

AERIE PHARMACEUTICALS INC

Form 424B5

January 25, 2018

Table of Contents

Filed Pursuant to Rule 424(b)(5)
Registration No. 333-213643

CALCULATION OF REGISTRATION FEE

Title of Each Class of Securities to be Registered	Amount to be Registered	Proposed Maximum Offering Price Per Share	Proposed Maximum Offering Price Aggregate	Amount of Registration Fee
Common Stock, par value \$0.001 per share	1,456,925(1)	\$57.20(2)	\$83,336,110.00	\$10,375.35

(1) Includes 190,033 shares of common stock that may be purchased by the underwriters upon the exercise of their option to purchase additional shares.

(2) Estimated solely for purposes of calculating the registration fee. In accordance with Rule 457(c) and Rule 457(r) of the Securities Act of 1933, as amended, the prices shown are based on the average of the high and low prices reported for Aerie Pharmaceuticals, Inc.'s common stock on The Nasdaq Global Market on January 24, 2018.

PROSPECTUS SUPPLEMENT

(To Prospectus dated September 15, 2016)

1,266,892 Shares

Common Stock

We are offering 1,266,892 shares of our common stock. Our common stock is listed on The Nasdaq Global Market under the symbol AERI. On January 23, 2018, the last reported sale price of our common stock on The Nasdaq Global Market was \$61.00 per share.

The underwriters have agreed to purchase the common stock from us at a price of \$58.62 per share, which will result in approximately \$74.3 million of proceeds to us, before offering expenses. The underwriters may offer the shares of common stock from time to time to purchasers directly or through agents, or through brokers in brokerage transactions on The Nasdaq Global Market, or to dealers in negotiated transactions, or in a combination of such methods of sale or otherwise, at a fixed price or prices, which may be changed, or at market prices prevailing at the time of sale, at prices related to such prevailing market prices or at negotiated prices. See Underwriting.

We have granted the underwriters an option for a period of 30 days from the date of this prospectus supplement to purchase up to an additional 190,033 shares of our common stock at a price of \$58.62 per share. If the underwriters exercise the option in full, the total proceeds to us, before offering expenses, will be approximately \$85.4 million.

Investing in our common stock involves risks. You should carefully consider all of the information set forth in this prospectus supplement, the accompanying base prospectus and the documents incorporated by reference in this prospectus supplement and the accompanying base prospectus before deciding to invest in our common stock. Please see Risk Factors on page S-12 of this prospectus supplement and page 6 of the accompanying base prospectus and in the documents incorporated by reference in this prospectus supplement and the accompanying base prospectus to read about factors you should consider before buying shares of our common stock.

Neither the Securities and Exchange Commission nor any state securities commission has approved or disapproved of these securities or passed upon the adequacy or accuracy of this prospectus supplement. Any representation to the contrary is a criminal offense.

The underwriters expect to deliver the shares of common stock against payment on or about January 26, 2018.

ABOUT THIS PROSPECTUS SUPPLEMENT

This document is in two parts. The first part is this prospectus supplement, which describes the specific terms of this offering and also adds to and updates information contained in the accompanying base prospectus and the documents incorporated by reference into the accompanying base prospectus. The second part, the accompanying base prospectus, gives more general information, some of which may not apply to this offering. You should read both this prospectus supplement and the accompanying base prospectus before deciding to invest in our common stock.

To the extent there is a conflict between the information contained in this prospectus supplement, on the one hand, and the information contained in the accompanying base prospectus or in any document incorporated by reference in this prospectus supplement having an earlier date than the date of this prospectus supplement, on the other hand, you should rely on the information in this prospectus supplement. You should also read and consider the additional information under the captions **Information Incorporated by Reference** and **Where You Can Find More Information** in this prospectus supplement.

We and the underwriters are offering to sell, and seeking offers to buy, shares of common stock only in jurisdictions where offers and sales are permitted. The distribution of this prospectus supplement and the accompanying base prospectus and the offering of the common stock in certain jurisdictions may be restricted by law. Persons outside the United States who come into possession of this prospectus supplement and the accompanying base prospectus must inform themselves about, and observe any restrictions relating to, the offering of the common stock and the distribution of this prospectus supplement and the accompanying base prospectus outside the United States. This prospectus supplement and the accompanying base prospectus do not constitute, and may not be used in connection with, an offer to sell, or a solicitation of an offer to buy, any securities offered by this prospectus supplement and the accompanying base prospectus by any person in any jurisdiction in which it is unlawful for such person to make such an offer or solicitation.

References in this prospectus supplement to the **Company**, **Aerie**, **we**, **us** and **our** and similar terms refer to Aerie Pharmaceuticals, Inc. and its subsidiaries.

Table of Contents

SPECIAL NOTE REGARDING FORWARD-LOOKING STATEMENTS

This prospectus supplement and the documents incorporated by reference contain forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, as amended (the Securities Act), and Section 21E of the Securities Exchange Act of 1934, as amended (the Exchange Act). We may, in some cases, use terms such as predicts, believes, potential, proposed, continue, estimates, anticipates, expects, plans, intends, may, would, should, exploring, pursuing or other words that convey uncertainty of future events or outcomes to identify these forward-looking statements.

