership positions throughout the company. Prior to his time at Fifth Third, he held positions at Deloitte and Touche LLP in the Chicago and Cincinnati offices. DeBrunner holds a bachelor's of science in accounting from Indiana University.

Sanjay Gupta Chief Marketing Officer of Ally Financial Inc. since March 2008. Gupta has responsibility for all marketing, e-commerce, and product innovation at Ally. Before joining Ally, Gupta held the position of global consumer & small business marketing executive at Bank of America. Prior to joining Bank of America in 2001, Gupta served as chief marketing officer of SciQuest.com and before that assignment as managing director of interactive marketing and e-commerce at Federal Express. Gupta has a bachelor's degree in electronics engineering from the University of Bombay and a master's degree in business administration from the University of Texas at Austin with a concentration in finance and management information systems.

Thomas Marano Chairman and Chief Executive Officer of Ally's Mortgage operations and, as of May 1, 2009, Ally's Chief Capital Markets Officer. As CEO of Mortgage operations, Marano oversees mortgage lending and servicing at Residential Capital, LLC (ResCap) and ResMor Trust (the Canadian depository) and the correspondent and warehouse lending at Ally Bank. Marano has served as Chairman and Chief Executive Officer of ResCap since July 2008 and is a chairman on its board of directors and member of its executive committee. In the role of Chief Capital Markets Officer, Marano oversees the coordination of Ally's capital commitments across the firm's bank, broker-dealer, mortgage, automotive, and proprietary trading divisions. Before joining ResCap, Marano was managing director for Cerberus Capital Management, L.P., responsible for residential and commercial capital markets. Marano spent more than 25 years at Bear Stearns & Co. Inc., most recently as senior managing director and global head of mortgage and asset-backed securities responsible for mortgage sales, trading, and origination. Marano earned a bachelor's degree from Columbia College in New York City. He serves on the board of the Intrepid Fallen Heroes Fund and is on Columbia University's Board of Visitors and a Trustee of the Samuel Waxman Cancer Research Foundation.

Table of Contents

Ally Code of Ethics

Ally has published on its website the Ally Code of Conduct and Ethics that is applicable to all employees and members of the Ally Board of Directors. The Ally Code of Conduct and Ethics further includes certain provisions that apply specifically to Ally financial professionals (as that term is defined in the Ally Code of Conduct and Ethics). The Ally Code of Conduct and Ethics has been posted on Ally's internet website at www.ally.com, under About Ally, and Policies & Charters. Any amendment to, or waiver from, a provision of the Ally Code of Conduct and Ethics that applies to our principal executive officer, principal financial officer, principal accounting officer or controller or persons performing similar functions will be posted at this same internet website location as required by applicable law.

Board and Committee Composition

Our current directors were elected pursuant to the terms of the Amended and Restated Governance Agreement dated May 21, 2009 (the Governance Agreement), which we have entered into with certain of our shareholders (see Exhibit 10.2 to our Form 8-K filed on May 22, 2009). Based on the current ownership of our common stock, the Governance Agreement provides that the Board is to be comprised of the following: (1) one director designated by affiliates of Cerberus Capital Management, L.P., (2) six directors designated by Treasury, (3) the chief executive officer of Ally and (4) three independent directors chosen by the members described in (1) through (3) above. Currently, the Board consists of the Cerberus designated director, the chief executive officer of Ally, four directors designated by Treasury, and three independent directors. See Certain Stockholder Agreements.

The Board has independently and affirmatively determined that all Board members, except for Mr. Carpenter, meet all the requirements for independence under the rules and regulations promulgated by the NYSE. Pursuant to Ally's Bylaws, any Board member that qualifies as independent under the applicable standards may perform any independent director function (e.g., serve on an audit committee of the Board).

We have established a separately designated standing Audit Committee. Members currently include Chairman Robert T. Blakely, Mayree C. Clark, Marjorie Magner, and John J. Stack. Each member is independent as required by Rule 10A-3 of the Exchange Act and under rules of the NYSE, and the Board has determined that all members are also qualified as audit committee financial experts, as defined by the SEC. The Audit Committee operates pursuant to a charter approved by the Board of Directors. The Audit Committee reviews and, as it deems appropriate, recommends to our Board of Directors our internal accounting and financial controls and the accounting principles and auditing practices and procedures to be employed in preparation and review of our financial statements. The Audit Committee also makes recommendations to the Board concerning the engagement of independent public auditors and the scope of the audit to be undertaken by such auditors.

