**Table of Contents****Management's Discussion of Funds Performance** (audited)**Market Environment Overview**

The international equity markets, measured by the MSCI EAFE Index, a broad measure of equity performance for the developed world outside the U.S. and Canada, returned -0.92% in the 12-month period that ended March 31, 2015 (the period), which lagged the S&P 500 Index by 13.65%. Measured in local currency, the MSCI EAFE Index returned 17.74% over the period, outperforming the return of the S&P 500 Index by 5.01%. It is important to note that the foreign currency component of the developed world returns subtracted approximately 18.7 percentage points from the returns of the MSCI EAFE Index. During the period, the British pound, Japanese yen and euro (which account for about 75% of the MSCI EAFE Index currency exposure) all weakened against the U.S. dollar by approximately 11%, 14% and 22%, respectively. Weakening currencies relative to the U.S. dollar decreases the value of foreign investments measured in U.S. dollars and tend to decrease returns experienced by U.S. investors who invest overseas, while strengthening currencies relative to the U.S. dollar have the opposite effect.

Although the MSCI EAFE Index lagged the broad U.S. domestic markets in U.S. dollar terms, in local currency terms it was a pretty strong performance year for international equity markets. The Eurozone region reacted positively to expectations and the monetary easing actions from the European Central Bank (ECB). Over the period, the euro weakened substantially as a result of the ECB's expansionary policies, which helped contribute to positive performance of the equity market, particularly the export focused firms. Japan, one of the best performing countries in local currency terms, also helped contribute with strong positive performance as a result of continued monetary and fiscal stimulus. Broad emerging market equities, in local currency terms, lagged both the U.S. and international developed markets. It seems investors were cautious about the potential ramifications from the U.S. Federal Reserve ending its quantitative easing program even though the ECB and the Bank of Japan have increased liquidity.

In local currency terms, nine out of ten sectors within the MSCI EAFE Index were positive, with Information Technology, Healthcare and Consumer Discretionary sectors leading and Materials and Energy sectors lagging. The only sector that recorded negative performance over the period was the Energy sector, which was negatively impacted by the decline in oil prices. The Information Technology and Consumer Discretionary sectors tend to be cyclically focused and were able to benefit from positive central bank actions and from consumers with greater disposable income due to the decline in gas prices.

WisdomTree's international dividend-weighted Funds are designed to track Indexes based on the dividend stream generated by the companies included in the Index. The dividend stream is defined as the sum of all dividends paid over the prior 12 months for each company. There are two primary factors that drive performance differentials versus market cap-weighted benchmarks. The first is aggregate exposure to one or more sectors or countries. The second is stock selection within each sector or country. Both of these are determined as part of WisdomTree's rules-based index methodology. These exposures are not subjectively determined. Rather, they are objectively determined at the Index rebalancing dates based on the dividend stream.

WisdomTree's best performing Fund for the full period was the WisdomTree Japan Hedged Equity Fund (DXJ), returning 29.30% over the period. Japan's economic policy, aggressive inflation target and accommodative central bank helped equities climb higher. The Japanese yen weakened about 14 percent over the time period, and because DXJ neutralizes the currency exposure, the performance was not hurt from this depreciation. The WisdomTree Japan Hedged SmallCap Equity Fund (DXJS) was also able to deliver strong performance over the period, up 25.86%, but the WisdomTree Japan SmallCap Dividend Fund (DFJ) was only able to return 9.26% since it does not hedge the currency exposure.

The WisdomTree Europe Hedged Equity Fund (HEDJ) delivered a 24.02% return over the period, outperforming its performance benchmark by 3.56%. The monetary easing actions by the ECB over the period were successful at weakening the euro, suppressing bond yields and driving equity prices higher. The WisdomTree Germany Hedged Equity Fund (DXGE) also benefited from these actions over the period by returning 23.70%. The euro weakened about 22 percent over the time period, and because HEDJ and DXGE neutralize the currency exposure, their performance was not hurt from this depreciation.

Fund returns are shown at NAV. Please see Performance Summaries on the subsequent pages for more complete performance information. Please see page 26 for the list of index descriptions.

**Fund performance assumes reinvestment of dividends and capital gain distributions. An index is a statistical measure of a specified financial market or sector. An index does not actually hold a portfolio of securities, incur expenses or pay any transaction costs. Therefore, index returns do not reflect deductions for fees or expenses and are not available for direct investment. In comparison, the Funds' performance is negatively impacted by these deductions. The WisdomTree Europe Dividend Growth Fund (the Fund) seeks to track the price and yield performance, before fees and expenses, of the WisdomTree Europe Dividend Growth Index.

The Fund returned -6.35% at net asset value (NAV) from Fund inception on May 7, 2014 to March 31, 2015 (for more complete performance information please see the chart below). The Fund benefited most from its position in the Healthcare sector. The Fund's position in the Energy sector created the greatest drag on performance.

The following performance chart is provided for comparative purposes and represents the period noted. The Fund's per share NAV is the value of one share of the Fund and is calculated by dividing the value of total assets less total liabilities by the number of shares outstanding. The NAV return is based on the NAV of the Fund and the market price return is based on the market price per share of the Fund. The price used to

The Fund benefited most from its position in the Healthcare sector. The Fund's position in the Materials sector created the greatest drag on performance.

## Edgar Filing: WisdomTree Trust - Form N-CSR

The following performance chart is provided for comparative purposes and represents the period noted. The Fund's per share NAV is the value of one share of the Fund and is calculated by dividing the value of total assets less total liabilities by the number of shares outstanding. The NAV return is based on the NAV of the Fund and the market price return is based on the market price per share of the Fund. The price used to calculate market price returns is the mid-point of the highest bid and lowest offer for Fund shares as of the close of trading on the exchange where Fund shares are listed. NAV and market price returns assume that dividends and capital gain distributions have been reinvested in the Fund at NAV and market price, respectively. As with other ETFs, NAV returns and market price returns may differ because of factors such as the supply and demand for Fund shares and investors' assessments of the underlying value of the Fund's portfolio securities.