Forward-looking statements appear in a number of places throughout this prospectus supplement and the documents incorporated by reference herein, and include statements regarding our intentions, beliefs, projections, outlook, analyses or current expectations concerning, among other things:

the commercial launch and potential future sales of Rhopressa[®] (netarsudil ophthalmic solution) 0.02% (Rhopressa[®]) and our current or any future product candidates;

our commercialization, marketing, manufacturing and supply management capabilities and strategies;

third-party payor coverage and reimbursement for Rhopressa[®] and our current or any future product candidates;

the glaucoma patient market size and the rate and degree of market adoption of Rhopressa[®] and our current or any future product candidates by eye-care professionals and patients;

the timing, cost or other aspects of the commercial launch of Rhopressa[®] and our current or any future product candidates;

the success, timing and cost of our ongoing and anticipated preclinical studies and clinical trials for Rhopressa[®], with respect to foreign approval or additional indications, and our current or any future product candidates, including statements regarding the timing of initiation and completion of the studies and trials;

our expectations regarding the clinical effectiveness of our current or any future product candidates and results of our clinical trials and any potential preclinical trials;

the timing of and our ability to request, obtain and maintain U.S. Food and Drug Administration (FDA) or other regulatory authority approval of, or other action with respect to, as applicable, Rhopressa[®] and our current or any future product candidates in the U.S., Canada, Europe, Japan and elsewhere, including the expected timing of, and regulatory and/or other review of, filings for, as applicable, Rhopressa[®] and our current or any future product candidates;

our expectations related to the use of proceeds from our financing activities;

our estimates regarding anticipated operating expenses and capital requirements and our needs for additional financing;

our plans to pursue development of additional product candidates and technologies in ophthalmology, including development of Rhopressa[®] and Roclatan[™] (netarsudil/latanoprost ophthalmic solution) 0.02%/0.005% (Roclata[™]) for additional indications and other therapeutic opportunities;

the potential advantages of Rhopressa[®] and our current or any future product candidates;

our plans to explore possible uses of our existing proprietary compounds beyond glaucoma;

our ability to protect our proprietary technology and enforce our intellectual property rights;

our expectations regarding collaborations, licensing, acquisitions and strategic operations, including our ability to in-license or acquire additional ophthalmic products, product candidates or technologies; and

our stated objective of building a major ophthalmic pharmaceutical company.

S-2

Table of Contents

By their nature, forward-looking statements involve risks and uncertainties because they relate to events, competitive dynamics, industry change and other factors beyond our control, and depend on regulatory approvals and economic and other environmental circumstances that may or may not occur in the future or may occur on longer or shorter timelines than anticipated. We discuss many of these risks in greater detail under the heading **Risk Factors** in our Annual Report on Form 10-K for the year ended December 31, 2016 and our Quarterly Report on Form 10-Q for the quarterly period ended September 30, 2017, each incorporated by reference herein, and in other documents we have filed or furnished with the SEC.

In particular, FDA approval of Rhopressa[®] does not constitute FDA approval of Roclatan[™], and there can be no assurance that we will receive FDA approval for Roclatan[™] or any future product candidates. In addition, the preclinical research discussed in this prospectus supplement and the documents incorporated by reference herein is preliminary and the outcome of such preclinical studies may not be predictive of the outcome of later clinical trials. Any future clinical trial results may not demonstrate safety and efficacy sufficient to obtain regulatory approval related to the preclinical research findings discussed in this prospectus supplement or the documents incorporated by reference herein.

You should not rely upon forward-looking statements as predictions of future events. Although we believe that we have a reasonable basis for each forward-looking statement contained in this prospectus supplement and the documents incorporated by reference herein, we caution you that forward-looking statements are not guarantees of future performance and that our actual results of operations, financial condition and liquidity, and the development of the industry in which we operate may differ materially from the forward-looking statements contained in this prospectus supplement and the documents incorporated by reference herein. In addition, even if our results of operations, financial condition and liquidity, and events in the industry in which we operate are consistent with the forward-looking statements contained in this prospectus supplement and the documents incorporated by reference herein, they may not be predictive of results or developments in future periods.

Any forward-looking statements that we make in this prospectus supplement speak only as of the date of this prospectus supplement. Except as required by law, we are under no duty to update or revise any of the forward-looking statements, whether as a result of new information, future events or otherwise, after the date of this prospectus supplement.

Table of Contents

SUMMARY

This summary highlights information about this prospectus supplement and may not contain all of the information that may be important to you. You should read the following summary together with the more detailed information appearing elsewhere in this prospectus supplement and accompanying base prospectus, as well as the financial statements and related notes thereto and other information included in or incorporated by reference in this prospectus supplement before making any investment decision.

Overview

We are an ophthalmic pharmaceutical company focused on the discovery, development and commercialization of first-in-class therapies for the treatment of patients with glaucoma or ocular hypertension and other diseases of the eye. Our strategy is to commercialize our FDA-approved product, Rhopressa[®], ourselves in North American markets and advance our product candidate, Roclatan[™], to regulatory approval. We plan to build a commercial team that will include approximately 100 sales representatives to target approximately 12,000 high prescribing eye-care professionals throughout the United States. See [Recent Developments FDA Approval](#). Our strategy also includes developing our business outside of North America, including obtaining regulatory approval in Europe and Japan on our own for Rhopressa[®] and Roclatan[™]. We are also enhancing our longer-term commercial potential by identifying and advancing additional potential product candidates and drug delivery technologies, including through our internal discovery efforts and potential research collaborations, in-licensing or acquisitions of additional ophthalmic products or technologies or product candidates that would complement our current product portfolio, such as our recent collaboration with DSM, whereby we have access to their bio-erodible polymer technology, and our acquisition of certain assets from Envisia Therapeutics Inc. ([Envisia](#)), each of which are designed to advance our progress in developing potential future product candidates to treat retinal diseases, as discussed below.