We have also established a Compensation, Nominating, and Governance Committee (the CNG Committee). Members of the CNG Committee currently include Kim S. Fennebresque (Committee Chairman), Robert T. Blakely, and Franklin W. Hobbs. The Board has independently and affirmatively determined that all CNG Committee members meet all the requirements for independence under the rules and regulations promulgated by the NYSE. The CNG Committee operates pursuant to a charter approved by the Board of Directors. For a description of CNG's responsibilities, see Executive Compensation.

We have also established a Risk and Compliance Committee (the Risk Committee). Members of the Risk Committee currently include Mayree C. Clark (Committee Chairwoman), Stephen A. Feinberg, Franklin W. Hobbs, Marjorie Magner and John J. Stack. The Risk Committee operates pursuant to a charter approved by the Board of Directors. The Risk Committee assists the Board of Directors in setting risk appetite and tolerances, and overseeing our management's responsibility to manage our risk profile and implement our risk program, with emphasis on credit, market, liquidity, operational, and reputational risks from both an enterprise and a line of business perspective. Additionally, the Risk Committee oversees our management's responsibility to implement our compliance program, with emphasis on our compliance with legal and regulatory requirements.

Table of Contents

EXECUTIVE COMPENSATION

Corporate Governance and Related Disclosures

The Compensation, Nominating and Governance Committee

The Ally Compensation, Nominating and Governance Committee (the Committee, in this section) is a committee of the Board consisting of three nonemployee, independent directors: Kim S. Fennebresque (Committee Chairman), Robert T. Blakely, and Franklin W. Hobbs.

The Committee, pursuant to its Charter, is responsible for the following:

Discharging the Board's responsibilities with respect to the establishment, maintenance and administration of Ally's compensation plans, including determining the total compensation of the Chief Executive Officer and executive officers plus other senior executives designated by the Committee as under its purview;

Overseeing Ally's leadership development and succession planning programs;

Identifying qualified individuals for membership on the Board (consistent with criteria approved by the Board) and to recommend to the Board the director nominees;

Reviewing and recommending to the Board the director compensation for service on the Board;

Leading the Board and its committees in their annual self-evaluation and the annual review of the Board's performance;

Developing and recommending to the Board a corporate governance policy for the Board, and overseeing Ally's corporate governance procedures and practices related to the Board; and

Performing any and all duties required of it under the EESA and any regulations or other legal authority promulgated at any time thereunder.

Compensation, Nominating and Governance Committee Process

Ally's executive compensation programs are administered by the Committee. As noted above, the Committee consists of three independent directors: Kim S. Fennebresque (Committee Chairman), Robert T. Blakely, and Franklin W. Hobbs. During 2010, the Committee met 15 times.

The Committee determines the compensation of senior executives under its purview, including the compensation of our named executive officers (NEOs, who are also our CEOs for purposes of the TARP requirements). In making its determination for senior executives, other than the CEO, and in making changes to our executive compensation program, the Committee considers the recommendations of the CEO. The Committee determines the compensation of the CEO without recommendations from the CEO or from management. The Committee has delegated to the CEO the authority to determine cash compensation for and to grant long-term incentive awards to executives below the approximately 25 highest-compensated employees and other select senior executives whose compensation is under the purview of the Committee. The Committee also meets periodically in executive session without the presence of any members of management. As discussed above in reviewing Ally's compensation policies and practices, the Committee seeks the input of Ally's Risk Management functions, including the chief risk officer, and in its deliberations on compensation related issues, it also consults with the chairmen of the Board's Risk and Compliance Committee and Audit Committee.

Edgar Filing: Ally Financial Inc. - Form S-1/A

Frederic W. Cook & Co. (Cook) has been appointed by the Committee to serve as its independent advisor. Cook reports directly to the Committee and provides ongoing advice with respect to the plans and programs covering the executives, including our NEOs, for which the Committee is responsible. Cook reviews all materials developed by management in advance of Committee meetings, provides comments on such materials to the

Table of Contents

Chair, provides advice and recommendations concerning changes to our plans and programs, as well as information on market practices and trends, and attends meetings of the Committee. During 2010, Cook also provided competitive information, advice, and recommendations for changes to the compensation program for 2011 to Ally's Board. Cook undertakes no separate work for the management of Ally.

In addition to the Committee's relationship with Cook, Ally's Human Resources Group separately engaged Hewitt Associates, LLC. (Hewitt) during 2010 to provide assistance on executive compensation matters. Hewitt conducted a competitive assessment of compensation for the 25 highest-compensated executives that was used in determining pay recommendations for submission to the Special Master in early 2010. In July 2010, Ally's Human Resources Group separately engaged Pearl Meyer & Partners (Pearl Meyer) to provide consulting assistance on matters pertaining to executive compensation. More specifically, Pearl Meyer provided assistance regarding the following matters: a competitive assessment of the compensation paid to Ally's CEO and Chief Financial Officer (CFO), a review of the key terms and provisions included in omnibus long-term incentive plans used in the financial services industry and an updated competitive assessment of the compensation for Ally's 25 highest-compensated executives requested by the Special Master. Pearl Meyer provided no consulting services to Ally prior to its engagement in July 2010.