An index is a statistical measure of a specified financial market or sector. An index does not actually hold a portfolio of securities, incur expenses or pay any transaction costs. Therefore, index returns do not reflect deductions for fees or expenses and the index is not available for direct investment. In comparison, the Fund's performance is negatively impacted by these deductions. Fund returns do not reflect brokerage commissions or taxes a shareholder would pay on the sale of Fund shares or on Fund distributions. **As of the Fund's current prospectus dated August 1, 2014, as supplemented January 1, 2015, the Fund's annual expense ratio was 0.58%.**

The WisdomTree Japan Hedged Financials Fund (the Fund) seeks to track the price and yield performance, before fees and expenses, of the WisdomTree Japan Hedged Financials Index.

The Fund returned 25.94% at net asset value (NAV) from Fund inception on April 8, 2014 to March 31, 2015 (for more complete performance information please see the chart below). The Fund benefited most from its position in Tokio Marine Holdings, Inc. The Fund's position in Sumitomo Mitsui Financial Group, Inc. created the greatest drag on performance.

The following performance chart is provided for comparative purposes and represents the period noted. The Fund's per share NAV is the value of one share of the Fund and is calculated by dividing the value of total assets less total liabilities by the number of shares outstanding. The NAV return is based on the NAV of the Fund and the market price return is based on the market price per share of the Fund. The price used to calculate market price returns is the mid-point of the highest bid and lowest offer for Fund shares as of the close of trading on the exchange where Fund shares are listed. NAV and market price returns assume that dividends and capital gain distributions have been reinvested in the Fund at NAV and market price, respectively. As with other ETFs, NAV returns and market price returns may differ because of factors such as the supply and demand for Fund shares and investors' assessments of the underlying value of the Fund's portfolio securities.

The WisdomTree Korea Hedged Equity Fund (the Fund) seeks to track the price and yield performance, before fees and expenses, of the WisdomTree Korea Hedged Equity Index.

The Fund returned -6.41% at net asset value (NAV) for the fiscal year ending March 31, 2015 (for more complete performance information please see the chart below). The Fund benefited most from its position in the Information Technology sector. The Fund's position in the Consumer Discretionary sector created the greatest drag on performance.

The following performance chart is provided for comparative purposes and represents the period noted. The Fund's per share NAV is the value of one share of the Fund and is calculated by dividing the value of total assets less total liabilities by the number of shares outstanding. The NAV return is based on the NAV of the Fund and the market price return is based on the market price per share of the Fund. The price used to calculate market price returns is the mid-point of the highest bid and lowest offer for Fund shares as of the close of trading on the exchange where Fund shares are listed. NAV and market price returns assume that dividends and capital gain distributions have been reinvested in the Fund at NAV and market price, respectively. As with other ETFs, NAV returns and market price returns may differ because of factors such as the supply and demand for Fund shares and investors' assessments of the underlying value of the Fund's portfolio securities.

An index is a statistical measure of a specified financial market or sector. An index does not actually hold a portfolio of securities, incur expenses or pay any transaction costs. Therefore, index returns do not reflect deductions for fees or expenses and the index is not available for direct investment. In comparison, the Fund's performance is negatively impacted by these deductions. Fund returns do not reflect brokerage commissions or taxes a shareholder would pay on the sale of Fund shares or on Fund distributions. **As of the Fund's current prospectus dated August 1, 2014, as supplemented January 1, 2015, the Fund's annual expense ratio was 0.58%.**

### **Shareholder Expense Examples** (unaudited)

As a shareholder of a WisdomTree Fund, you incur two types of cost: (1) transaction costs, including brokerage commissions on purchases and sales of your Fund shares and (2) ongoing costs, including management fees and other Fund expenses. The following example is intended to help you understand your ongoing costs (in dollars and cents) of investing in a Fund and to compare these costs with the ongoing costs of investing in other funds.

The example is based on an investment of \$1,000 invested at the beginning of the period and held for the entire period from October 1, 2014 to March 31, 2015.

#### **Actual expenses**

The first line under each Fund in the table on the next page provides information about actual account values and actual expenses. You may use the information in this line, together with the amount you invested, to estimate the expenses that you paid over the period. Simply divide your account value by \$1,000 (for example, an \$8,600 account value divided by \$1,000 = 8.6), then multiply the result by the number in the first line for your Fund under the heading entitled **Expenses Paid During the Period 10/1/14 to 3/31/15** to estimate the expenses you paid on your account during the period.

#### **Hypothetical example for comparison purposes**

The second line under each Fund in the table on the next page provides information about hypothetical account values and hypothetical expenses based on each Fund's actual expense ratio and an assumed rate of return of 5% per year before expenses, which is not the Fund's actual return. The hypothetical account values and expenses may not be used to estimate the actual ending account balance or expenses you paid for the period. You may use this information to compare the ongoing costs of investing in your Fund and other funds. To do so, compare this 5% hypothetical example with the 5% hypothetical examples that appear in the shareholder reports of the other funds.

Please note that the expenses shown in the table are meant to highlight your ongoing costs only and do not reflect any transactional costs, such as brokerage commissions paid on purchases and sales of Fund shares. Therefore, the second line under each Fund in the table is useful in comparing ongoing Fund costs only and will not help you determine the relative total costs of owning different funds. In addition, if these transactional costs were included, your costs would have been higher.