We completed our initial public offering ([IPO](#)) in October 2013, which raised net proceeds of approximately \$68.3 million. Since our IPO, we have raised additional net proceeds of approximately \$122.9 million through the sale and issuance of our senior secured convertible notes (the [2014 Convertible Notes](#)) in September 2014 and approximately \$413.6 million through the issuance and sale of common stock under our shelf registration statements on Form S-3 and [at-the-market sales agreements](#), including approximately \$74.0 million sold under the \$75.0 million [at-the-market sales agreement](#) entered into with Cantor Fitzgerald & Co. on December 19, 2017 (the [ATM Sales Agreement](#)). For additional information, see [Recent Developments At-the-Market Sales](#) below. Our senior leadership team has extensive experience in the ophthalmology market and has overseen the development and commercialization of several successful ophthalmic products at major pharmaceutical companies.

Our FDA-approved product, Rhopressa[®], and our product candidate, Roclatan[™], are designed to lower intraocular pressure ([IOP](#)) in patients with open-angle glaucoma or ocular hypertension. Rhopressa[®] is approved for, and Roclatan[™] is under development for, once-daily use in the evening, and both have shown efficacy in preclinical and clinical trials in lowering elevated IOP, with novel mechanisms of action ([MOAs](#)) and a favorable safety profile. Glaucoma is one of the largest segments in the global ophthalmic market. In 2016, branded and generic glaucoma product sales exceeded \$5.0 billion in the United States, Europe and Japan in aggregate, according to IMS. Prescription volume for glaucoma products in the United States alone was 36 million in 2016 and is expected to grow, driven in large part by the aging population.

We own the worldwide rights to all indications for Rhopressa[®] and Roclatan[™]. Our intellectual property portfolio contains patents and pending patent applications related to composition of matter, pharmaceutical compositions, methods of use, and synthetic methods. We have patent protection for Rhopressa[®] and Roclatan[™] in the United States through at least 2030.

S-4

Table of Contents

Our FDA-approved product, Rhopressa[®], is a novel once-daily eye drop intended to reduce elevated IOP in patients with open-angle glaucoma or ocular hypertension. We developed Rhopressa[®] as the first of a new class of compounds that is designed to lower elevated IOP in patients through novel MOAs. We believe that Rhopressa[®] represents the first new chemical entity that reduces elevated IOP in patients with open-angle glaucoma or ocular hypertension in over 20 years. Based on preclinical studies and clinical data, we expect that Rhopressa[®] will have the potential to compete with non-prostaglandin analogue products as a preferred adjunctive therapy to prostaglandin analogues (PGAs), due to its targeting of the diseased tissue known as the trabecular meshwork (TM), its demonstrated IOP-lowering ability at consistent levels across tested baselines with once-daily dosing, its potential synergistic effect with PGA products, and its favorable safety profile. Adjunctive therapies currently represent approximately one-half of the entire glaucoma therapy market in the United States, according to IMS. In addition, we believe that Rhopressa[®] may also potentially become a preferred therapy where PGAs are contraindicated, for patients who do not respond to PGAs and for patients who choose to avoid the cosmetic issues associated with PGA products.

The FDA approved Rhopressa[®] for the reduction of elevated IOP in patients with open-angle glaucoma or ocular hypertension on December 18, 2017. See Recent Developments FDA Approval. We submitted our new drug application (NDA) with the FDA for Rhopressa[®] on February 28, 2017. The NDA submission included our second Phase 3 registration trial for Rhopressa[®], named Rocket 2, as the pivotal clinical trial and our initial Phase 3 registration trial, named Rocket 1, as supportive in nature. Our Rocket 2 trial achieved its primary efficacy endpoint of demonstrating non-inferiority of Rhopressa[®] compared to timolol in patients with baseline IOPs of above 20 mmHg (millimeters of mercury) to below 25 mmHg. In addition, the 12-month safety data from this registration trial also confirmed a favorable safety profile for the drug and demonstrated a consistent IOP-lowering effect throughout the 12-month period at the specified measurement time points. Our fourth Phase 3 registration trial for Rhopressa[®], named Rocket 4, in the U.S., achieved its primary efficacy endpoint of demonstrating non-inferiority of Rhopressa[®] compared to timolol in patients with baseline IOPs of above 20 mmHg to below 25 mmHg and was also reviewed by the FDA as part of the NDA review process. The Rhopressa[®] Phase 3 registration trial results have shown minimal drug-related serious adverse events or drug-related systemic adverse events, with the most common adverse event reported being conjunctival hyperemia, or eye redness, with incidence rates of approximately 50% across all Phase 3 registration trials for Rhopressa[®], the majority of which was reported as mild.

Rocket 4 was designed to generate adequate six-month safety data for European regulatory approval, for which we expect to file a marketing authorization application with the European Medicines Agency in the second half of 2018. We also initiated a Phase 2 clinical trial in the U.S. in the fourth quarter of 2017, which is designed in accordance with the requirements of Japan's Pharmaceuticals and Medical Devices Agency (PMDA) for potential regulatory submission of Rhopressa[®] in Japan. This Phase 2 clinical trial enrolled Japanese and Japanese-American subjects as a precursor to Phase 3 registration trials that are expected to be subsequently conducted in Japan. The primary objectives of this Phase 2 clinical trial are to evaluate for non-inferiority the ocular hypotensive activity of two different dose concentrations of Rhopressa[®] relative to placebo over a 28-day period and the ocular and systemic safety of Rhopressa[®] relative to placebo over that same period. Baseline IOP ranges in the trial are greater than or equal to 15 mmHg to less than 35 mmHg for subjects with glaucoma, and greater than 22 mmHg to less than 35 mmHg for subjects with ocular hypertension.