Executive Compensation Discussion and Analysis

Introduction

During 2010, we successfully achieved our primary strategic objectives, which included being the premier auto finance provider, de-risking the mortgage business, successfully accessing the capital markets, growing our deposit base, and improving our cost structure. As a result, Ally earned core pretax income of \$2.5 billion in 2010 and was profitable in all four quarters in 2010.

Our automotive finance business remained the leading provider of auto loans with global consumer originations for new and used vehicles increasing significantly. Ally was ranked as the number one provider of new vehicle retail financing in the United States during 2010 by Experian Automotive. We also significantly increased consumer penetration with GM and Chrysler during 2010 and were named as the recommended provider of finance and insurance products and services for Saab and Fiat dealerships in the United States. We continued to reduce risk in the mortgage business and reached important settlements for representation and warranty exposure with various counterparties. We have also completed a strategic review of our mortgage business and have determined to focus on our conforming and government-insured residential mortgage loans (mortgages eligible for securitizations guaranteed by Fannie Mae or Freddie Mac) origination and servicing platform. We converted \$5.5 billion of the \$11.4 billion of Treasury's mandatory convertible preferred stock into common equity on December 31, 2010, thereby improving our capital position, and we successfully accessed the capital markets with nearly \$36 billion of new funding transactions completed in 2010. Ally Bank demonstrated the strength of its customer value proposition with strong deposit growth and high retention rates. We were also successful in reducing costs and divesting noncore businesses during 2010.

TARP Executive Compensation Limitations

In connection with our participation in TARP and certain determinations of the Special Master, Ally is subject to certain limitations on executive compensation, the most significant of which are:

Cash salaries generally limited to \$500,000, except in special cases;

The majority of an CEO's compensation paid in equity that must be held long-term;

Incentive compensation granted in the form of long-term restricted equity that is contingent on performance and paid out after incremental TARP repayments;

Table of Contents

Perquisites and other compensation capped at \$25,000, with limited exceptions;

Suspension of the accrual of benefits to supplemental executive retirement plans;

Prohibition on incentives for SEOs that could cause them to take unnecessary or excessive risks;

Clawback of any bonus or incentive compensation paid to an SEO based on statements of earnings, gains, or other criteria that are later proven to be materially inaccurate; and

Prohibition on any severance payable to the SEOs and the next five most highly compensated employees. These limitations apply until Ally is no longer subject to TARP.

Ally Compensation Program Overview and Philosophy

Despite the limitations imposed on our executive compensation by TARP, Ally's compensation philosophy has been, and continues to be, that there should be a strong linkage between compensation and performance. We believe compensation should:

Align with long-term value creation for our shareowners;

Provide appropriate incentives based on individual, business, and Company performance;

Encourage prudent, but not excessive risk taking;

Provide a total compensation opportunity competitive with market practice; and

Be internally equitable for the relative value of the employee's position at Ally.

In addition, our compensation plans have been designed to achieve performance enabling us to repay the U.S. taxpayers as quickly as practicable.

Ally supports the compensation principles underlying the TARP compensation rules, and we believe our compensation philosophy is consistent with the TARP compensation principles. The Special Master has required that the majority of compensation for NEOs and the next 20 highest-compensated employees be in the form of long-term stock or stock units, that such stock or stock units should be held for specified minimum periods of time, and that incentive payments should be subject to recoupment if paid based on information that is subsequently found to be materially inaccurate. The Company and the Committee fully support and have implemented these principles for our NEOs and the next 20 highest-compensated employees.

The Pay Process for 2010

For 2010, the total compensation opportunity for the NEOs was determined by the Special Master, following review and approval of recommended total direct compensation levels for each of the NEOs by the Committee. As part of the process for developing pay recommendations for submission to the Special Master, the Committee approved individual performance goals and objectives for awarding long-term incentive restricted stock units (RSUs) at year-end.

Edgar Filing: Ally Financial Inc. - Form S-1/A

During 2010, Ally converted the awards associated with our long-term compensation plans from basis points to phantom shares, which resulted in each award denominated in basis points being converted into approximately 80 phantom shares per basis point. This change did not affect the vesting, value, or any other features of the awards.

