**Item 1. Schedule of Investments.**

The Schedule(s) of Investments is attached herewith.

*FLAHERTY & CRUMRINE PREFERRED INCOME OPPORTUNITY FUND*

To the Shareholders of Flaherty & Crumrine Preferred Income Opportunity Fund ( PFO ):

The preferred market didn't miss a beat in the third fiscal quarter, continuing where it left off second quarter with additional positive returns. Total return<sup>2</sup> on net asset value ( NAV ) was 6.0% for the quarter, bringing the total return for the first nine months of fiscal 2016 to 10.7%. Total return on market price over the same periods was 4.6% and 20.7%, respectively.

Tailwinds described earlier in the year continued unabated during the most recent quarter. Monetary policy globally was very accommodative; supply of new preferred securities was subdued; legacy (those losing regulatory-capital treatment) and higher-coupon preferred securities were redeemed at a healthy pace; and credit quality remained strong. Preferred securities offered yield to investors struggling to find it in other places, which resulted in strong demand and higher prices for the asset class.

There is a direct inverse relationship in fixed-income securities (including preferreds) between price and yield, and higher prices this year have led to much lower coupons for newly-issued preferred securities. Many new issues during the quarter yield in the range of 4.5% - 5.5%, which in many cases is lower than early-2016 levels by almost 1.0%. These lower yields on preferreds were the result of lower overall interest rates (Treasuries and Swap Rates) and tighter spreads. Many issuers have taken advantage of persistently-low rates and positive market sentiment to refinance higher-coupon securities.

Although U.S. interest rates remain very low, the short end of the curve (notably T-bills and LIBOR) has moved higher in recent months as investors begin to factor in additional rate hikes by the Federal Reserve. The Federal Open Market Committee passed on a rate hike at its meeting on September 21, however, so markets continue to wrestle with predicting a future path of increases. Higher levels of 3-month LIBOR have resulted in higher leverage costs for the Fund, and future changes in this reference rate will be highly correlated to Federal Reserve rate changes. Although leverage still adds substantial incremental net income for the Fund, we expect that to decline modestly over time as borrowing costs rise.

We continue to see value in preferred securities, although security selection has become more challenging as yields have moved lower and older, higher-coupon issues have been refinanced. Flows into the preferred market (via mutual funds, exchange-traded funds (ETFs), asset managers, and retail investors) have been very strong for many years. If anything gives us pause, it is more this level of inflow than current valuations. ETFs that invest in preferreds have become very large relative to their target market segment (\$25-par listed securities), and it isn't clear where the outer limits are located. We know ETFs have been a source of volatility in the past (or opportunity, depending on one's viewpoint), and we expect they could be again in the future. Preferreds should benefit from continued strong credit quality, reliably earning coupons many of them tax-advantaged over time. However, at current levels they are potentially more sensitive to changes in market sentiment than they were six months ago.

<sup>1</sup> June 1, 2016 - August 31, 2016

<sup>2</sup> Following the methodology required by the Securities and Exchange Commission, total return assumes dividend reinvestment.

As always, we encourage you to visit the Fund's website [www.preferredincome.com](http://www.preferredincome.com) for timely and important information.

Sincerely,

The Flaherty & Crumrine Portfolio Management Team

## NOTES TO FINANCIAL STATEMENTS (Unaudited)

### 1. Aggregate Information for Federal Income Tax Purposes

At August 31, 2016, the aggregate cost of securities for federal income tax purposes was \$207,682,563, the aggregate gross unrealized appreciation for all securities in which there was an excess of value over tax cost was \$20,250,269 and the aggregate gross unrealized depreciation for all securities in which there was an excess of tax cost over value was \$13,057,544.

### 2. Additional Accounting Standards

*Fair Value Measurements:* The Fund has analyzed all existing investments to determine the significance and character of all inputs to their fair value determination. The levels of fair value inputs used to measure the Fund's investments are characterized into a fair value hierarchy. Where inputs for an asset or liability fall into more than one level in the fair value hierarchy, the investment is classified in its entirety based on the lowest level input that is significant to that investment's valuation. The three levels of the fair value hierarchy are described below:

Level 1      quoted prices in active markets for identical securities

Level 2      other significant observable inputs (including quoted prices for similar securities, interest rates, prepayment speeds, credit risk, etc.)

Level 3      significant unobservable inputs (including the Fund's own assumptions in determining the fair value of investments)

The inputs or methodology used for valuing securities are not necessarily an indication of the risk associated with investing in those securities. Transfers in and out of levels are recognized at market value at the end of the period.

During the reporting period, there were no transfers into Level 1 from Level 2 or into Level 2 from Level 1.

The fair values of the Fund's investments are generally based on market information and quotes received from brokers or independent pricing services that are approved by the Board of Directors and are unaffiliated with the Adviser. To assess the continuing appropriateness of security valuations, management, in consultation with the Adviser, regularly compares current prices to prior prices, prices across comparable securities, actual sale prices for securities in the Fund's portfolio, and market information obtained by the Adviser as a function of being an active market participant.

Securities with quotes that are based on actual trades or actionable bids and offers with a sufficient level of activity on or near the measurement date are classified as Level 1. Securities that are priced using quotes derived from implied values, indicative bids and offers, or a limited number of actual trades or the same information for securities that are similar in many respects to those being valued are classified as Level 2. If market information is not available for securities being valued, or materially-comparable securities, then those securities are classified as Level 3. In considering market information, management evaluates changes in liquidity, willingness of a broker to execute at the quoted price, the depth and consistency of prices from pricing services, and the existence of observable trades in the market.

**NOTES TO FINANCIAL STATEMENTS (Unaudited) (Continued)**

The following is a reconciliation of Level 3 investments for which significant unobservable inputs were used to determine fair value:

	<b>Total Investments</b>	<b>Preferred Securities</b>
		<b>Banking</b>
<b>Balance as of 11/30/15</b>	\$ 6,750	\$ 6,750
Accrued discounts/premiums		
Realized gain/(loss)		
Change in unrealized appreciation/(depreciation)		
Purchases		
Sales		
Transfer in		
Transfer out		
<b>Balance as of 08/31/16</b>	\$ 6,750	\$ 6,750

For the nine months ended August 31, 2016, total change in unrealized gain/(loss) on Level 3 securities still held at period-end and included in the change in net assets was \$0.

The following table summarizes the valuation techniques used and unobservable inputs developed to determine the fair value of Level 3 investments:

Category	Fair Value at 08/31/16	Valuation Technique	Unobservable Input	Input Range (Wgt Avg)
Preferred Securities				
(Banking)	\$ 6,750	Bankruptcy recovery	Credit/Structure-specific recovery	0.00% - 0.50% (0.15%)

The significant unobservable inputs used in the fair value measurement technique for bankruptcy recovery are based on recovery analysis that is specific to the security being valued, including the level of subordination and structural features of the security, and the current status of any bankruptcy or liquidation proceedings. Observable market trades in bankruptcy claims are utilized by management, when available, to assess the appropriateness of valuations, although the frequency of trading depends on the specific credit and seniority of the claim. Expected recoveries in bankruptcy by security type and industry do not tend to deviate much from historical recovery rates, which are very low (sometimes zero) for preferred securities and more moderate for senior debt. Significant changes in these inputs would result in a significantly higher or lower fair value measurement.