Our advanced-stage product candidate, once-daily Roclatan[™], is a fixed-dose combination of Rhopressa[®] and latanoprost, the most widely prescribed PGA. We believe, based on our two completed Phase 3 registration trials, that Roclatan[™], if approved, will be the only glaucoma product that covers the full spectrum of currently known IOP lowering MOAs, giving it the potential to provide a greater IOP-lowering effect than any currently marketed glaucoma product. Therefore, we believe that Roclatan[™], if approved, could compete with both PGA and non-PGA therapies for patients requiring maximal IOP lowering, including those with higher IOPs and those who present with significant disease progression despite currently available therapies.

S-5

Table of Contents

We have completed two Phase 3 registration trials for Roclatan™. The first Phase 3 registration trial for Roclatan™, named Mercury 1, was a 12-month safety trial with a 90-day efficacy readout. Mercury 1 achieved its primary efficacy endpoint of demonstrating statistical superiority of Roclatan™ to each of its components, including Rhopressa® and latanoprost, in patients with maximum baseline IOPs of above 20 mmHg to below 36 mmHg. The safety and tolerability results for Roclatan™ from the 90-day efficacy period of Mercury 1 showed no drug-related serious adverse events or drug-related systemic adverse events. On July 19, 2017, we announced the results of the Mercury 1 12-month safety study, noting the safety results for Roclatan™ for the 12-month period were consistent with those observed for the 90-day efficacy period. The most common Roclatan adverse event was conjunctival hyperemia, which was observed in approximately 60% of patients, of which approximately 70% was determined to be mild. Other ocular adverse events reported in approximately 5% to 18% of patients in the Roclatan group included cornea verticillata, conjunctival hemorrhage, or petechiae, eye pruritus, increased lacrimation, reduced visual acuity, blepharitis and punctate keratitis. In addition, levels of IOP lowering were consistent with those observed in the Mercury 1 and Mercury 2 90-day efficacy results for all arms of the study. Roclatan also demonstrated consistent levels of IOP lowering across the 12-month study period.

The second Phase 3 registration trial for Roclatan™ is named Mercury 2. The Mercury 2 trial design was identical to that of Mercury 1, except that Mercury 2 was a 90-day trial without the additional nine-month safety extension included in Mercury 1. Similar to Mercury 1, Mercury 2 achieved its 90-day primary efficacy endpoint of demonstrating statistical superiority over each of its components at all measured time points and showed no drug-related serious adverse events and minimal drug-related systemic adverse events. The study evaluated patients with maximum baseline IOPs ranging from above 20 to below 36 mmHg at nine measured time points over the trial. The IOP-lowering effect of Roclatan exceeded that of monotherapy with latanoprost in a range of 1.5 to 2.4 mmHg and Rhopressa® in a range of 2.2 to 3.3 mmHg, with efficacy levels remaining consistent for all arms of the study throughout the trial. Throughout the duration of the study, the mean diurnal IOP-lowering effect of Roclatan exceeded that of latanoprost by an average of 1.8 mmHg and exceeded Rhopressa® by an average of 2.7 mmHg. Roclatan reduced mean diurnal IOPs to 16 mmHg or lower in 56% of patients, a significantly higher percentage than observed in the comparator arms of the study. The most common Roclatan adverse event observed in the study was conjunctival hyperemia, which was reported in nearly 55% of patients, and was scored as mild for approximately 70% of affected patients. Other ocular adverse events reported in approximately 5% to 13% of patients in the Roclatan group included cornea verticillata, conjunctival hemorrhage and corneal disorder (asymptomatic change in appearance of corneal endothelial cells).

We expect to submit an NDA for Roclatan™ in the second quarter of 2018. Mercury 1 and Mercury 2 will also be used for European approval of Roclatan™, and we initiated a third Phase 3 registration trial for Roclatan™, named Mercury 3, in Europe during the third quarter of 2017. Mercury 3 is designed to compare Roclatan to Ganfort fixed-dose combination product of bimatoprost and timolol marketed in Europe, which if successful, is expected to improve our commercialization prospects in that region. We estimate a total enrollment of approximately 500 patients in Mercury 3, a two-arm, six-month safety trial that also provides a 90-day interim efficacy readout. Each comparator arm will be dosed once daily in the evening. Patients will be evaluated with maximum baseline IOPs ranging from above 20 mmHg to below 36 mmHg. The trial will be conducted primarily in the United Kingdom, France, Germany, Italy, Spain, Belgium and Austria, and we currently expect to read out topline 90-day efficacy data for the trial by early 2019 and to submit a regulatory submission for European approval for Roclatan™ in the second half of 2019.

In addition to our continued use of our final drug product for clinical trials sourced from our current contract manufacturer based in the U.S., in January 2017, we announced that we are building out a new manufacturing plant in Athlone, Ireland. This will be our first manufacturing plant, which is expected to produce commercial supplies of Rhopressa® and, if approved, Roclatan™. In anticipation of obtaining FDA approval of Rhopressa®, our current contract manufacturer has started producing commercial supply of Rhopressa®, and commercial

S-6

Table of Contents

supply of Rhopressa® from our own manufacturing plant is expected to be available by 2020. We are also in the process of adding a second contract manufacturer, which we expect may produce commercial supply of Rhopressa® by the end of 2018.