Table of Contents

Assessing Ally Compensation Competitiveness

We compare our total direct compensation against a peer group of other comparably sized financial services companies with whom we compete for business and senior executive talent in the auto finance, mortgage finance, commercial finance, and insurance markets. We use publicly available SEC reported pay data from a peer group of companies approved by the Committee to conduct the competitive assessment for the CEO and CFO positions. For the other NEO and senior executive positions, we use market survey data from several survey sources to conduct the competitive assessments. Wherever practical, the market surveys include companies that are part of the peer group approved by the Committee.

For 2010, the Committee approved the use of the following peer group of 12 financial services companies listed below to conduct the competitive assessment for the CEO and CFO compensation:

AFLAC Inc.	Genworth Financial, Inc.	SunTrust Banks, Inc.
American Express Company	Hartford Financial Services	U.S. Bancorp
Capital One Financial Corporation	MetLife Inc.	Unum Group
CIT Group Inc.	Prudential Financial Inc.	Wells Fargo & Company

This peer group is the same used for 2009 and has been approved for use in 2011. Ford Motor Credit and GE Capital Services are included in the peer group for the CEO competitive pay analyses if CEO compensation is reported in their parent company SEC statements.

For 2010, survey data used for the remaining NEOs and other senior executive positions came from one or more survey sources including Hewitt's Total Compensation Measurement (TCM) database, Towers Watson Executive Financial Services survey, McLagan Investment Management survey, and McLagan Fixed Income Sales and Trading survey. Because multiple survey sources are used and not all survey participants provide data for each of the remaining NEOs, it is not possible to list the survey participants included in our competitive data analyzed for positions other than the CEO and the CFO.

For executives whose pay is not determined by the Special Master, our compensation philosophy is to set base salaries and employee benefits at median competitive levels and to set annual incentives to deliver total annual cash compensation up to or exceeding the 75th percentile when warranted by achievement of aggressive performance goals and top quartile competitive performance. If annual performance goals are not achieved, annual incentives are reduced or eliminated, and total annual cash compensation falls to below the market median. The size of long-term incentive awards relative to total compensation is set annually to ensure senior management maintains an appropriate level of long-term balance in their total compensation and to achieve individual differentiation of total compensation based on performance considerations and retention needs.

Due to the pay restrictions applicable to the NEOs under TARP, including limitations on incentive compensation, total direct compensation rather than individual elements of pay (i.e., base salary, annual incentives, and long-term incentives) is set to provide competitive compensation when attainment of individual performance goals supports the awarding of long-term IRSUs at year-end. If IRSUs are partially awarded or not awarded at all because of insufficient performance, total direct compensation will fall below competitive levels.

At the beginning of the year, the Committee sets proposed direct and incentive compensation levels for each of the NEOs based on his or her job responsibilities. Once the Committee determines and approves the proposed compensation packages for the NEOs, they are submitted to the Special Master for approval. The Special Master then reviews the proposed packages to determine if they are aligned with TARP requirements and set at appropriate market levels. The Special Master subsequently issues a determination letter, specifying the final

Table of Contents

design and allocation of total pay approved for the NEOs. At the end of the year, the Committee reviews the performance of the NEOs relative to their individual goals and objectives and determines the total incentive compensation (i.e., the IRSUs) to be awarded to each NEO, which can be up to 100% of the amount previously approved in the determination letter.

Role of Management in Compensation Decisions

Compensation recommendations for the NEOs other than the CEO are presented to and discussed with the Committee by the CEO. The Committee then determines and approves the proposed compensation for the NEOs, which is submitted to the Special Master for final approval.

The Committee determines and approves the compensation of the CEO without the recommendation of management.

Components of Ally Compensation Program

Due to the TARP restrictions on cash compensation and limitations on incentive compensation, base salary is delivered in a combination of cash and equity. Additionally, all NEOs are ineligible to receive annual cash incentives, but are eligible to receive incentives of up to one-third of total compensation in the form of long-term IRSUs. We also offer a limited selection of perquisites and other benefits in order to enhance the effectiveness of our NEOs in focusing their time and energy on performing their duties and responsibilities and to enable us to offer a competitive compensation package to attract and retain senior executive talent.

Base Salary

Under our compensation philosophy, base salary is intended to provide a predictable level of compensation that is competitive in the marketplace for the position responsibilities and individual skills, knowledge, and experience of each executive. However, the pay restrictions under TARP significantly changed the form and amount of base salary paid in 2009, which continued for 2010. The Special Master has determined that NEO cash salaries should not exceed \$500,000 except in special cases. As a result, a significant portion of total direct compensation is delivered in the form of equity-based salary for alignment with shareholders' interests.

The following table shows base salaries paid to the NEOs (excluding Mr. Hull) in 2010.