Our stated objective is to build a major ophthalmic pharmaceutical company. In addition to Rhopressa® and Roclatan™, we plan to continue exploring the benefits of Rhopressa® on 24-hour IOP lowering, normal tension glaucoma, neuroprotection, as well as antifibrotic effects on the diseased TM. We are also evaluating possible uses of our existing proprietary portfolio of Rho kinase inhibitors beyond glaucoma. Our owned preclinical small molecule, AR-13154, has demonstrated the potential for the treatment of wet age-related macular degeneration (AMD) by inhibiting Rho kinase and Protein kinase C and has shown lesion size decreases in an *in vivo* preclinical model of wet AMD at levels similar to the current market-leading wet AMD anti-VEGF product, and even greater lesion size reduction in combination with the current market-leading wet AMD anti-VEGF product. Further, in our preclinical studies, we have seen a promising potential of this molecule to reduce neovascularization in a model of proliferative diabetic retinopathy. Pending additional studies, the active metabolite of AR-13154 and related molecules may have the potential to provide an entirely new mechanism and pathway to treat wet AMD and other diseases of the retina, such as diabetic macular edema (DME). This molecule has not yet been tested in humans in a clinical trial setting.

We have and may continue to enter into research collaboration arrangements, license, acquire or develop additional potential product candidates and technologies to broaden our presence in ophthalmology, and we continually explore and discuss potential additional opportunities for new ophthalmic products, delivery alternatives and new therapeutic areas with potential partners. We are currently focused on the evaluation of technologies for the delivery of our owned molecules to the back of the eye over sustained periods.

On July 31, 2017, we announced that we entered into a collaborative research, development and licensing agreement with DSM, a global science-based company headquartered in the Netherlands. The research collaboration agreement includes an option to license DSM's bio-erodible polymer implant technology for evaluating its application to the delivery of certain of our compounds, initially focused on retinal diseases. This technology uses polyesteramide polymers that may, when combined with AR-13154, provide for sustained delivery of the small molecule over a period of several months. To date, preclinical experiments have demonstrated early success in conjunction with AR-13154, including demonstration of linear, sustained elution rates over several months and achievement of target retinal drug concentrations.

On October 4, 2017, we acquired from Envisia the rights to use PRINT® technology in ophthalmology and certain other assets. The PRINT® technology is a proprietary system capable of creating precisely engineered sustained release implant products utilizing fully-scalable manufacturing processes. Our initial focus will be in using PRINT® to manufacture injectable implants containing AR-13154, potentially in conjunction with the polymer technology from DSM. In addition, we acquired Envisia's intellectual property rights relating to its preclinical dexamethasone steroid for the treatment of DME, which also utilizes PRINT® technology, which we refer to as AR-1105.

Our Strategy

Our goal is to become a leader in the discovery, development and commercialization of innovative pharmaceutical products for the treatment of patients with glaucoma or ocular hypertension and other diseases of the eye. We believe Rhopressa® and Roclatan™ have the potential to address many of the unmet medical needs in the glaucoma market. Key elements of our strategy are to:

Successfully launch and commercialize Rhopressa® in North America. We own worldwide rights to all indications for Rhopressa® and we plan to retain commercialization rights in North American markets. We

S-7

Table of Contents

expect to launch Rhopressa® in the United States by mid-second quarter of 2018, and we anticipate having the first commercial sale within the United States by the second or third quarter of 2018. In December 2016, we hired a Chief Commercial Officer and have since hired several members of the commercialization leadership team. In connection with obtaining FDA approval of Rhopressa®, starting in the first quarter of 2018, we plan to further build out the commercial team in the United States by hiring approximately 100 sales representatives, and also plan to contract for formulary coverage for Rhopressa® with U.S. payers for both commercial and Medicare Part D prescription drug plans. We expect our sales organization to target approximately 12,000 high prescribing eye-care professionals throughout the United States.

Advance the development of Roclatan™ to approval. Roclatan™ achieved its primary efficacy endpoint of demonstrating statistical superiority of Roclatan™ to each of its components in the Mercury 1 readout in September 2016 and in the Mercury 2 readout in May 2017. The safety and tolerability results for Roclatan™ from Mercury 1 and Mercury 2 showed no drug-related serious adverse events and minimal drug-related systemic adverse events. We expect to submit an NDA for Roclatan™ in the second quarter of 2018.

Advance the development of Rhopressa® and Roclatan™ outside the United States to approval and commercialize on our own in Europe while potentially securing a commercialization partner in Japan. Our strategy includes developing our business outside of North America, including obtaining regulatory approval on our own for Rhopressa® and Roclatan™ in Europe and Japan. We completed Rocket 4 for Rhopressa®, which was designed to generate adequate six-month safety data for European regulatory approval, which we expect to file for in the second half of 2018. We initiated a Phase 2 clinical trial in the United States in the fourth quarter of 2017, which is designed in accordance with the requirements of Japan's PMDA, as a precursor to Phase 3 registration trials that are expected to be subsequently conducted in Japan for potential regulatory submission of Rhopressa® in Japan. With respect to Roclatan™, we commenced Mercury 3 in Europe during the third quarter of 2017, which is designed to compare Roclatan™ to Ganfort®, a fixed-dose combination product of bimatoprost and timolol marketed in Europe, which if successful, is expected to improve our commercialization prospects in that region. We currently expect to read out topline 90-day efficacy data for the trial by early 2019 and to submit a regulatory submission for European approval of Roclatan™ in the second half of 2019. If we obtain regulatory approval, we currently expect to commercialize our current or any future products in Europe on our own, and potentially partner for commercialization in Japan.

Continue to leverage and strengthen our intellectual property portfolio. We believe we have a strong intellectual property position relating to Rhopressa® and Roclatan™. Our intellectual property portfolio contains U.S. and foreign patents and pending U.S. and foreign patent applications related to composition of matter, pharmaceutical compositions, methods of use, and synthetic methods. We have patent protection for Rhopressa® and Roclatan™ in the United States through at least 2030.

Expand our product portfolio through internal discovery efforts, research collaboration arrangements and in-licensing or acquisitions of additional ophthalmic product candidates, products or technologies. We continue to seek to discover and develop new compounds in our research laboratories and employ a scientific staff with expertise in medicinal chemistry, analytical chemistry, biochemistry, cell biology, pharmacology and pharmaceutical science, and are currently focused on evaluating our portfolio of owned Rho kinase inhibitors for indications beyond ophthalmology. In addition, we may enter into additional research collaboration arrangements, license or acquire additional product candidates and technologies to broaden our presence in ophthalmology, and we continually explore and discuss potential additional opportunities for new ophthalmic products, delivery alternatives and new therapeutic areas. We are currently focused on the evaluation of technologies for the delivery of our owned molecules to the back of the eye over sustained periods, and plan to pursue further development of our preclinical molecules and technologies focused on retinal diseases.

Table of Contents

Recent Developments

FDA Approval

On December 18, 2017, the FDA approved Rhopressa® for the reduction of elevated IOP in patients with open-angle glaucoma or ocular hypertension. The FDA approval decision was made two months ahead of the scheduled Prescription Drug User Fee Act (PDUFA) goal date of February 28, 2018.

FDA approval means that we can begin marketing Rhopressa® for the approved indication in the United States and we are implementing our plans to do so. We expect to launch Rhopressa® in the United States by mid-second quarter of 2018, and we anticipate having the first commercial sale within the United States by the second or third quarter of 2018. We hired a Chief Commercial Officer in December 2016 to oversee the commercialization process and have since hired several members of the commercialization leadership team, and, starting in the first quarter of 2018, we plan to further build out the commercial team in the United States by hiring approximately 100 sales representatives who will target approximately 12,000 high prescribing eye-care professionals throughout the United States. We also plan to contract for formulary coverage for Rhopressa® with U.S. payers for both commercial and Medicare Part D prescription drug plans, and have started that process. To date, we have relied on, and for the foreseeable future, we anticipate that we will continue to rely on third-party manufacturers for the commercial production of Rhopressa®, and our current contract manufacturer has started producing commercial supply of Rhopressa®.

See Risk Factors Additional Risks Relating to this Offering Our prospects are highly dependent on the successful commercialization of Rhopressa®, which received approval from the FDA in December 2017 for the reduction of elevated IOP in patients with open-angle glaucoma or ocular hypertension. To the extent that Rhopressa® is not commercially successful, our business, financial condition and results of operations will be materially adversely affected and the price of our common stock will materially decline elsewhere in this prospectus supplement.

At-the-Market Sales

On December 19, 2017, we entered into the ATM Sales Agreement with Cantor Fitzgerald & Co., acting as agent, pursuant to which we may offer and sell, from time to time through Cantor Fitzgerald & Co., shares of our common stock, par value \$0.001 per share, having an aggregate offering price of up to \$75.0 million. As of January 23, 2018, we sold 1,251,112 shares of common stock under the ATM Sales Agreement, of which 45,105 shares have not yet settled. As of January 23, 2018, we have fully utilized the ATM Sales Agreement for expected aggregate net proceeds of approximately \$74.0 million.

Certain Preliminary Financial Information as of December 31, 2017

As of December 31, 2017, we had approximately \$250 million of cash, cash equivalents and investments. This amount gives effect to the issuance and sale of 204,180 shares of common stock under the ATM Sales Agreement for aggregate net proceeds of approximately \$12 million during the three months ended December 31, 2017.

The amount presented above is a preliminary financial estimate based solely upon information available to us as of the date of this prospectus supplement and is subject to the completion of our financial closing procedures, which have not yet been completed. Our actual cash, cash equivalents and investments as of December 31, 2017 will not be available until after this offering is completed, and may differ materially from this preliminary estimate. Accordingly, you should not place undue reliance upon this preliminary estimate. During the course of the preparation of our audited financial statements and related notes, additional items that would require material adjustments to be made to the preliminary estimate may be identified. The preliminary estimate

S-9

is subject to risks and uncertainties, many of which are not within our control. See **Risk Factors** in our Annual Report on Form 10-K for the year ended December 31, 2016 and our Quarterly Report on Form 10-Q for the quarterly period ended September 30, 2017, each incorporated by reference herein, and **Special Note Regarding Forward-Looking Statements**.

The preliminary estimate presented above has been prepared by and is the responsibility of our management. Our independent accountant, PricewaterhouseCoopers LLP, has not audited, reviewed, compiled or performed any procedures with respect to the preliminary estimate. Accordingly, PricewaterhouseCoopers LLP does not express an opinion or any other form of assurance with respect thereto.

The preliminary estimate presented above does not present all information necessary for an understanding of our financial condition as of December 31, 2017, and should not be viewed as a substitute for full financial statements prepared in accordance with accounting principles generally accepted in the United States of America. In addition, the preliminary estimate is not necessarily indicative of our future financial condition.

Corporate Information

Our principal executive offices are located at 2030 Main Street, Suite 1500, Irvine, California 92614, and our telephone number is (949) 526-8700. We also have offices in Bedminster, New Jersey, Durham, North Carolina and Dublin, Ireland. We were incorporated in Delaware in June 2005. Our internet address is <http://www.aeriepharma.com>. The information found on our website is not incorporated by reference into this prospectus supplement.

Implications of No Longer Being an Emerging Growth Company

We are no longer an emerging growth company, as defined in the Jumpstart Our Business Startups Act of 2012, since the market value of our common stock held by non-affiliates exceeded \$700 million as of June 30, 2017, as of the year ended December 31, 2017. As a result, beginning with our Annual Report on Form 10-K for the year ended December 31, 2017, we will be subject to Section 404(b) of the Sarbanes-Oxley Act, which requires that our independent registered public accounting firm provide an attestation report on the effectiveness of our internal control over financial reporting.