NEO	Cash (\$)	2010 Base salary Equity (Deferred stock units) (\$)	Total (\$)
Michael A. Carpenter	\$ 186,346	\$ 7,813,654	\$ 8,000,000
James G. Mackey	475,068	1,119,964	1,595,032
Jeffrey J. Brown	500,000	2,350,000	2,850,000
Thomas Marano	500,000	4,437,500	4,937,500
Sanjay Gupta	509,000	2,208,333	2,717,333

Equity salary is delivered in the form of deferred stock units (DSUs), which vest immediately, but are subject to restrictions on the timing of payout. DSUs are paid out in installments beginning one year after grant and continuing over the next four years. Salary levels for the NEOs for 2011 have not been determined by the Special Master as of the date of this report.

Determining Mr. Carpenter's 2010 Pay Package

Effective on March 23, 2010, the Special Master approved a new compensation structure for Mr. Carpenter, our CEO, as requested by the Committee. The revised compensation structure for 2010 provides that all of

Table of Contents

Mr. Carpenter's compensation be based on the long-term equity value of the company. Accordingly, effective March 23, 2010, payment of cash base salary to Mr. Carpenter was discontinued and the rate of his equity salary was increased by a corresponding amount.

The Special Master set the compensation for Mr. Carpenter in a determination letter dated March 23, 2010 as follows.

Cash	Base salary	Deferred stock units	Incentive restricted stock units	Target total compensation
\$		\$ 8,000,000	\$ 1,500,000	\$ 9,500,000

Annual Cash Incentives

All NEOs were ineligible to receive annual cash incentives in 2010 due to restrictions under TARP and will continue to be ineligible for as long as the TARP restrictions are in place.

Long-term Equity-based Incentives

We provide long-term equity-based incentives in the form of IRSUs to have an incentive compensation component in the total direct compensation opportunity of our NEOs and to provide retention and alignment with shareholder interests. Due to the restrictions under TARP, grants of long-term IRSUs are the only incentive compensation permitted for the NEOs and the next 20 highest-compensated employees. In addition, the Company grants restricted stock units (RSUs) to approximately 500 executives below the top 25 highest-compensated employees.

These long-term IRSU awards for our NEOs and the next 20 highest compensated employees vest in full three years after they are granted. After the vesting requirement is met, the NEOs will receive payouts only when the Company starts to repay its TARP obligations. Payouts will be made on an incremental basis. For example, after the vesting requirement is met and Ally repays 25% of the TARP obligations, 25% of the value of the vested IRSU award will be paid to the NEOs (the payout schedule is the same for all NEOs and the next 20 highest-compensated employees receiving these awards). The NEOs will receive additional installments equal to 25% of the vested IRSU value after 50%, 75%, and 100% of the TARP obligations have been repaid.

Incentive Compensation Determination for the NEOs

At the beginning of 2010, the Committee established proposed incentive compensation levels for each of the NEOs based on their job responsibilities and individual goals and objectives. As noted above, IRSU awards are the only permitted incentive compensation for the NEOs. These individual goals and objectives related both to Ally performance and individual performance including the performance of the individual's business unit or function.

Based on their reviews, the Committee granted the IRSU awards to the NEOs as indicated in the Summary Compensation Table. The value of each IRSU award granted was determined at the end of the year based on the Committee's judgment of how each NEO performed relative to applicable goals and objectives and within the limitations established by the Special Master including an overall limitation of one-third of total compensation. Forms of compensation other than IRSUs were not impacted by these reviews since they were set at the permitted levels in accordance with the applicable TARP restrictions on executive compensation.

For 2010, the Special Master imposed an additional performance restriction on Ally's grants of long-term IRSUs. Unless Ally had positive core pretax income for 2010, the potential grant of IRSUs would be reduced by 50%. Since Ally's actual core pretax income for 2010 was \$2.5 billion, this restriction did not apply.

Table of Contents

Some of the significant 2010 performance objectives and accomplishments for Ally are discussed in the CEO Compensation section below. Each NEO was responsible for various contributions to achieve these enterprise-wide objectives. Below is a listing of the overall responsibilities of each NEO, along with the NEO's significant individual 2010 performance objectives and applicable 2010 accomplishments.

CEO Compensation

Michael A. Carpenter Chief Executive Officer of Ally since November 2009 and a member of the Ally Board of Directors since May 2009. Mr. Carpenter oversees all Ally strategy and operations to focus on strengthening the core businesses, while positioning the company for long-term growth. The performance objectives for Mr. Carpenter included returning Ally to profitability, reducing overall expenses, capitalizing on the opportunities in the auto finance business, demonstrating improved access to capital markets, continuing to build Ally Bank, exploring strategic alternatives for the mortgage business and further managing risk, and positioning Ally to repay the United States Department of Treasury as soon as practical.

In making the incentive compensation award determination for Mr. Carpenter, the Committee considered, among other factors, the following 2010 accomplishments of Ally:

Returned to profitability for all four quarters

Ranked as the number one provider of new vehicle retail financing in the United States by Experian Automotive

Increased global consumer auto financing originations for new and used vehicles

Significantly increased United States consumer penetration with General Motors and Chrysler

Named the recommended provider of finance and insurance products and services for Saab and Fiat dealerships in the United States

Converted \$5.5 billion of the \$11.4 billion of the United States Department of Treasury's mandatory convertible preferred stock into common equity

Successfully accessed the capital markets with nearly \$36 billion of new funding transactions

Achieved strong deposit growth and high retention rates at Ally Bank

Successfully reduced costs and divested noncore businesses

Significantly reduced risk in the legacy mortgage business and reduced representation and warranty exposure through several important settlements with various counterparties

Other NEO Compensation

Mr. Carpenter, in consultation with the Compensation Committee and the Board, established the priorities for Ally and each NEO at the beginning of the year. Each NEO reports directly to Mr. Carpenter and is a member of the Management Council, a group which is responsible for the strategic direction and overall performance of the company. As such, each NEO plays a key role in the stewardship and overall success of

Edgar Filing: Ally Financial Inc. - Form S-1/A

Ally and achievement of Ally's established performance objectives. Therefore, the 2010 Ally accomplishments outlined in the CEO Compensation section above and each individual contribution to the achievement of these accomplishments were the main deciding factors used for determination of the incentive compensation awards provided to each NEO for 2010. In addition to the accomplishments of Ally, each NEO was also rated based on the achievement of individual accomplishments discussed below. When awarding incentive compensation grants to individual NEOs, the Compensation Committee is limited in the awards that can be granted as governed by the TARP compensation rules discussed above.

James G. Mackey Interim Chief Financial Officer of Ally since April 2010. Mr. Mackey is responsible for the oversight of the company's financial analysis, controls and reporting, accounting, business planning, and

Table of Contents

corporate strategy. The additional performance objectives for Mr. Mackey included focusing on delivering business partner needs, driving corporate strategy initiatives and improving accuracy and efficiency of the monthly close and forecasting processes.

In making the incentive compensation award determination for Mr. Mackey, the Committee considered, among other factors, the 2010 accomplishments of Ally noted above, as well as the following contributions of Mr. Mackey:

Engaged business unit and functional partners to assess business needs and establish strategic priorities

Reduced Ally's legal and managerial close timeframe

Created a new business review process, drove integrated financial, stress, liquidity and capital forecasts, and increased the accuracy in consolidated forecasts

Jeffrey J. Brown Corporate Treasurer of Ally since March 2009. Mr. Brown is responsible for all global treasury activities, including funding and balance sheet management. The additional performance objectives for Mr. Brown included building an improved forecast for the company's consolidated balance sheet and future business model, managing cash forecasts for all key business entities and identifying opportunities to enhance the company's liquidity position, and identifying opportunities to enhance the company's capital position.

In making the incentive compensation award determination for Mr. Brown, the Committee considered, among other factors, the 2010 accomplishments of Ally noted above, as well as the following contributions of Mr. Brown:

Developed the company's current asset-liability management model that serves as the basis for liquidity and capital planning and is leveraged across treasury and finance, to provide improved transparency for near and long-term forecasts

Established a balance sheet management unit capable of modeling various forecasts and assessing various risks

Raised \$26 billion in secured funding with a variety of asset classes and \$7 billion in unsecured funding

Sanjay Gupta Chief Marketing Officer of Ally Financial Inc. since March 2008. Mr. Gupta has responsibility for all marketing, e-commerce, and product innovation at Ally. The additional performance objectives for Mr. Gupta included driving brand awareness for the company, managing the consumer marketing activities for Ally, and driving deposit growth in the US and Canada and creating innovative products to enhance value propositions.

In making the incentive compensation award determination for Mr. Gupta, the Committee considered, among other factors, the 2010 accomplishments of Ally noted above, as well as the following contributions of Mr. Gupta:

Successfully completed the rebranding of various strategic operations of the business to Ally

Significantly increased Ally brand awareness, and improved the satisfaction of Ally Bank customers

Launched several significant new products at Ally Bank

Thomas Marano Chairman and Chief Executive Officer of Ally's Mortgage operations and, as of May 1, 2009, Ally's Chief Capital Markets Officer. As CEO of Mortgage operations, Mr. Marano oversees

Table of Contents

mortgage lending and servicing at Residential Capital, LLC (ResCap) and ResMor Trust (the Canadian depository) and the correspondent and warehouse lending at Ally Bank. The additional performance objectives for Mr. Marano included maximizing capital markets execution, executing strategic solutions for ResCap by implementing cost reductions and divesting non-core businesses, and ensuring compliance defects are reduced to mitigate credit operations risk through new technology implementations.

In making the incentive compensation award determination for Mr. Marano, the Committee considered, among other factors, the 2010 accomplishments of Ally noted above, as well as the following contributions of Mr. Marano:

Improved financial performance for the capital markets and broker dealer businesses

Increased loan modifications enabling ResCap to continue to be the servicer with the highest conversion rates among the five largest servicers in the United States Treasury's Home Affordable Modification Program

Completed significant distressed loan sales and noncore business divestitures to reduce risk in mortgage business

Benefits and Perquisites

We provide our NEOs with health and welfare benefits under the broad-based program generally available to all of our employees. This allows them to receive certain benefits that are not readily available to individuals except through an employer and to receive certain benefits on a pretax basis. Our benefit program includes the Ally Retirement Savings Plan. We provide the savings plan in lieu of higher current cash compensation to ensure that employees have a source of retirement income and because these plans enjoy more favorable tax treatment than current compensation. Under this plan, employee contributions of up to 6% of salary were matched 100% by Ally. Ally also provided a 2% nonmatching contribution on both salary and annual incentives which fully vests after being employed for three years. In addition, Ally provided a 2% nonmatching discretionary contribution on salary in light of the Company's significantly improved 2010 performance.

Ally suspended nonqualified contributions to its Retirement Savings Plan in 2009 and did not make any additional nonqualified contributions in 2010. Therefore, employer contributions for 2010 were made only under the qualified portion of the plan only which limits contributions to pay up to \$245,000.

In addition to broad-based benefits, the NEOs are provided with limited supplemental benefits and perquisites to remain competitive in attracting and retaining executive talent. For 2010, in accordance with the TARP restrictions, the total value of these perquisites and supplemental benefits was capped at \$25,000.

Long-term Compensation Structure

Based on the compensation structure for 2010, long-term equity-based compensation, represented by DSUs and IRSUs, comprises a significant portion of each NEOs total compensation. The long-term equity-based portion of total compensation for each NEO and its associated percentage of total compensation for 2010 are as follows.

NEO	Long-term equity-based compensation		
	Total compensation (a) (\$)	Dollar amount awarded (\$)	Percent of total compensation (%)
Michael A. Carpenter	\$ 9,529,958	\$ 9,313,654	97.7%
James G. Mackey	2,419,623	1,922,951	79.5%
Jeffrey J. Brown	4,288,908	3,750,000	87.4%
Thomas Marano	7,433,035	6,906,250	92.9%
Sanjay Gupta	3,938,878	3,408,333	86.5%

Table of Contents

- (a) The compensation amounts shown above for Mr. Carpenter do not include \$395,096 of IRSU awards, which were granted in 2010 for 2009 performance. This IRSU grant is included in the 2010 compensation for the Summary Compensation Table as per SEC rules.

Employment Agreements and Severance

Ally currently has no employment agreement with any of the NEOs.

As a condition to participating in TARP, Ally's NEOs and the next five most highly compensated employees are not eligible for any severance in the event of termination of employment. These restrictions apply until Ally repays its TARP obligations.

Clawback Provisions

In connection with the risk assessment Ally conducted in 2010, the Company has reviewed all of its incentive compensation programs to ensure they include language allowing the Company to recoup incentive payments made to recipients in the event those payments were based on financial statements that are later found to be materially inaccurate. Incentive plans that did not include such language were revised to allow for incentive payments to be recovered. A recipient who fails to promptly repay Ally under such circumstances is subject to termination of employment.

Summary Compensation Table

Name and principal position	Year	Salary (\$)(a)(b)	Bonus (\$)(c)	Stock awards (\$)(d)(e)(f)	Option awards (\$)(g)	All other compensation (\$)(h)	Total (\$)
Michael A. Carpenter Chief Executive Officer	2010	\$ 186,346	\$	\$ 9,708,750	\$	\$ 29,958	\$ 9,925,054
	2009	119,726		682,438		35	802,199
James G. Mackey Executive Vice President,	2010	475,068		1,922,951		21,604	2,419,623
Interim Chief Financial Officer							
Jeffrey J. Brown Corporate Treasurer	2010	500,000		3,750,000		38,908	4,288,908
Thomas Marano Chief Executive Officer, ResCap, and Chief Capital Markets Officer	2010	500,000		6,906,250		26,785	7,433,035
	2009	2,419,231		3,223,108		51,994	5,694,333
Sanjay Gupta Chief Marketing Officer	2010	509,000		3,408,333		21,545	3,938,878
	2009	430,769		3,508,333		40,425	3,979,527
	2008	333,333	1,262,500	3,665,352	141,568	574,776	5,977,529
Robert S. Hull former Chief Financial Officer	2010	128,222		772,500		98,378	999,100
	2009	517,307		4,345,000		54,210	4,916,517
	2008	500,000	250,000	5,970,340	353,920	1,855,344	8,929,604

- (a) Amounts represent the cash portion of the base salary earned from each executive's employment commencement with Ally. These dates are: November 15, 2009, for Mr. Carpenter; May 1, 2009, for Mr. Marano; and March 3, 2008, for Mr. Gupta. Mr. Hull resigned effective April 2, 2010. Mr. Mackey was named interim CFO on April 2, 2010. The amounts shown as salary do not include the DSU award values that are part of the executive's base salary and are shown as stock awards in this table.

- (b) For 2010, represents the amount of Mr. Carpenter's compensation that was paid in cash prior to March 23, 2010, when his compensation structure changed to be fully based on the long-term equity value of the Company, as previously discussed in the section titled *Determining Mr. Carpenter's 2010 Pay Package*.

Table of Contents

- (c) No NEO received a discretionary bonus under our Annual Incentive Plan for 2010 or 2009. Mr. Gupta's 2008 total represents a \$700,000 sign-on bonus following his hiring to compensate for value he forfeited with his former employer when he joined Ally and \$662,500 for a discretionary bonus under our Annual Incentive Plan. Mr. Hull's 2008 total represents a discretionary midyear spot award that was provided in recognition of his substantial contributions to securing Ally's first financial restructuring of 2008.
- (d) The 2010 total represents the grant date fair value of the Ally DSU and IRSU awards granted in 2010 in accordance with ASC 718 and was not necessarily the cash payment received. The amount for Mr. Carpenter includes \$395,096 of IRSU awards that were granted in January 2010 for performance in 2009, as per the SEC rules. The amounts for each NEO for 2010 are displayed in the following table.

Name	DSU(\$)	IRSU(\$)	Total(\$)
Michael A. Carpenter	\$ 7,813,654	\$ 1,895,096	\$ 9,708,750
James G. Mackey	1,119,964	802,987	1,922,951
Jeffrey J. Brown	2,350,000	1,400,000	3,750,000
Thomas Marano	4,437,500	2,468,750	6,906,250
Sanjay Gupta	2,208,333	1,200,000	3,408,333
Robert S. Hull	772,500		772,500

- (e) The 2009 total represents the grant date fair value of the Ally RSU, DSU, and IRSU awards granted in 2009 in accordance with ASC 718 and was not necessarily the cash payment received. The amount for Mr. Carpenter does not include \$395,096 of IRSU awards that were granted in January 2010 for performance in 2009 and were included in the 2010 total, as per the SEC rules. The RSU value shown for Mr. Marano represents the grant date fair value of his RSU awards granted in 2009. Subsequent to the grant, RSU awards with a fair value of \$671,135 were vested and settled, and RSU awards with a fair value of \$2,013,407 were converted to IRSU awards with the original RSU grant date. Based on TARP restrictions, a portion of Mr. Marano's IRSU awards were converted to DSU awards in December 2010. The balances below have been restated to include this conversion. The amounts for each NEO for 2009 are displayed in the following table.

Name	RSU(\$)	DSU(\$)	IRSU(\$)	Total(\$)
Michael A. Carpenter	\$	\$ 682,438	\$	\$ 682,438
Thomas Marano	2,569,246	653,862		3,223,108
Sanjay Gupta		2,208,333	1,300,000	3,508,333
Robert S. Hull		2,730,000	1,615,000	4,345,000

- (f) The 2008 total represents the grant date fair value of the Ally RSU and Management Profits Interest Plan (MPI) awards granted in 2008 in accordance with ASC 718 and was not necessarily the cash payment received. The amounts for each NEO for 2008 are displayed in the following table.

Name	RSU(\$)	MPI(\$)	Total(\$)
Sanjay Gupta	\$ 2,970,000	\$ 695,352	\$ 3,665,352
Robert S. Hull	3,652,500	2,317,840	5,970,340

- (g) Represents the grant date fair value of the Ally Long Term Phantom Interest Plan awards in accordance with ASC 718 and not necessarily the cash payments received with respect to the year ended December 31, 2008. There was no cash compensation paid to our NEOs with respect to these awards and none of the awards is currently outstanding. See Note 25 to our Consolidated Financial Statements for a discussion of the valuation assumptions for the awards.

- (h) See the All Other Compensation in 2010 section below for further details.