THE OFFERING

Common stock offered by us	1,266,892 shares.
Common stock to be outstanding immediately after this offering	37,693,722 shares.
Option to purchase additional shares	We have granted the underwriters an option for 30 days from the date of this prospectus supplement to purchase up to an additional 190,033 shares of common stock.
Use of proceeds	We currently intend to use the net proceeds from this offering for general corporate purposes, including to fund expansion of our commercialization programs in North America for both Rhopressa [®] and Roclatan [™] , our clinical and commercialization efforts beyond North America, further development of other potential pipeline opportunities, including activities to support the ongoing development of our retina programs and evaluating possible uses of our existing proprietary portfolio of molecules beyond ophthalmology, our external business development efforts, and our manufacturing activities, including the construction of our own manufacturing plant in Ireland. See Use of Proceeds.
Nasdaq Global Market symbol	AERI.
Risk factors	Investing in our common stock involves risks. Please see Risk Factors on page S-12 of this prospectus supplement and page 6 of the accompanying base prospectus, and in the documents incorporated by reference herein, to read about factors you should consider before deciding to purchase shares of our common stock.

The number of shares of our common stock to be outstanding immediately after this offering is based on 36,426,830 shares of common stock outstanding as of September 30, 2017, and excludes as of such date:

6,237,959 shares of common stock issuable upon the exercise of stock options outstanding as of September 30, 2017, under our equity compensation and inducement award plans, having a weighted average exercise price of \$20.56 per share;

Edgar Filing: AERIE PHARMACEUTICALS INC - Form 424B5

536,756 shares of common stock reserved as of September 30, 2017 for future issuance under our 2013 Employee Stock Purchase Plan;

1,504,132 shares of common stock reserved as of September 30, 2017 for future issuance under our Amended and Restated Equity Plan;

241,000 shares of common stock reserved as of September 30, 2017 for future issuance under our Inducement Award Plan;

380,982 shares of common stock issuable upon the exercise of warrants outstanding as of September 30, 2017, having a weighted average exercise price of \$2.10 per share;

any shares of common stock issuable upon conversion of the 2014 Convertible Notes; and

1,251,112 shares of common stock sold under the ATM Sales Agreement. See Recent Developments At-the-Market Sales.

If the underwriters' option to purchase additional shares of common stock is exercised in full, we will issue and sell an additional 190,033 shares of common stock and will have 37,883,755 shares of common stock outstanding after the offering.

Unless otherwise indicated, all information in this prospectus supplement assumes no exercise of the underwriters' option to purchase additional shares of common stock.

Table of Contents

RISK FACTORS

You should consider carefully the risks described below and discussed under the section captioned Risk Factors contained in our Annual Report on Form 10-K for the year ended December 31, 2016 and our Quarterly Report on Form 10-Q for the quarterly period ended September 30, 2017, each of which is incorporated by reference in this prospectus supplement, together with other information in this prospectus supplement, and the information and documents incorporated by reference in this prospectus supplement, and any free writing prospectus with respect to this offering filed by us with the SEC, before you make a decision to invest in our common stock. The risks and uncertainties described below are not the only ones we face. Other risks and uncertainties, including those that we do not currently consider material, may impair our business. If any of these risks actually occur, our business, financial condition, operating results or cash flows could be materially adversely affected. This could cause the trading price of our common stock to decline.

Additional Risks Relating to this Offering

Our management will have broad discretion in the use of the net proceeds from this offering and may allocate the net proceeds from this offering in ways that you and other stockholders may not approve.

Our management will have broad discretion in the use of the net proceeds, including for any of the purposes described in the section entitled Use of Proceeds, and you will not have the opportunity as part of your investment decision to assess whether the net proceeds are being used appropriately. Because of the number and variability of factors that will determine our use of the net proceeds from this offering, their ultimate use may vary substantially from their currently intended use. The failure of our management to use these funds effectively could have a material adverse effect on our business, cause the market price of our common stock to decline and delay the commercialization of Rhopressa® and the development of our current or any future product candidates. Pending their use, we may invest the net proceeds from this offering in short-term, investment-grade, interest-bearing instruments and U.S. government securities. These investments may not yield a favorable return to our stockholders.

We may sell additional equity or debt securities, which may result in dilution to our stockholders and impose restrictions on our business.

In order to raise additional funds to support our operations, or if we decide based on ongoing forecast updates, new strategic initiatives, market conditions or for other reasons that additional financings are desirable or needed, we may, at any time, sell additional equity or debt securities, which would result in dilution to all of our stockholders or impose restrictive covenants that adversely impact our business. See Dilution. For example, subsequent to September 30, 2017, we sold 1,251,112 shares of common stock under the ATM Sales Agreement. See Summary Recent Developments At-the-Market Sales. The incurrence of indebtedness would result in increased fixed payment obligations and could also result in restrictive covenants, such as limitations on our ability to incur additional debt, limitations on our ability to acquire, sell or license intellectual property rights and other operating restrictions that could adversely impact our ability to conduct our business. If we are unable to expand our operations or otherwise capitalize on our business opportunities, our business, financial condition and results of operations could be materially adversely affected.

Because we do not intend to declare cash dividends on our shares of common stock in the foreseeable future, stockholders must rely on appreciation of the value of our common stock for any return on their investment.

We have never declared or paid cash dividends on our common stock. We currently anticipate that we will retain future earnings, if any, for the development, operation and expansion of our business and do not anticipate declaring

or paying any cash dividends in the foreseeable future. In addition, the terms of any existing or future debt agreements may preclude us from paying dividends. As a result, we expect that only appreciation of the price of our common stock, if any, will provide a return to investors in this offering for the foreseeable future.

S-12

Table of Contents

You will experience immediate dilution in the book value per share of the common stock you purchase.

Because the price per share of our common stock being offered may be higher than the book value per share of our common stock, you may suffer immediate substantial dilution in the net tangible book value of the common stock you purchase in this offering. See **Dilution** for a more detailed discussion of the dilution you will incur if you purchase common stock in this offering.

Our prospects are highly dependent on the successful commercialization of Rhopressa[®], which received approval from the FDA in December 2017 for the reduction of elevated IOP in patients with open-angle glaucoma or ocular hypertension. To the extent that Rhopressa[®] is not commercially successful, our business, financial condition and results of operations will be materially adversely affected and the price of our common stock will materially decline.

Rhopressa[®] is our only product that has been approved for sale by the FDA. We have not yet begun to commercialize Rhopressa[®] and the commercial launch of Rhopressa[®] is not expected until mid-second quarter of 2018. We have invested a significant portion of our activities and resources toward the development of Rhopressa[®], and we believe our prospects are highly dependent on, and a significant portion of the value of our company relates to, our ability to successfully commercialize Rhopressa[®] in the United States.

Successful commercialization of Rhopressa[®] is subject to many risks. We have never, as an organization, launched or commercialized a product, and there is no guarantee that we will be able to do so successfully with Rhopressa[®] for its approved indication, the reduction of elevated IOP in patients with open-angle glaucoma or ocular hypertension. There are numerous examples of other companies that have experienced unsuccessful product launches and failed to meet high expectations of market potential, including pharmaceutical companies with significantly more experience and resources than us.

The future success of Rhopressa[®], including the expected timing of the commercial launch, and the rate and degree of market acceptance, of Rhopressa[®] in the United States, will depend on a number of factors, including:

the efficacy and safety of Rhopressa[®] in a larger number of patients and in broader populations than those demonstrated in our clinical trials;

our ability to manufacture sufficient commercial supplies of Rhopressa[®] in compliance with regulatory requirements;

the effectiveness of our sales and marketing efforts;

the timing of market introduction of Rhopressa[®];

the ability of Rhopressa[®] to successfully compete against other products;

acceptance by eye-care professionals, the medical community and patients of Rhopressa® as a safe and effective product;

the potential and perceived advantages of Rhopressa® over alternative products;

the ability to distinguish safety and efficacy from existing alternatives;

the willingness of eye-care professionals to prescribe and patients to use Rhopressa® and continue to use Rhopressa® instead of alternative products;

the prevalence and severity of adverse side effects;

the convenience of prescribing, administering and initiating patients on Rhopressa®;

the potential and perceived value and relative cost of Rhopressa® over alternative products, including generic products or treatments;

the availability of coverage and adequate reimbursement and pricing by third-party payors and government authorities;

Table of Contents

the successful completion of any clinical trials, regulatory approval and commercialization of Rhopressa® for one or more label expansion indications; and

our ability to enforce our intellectual property rights with respect to Rhopressa®.

While our current contract manufacturer has started commercial production of Rhopressa® and we have established our commercial team, we will need to incur significant additional expenses and commit significant additional management time to further develop our manufacturing and commercialization capabilities and to hire, develop and train a sales force in order to be prepared to successfully coordinate the launch and commercialization of Rhopressa® in the United States. We may not be able to successfully establish these capabilities on our expected timing or at all. Even if we are successful in developing effective manufacturing capabilities and building out our commercial team and sales force, there are many factors that could cause the launch and commercialization of Rhopressa® to be unsuccessful and/or delayed, including a number of factors that are outside our control.

The commercial success of Rhopressa® depends on the extent to which eye-care professionals and patients accept and adopt Rhopressa® as a product for the reduction of elevated IOP in patients with open-angle glaucoma or ocular hypertension, and we do not know whether our or others' revenue estimates in this regard will be accurate. For example, if the patient population suffering from open-angle glaucoma or ocular hypertension is smaller than we estimate or if eye-care professionals are unwilling to prescribe or patients are unwilling to try and then continue to use Rhopressa®, the commercial potential of Rhopressa® will be limited. We also do not know how eye-care professionals, patients and third-party payors will respond to the pricing of Rhopressa®. In particular, our insight into pricing sensitivity may be delayed because as part of our initial launch strategy we intend to provide some free product as samples during a trial period, and do not know whether eye-care professionals and patients that initially use Rhopressa® will continue to do so after using the free product samples. Eye-care professionals may not prescribe Rhopressa® and patients may be unwilling to use Rhopressa® if coverage is not provided or reimbursement is inadequate to cover a significant portion of the cost, and we may find it necessary or desirable to provide rebates on Rhopressa® to customers or third-party payors or to implement patient assistance programs, including co-pay assistance programs, which could materially adversely affect our profitability.

While the FDA granted approval of Rhopressa® based on the data included in the NDA, we do not know whether the results when a larger number of patients in broader populations are exposed to Rhopressa®, including results related to safety and efficacy, will be consistent with the results from our earlier clinical studies of Rhopressa® that served as the basis of FDA approval of Rhopressa®. New data relating to Rhopressa®, including from any adverse event reports or any negative results during clinical development for additional indications of Rhopressa®, may adversely impact the commercial results and potential of Rhopressa®. Thus, significant uncertainty remains regarding the commercial potential success of Rhopressa®. In addition, such new data or any serious or unexpected side effects caused by Rhopressa® may result in a number of potentially significant negative consequences, including:
