Form 20-F/A
January 26, 2011

UNITED STATES
SECURITIES AND EXCHANGE COMMISSION
WASHINGTON, D.C. 20549

FORM 20-F/A
Amendment No. 1

(Mark One)

REGISTRATION STATEMENT PURSUANT TO SECTION 12(b) OR (g) OF THE SECURITIES EXCHANGE ACT OF 1934

OR

ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the fiscal year ended December 31, 2009

OR

TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

OR

SHELL COMPANY REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

Date of event requiring this shell company report.....

For the transition period from _____ to _____

Commission file number 001-33905

UR-ENERGY INC.
(Exact name of Registrant as specified in its charter)

N/A
(Translation of Registrant's name into English)

Canada
(Jurisdiction of incorporation or organization)

10758 W. Centennial Road, Suite 200, Littleton, Colorado 80127

Edgar Filing: UR-ENERGY INC - Form 20-F/A

(Address of principal executive offices)

Roger Smith, 720-981-4588, roger.smith@ur-energyusa.com, 10758 W. Centennial Road, Suite 200, Littleton,
Colorado 80127

(Name, Telephone, E-mail and/or Facsimile number and Address of Corporation Contact Person)

Securities registered or to be registered pursuant to Section 12(b) of the Act.

Title of each class	Name of each exchange on which registered
Common Shares, no par value	NYSE Amex

Securities registered or to be registered pursuant to Section 12(g) of the Act.

None
(Title of Class)

Securities for which there is a reporting obligation pursuant to Section 15(d) of the Act.

None
(Title of Class)

Indicate the number of outstanding shares of each of the issuer's classes of capital or common stock as of the close of the period covered by the annual report.

93,940,568

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act.

Yes No

If this report is an annual or transition report, indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934.

Yes No

Note – Checking the box above will not relieve any registrant required to file reports pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934 from their obligations under those Sections.

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days.

Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate website, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files).

Yes No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, or a non-accelerated filer. See definition of "accelerated filer and large accelerated filer" in Rule 12b-2 of the Securities Exchange Act of 1934. (Check One):

Large accelerated filer Accelerated filer Non-accelerated filer

Indicate by check mark which basis of accounting the registrant has used to prepare the financial statements included in this filing:

U.S. GAAP International Financial Reporting Standards as issued by the International Accounting Standards Board Other

If "Other" has been checked in response to the previous question, indicate by check mark which financial statement item the registrant has elected to follow.

Item 17 Item 18

If this is an annual report, indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Securities Exchange Act of 1934).

Yes No

(APPLICABLE ONLY TO ISSUERS INVOLVED IN BANKRUPTCY PROCEEDINGS DURING THE PAST FIVE YEARS)

Indicate by check mark whether the registrant has filed all documents and reports required to be filed by Sections 12, 13 or 15(d) of the Securities Exchange Act of 1934 subsequent to the distribution of securities under a plan confirmed by a court.

Yes No

PART I

This Amendment No. 1 (“Amendment No. 1”) to our Annual Report on Form 20-F (Annual Information Form) filed with the Securities and Exchange Commission for the fiscal year ended December 31, 2009 is being filed to include (i) a map showing the locations of the Lost Creek and Lost Soldier projects in Item 4B, (ii) a table providing the spot and long-term contract prices of uranium in Item 3A, (iii) information with respect to quantity and grade where contained pounds of U3O8 are referenced with respect to certain exploration targets in Items 4 and 5, and (iv) a further explanation of Indicated Mineral Resources and Mineral Reserves in connection with our technical reports in Item 4. In addition, this Amendment No. 1 changes throughout our Annual Report on Form 20-F (Annual Information Form) our references to the Corporation as a development stage company to an exploration stage company to comply with Industry Guide 7 definitions.

Other than the additions and changes mentioned in this note and conforming changes related thereto, no part of the Annual Report on Form 20-F (Annual Information Form) filed on www.sec.gov on March 12, 2010 is being amended, and this report continues to speak as of March 5, 2010, the date on which it was approved by our board of directors. The filing of this Amendment No. 1 should not be understood to mean that any statements contained herein are true or complete as of any date subsequent to March 5, 2010. Accordingly, this Amendment No. 1 should be read in conjunction with Annual Report on Form 20-F (Annual Information Form) for the fiscal year ended December 31, 2009 and the documents filed with and/or furnished to the Securities and Exchange Commission by the Corporation subsequent to March 12, 2010.

Introduction

Ur-Energy Inc. is incorporated under the laws of Canada and is referred to in this document, together with its subsidiaries, as "Ur-Energy" or the "Corporation" or the "Company".

The Corporation's consolidated financial statements are prepared in accordance with accounting principles generally accepted in Canada ("Canadian GAAP") and are presented in Canadian dollars unless otherwise indicated. All references in this Annual Report on Form 20-F (Annual Information Form) to financial information concerning the Corporation refer to such information in accordance with Canadian GAAP and all dollar amounts in this Annual Report on Form 20-F (Annual Information Form) are in Canadian dollars unless otherwise indicated.

In this document, cross-references relevant to the information being requested may be provided for ease of reference.

Forward-Looking Information

This Annual Report on Form 20-F (Annual Information Form) contains "forward-looking statements" within the meaning of applicable United States and Canadian securities laws. Shareholders can identify these forward-looking statements by the use of words such as "expect", "anticipate", "estimate", "believe", "may", "potential", "intends", "plans" and other similar expressions or statements that an action, event or result "may", "could" or "should" be taken, occur or be achieved, or the negative thereof or other similar statements. These statements are only predictions and involve known and unknown risks, uncertainties and other factors which may cause the Corporation's actual results, performance or achievements, or industry results, to be materially different from any future results, performance, or achievements expressed or implied by these forward-looking statements. Such statements include, but are not limited to: (i) the Corporation's belief that it will have sufficient cash to fund its capital requirements; (ii) receipt of (and related timing of) a United States Nuclear Regulatory Commission Source and Byproduct Material License; Wyoming Department of Environmental Quality Permit and License to Mine and all other necessary permits related to Lost Creek; (iii) Lost Creek and Lost Soldier will advance to production and the production timeline at Lost Creek scheduled for early 2011; (iv) production rates, timetables and methods at Lost Creek and Lost Soldier; (v) the

Corporation's procurement and construction plans at Lost Creek; (vi) the licensing process at Lost Soldier; (vii) the timing, the mine design planning and the preliminary assessment at Lost Soldier; (viii) the completion and timing of various exploration programs, including without limitation, those as LC North and LC South ; (ix) the potential of new exploration targets in the area of Lost Creek, including those at LC North and LC South, to contain 24 – 28 million pounds of U3O8 (not an NI 43-101 compliant resource); (x) timing, completion, and funding for and results of further exploration programs at the Bootheel Project and Hauber Project; and (xi) the community and regulatory issues with the Screech Lake project and related exploration. The potential quantity and grade ranges set forth in regards exploration targets at Lost Creek, LC North and LC South are conceptual in nature only. There has been insufficient exploration to define a mineral resource at the new exploration targets at Lost Creek, LC North and LC South. It is uncertain if further exploration will result in the target(s) being delineated as a mineral resource. These other factors include, among others, the following: future estimates for production, production start-up and operations (including any difficulties with startup), capital expenditures, operating costs, mineral resources, recovery rates, grades and prices; business strategies and measures to implement such strategies; competitive strengths; estimated goals; expansion and growth of the business and operations; plans and references to the Corporation's future successes; the Corporation's history of operating losses and uncertainty of future profitability; the Corporation's status as an exploration stage corporation; the Corporation's lack of mineral reserves; the hazards associated with mining construction and production; compliance with environmental laws and regulations; risks associated with obtaining permits in Canada and the United States; risks associated with current variable economic conditions; the possible impact of future financings; uncertainty regarding the pricing and collection of accounts; risks associated with dependence on sales in foreign countries; the possibility for adverse results in potential litigation; fluctuations in foreign exchange rates; uncertainties associated with changes in government policy and regulation; uncertainties associated with the Canadian Revenue Agency's audit of any of the Corporation's cross border transactions; adverse changes in general business conditions in any of the countries in which the Corporation does business; changes in the Corporation's size and structure; the effectiveness of the Corporation's management and its strategic relationships; risks associated with the Corporation's ability to attract and retain key personnel; uncertainties regarding the Corporation's need for additional capital; uncertainty regarding the fluctuations of the Corporation's quarterly results; uncertainties relating to the Corporation's status as a non-U.S. corporation; uncertainties related to the volatility of the Corporation's shares price and trading volumes; foreign currency exchange risks; ability to enforce civil liabilities under U.S. securities laws outside the United States; ability to maintain the Corporation's listing on the NYSE Amex (the "NYSE Amex") and Toronto Stock Exchange (the "TSX"); risks associated with the Corporation's possible status as a "passive foreign investment Corporation" or a "controlled foreign corporation" under the applicable provisions of the U.S. Internal Revenue Code of 1986, as amended; risks associated with the Corporation's investments and other risks and uncertainties described under the heading "Risk Factors" of this Annual Report on Form 20-F (Annual Information Form).

Table of Contents

Cautionary Note to U.S. Investors - Resource and Reserve Estimates

The terms “mineral reserve,” “proven mineral reserve” and “probable mineral reserve” used in the Corporation’s disclosure are Canadian mining terms that are defined in accordance with National Instrument 43-101 – Standards of Disclosure for Mineral Projects (“NI 43-101”) under the guidelines set out in the Canadian Institute of Mining, Metallurgy and Petroleum (the “CIM”) Best Practice Guidelines for the Estimation of Mineral Resource and Mineral Reserves (the “CIM Standards”), adopted by the CIM Council on November 23, 2003. These definitions differ from the definitions in the United States Securities and Exchange Commission (the “SEC”) Industry Guide 7 under the Securities Act of 1933, as amended (the “Securities Act”). Under Industry Guide 7 standards, mineralization may not be classified as a “reserve” unless the determination has been made that the mineralization could be economically and legally produced or extracted at the time the reserve determination is made. Under Industry Guide 7 standards, a “final” or “bankable” feasibility study is required to report reserves, the three-year historical average price is used in any reserve or cash flow analysis to designate reserves and the primary environmental analysis or report must be filed with the appropriate governmental authority.

The terms “mineral resource,” “measured mineral resource,” “indicated mineral resource” and “inferred mineral resource” used in the Corporation’s disclosure are Canadian mining terms that are defined in accordance with NI 43-101 under the guidelines set out in the CIM Standards; however, these terms are not defined terms under Industry Guide 7 and are normally not permitted to be used in reports and registration statements filed with the SEC. Investors are cautioned not to assume that any part or all of mineral deposits in these categories will ever be converted into reserves. “Inferred mineral resources” have a great amount of uncertainty as to their existence, and great uncertainty as to their economic feasibility. It cannot be assumed that all or any part of an inferred mineral resource will ever be upgraded to a higher category. Under Canadian rules, estimates of inferred mineral resources may not form the basis of feasibility or pre-feasibility studies, except in rare cases. Investors are cautioned not to assume that all or any part of an inferred mineral resource exists or is economically mineable.

Accordingly, information contained in this report containing descriptions of the Corporation’s mineral deposits may not be comparable to similar information made public by U.S. companies subject to the reporting and disclosure requirements under the United States federal securities laws and the rules and regulations thereunder.

Metric/Imperial Conversion Table

The imperial equivalents of the metric units of measurement used in this Annual Report on Form 20-F (Annual Information Form) are as follows:

Metric Unit	Imperial Equivalent
gram	0.03215 troy ounces
hectare	2.4711 acres
kilogram	2.2046223 pounds
kilometer	0.62139 miles
meter	3.2808 feet
tonne	1.1023 short tons

Item 1. Identity of Directors, Senior Management and Advisers.

Not applicable.

Page 2

Table of Contents

Item 2. Offer Statistics and Expected Timetable.

Not applicable.

Item 3. Key Information.

A. Selected financial data.

The following table summarizes certain of the Corporation's selected financial information (stated in thousands of Canadian dollars) prepared in accordance with Canadian GAAP. The information in the table was derived from the more detailed financial statements for the periods ended December 31, 2005 through the fiscal year ended December 31, 2009, inclusive, and the related notes, and should be read in conjunction with the financial statements and with the information appearing under the headings Item 5 – Operating and Financial Review and Prospects and Item 17 – Financial Statements.

Historical results are not necessarily indicative of results to be expected for any future period. No dividends have been paid in any of the fiscal years ended December 31, 2005 through the fiscal year ended December 31, 2009.

	2009	2008	2007	2006	2005

Currency and Exchange Rates

The following table sets out the exchange rates for currencies expressed in terms of equivalent Canadian dollars for one U.S. dollar:

Canadian dollar	Years ended December 31,					
	2009	2008	2007	2006	2005	
End of period	\$ 1.04940	\$ 1.22280	\$ 0.98200	\$ 1.16640	\$ 1.16600	
Average for the period	\$ 1.14235	\$ 1.06669	\$ 1.07440	\$ 1.13461	\$ 1.21173	
	September	October	November	December	January	February
Canadian dollar	2009	2009	2009	2009	2010	2010
High for the month	\$ 1.10440	\$ 1.08550	\$ 1.08520	\$ 1.06830	\$ 1.07090	\$ 1.07310
Low for the month	\$ 1.06490	\$ 1.02690	\$ 1.04760	\$ 1.04210	\$ 1.02670	\$ 1.03960

Exchange rates are the historical interbank foreign exchange rates for the appropriate period as quoted by OANDA Corporation on its website www.oanda.com. The rate quoted by OANDA for the conversion of United States dollars into Canadian dollars on March 5, 2010 is CDN\$1.0314 = US\$1.00.

Unlike other commodities, uranium does not trade on an open market. Contracts are negotiated privately by buyers and sellers. Uranium prices are published by two of the leading industry-recognized independent market consultants The Ux Consulting Company, LLC and TradeTech, LLC who publish on their respective websites at <http://www.uxc.com/> and <http://www.uranium.info>. The following information reflects an average of the prices published by these two consulting groups for the timeframe indicated:

12.31 of [year]	2007	2008	2009				
Spot price	\$ 89.50	\$ 52.50	\$ 44.50				
LT price	\$ 95	\$ 70	\$ 61				
	End of [month]	Sept 2009	Oct 2009	Nov 2009	Dec 2009	Jan 2010	Feb 2010
Spot price		\$ 42.88	\$ 48	\$ 45.38	\$ 44.50	\$ 42.38	\$ 41.13
LT price		\$ 64.50	\$ 64.50	\$ 61	\$ 61	\$ 61	\$ 60

B. Capitalization and indebtedness.

Not applicable.

C. Reasons for the offer and use of proceeds.

Not applicable.

D. Risk factors.

The Corporation operates in a dynamic and rapidly changing environment that involves numerous risks and uncertainties. The risks described below should be considered carefully when assessing an investment in the common

shares of the Corporation (the “Common Shares”). The occurrence of any of the following events could harm the Corporation. If these events occur, the trading price of the Corporation’s Common Shares could decline, and shareholders may lose part or even all of their investment.

The Corporation faces numerous risks as an exploration stage company.

The Corporation is engaged in the business of acquiring and exploring mineral properties in the hope of locating economic deposits of minerals. The Corporation’s property interests are in the exploration stage. Accordingly, there is little likelihood that the Corporation will realize profits in the short term. Any profitability in the future from the Corporation’s business will be dependent upon development of an economic deposit of minerals and further exploration and development of other economic deposits of minerals, each of which is subject to numerous risk factors. Further, there can be no assurance, even when an economic deposit of minerals is located, that any of the Corporation's property interests can be commercially mined. The exploration and development of mineral deposits involve a high degree of financial risk over a significant period of time which a combination of careful evaluation, experience and knowledge of management may not eliminate. While discovery of additional ore-bearing structures may result in substantial rewards, few properties which are explored are ultimately developed into producing mines. It is impossible to ensure that the current exploration programs of the Corporation will result in profitable commercial mining operations. The profitability of the Corporation's operations will be, in part, directly related to the cost and success of its exploration and development programs which may be affected by a number of factors. Substantial expenditures are required to establish resources and reserves which are sufficient to commercially mine some of the Corporation's properties and to construct, complete and install mining and processing facilities in those properties that are actually mined and developed.

Table of Contents

The price of uranium is affected by demand.

The price of uranium fluctuates. The future direction of the price of uranium will depend on numerous factors beyond the Corporation's control including international, economic and political trends, governmental regulations, expectations of inflation, currency exchange fluctuations, interest rates, global or regional consumption patterns, speculative activities and increased production due to new extraction developments and improved extraction and production methods. The effect of these factors on the price of uranium, and therefore on the economic viability of the Corporation's properties, cannot accurately be predicted. As the Corporation is only at the exploration stage, it is not yet possible for it to adopt specific strategies for controlling the impact of fluctuations in the price of uranium.

Permitting, licensing and approval processes are required for the Corporation's operations and obtaining and maintaining these permits and licenses is subject to many conditions which the Corporation may be unable to achieve.

Many of the operations of the Corporation require licenses and permits from various governmental authorities. The Corporation believes it holds or is in the process of obtaining all necessary licenses and permits to carry on the activities which it is currently conducting or proposes to conduct under applicable laws and regulations. Such licenses and permits are subject to changes in regulations and changes in various operating circumstances. There can be no guarantee that the Corporation will be able to obtain all necessary licenses and permits that may be required to maintain its exploration and mining activities including constructing mines or milling facilities and commencing operations of any of its exploration properties. In addition, if the Corporation proceeds to production on any exploration property, it must obtain and comply with permits and licenses which may contain specific operating conditions. There can be no assurance that the Corporation will be able to obtain such permits and licenses or that it will be able to comply with any such conditions.

The Corporation's operations are subject to environmental risks and compliance with environmental regulations which are increasing and costly.

Environmental legislation and regulation is evolving in a manner which will require stricter standards and enforcement, increased fines and penalties for non-compliance, more stringent environmental assessments of proposed projects and a heightened degree of responsibility for companies and their officers, directors and employees. Compliance with environmental quality requirements and reclamation laws imposed by federal, state, provincial, and local governmental authorities may require significant capital outlays, materially affect the economics of a given property, cause material changes or delays in intended activities, and potentially expose the Corporation to litigation. The Corporation cannot accurately predict or estimate the impact of any such future laws or regulations, or future interpretations of existing laws and regulations, on the Corporation's operations. Historic mining activities have occurred on and around certain of the Corporation's properties. If such historic activities have resulted in releases or threatened releases of regulated substances to the environment, potential for liability may exist under federal or state remediation statutes.

The only market for uranium is nuclear power plants worldwide, and there are a limited number of customers.

The marketability of uranium and acceptance of uranium mining is subject to numerous factors beyond the control of the Corporation. The price of uranium may experience volatile and significant price movements over short periods of time. Factors affecting the market and price include demand for nuclear power, political and economic conditions in uranium mining, producing and consuming countries, reprocessing of spent fuel and the re-enrichment of depleted uranium tails or waste, sales of excess civilian and military inventories (including from the dismantling of nuclear weapons) by governments and industry participants, and production levels and costs of production in geographical areas such as Russia, Africa and Australia.

Deregulation of the electrical utility industry and acceptance of nuclear energy affects the demand for uranium.

The Corporation's future prospects are tied directly to the electrical utility industry worldwide. Deregulation of the utility industry, particularly in the United States and Europe, is expected to affect the market for nuclear and other fuels for years to come, and may result in a wide range of outcomes including the expansion or the premature shutdown of nuclear reactors. Maintaining the demand for uranium at current levels and future growth in demand will depend upon acceptance of the nuclear technology as a means of generating electricity. Lack of public acceptance of nuclear technology would adversely affect the demand for nuclear power and potentially increase the regulation of the nuclear power industry.

Table of Contents

The Corporation's share price is subject to significant fluctuations.

The value of the Corporation's Common Shares could be subject to significant fluctuations in response to variations in quarterly and yearly operating results, the success of the Corporation's business strategy, competition, financial markets, commodity prices or applicable regulations which may affect the business of the Corporation and other factors.

While the Corporation has mineral resources, it currently does not have any mineral reserves. Calculations of mineral resources and recovery are only estimates, and there can be no assurance about the quantity and grade of minerals until reserves or resources are actually mined.

Until reserves or resources are actually mined and processed, the quantity of reserves or resources and grades must be considered as estimates only. In addition, the quantity of reserves or resources may vary depending on commodity prices. Any material change in the quantity of resources, grade, or production costs may affect the economic viability of the Corporation's properties.

The Corporation is dependent on key personnel, contractors and service providers, the loss of whom could harm the Corporation's business.

Shareholders will be relying on the good faith, experience and judgment of the Corporation's management and advisors in supervising and providing for the effective management of the business and the operations of the Corporation and in selecting and developing new investment and expansion opportunities. The Corporation may need to recruit additional qualified employees, contractors and service providers to supplement existing management, the availability of which cannot be assured. The Corporation will be dependent on a relatively small number of key persons including specifically W. William Boberg, President and Chief Executive Officer, Harold Backer, Executive Vice President, Geology & Exploration and Wayne Heili, Vice President Mining & Engineering, the loss of any one of whom could have an adverse effect on the Corporation's business and operations. The Corporation does not hold key man insurance in respect of any of its executive officers.

Mining operations involve a high degree of risk and the results of exploration and ultimate productions are highly uncertain.

The exploration for, and development of, mineral deposits involves significant risks which a combination of careful evaluation, experience and knowledge may not eliminate. While the discovery of an ore body may result in substantial rewards, few properties which are explored are ultimately developed into producing mines. Major expenses may be required to establish ore reserves, to develop metallurgical processes and to construct mining and processing facilities at a particular site. It is impossible to ensure that the current exploration and development programs planned by the Corporation will result in a profitable commercial operation.

Whether a mineral deposit will be commercially viable depends on a number of factors, some of which are the particular attributes of the deposit, such as size, grade and proximity to infrastructure, as well as uranium prices which are highly cyclical and government regulations, including regulations relating to prices, taxes, royalties, land tenure, land use, importing and exporting of uranium and environmental protection. The exact effect of these factors cannot be accurately predicted, but the combination of these factors may result in the Corporation not receiving an adequate return on invested capital.

Mining operations generally involve a high degree of risk. The Corporation's operations will be subject to all the hazards and risks normally encountered in the exploration and development of uranium, including unusual and unexpected geology formations, flooding and other conditions involved in the drilling and removal of material, any of

which could result in damage to, or destruction of, mines and other producing facilities, damage to life or property, environmental damage and possible legal liability.

The Corporation's operations are subject to many regulatory requirements.

The Corporation's business is subject to various federal, state, provincial and local laws governing prospecting and development, taxes, labor standards and occupational health, mine and radiation safety, toxic substances, environmental protection and other matters. Exploration and development are also subject to various federal, state, provincial and local laws and regulations relating to the protection of the environment. These laws impose high standards on the mining industry to monitor the discharge of waste water and report the results of such monitoring to regulatory authorities, to reduce or eliminate certain effects on or into land, water or air, to progressively restore mine properties, to manage hazardous wastes and materials and to reduce the risk of worker accidents. A violation of these laws may result in the imposition of substantial fines and other penalties and potentially expose the Corporation to litigation. There can be no assurance that the Corporation will be able to meet all the regulatory requirements in a timely manner or without significant expense or that the regulatory requirements will not change to delay or prohibit the Corporation from proceeding with certain exploration and development.

Table of Contents

Possible Amendment to Mining Law of 1872 may significantly impact the Corporation's ability to develop certain unpatented mining claims.

Members of the United States Congress have repeatedly introduced bills which would supplant or alter the provisions of the United States Mining Law of 1872, as amended. If enacted, such legislation could change the cost of holding unpatented mining claims and could significantly impact the Corporation's ability to develop mineralized material on unpatented mining claims. Such bills have proposed, among other things, to either eliminate or greatly limit the right to a mineral patent and to impose a federal royalty on production from unpatented mining claims. Although it is impossible to predict at this point what any legislated royalties might be, enactment could adversely affect the potential for development of such mining claims and the economics of existing operating mines on federal unpatented mining claims. Passage of such legislation could adversely affect the financial performance of the Corporation.

Competition from larger or better capitalized companies may affect the Corporation's Common Share price and the Corporation's ability to acquire properties.

The international uranium industry is highly competitive. The Corporation's activities are directed toward the search, evaluation, acquisition and development of uranium deposits. There is no certainty that the expenditures to be made by the Corporation will result in discoveries of commercial quantities of uranium deposits. There is aggressive competition within the mining industry for the discovery and acquisition of properties considered to have commercial potential. The Corporation will compete with other interests, many of which have greater financial resources than it will have, for the opportunity to participate in promising projects. Significant capital investment is required to achieve commercial production from successful exploration and development efforts.

Nuclear energy competes with other sources of energy, including oil, natural gas, coal and hydro-electricity. These other energy sources are to some extent interchangeable with nuclear energy, particularly over the longer term. Lower prices of oil, natural gas, coal and hydro-electricity may result in lower demand for uranium concentrate and uranium conversion services. Furthermore, the growth of the uranium and nuclear power industry beyond its current level will depend upon continued and increased acceptance of nuclear technology as a means of generating electricity. Because of unique political, technological and environmental factors that affect the nuclear industry, the industry is subject to public opinion risks which could have an adverse impact on the demand for nuclear power and increase the regulation of the nuclear power industry.

Uncertain global economic conditions will affect the Corporation and its Common Share price.

Current conditions in the domestic and global economies are uncertain. There continues to be a high level of market instability and market volatility with unpredictable and uncertain financial market projections. The impacts of a global recession or depression, commodity price fluctuations, the availability of capital and the acceptance of nuclear energy may have consequences on the Corporation and its share price. In addition, it could have consequences on the nuclear industry's ability to finance future construction of nuclear generating facilities. Global financial problems and lack of confidence in the strength of global financial institutions have created many economic and political uncertainties that have impacted the global economy. As a result, it is difficult to estimate the level of growth for the world economy as a whole. It is even more difficult to estimate growth in various parts of the world economy, including the markets in which the Corporation participates. All components of the Corporation's budgeting and forecasting are dependent on commodity prices and their fluctuations as well as political acceptance and policy. The prevailing economic uncertainties render estimates of future expenditures difficult.

The Corporation will need to obtain additional funding in the medium to long term in order to implement the Corporation's business plan, and the inability to obtain it could cause the Corporation's business plan to fail.

Additional funds will be required for future exploration, development and production. The source of future funds available to the Corporation is through the sale of additional equity capital, proceeds from the exercise of convertible equity instruments outstanding or borrowing of funds. There is no assurance that such funding will be available to the Corporation. Furthermore, even if such financing is successfully completed, there can be no assurance that it will be obtained on terms favorable to the Corporation or will provide the Corporation with sufficient funds to meet its objectives, which may adversely affect the Corporation's business and financial position. In addition, any future equity financings by the Corporation may result in substantial dilution for existing shareholders of the Corporation.

Table of Contents

The Corporation lacks a history of earnings and dividend record.

The Corporation has no earnings or dividend record. It has not paid dividends on its Common Shares since incorporation and does not anticipate doing so in the foreseeable future. Payments of any dividends will be at the discretion of the board of directors of the Corporation after taking into account many factors, including the Corporation's financial condition and current and anticipated cash needs.

The impact of hedging activities may affect the Corporation's profitability.

Although the Corporation has no present intention to do so, it may hedge a portion of its future uranium production to protect it against low uranium prices and/or to satisfy covenants required to obtain project financings. Hedging activities are intended to protect the Corporation from the fluctuations of the price of uranium and to minimize the effect of declines in uranium prices on results of operations for a period of time. Although hedging activities may protect a company against low uranium prices, they may also limit the price that can be realized on uranium that is subject to forward sales and call options where the market price of uranium exceeds the uranium price in a forward sale or call option contract.

The Corporation's title to certain properties may be uncertain.

Although the Corporation has obtained title opinions with respect to certain of its properties and has taken reasonable measures to ensure proper title to its properties, there is no guarantee that title to any of its properties will not be challenged or impugned. Third parties may have valid claims underlying portions of the Corporation's interests. The Corporation's mineral properties in the United States consist of leases to private mineral rights, leases covering state lands and unpatented mining claims. Many of the Corporation's mining properties in the United States are unpatented mining claims to which the Corporation has only possessory title. Because title to unpatented mining claims is subject to inherent uncertainties, it is difficult to determine conclusively ownership of such claims. These uncertainties relate to such things as sufficiency of mineral discovery, proper posting and marking of boundaries and possible conflicts with other claims not determinable from descriptions of record. The present status of the Corporation's unpatented mining claims located on public lands allows the Corporation the exclusive right to mine and remove valuable minerals. The Corporation is allowed to use the surface of the public lands solely for purposes related to mining and processing the mineral-bearing ores. However, legal ownership of the land remains with the United States. The Corporation remains at risk that the mining claims may be forfeited either to the United States or to rival private claimants due to failure to comply with statutory requirements. The Corporation has taken or will take all curative measures to ensure proper title to its properties where necessary and where possible.

The Corporation may be subject to aboriginal land claims.

Certain properties in which the Corporation has an interest may be the subject of aboriginal land claims. As a result of these claims, the Corporation may be significantly delayed or unable to pursue exploration and production activities in respect of these properties or may have to expend considerable management resources and funds to adequately meet the regulatory requirements to pursue activities in respect of these properties.

Some hazards which the Corporation may face are uninsurable.

The Corporation currently carries insurance coverage for general liability, directors' and officers' liability and other matters. The Corporation intends to carry insurance to protect against certain risks in such amounts as it considers adequate. The nature of the risks the Corporation faces in the conduct of its operations is such that liabilities could exceed policy limits in any insurance policy or could be excluded from coverage under an insurance policy. The potential costs that could be associated with any liabilities not covered by insurance or in excess of insurance coverage

or compliance with applicable laws and regulations may cause substantial delays and require significant capital outlays, adversely affecting the Corporation's business and financial position.

Table of Contents

The Corporation's board of directors may face the possibility of conflicts of interest with other resource companies with which they are involved.

Certain directors of the Corporation also serve as directors and officers of other companies involved in natural resource exploration, development and production. Consequently, there exists the possibility that such directors will be in a position of conflict of interest. Any decision made by such directors involving the Corporation will be made in accordance with their duties and obligations to deal fairly and in good faith with the Corporation and such other companies. In addition, such directors will declare, and refrain from voting on, any matter in which such directors may have a material interest.

U.S. holders of the Corporation's shares may have potential adverse U.S. Federal Income Tax consequences.

A non-U.S. corporation generally will be considered a "passive foreign investment company" (a "PFIC") as such term is defined in the U.S. Internal Revenue Code of 1986, as amended (the "Code") for any taxable year if either (1) at least 75% of its gross income is passive income or (2) at least 50% of the value of its assets is attributable to assets that produce or are held for the production of passive income. If the Corporation were treated as a PFIC for any taxable year in which a U.S. holder held the Corporation's shares, certain adverse consequences could apply, including a material increase in the amount of tax that the U.S. holder would owe, an imposition of tax earlier than would otherwise be imposed, interest charges and additional tax form filing requirements.

The determination of whether a corporation is a PFIC involves the application of complex tax rules. The Corporation has not made a conclusive determination as to whether it has been in prior tax years or is currently a PFIC. The Corporation could have qualified as a PFIC for past tax years and may qualify as a PFIC currently or in future tax years. However, no assurance can be given as to such status for prior tax years, for the current tax year or future tax years. U.S. holders of Corporation's shares are urged to consult their own tax advisors regarding the application of U.S. income tax rules.

The Corporation may lose its status as a foreign private issuer.

Ur-Energy is a "foreign private issuer," as such term is defined in Rule 405 under the Securities Act, and, therefore, it is not required to comply with all the periodic disclosure and current reporting requirements of the Securities Exchange Act of 1934, as amended (the "Exchange Act"), and related rules and regulations. In order for the Corporation to maintain its current status as a foreign private issuer, a majority of its Common Shares must be either directly or indirectly owned of record by non-residents of the U.S., as it does not currently satisfy any of the additional requirements necessary to preserve this status.

The Corporation may in the future lose its foreign private issuer status if a majority of its shares are owned of record by residents of the U.S. and it continues to fail to meet the additional requirements necessary to avoid loss of foreign private issuer status. The regulatory and compliance costs to the Corporation under U.S. securities laws as a U.S. domestic issuer may be significantly more than the costs it incurs as a Canadian foreign private issuer eligible to use the Multi-Jurisdictional Disclosure System ("MJDS"). If it is not a foreign private issuer, it would not be eligible to use the MJDS or other foreign issuer forms and would be required to file periodic and current reports and registration statements on U.S. domestic issuer forms with the SEC, which are more detailed and extensive than the forms required of a foreign private issuer. The Corporation may also be required to prepare its financial statements in accordance with U.S. generally accepted accounting principles ("GAAP"). In addition, the Corporation may lose the ability to rely upon exemptions from certain corporate governance requirements on U.S. stock exchanges that are available to foreign private issuers. Further, if the Corporation engages in capital raising activities through private placements after losing its foreign private issuer status, there is a higher likelihood that investors may require the Corporation to file resale registration statements with the SEC as a condition to any such financing.

Item 4. Information on the Corporation.

A. History and development of the Corporation.

Ur-Energy is a corporation continued under the laws of Canada pursuant to the Canada Business Corporations Act (the "CBCA") on August 8, 2006. The registered office of the Corporation is located at 55 Metcalfe Street, Suite 1300, Ottawa, Ontario, K1P 6L5. The Corporation's head office and United States headquarters is located at 10758 West Centennial Road, Suite 200, Littleton, Colorado, 80127. The Corporation also has offices at 5880 Enterprise Drive, Suite 200, Casper, Wyoming 82609 and 341 Main Street North, Suite 206, Brampton, Ontario L6X 3C7. The Corporation's Littleton telephone number is (720) 981-4588 and its facsimile number is (720) 981-5643. The Corporation's Common Shares are listed on the TSX under the symbol "URE" and on the NYSE Amex under the symbol "URG".

Table of Contents

Incorporated on March 22, 2004, Ur-Energy is an exploration stage junior mining company engaged in the identification, acquisition, evaluation, exploration and development of uranium mineral properties in Canada and the United States. The Corporation's land portfolio includes 12 properties in Wyoming, USA. Of these, 10 are located in the Great Divide Basin, of which two (the Lost Creek property and the Lost Soldier property) contain defined resources that the Corporation expects to advance to production.

The Corporation also has two properties, known as Screech Lake and Gravel Hill, in the Northwest Territories, Canada; and the Bugs property in the Kivalliq region of the Baker Lake Basin in Nunavut, Canada.

The Corporation has various royalty interests in properties in Wyoming, USA and Nunavut, Canada.

Background

The Corporation, through its wholly-owned subsidiary, Ur-Energy USA Inc. ("Ur-Energy USA"), acquired Wyoming properties comprising certain of its Great Divide Basin and the Shirley Basin projects, effective June 30, 2005, when Ur-Energy USA entered into the Membership Interest Purchase Agreement ("MIPA") with New Frontiers Uranium, LLC ("New Frontiers"). Under the terms of the MIPA, the Corporation purchased from New Frontiers all of the issued and outstanding membership interests (the "Membership Interests") in NFU Wyoming, LLC ("NFU Wyoming"). Assets acquired from New Frontiers include the extensively explored and drilled Lost Creek and Lost Soldier projects, other properties, and a development database including more than 10,000 electric well logs, over 100 geologic reports and over 1,000 geologic and uranium maps covering large areas of Wyoming, Montana and South Dakota. The 100% interest in NFU Wyoming was purchased for an aggregate consideration of \$24,515,832 (US\$20,000,000), plus capitalized interest.

Since 2005, the exploration and development of Lost Creek has progressed. The Corporation commissioned an NI 43-101 Preliminary Assessment in 2008. Beginning in 2007, the Corporation has proceeded with its applications for a Source Material and Byproduct License from the U.S. Nuclear Regulatory Commission ("NRC") and a Permit and License to Mine from the Wyoming Department of Environmental Quality ("WDEQ"). The applications were deemed complete by both agencies and the technical review process is ongoing. See also Item 4.B - Business Overview: Lost Creek Project.

Recent Developments

Corporate

The Corporation has continued to add essential technical personnel including three new people based out of the Corporation's Casper, Wyoming office: Sam Talbott, Chief Geologist; Dr. Charles Kelsey, Radiation Safety Officer and Leland Huffman, Senior Scientist.

On April 28, 2009, at the Corporation's annual and special meeting of shareholders, the shareholders approved and ratified the Corporation's Shareholder Rights Plan which became effective on November 7, 2008. Through a Successor Rights Plan Agreement, effective as of January 1, 2010, the Successor Rights Agent is now Computershare Investor Services Inc.

Regulatory

In May 2009, the Corporation received new guidance from the NRC concerning the NRC's schedule for the first three pending applications for in situ recovery ("ISR") operations which included the Corporation's application for the Lost Creek project. The NRC determined that it will complete a site-specific Supplemental Environmental Impact

Statement (“SEIS”) for each of the ISR applications rather than an environmental assessment. In December 2009, the NRC issued the Draft SEIS for the Lost Creek project, and continued its guidance for the completion of a SEIS for each pending application in second quarter 2010 and the probable issuance of licenses in third quarter 2010.

Table of Contents

In June 2009, the Corporation submitted an application for a Class I Underground Injection Control (“UIC”) permit to the WDEQ which supports the suitability of a Class I UIC permit for the Lost Creek disposal well system, including up to five disposal wells. In November 2009, the WDEQ provided its technical comments on the application, and notified the Corporation that the agency will proceed with drafting of the permit, while it awaits the responses to technical comments. The Corporation provided responses to the technical comments on February 1, 2010.

Throughout 2009, the Corporation worked with the WDEQ in its review of the Lost Creek Application for Permit to Mine, submitting additional technical data and information, holding meetings and, in December 2009, submitting the data package for Mine Unit #1.

On December 3, 2009, the Corporation announced the approval of its Lost Creek Development Plan by the officials of Sweetwater County, Wyoming. The Development Plan describes in detail the infrastructure and facilities which will be constructed at the planned uranium ISR production site.

Technical

As of March 31, 2009, as part of its winter drilling program, the Corporation had drilled and installed 15 monitoring wells; completed groundwater sampling of an approximately 10,000 foot deep test well; and, assisted by TREC, Inc., completed detailed designs and specifications for all components of the Lost Creek ISR Plant.

The drilling program at Lost Creek resumed in July 2009 following the earlier winter drilling program. The primary purpose of the 2009 drilling program was delineation of the ISR recoverable uranium resources within the planned Mine Unit #2 area.

On August 10, 2009, the Corporation announced that geophysical and survey crews started work on the Screech Lake project in the Thelon Basin, Northwest Territories, Canada. The Corporation continues discussions with the First Nations groups towards an exploration agreement on the Screech Lake project.

On August 12, 2009, the Corporation announced the results of geologic evaluations of the Lost Creek Permit Area and adjacent properties held by the Corporation, namely, LC North and LC South, which contain multiple exploration targets and demonstrate the potential to contain 24 to 28 million pounds U₃O₈ in 20.7 to 24.1 million tons, with an average grade of 0.058% U₃O₈ (not an NI 43-101 compliant resource). Individual redox fronts (reduction – oxidation fronts) which are amenable to ISR mining technology are commonly in the range of 10 to 20 feet (3 to 6 meters) thick. Depths of mineralization are from 200 feet to 900 feet with GTs (Grade X Thickness) of 0.3 to 2.23 (averaging 0.7), with an assumption, based upon knowledge of roll fronts in the Great Divide Basin, of 50 - 100 foot width, all of which are similar to the Lost Creek deposit. These potential quantity and grade ranges are conceptual in nature, only. There has been insufficient exploration to define a mineral resource. It is uncertain if further exploration will result in the target(s) being delineated as a mineral resource. The Corporation’s drilling and historic data have identified a minimum of an additional 120 compiled linear miles of new redox fronts stacked with multiple stratigraphic horizons with potential for resource development on these properties. The newly identified fronts occur within the same stratigraphic horizons that are present in the area of the Lost Creek deposit. Estimation of the potential of the new fronts is based on the observed similarity of alteration characteristics, grade and thickness of mineralization to that currently identified in the Lost Creek deposit.

The Corporation announced in November 2009 that it had selected Fagen Inc. to serve as General Contractor in the construction of the process plant facilities at Lost Creek.

As part of its third quarter 2009 update in November 2009, the Corporation detailed the US\$22 million of capital and development expenditures made on the Lost Creek project from 2007 through third quarter which included

800 exploration and delineation drill holes, drilling and installation of 153 monitor wells, complete delineation of Mine Unit #1 and commencement of delineation of Mine Unit #2, prepayment for key long-lead time plant equipment, and acquisition of operational support equipment for ongoing use now and during production operations.

Joint Ventures

During the third quarter of 2009, Crosshair Exploration & Mining Corporation (“Crosshair”) completed its earn-in to a 75% interest in The Bootheel Project, LLC in the Shirley Basin, Wyoming which comprises the Bootheel and Buck Point properties (the “Bootheel Project”). Crosshair earned its 75% interest in the Bootheel Project by spending US\$3 million in exploration costs and issuing 125,000 common shares of Target Exploration & Mining Corporation (an acquisition by Crosshair subsequent to the buy-in agreement) to the Corporation. Earlier in the third quarter, Crosshair completed an independent NI 43-101 mineral resource estimate on the Bootheel property.

Table of Contents

Effective December 1, 2009, Bayswater Uranium Corporation (“Bayswater”) joined the Corporation’s wholly-owned subsidiary, Hauber Project LLC, as an earn-in Member and Manager of the Hauber project (the “Hauber Project”). The Hauber Project is located in Crook County, Wyoming. Pursuant to the terms of the operating agreement, Bayswater can earn a 75% interest by incurring eligible exploration expenditures of US\$1 million over a four-year period. On January 11, 2010, the Corporation further announced that Bayswater completed an independent NI 43-101 mineral resource estimate on the Hauber Project

Principal Capital Expenditures and Divestitures

In August 2009, the Corporation completed the sale of its “Moorcroft Database” to Peninsula Minerals Limited for US\$1 million and a royalty on future production from a broad-ranging project area in the Eastern Powder River Basin, Wyoming. The Corporation obtained the Moorcroft Database as part of its acquisition of NFU Wyoming in 2005, which also included several other historic databases.

Although construction of the Lost Creek plant will not begin until receipt of the necessary permits, requests for quotations for all major process equipment were prepared and solicited from vendors and contractors. During 2009, the Corporation spent approximately \$1.1 million on construction related activities, including plant design work and the purchase of certain long-lead construction items.

No significant capital expenditures are currently in progress. Pursuant to the Corporation’s policy, other continuing development costs on the Lost Creek project are presently being charged to expense as incurred.

B. Business overview.

Lost Creek Project

The Lost Creek uranium deposit is located in the Great Divide Basin, Wyoming. The deposit is approximately three miles (4.8 kilometers) long and the mineralization occurs in four main sandstone horizons between 315 feet (96 meters) and 700 feet (213 meters) in depth.

As identified in the June 2006 Technical Report on Lost Creek, NI 43-101 compliant resources are 9.8 million pounds of U₃O₈ at 0.058% as an indicated resource and an additional 1.1 million pounds of U₃O₈ at 0.076% as an inferred resource.

A royalty on future production of 1.67% is in place with respect to 20 claims comprising a small portion of the Lost Creek project.

The Corporation continues to advance matters to obtain an NRC Source Material and Byproduct License (the “NRC License”) for the Lost Creek project. In October 2007, the Corporation submitted its Application for the NRC License (the “Application”). In June 2008, the NRC notified the Corporation that the acceptance review had been completed and the Application was found sufficient for technical review. Since November 2008, the NRC has submitted various Request for Additional Information (“RAI”) inquiries to the Corporation for both the Technical Report and Environmental Report portions of the Application and the Corporation has submitted responses. In June 2009, the NRC issued its Generic Environmental Impact Study (“GEIS”). In addition to the GEIS guidelines, the NRC has advised all applicants for new ISR operations that a site-specific SEIS is required. The Corporation received the Lost Creek Draft SEIS in December 2009, and submitted comments to the NRC in response in February 2010. Current NRC guidance calls for the completion of an SEIS for each pending application in second quarter 2010 and the probable issuance of licenses in third quarter 2010. The Corporation anticipates the issuance of Lost Creek's NRC

License in the summer of 2010.

The U.S. Bureau of Land Management (“BLM”) has determined that its project environmental review and approval will be independent of the environmental review process carried out by the NRC. In response, the Corporation submitted a Plan of Operations to the BLM in November 2009. The BLM appointed a coordinator for the review process and the review, including public comment and selection of a contractor for the environmental review, has commenced. The BLM’s decision of record on the Plan is expected in the summer of 2010.

Page 12

Table of Contents

The Corporation continues to advance matters to obtain a WDEQ Permit to Mine (the “WDEQ Permit”) for the Lost Creek project. In December 2007, the Corporation submitted the Lost Creek Permit to Mine Application (the “WDEQ Application”) to the WDEQ. The WDEQ Application was deemed complete in May 2008. WDEQ has issued various sets of technical comments to which the Corporation has responded. The Corporation submitted its data package for Mine Unit #1 in December 2009, and initial comments were received from WDEQ in February 2010. The Company anticipates filing its responses to those comments before the end of first quarter 2010. Ur-Energy anticipates the issuance of Lost Creek's WDEQ Permit in the summer of 2010.

On March 5, 2010, the U.S. Fish and Wildlife Service (“USFWS”), in compliance with a federal court order, submitted a finding of “warranted for listing but precluded by higher priorities” with regard to the greater sage grouse – whose habitat includes Wyoming. A finding that listing is “warranted but precluded” results in recognition of the greater sage grouse as a candidate for listing. This finding is reconsidered annually, taking into account changes in the status of the species. When higher priority listing actions have been addressed by the USFWS for other species, a proposed listing rule is prepared and issued for public comment. This means that until the USFWS finalizes a listing determination, the greater sage grouse will remain under state management. As a part of its WDEQ Application, the Corporation has submitted a Wildlife Protection Plan regarding, among other issues, the sage grouse. The Corporation conducted several meetings during fourth quarter 2009 – first quarter 2010 with the WDEQ and Wyoming Department of Game and Fish to facilitate the processing and acceptance of the mitigation plan as a part of the WDEQ Permit.

The Corporation submitted to the WDEQ-Water Quality Division an application for a permit for up to five Class 1 UIC disposal wells. These wells, utilized for deep geologic disposal of liquid waste, will be located within the Lost Creek permit area. The Corporation acquired detailed data including formation stratigraphy, reservoir extent and properties, water quality and assessment of well injection rates from a deep test well drilled in 2008. This data set was used to support the application which was submitted to WDEQ-Water Quality Division in June 2009. WDEQ processing of this particular application was delayed initially as a result of WDEQ staffing issues, but progressed with the issuance in late November 2009 of technical comments, to which the Corporation submitted its responses on February 1, 2010. The Corporation anticipates receipt of this permit in the second quarter of 2010.

The Corporation continued its development program at Lost Creek during 2009. The first phase of the 2009 program included the drilling and installation of 15 monitoring wells (11,770 feet / 3,590 meters) to obtain and monitor water quality and hydrologic data for the purpose of permitting an additional mineralized horizon underlying the horizon presently being permitted. The Corporation also completed mechanical integrity testing of installed baseline and monitoring wells and the installation of submersible pump equipment to facilitate ongoing water sampling requirements.

In July 2009, the delineation drilling program at Lost Creek continued with 235 additional drill holes originally planned. As the program progressed, additional drill holes were planned, and the program was extended through February 2010, to further investigate mineralization found in unanticipated locations. As of February 28, 2010, 277 holes were completed for a total of 196,840 feet (59,741 meters) drilling completed to support definition of future proposed mining areas. As well, in early 2010, additional monitor wells were drilled and other work completed.

In 2009, the Corporation’s engineering staff, assisted by TREC, Inc., completed the detailed designs and specifications for all components of the Lost Creek plant.

Although construction of the Lost Creek plant will not begin until receipt of the necessary permits, requests for quotations for all major process equipment at the Lost Creek project were solicited from vendors and contractors. Bids were evaluated and procurement was ongoing throughout 2009. One purchase order totaling US\$1,323,834 was issued during the second quarter of 2009 for ion exchange columns and other process equipment. An additional purchase order for US\$319,357 was issued during the second quarter in order to initiate the

drawing and approval process for other plant equipment.

During the year ended December 31, 2008, the Corporation invested \$3.5 million in mineral properties, bonding deposits, capital assets and design work on the Lost Creek plant. The majority of these expenditures went toward bonding deposits and the purchase of capital assets. The capital asset purchases were primarily for field vehicles and field equipment purchased to facilitate the exploration and development work programs in Wyoming.

During the year ended December 31, 2007, the Corporation invested \$3.5 million in mineral properties, bonding deposits and capital assets. The majority of these expenditures went toward mineral properties and bonding deposits. The capital asset purchases were primarily for field vehicles and field equipment purchased to facilitate the exploration and development work programs in Wyoming.

Technical Report Summaries

The following are the executive summaries excerpted in substantive form from the two technical reports completed on the Lost Creek project. A Preliminary Assessment, completed in 2008 by John I. Kyle, P.E. and Douglas K. Maxwell, P.E. of Lyntek Incorporated (“Lyntek”), is the more recent NI 43-101 Technical Report and was prepared to provide an independent analysis and preliminary assessment of the potential economic viability of the mineral resource of the Lost Creek project. In 2006, an NI 43-101 Technical Report was prepared by C. Stewart Wallis, P.Geo, then a consulting geologist associated with Scott Wilson Roscoe Postle Associates Inc. (formerly, Roscoe Postle Associates Inc. (“RPA”)).

As noted above, considerable development and changes have been made on the Lost Creek property since these reports, particularly the initial Wallis report, were produced. Total drilling on the project to date by Ur-Energy is 1048 holes for a total of 689,824 feet (210,007 meters). Most of this drilling, however, has been geared toward advancing the primary resource at the Lost Creek deposit toward production. For the most part, the detailed drill holes (300 or more holes to delineate each mine unit at 100 foot spacing) were drilled for mine unit design and layout purposes. These holes are closely spaced for the mine unit planning and specifically not for the purpose of adding resources.

The NI 43-101 compliant Indicated Mineral Resource at Lost Creek allows for the application of technical and economic parameters to support mine planning and evaluation of the economic viability of the deposit, as set forth in the 2008 Preliminary Assessment – Lost Creek. Because the practice of ISR mining is to drill out individual mine units just prior to mining each unit, the Preliminary Assessment – Lost Creek can only make use of the Indicated Mineral Resources figures. The ISR drilling and development practices make the reporting of an NI 43-101 mineral reserve impracticable as there is insufficient delineation of the project for treatment as a Mineral Reserve.

April 2008

The following is the Executive Summary extracted from the technical report dated April 2, 2008 and titled “Preliminary Assessment for the Lost Creek Project Sweetwater County, Wyoming”, which was prepared for the Corporation in accordance with NI 43-101 by Lyntek (“Preliminary Assessment – Lost Creek”). The full Preliminary Assessment – Lost Creek can be viewed under the Corporation’s profile on the SEDAR website at www.sedar.com.

EXECUTIVE SUMMARY

Lyntek has generated a preliminary assessment or scoping study of the Lost Creek uranium in situ recovery (ISR) project located in Sweetwater County, Wyoming. Lost Creek ISR, LLC a wholly owned subsidiary of Ur-Energy USA Inc. controls the property and has evaluated the potential to place the property in production through the use of an in-house economic analysis. Lyntek has reviewed the analysis and has made changes as necessary to represent the project’s economics. During this effort, we reviewed several technical details regarding the project.

Lyntek has relied upon work conducted by an earlier NI 43-101 study that defined the uranium resources (C. Stewart Wallis, 2006). The Lost Creek resources are based on a minimum grade of 0.03 % U₃O₈ and a minimum grade thickness (GT) equal to or greater than 0.3 are reported in the table below.

Table 1.1 Lost Creek Resources: C. Stewart Wallis, Rostle Postle Associates, Inc., June 15, 2006

Reserve Classification	Tons (millions)	Average Ore Zone Thickness (feet)	Uranium Grade (Percent U ₃ O ₈)	Pounds U ₃ O ₈ (millions)
---------------------------	--------------------	--	---	--

Indicated	8.5	19.5	0.058	9.8
Inferred	0.7	9.6	0.076	1.1

Indicated Resources were defined by 200 feet spacing with the exception of a few sections drilled off at 50 feet spacing. Detailed drilling on closer spacing (up to 50 feet) will be necessary prior to the final engineering designs and the ISR mining of individual mine units during the life of the mine. Individual mine units will be drilled out with hydrologic testing just prior to mining each mine unit. Detail drilling of the first mine unit planned is not completed at this time. The size and shape of individual mine units may vary when detailed drilling is carried out on each unit and the hydrologic characteristics of each mine unit may vary from mine unit to mine unit.

. . .A conservative approach to this preliminary assessment of the Lost Creek Project has been employed by using an in-place indicated resource of 8.1 million pounds of U₃O₈ defined by a model of 6 individual mine units averaging 1.2 to 1.4 million pounds of U₃O₈. Assuming an 80 % uranium recovery, it is projected that there will be 6.5 million pounds of U₃O₈ produced. The uranium mineralization is primarily located in the HJ and the UKM sandstone horizons at average depths of 435 feet and 555 feet, respectively.

Table of Contents

Lost Creek ISR, LLC has conducted hydrologic studies through its contractor Petrotek Engineering Corporation (October 2007) of the mineralized HJ sandstone horizon. These studies show that the sandstones appear to have adequate hydrologic characteristics that will support ISR operations. In addition, it has been concluded that the shale layers above and below the HJ ore zone will act as adequate geologic members to contain the lixiviant within the desired production zone and prevent the migration of the lixiviant to water bearing geologic zones above and below the target mineralized zone.

It is important to note that there is an east-west scissor fault located down the axis of a significant portion of the resources. This fault will impact mining operations. The hydrology studies also defined the scissor fault as a tight zone which acts as a barrier to groundwater flow across the fault. In addition, there is a difference in ground water elevations within the HJ structure as the fault line is crossed. The water level on the south side of the fault lies below the water level on the north side of the fault. Work in evaluating the UKM sandstone horizon has begun but needs to be finalized to determine if it has suitable characteristics consistent with the HJ horizon.

Leach studies have been conducted in 2005 and 2007. The leach studies conducted in 2005 used bottle roll tests on six one-foot core sections from five drill holes. The uranium grades within these six samples ranged from a low of 0.040 to a high of 0.480. With the application of 25 pore volumes of lixiviant containing 2 grams/liter HCO₃ and 500 milligrams/liter of H₂O₂, the recoveries ranged from 59.4 to 92.8 %. Interestingly, the high grade sample showed the lowest recovery and it is quite possible that additional pore volumes of lixiviant would remove additional uranium as the last pore volume contained 68 milligrams of uranium, so recovery would likely improve to some degree on this high grade ore. The next lowest recovery was 75.0 %. The 2007 leach study focused on a homogenized production zone from one hole in the HJ horizon. The goal of this test group was to review a matrix of different chemistries in an effort to determine the most appropriate lixiviate chemistry for the project. Results of the tests show an elevated bicarbonate concentration may be required to maximize productivity at the Project. Natural groundwater with peroxide yielded a 20 % ultimate recovery while all lixiviants with a bicarbonate concentration greater than 1.0 g/L averaged 88.6 % ultimate recovery with a range of 84.1 to 93.3 %.

Project economics have been developed assuming a 6000 gpm ISR processing plant producing one million pounds of U₃O₈ per year. During the first two years, yellowcake slurry will be produced while a dryer is being permitted and constructed so that afterwards dry yellowcake can be produced. The capital costs for plant equipment and facilities also include capital costs for a larger plant that will accommodate an additional one million pounds of U₃O₈ for processing resin from other properties including those belonging to Ur-Energy USA Inc. However the operating costs and sales of this additional yellowcake capacity have not been included in the economics analysis. It is assumed that the additional capital investment will present an un-quantified opportunity.

In Lyntek's assessment of the economics for the project, we find that the project will produce results that are quite robust. The economic assessment assumes contingencies of 20 % for both capital and operating costs. Lyntek has used a price forecast of \$80 as an indicator of likely uranium prices in the future. Per Nuclear Market Review, this price is \$15 below the current fixed price contract and \$7 above the spot price indicator of February 29, 2008. Because of the volatility of uranium prices, this price appears to be a reasonable price upon which the project's economics can be based. To allow for the volatility of the uranium price, we have assumed a price swing potential of \$40 per pound of U₃O₈ and developed additional economic cases upon those swings to allow stakeholders to properly evaluate the potential economics of the project under possible price conditions. Because of the extreme difficulty in forecasting current uranium prices, it is recommended that stakeholders pay particular attention to the lower limit price forecast as a measure of evaluating risk for the project. In addition to assist with forecast issues, cost sensitivities were also modeled to evaluate potential cost variances. The results of these economic analyses are shown in Table 1-2.

Table of Contents

Table 1-2 Economic Indicators

Case	Revenue (\$MM)	Pre-tax IRR (%)	NPV @ 10% (\$MM)
Case 1 Base Case U3O8 \$80	516.2	43.6	106.8
Case 2 U3O8 \$40	258.1	-1.9	-23.2
Case 3 U3O8 \$120	774.3	73.8	236.8
Case 4 U3O8 \$80 Operating Costs +20%	516.2	39	90.6
Case 5 U3O8 \$80 Operating Costs – 20%	516.2	48.2	122.9
Case 6 U3O8 \$80 Capital Costs +20%	516.2	36.7	94.3
Case 7 U3O8 \$80 Capital Costs -20%	516.2	52.5	119.3
Case 8 Worst Case U3O8 \$40 Op. & Cap. Costs + 20%	258.1	-7.6	-51.7
Case 8 Best Case U3O8 \$120 Op. & Cap. Costs - 20%	774.3	90	265.7

(a) This analysis is conducted upon operating and capital costs that include contingencies of 20%, respectively. The ranges cited above assume that the operating and capital estimates, inclusive of contingencies, may range in actuality by 20 %.

For the life of the mine, the economic assessment estimates the average operating cost at \$19.46 per pound and, with a 20 % contingency, 23.36 per pound of U3O8. The capital cost for the plant is estimated at \$30.0 million. The development of the property, inclusive of header houses, drilling, environmental, engineering, and permitting is forecast at \$23.9 million. Contingencies of \$8.6 million are added to provide a total capital cost of \$62.5 million to start the project in 2009. Of this amount, \$5.5 million has already been spent to advance the project to the current stage. The bonding estimate, which is included in the cash flow assessment, requires \$5.5 million in spending up to the start of production, of which \$1 million has already been spent. The allocated purchase price of the property, which is included in the economics as sunk capital, is \$9 million. The remaining expenditures to bring the project into production, at this point in time is then, \$61.5 million, including contingencies. Lyntek is of the opinion that these costs fairly represent the expected capital and operating costs of the project.

Based upon this economic assessment, it is recommended that work continue upon this project to further analyze the project, work to reduce risks, continue to permit and plan to execute the project as it appears to be worthwhile to continue these efforts. It is recommended that more extensive hydrologic and leach tests be conducted to better define these important considerations. Furthermore, there is no certainty that the results projected in the Preliminary Assessment will be realized and actual results may vary substantially.

June 2006

The following is the Executive Summary extracted from the technical report dated June 15, 2006 and titled “Technical Report on the Lost Creek Property, Wyoming”, which was prepared for the Corporation in accordance with NI 43-101 by C. Stewart Wallis, P.Geo, who at the time of the preparation of the report was a consulting geologist associated with Scott Wilson Roscoe Postle Associates Inc. (formerly, Roscoe Postle Associates Inc.) (“Technical Report – Lost Creek”). The full Technical Report – Lost Creek can be viewed under the Corporation’s profile on the SEDAR website at www.sedar.com.

EXECUTIVE SUMMARY

RPA was retained by Ur-Energy to prepare an independent Technical Report on the Lost Creek Project in the State of Wyoming, USA.

The Lost Creek Project consists of 184 unpatented lode claims and one state section lease totaling 4,379 acres, 90 miles southwest of Casper, Wyoming. The property was extensively drilled in the 1970s by Texasgulf Inc. (TG) and, more recently, Ur-Energy has completed a program of data compilation and 10,420 ft. of confirmation drilling.

The current resources at the Lost Creek Project as at May 30, 2006, based on a minimum grade of 0.03% U3O8 and a grade thickness (GT) equal to or greater than 0.3 are reported in Table 1-1. RPA is of the opinion that the classification of resources as stated meets the CIM definitions as adopted by the CIM Council on November 14, 2004, as required by National Instrument 43-101.

Table of Contents

Table 1.1 Lost Creek Resources - 2006
Ur-Energy, Inc.

Classification	Tons (millions)	Average Thickness (Ft.)	Grade (% U3O8)	Pounds U3O8 (millions)
Indicated	8.5	19.5	0.058	9.8
Inferred	0.7	9.6	0.076	1.1

Preliminary leach tests indicate that the mineralization is amenable to leaching with an oxygenated lixiviant. The main mineralized horizons, which have an approximate stratigraphic thickness in excess of 130 ft., are confined by impermeable mudstones above and below the mineralization and, therefore, are considered to be ideal for the use of in situ leaching (ISL) methodology.

Ur-Energy has proposed a US\$2.975 million budget to advance the project during the year ending June 2007. The proposed program includes the drilling of 17 wells in order to carry out pump tests and water quality analysis, permitting, collection of environmental data, and feasibility studies. Ur-Energy is planning to submit an application for mine permits by mid 2007.

RPA is of the opinion that Ur-Energy should continue with the drilling, pump tests, permitting and feasibility studies leading to a production decision.

TECHNICAL SUMMARY

The Lost Creek Project is located 90 miles southwest of Casper, Wyoming, and 25 miles south of Jeffrey City, which is located on U.S. Highway 287. The property is readily accessible year round by an extensive system of gravel and dirt roads extending from Jeffrey City.

Climax Amax Inc. acquired the property in 1968 and discovered low-grade mineralization in the Battle Springs formation. TG acquired the property in 1976, optioned the adjoining Conoco ground in 1978, and completed drilling with the discovery of the continuation of the Main Mineral Trend (MMT) eastward from the Lost Creek Project. Leach tests using bicarbonate lixiviant resulted in uranium extraction ranging from 60% to 80%. TG dropped the project in 1983 due to economic conditions.

From 1986 to 1988, Power Nuclear Corporation (PNC) Exploration of Japan acquired a 100% interest in the project from Cherokee Exploration Inc., the then owner of the property, and conducted geologic and in situ leach evaluations. In 2000, New Frontiers Uranium LLC acquired the property and the database from PNC.

About 3,000 rotary drill holes totaling some 1.36 million ft. have been completed on or near the property, with the MMT being drilled off at 200 ft. centers with some infill at closer spacing.

There have been a number of resource estimates completed by the various owners since 1978. In 1982, TG reported a total resource of 5.7 million lbs of contained U3O8 in 4.6 Mt at an average grade of 0.062% U3O8 using a polygonal method with varying cut-offs. These resources are historical in nature and Ur-Energy is not treating the historical estimates as NI 43-101 defined resources or reserves verified by a qualified person, and the historical estimates should not be relied upon.

Mineralization is found at depths ranging from 150 ft. to 1,150 ft. in fluvial arkosic sandstones of the Eocene Battle Spring Formation that dip from 3° northwest to 3° southwest. Thick-bedded (up to 50 ft. thick), medium- to

coarse-grained sandstones make up about 60% of the section at Lost Creek and host the uranium deposits. Siltstone, shale, and claystone are interbedded with the sandstones. The main zone of mineralization at Lost Creek strikes east-west for at least four miles (half of which is well defined) and is up to 2,000 ft. wide, with intercepts ranging from 350 ft. to 700 ft. deep. Mineralization is in the form of fine-grained intergrowths of coffinite with pyrite, as coatings, fracture fillings, and rimming voids. Grade ranges from 0.03% U₃O₈ to 0.20% U₃O₈, with an average of intercepts in the mineralized envelope of the MMT at 0.04% U₃O₈. The thickness of individual mineralized beds at Lost Creek locally ranges from 5 ft. to 28 ft., and averages 16 ft. It appears that there are no high-grade intercepts greater than 0.5% U₃O₈. Generally, the deposit has uniformly low grade intercepts in thick mineralized horizons, with continued alteration to the north.

Ur-Energy carried out a drill program totaling 10,420 ft. in 14 holes during October and November 2005. Twelve holes were spotted within 5 ft. to 10 ft. of the historical drill holes in order to verify mineralization intersected in those older holes and to allow comparison of the mineralized intervals. One hole was drilled between two historical holes 200 ft. apart in order to verify continuity of the mineralization. The holes were surveyed with a down-hole geophysical probe and selected intervals of core were sampled for chemical assays. Measurements taken by the down-hole probe include gamma logs, self potential, resistivity, and hole deviation. A total of 188 samples were chemically analyzed at Energy Laboratories Inc. (Energy Labs) of Casper, Wyoming, using standard industry analyses. Energy Labs has been carrying out uranium analysis for over 25 years and is considered to be a recognized laboratory.

Table of Contents

Ur-Energy selected a total of six one-foot samples from the recent drilling to undergo bottle roll leach tests. The work was carried out over an 80 hour period at Energy Labs using a lixiviant of sodium bicarbonate and hydrogen peroxide. Analysis of the leach solutions indicated leach efficiencies of 52% to 94%. Tails analysis indicated an average U3O8 extraction of 82.8%.

AATA International Inc., an environmental consultancy at Fort Collins, Colorado, reports that, based on the experience of two permitted projects, approval of a new greenfield ISL project could require three to four years after the decision to proceed with a baseline data collection. Ur-Energy will fast-track the project to shorten the timetable by one year by carrying out concurrent studies wherever possible and being proactive with the agencies. The schedule is driven by the collection of the environmental baseline data and project data. Ur-Energy has commenced collection of the baseline data required, and permission has been received from the Wyoming Department of Environmental Quality (WDEQ) for the drilling of 17 wells to be used for pump tests that will commence in June. The pump tests will provide information on water quality and permeability of the sandstones relative to the horizontal and vertical flow. Wildlife, meteorological, soil and vegetation surveys have commenced, and archaeological and radiology surveys are scheduled for this summer.

A total of 576 holes were identified within the current property boundary. These holes contained 628 mineralized intervals equal to or greater than 0.03% U3O8. The majority of the data consisted of U3O8 grade estimated from geophysical logs. Chemical assays were used where available (17 holes), representing approximately 4% of the intervals. GT values were calculated for each hole, using a cut-off of 0.03% U3O8. All intercepts below the water table contributed to the total thickness. A 0.3 GT boundary was used to create polygons, from which the area was calculated. Nineteen (19) holes within this boundary, but with a GT value of less than 0.3, were excluded from the estimate.

RPA reviewed selective geophysical drill logs, compared the TG drill holes and geophysical logs with the twins drilled by Ur-Energy, and considers the data appropriate for use in a resource estimate.

A cut-off grade of 0.03% U3O8 and a GT product equal to or greater than 0.3 were used to define the mineral resources. This is based on a uranium price of US\$40 per pound and estimated operating costs of approximately US\$20 per pound.

Classification of the resources was determined by a combination of grade continuity and drill hole spacing, nominally 200 ft. centers for indicated resources, with the exception of several section lines that have been drilled off at 50 ft. spacing along the sections.

Lost Soldier Project

The Lost Soldier project is located approximately 14 miles (22.5 kilometers) to the northeast of the Lost Creek project. The property has over 3,700 historical drill holes defining 14 mineralized sandstone units. The Corporation maintains 143 lode mining claims at Lost Soldier, totaling approximately 2,710 mineral acres (1,097 hectares). A royalty on future production of one percent (1%), which arises from a data purchase, is in place with respect to certain claims within the project.

Following the completion, in 2007, of all environmental baseline studies, the Lost Soldier project was turned over to the Corporation's engineering staff for detailed engineering evaluation and study, which has been ongoing; detailed mapping of the roll-front geology, and detailed mine design planning have been prepared. Corporation staff continued with engineering studies and mine design analyses in 2009. The Corporation continues to anticipate that regulatory applications for Lost Soldier will be made after the Corporation obtains the Lost Creek licenses and permit to mine, and as corporate priorities are determined for the development of the lands adjacent to Lost Creek.

Technical Report

The following Executive Summary is extracted from the technical report dated July 10, 2006 and titled “Technical Report on the Lost Soldier Property, Wyoming”, which was prepared for the Corporation in accordance with NI 43-101 by C. Stewart Wallis, P.Geo, who at the time of the preparation of the report was a consulting geologist associated with Scott Wilson Roscoe Postle Associates Inc. (formerly, Roscoe Postle Associates Inc.) (“Technical Report – Lost Solider”). The Technical Report – Lost Soldier can be viewed under the Corporation’s profile on the SEDAR website at www.sedar.com.

Table of Contents

EXECUTIVE SUMMARY

RPA was retained by Ur-Energy, to prepare an independent Technical Report on the Lost Soldier Project in the State of Wyoming, USA.

The Lost Soldier Project consists of 70 unpatented claims totaling 1,400 acres located in Sweetwater County, 90 miles southwest of Casper, Wyoming. The property was extensively drilled in the 1970s and more recently Ur-Energy has completed a program of data compilation and continuation drilling.

The current resources at the Lost Soldier Project as at May 30, 2006, based on a minimum grade of 0.03% U₃O₈ and a grade thickness (GT) equal to or greater than 0.3 are reported in Table 1-1. RPA is of the opinion that the classification of resources as stated meets the CIM definitions as adopted by the CIM Council on November 14, 2004 as required by National Instrument 43-101.

Table 1-1 Lost Soldier Resources – 2006
Ur-Energy Inc. Lost Soldier Project

Classification	Tons (millions)	Average Thickness (Ft.)	Grade (% U ₃ O ₈)	Pounds U ₃ O ₈ (millions)
Measured	3.9	21.1	0.064	5
Indicated	5.5	17.1	0.065	7.2
Total M+I	9.4	17.2	0.065	12.2
Inferred	1.6	14.5	0.055	1.8

Preliminary leach tests indicate that the mineralization is amenable to leaching with an oxygenated lixiviant. The main mineralized horizons consist of nine sand units ranging from depths of 100 ft. to greater than 450 ft. below the surface and are separated by impermeable mudstones and therefore are considered to be ideal for the use of ISL methodology.

Ur-Energy has proposed a US\$3.145 million budget to advance the project during the year ending June 2007. The proposed program includes the drilling of 17 wells in order to carry out pump tests and water quality analysis, permitting, collection of environmental data and feasibility studies. Ur-Energy is planning to submit an application for mine permits by mid 2007.

RPA is of the opinion that Ur-Energy should continue with the drilling, pump tests, permitting and feasibility studies leading to a production decision.

TECHNICAL SUMMARY

The Lost Soldier Project is readily accessible year round by three miles of gravel road from Bairoil, which is approximately 90 miles southwest of Casper.

In the late 1960s, Kerr-McGee Corp. (Kermac) carried out reconnaissance exploration and drilling that showed potential for low-grade mineralization in the Lost Soldier area. Kermac continued drilling through May, 1974 but let the property expire in 1986. More than 5,900 exploration, development, and core holes, totaling over 3.3 million ft. have been drilled in the area, half of which were drilled on 50 ft. to 100 ft. spacing.

Several individuals restaked the property and from 1992 to 1994, Cameco Corporation (Cameco) re-evaluated the property in 1993 and 1994. Cameco completed 28 holes totaling 13,481 ft. including 911 ft. of coring in 19 holes to

provide samples for porosity and permeability tests. It is reported that there was excellent permeability in the mineralized sands and low permeability in the confining zones. The leach tests confirmed that the mineralization was amenable to leaching with bicarbonate lixiviant.

Cameco transferred the property to its subsidiary Power Resources in January 1997 and the property was returned to the original owners in 2000. In 2003, New Frontiers) consolidated the 53 claim property.

Effective June 30, 2005, Ur-Energy entered into the Membership Interest Purchase Agreement where under it agreed to purchase all of the issued and outstanding membership interests in NFU Wyoming for US\$20 million as part of a package of properties that includes an extensive database. Ur-Energy staked an additional 17 claims adjoining the original property.

There have been a number of historic resource estimates completed by various owners of the property with the most recent being Cameco, (1994) that reported the following resources:

Table of Contents

- Demonstrated: 8.4 million pounds of U3O8
- Inferred: 7.3 million pounds of U3O8

The resources stated above are historical in nature and Ur-Energy is not treating the historical estimates as National Instrument 43-101 defined resources or reserves verified by a qualified person and the historical estimates should not be relied upon.

The Lost Soldier deposit occurs in the eastern part of the Great Divide Basin in arkosic sandstones of the Eocene Battle Spring Formation. Pliocene pediment and gravel deposits cover the sedimentary rocks and average four ft. thick. The Battle Spring Formation is 900 ft. thick locally and dips 1.5° to 15° west reflecting the Lost Soldier anticline. Mineralized intervals are found at depths ranging from less than 75 ft. to 500 ft. with individual sandstone beds up to 120 ft. thick containing uranium mineralization. Siltstone and mudstone intervals up to 30 ft. thick correlate across the area and separate the upper and lower sandstones. Alteration in barren zones within the geochemical cell shows limonite and hematite staining, kaolinization of feldspar, bleaching, and greenish coloration by chlorite. The area has a static water table 30 ft. to 100 ft. deep, typically 70 ft. to 80 ft.

Uranium occurs as uraninite and coffinite, in roll fronts and in stacked tabular bodies in arkosic sandstones. Some of the mineralization is also related to post-mineral faulting and remobilization. Mineralization occurs in nine or more sandstone horizons, generally 7 ft. to 16 ft. thick. An upper sandstone unit about 100 ft. thick contains most of the uranium mineralization. Grade ranges from 0.04% to 0.20% U3O8 with an average of intercepts in the mineralized zone of 0.078% U3O8. Several mineralized fronts extend beyond the core area, providing possible extensions to the deposit to the west-northwest and south.

Ur-Energy completed five rotary holes totaling 1,857 ft. during October and November 2005. The holes were spotted within 5 ft. or 10 ft. of the historical holes in order to verify mineralization intersected in these older holes and allow comparison of the mineralized intervals. Century Geophysical Corp of Tulsa, Oklahoma carried out downhole surveys which included gamma logs, self potential, resistivity and deviation surveys for all the holes. Of the total footage, 197 ft. in five holes were cored and 97 one-foot or 0.5 foot samples were chemically assayed at Energy Laboratories in Casper, Wyoming using a four-acid leach and ICP analysis. Energy Labs has been carrying out uranium analysis for over 25 years and is considered to be a recognized laboratory.

Ur-Energy selected six one-foot samples from the recent drilling to undergo bottle roll leach tests. The work was carried out over an 80 hour period at Energy Labs using a lixiviant of sodium bicarbonate and hydrogen peroxide. Analysis of the leach solutions indicated leach efficiencies of 53% to 94%. Tails analysis indicated an average U3O8 extraction of 65.2%.

AATA International Inc., an environmental consultancy at Fort Collins, Colorado, reports that based on the experience of two permitted projects, approval of a new greenfield ISL project could require three to four years after the decision to proceed with a baseline data collection. Ur-Energy will fast-track the project to shorten the timetable by one year by carrying out concurrent studies wherever possible and being proactive with the agencies. The schedule is driven by the collection of the environmental baseline data and project data. Ur-Energy has commenced collection of the baseline data required, and permission has been received from the Wyoming Department of Environmental Quality (WDEQ) for the drilling of 17 wells to be used for monitoring wells and pump tests that will commence in June. The pump tests will provide information on water quality and permeability of the sandstones relative to the horizontal and vertical flow. Wildlife, meteorological, soil and vegetation surveys have commenced and archaeological and radiology surveys are scheduled for this summer.

A total of 3,760 holes within the current property boundary contain mineralized intervals greater than 0.03% U₃O₈ of which 1,933 holes are used in the resource estimate. The majority of the data consist of U₃O₈ grade estimated from geophysical logs. Chemical assays are used where available representing approximately 2% of the intervals. Grade thickness (GT) values were then calculated for each hole, using a cut-off of 0.03% U₃O₈. All intervals above the cut-offs were summed to provide a total interval thickness in each hole. Only intercepts deeper than 100 ft. contributed to the total thickness. A 0.3 GT boundary was used to create polygons, for which the area was measured. One hundred and fifty (150) holes within this GT boundary but with a GT value below the cut-off of 0.3 were excluded from the resource estimate.

RPA reviewed selective geophysical drill logs, compared the Cameco and Kermac drill holes, chemical assays and geophysical logs with the twins drilled by Ur-Energy and considers all of the drill hole data appropriate for use in a resource estimate.

Table of Contents

A cut-off grade of 0.03% U₃O₈ and a grade thickness product (GT) equal to or greater than 0.3 were used to define the mineral resources. This is based on a uranium price of US\$40 per pound and estimated operating costs of approximately US\$20 per pound.

Classification of the resources was determined by a combination of grade continuity and drill hole spacing, nominally 50 ft. centres for measured resources, 100 ft. centres for indicated and up to 200 ft. for inferred resources.

C. Organizational structure.

The Corporation has three wholly-owned subsidiaries: Ur-Energy USA Inc. (“Ur-Energy USA”), a company incorporated under the laws of the State of Colorado for the acquisition and development of properties and, subsequently, more generally for operations in the United States; ISL Resources Corporation (“ISL”), a company incorporated under the laws of the Province of Ontario; and CBM-Energy Inc. (“CBM”), a company incorporated under the laws of the Province of Ontario. The latter two entities are shell companies with no assets or liabilities other than those related to their incorporation.

ISL has one wholly-owned subsidiary, ISL Wyoming, Inc., a company incorporated under the laws of the State of Wyoming.

Ur-Energy USA has four wholly-owned subsidiaries: NFU Wyoming, LLC (“NFU Wyoming”), a limited liability company formed under the laws of the State of Wyoming to facilitate the Corporation’s acquisition of certain property and assets and subsequently to be the land holding and exploration branch of the companies; NFUR Bootheel, LLC (“NFUR Bootheel”), a limited liability company formed under the laws of the State of Colorado to facilitate the Corporation’s participation in a limited liability company venture agreement with Crosshair; NFUR Hauber, LLC (“NFUR Hauber”), a limited liability company initially formed under the laws of the State of Colorado to facilitate the Corporation’s participation in venture at the Corporation’s Hauber project (now with Bayswater); and, Lost Creek ISR, LLC, a limited liability company formed under the laws of the State of Wyoming to hold and operate the Corporation’s Lost Creek property and assets.

NFUR Bootheel is a Member in The Bootheel Project, LLC, a limited liability company formed under the laws of the State of Colorado to hold the Corporation’s Bootheel and Buck Point properties and the venture formed with Crosshair. Crosshair completed its earn-in to a 75% interest in the Bootheel Project in 2009. See Item 4.D – Property, plants and equipment.

NFUR Hauber has one wholly-owned subsidiary: Hauber Project LLC, a limited liability company formed under the laws of the State of Colorado to hold the Corporation’s Hauber project and the venture in which Bayswater has become a Member. Bayswater is an earn-in Member and the current Manager of the Hauber Project. Bayswater can earn a 75% interest by incurring eligible exploration expenditures over a four-year period. See Item 4.D – Property, plants and equipment.

Table of Contents

The principal direct and indirect subsidiaries of the Corporation and the jurisdictions in which they were incorporated or organized are set out below:

D. Property, plants and equipment.

In addition to Lost Creek and Lost Soldier, described above, the Corporation has a number of other exploration properties in the United States and Canada, totaling more than 220,000 mineral acres (approximately, 89,000 hectares).

The Corporation also holds an extensive well log and exploration database, which an in-house team of geologists continues to evaluate for the purpose of generating new exploration targets and creating value by identifying other marketable portions of the database.

Lost Creek and Lost Soldier Projects

See Item 4B – Business overview for detailed descriptions and backgrounds of the Lost Creek and Lost Soldier projects.

Corporation's Projects Adjacent to Lost Creek

The Corporation has expanded its land holdings around Lost Creek, and currently controls a total of 1,753 unpatented mining claims and two State of Wyoming sections for a total of almost 34,000 mineral acres including the Lost Creek permit area, LC North, LC South, EN and Toby project areas. These totals include the 292 lode mining claims acquired by the Corporation during 2009 through staking and two purchase agreements.

Initial drilling at LC North in 2007 was conducted for purposes of investigating numerous occurrences of uranium-bearing intercepts detected by historical exploration drilling by previous operators in the 1970s and examining the relationships to the mineralization to be mined at Lost Creek. In the 2007 drill program, 30 holes were drilled for a total of 29,600 feet (9,022 meters).

In 2008, exploration drilling of 11,370 feet (3,468 meters) was completed at the EN project. In January 2009, the Corporation completed an agreement reducing an existing royalty within an area of interest arising from transactions dating back to 2006. With regard to the EN project, and three other areas, the Corporation was able to eliminate the area of interest, and to reduce the royalty (from two percent (2%) to one percent (1%)) on certain specified mining claims. The results of the 2007 and 2008 drilling programs outside of the Lost Creek permit area along with information from over 725 historic drill holes confirmed mineralization occurring in multiple horizons.

Table of Contents

In August 2009, the Corporation announced the results of in-house geologic evaluations of the Lost Creek permit area and adjacent properties held by the Corporation which contain multiple exploration targets demonstrating the potential to contain 24 to 28 million pounds U₃O₈ in 20.7 to 24.1 million tons, with an average grade of 0.058% U₃O₈ (not an NI 43-101 compliant resource). Individual redox fronts (reduction – oxidation fronts) which are amenable to ISR mining technology are commonly in the range of 10 to 20 feet (3 to 6 meters) thick. Depths of mineralization are from 200 feet to 900 feet with GTs (Grade X Thickness) of 0.3 to 2.23 (averaging 0.7), with an assumption, based upon knowledge of roll fronts in the Great Divide Basin, of 50 - 100 foot width, all of which are similar to the Lost Creek deposit. These potential quantity and grade ranges are conceptual in nature, only. There has been insufficient exploration to define a mineral resource. It is uncertain if further exploration will result in the target(s) being delineated as a mineral resource. Corporation geologists, using Ur-Energy drilling and historic data, have identified a minimum of an additional 120 compiled linear miles (193 kilometers) of new redox fronts with potential for resource development on these properties. This is in addition to the approximately 36 miles of redox fronts containing the current Lost Creek deposit. The new exploration targets on LC North and LC South properties (adjacent to the Lost Creek permit area) consist of at least 10 individual sinuous redox fronts within four major stratigraphic horizons identified by Ur-Energy geologists using an in-house database of historic drill holes and Ur-Energy drill holes. The Corporation continues to evaluate the exploration potential and is recommending future exploration programs for these areas. The newly identified fronts occur within the same stratigraphic horizons that are present in the area of the Lost Creek deposit. Estimation of the potential of the new fronts is based on the observed similarity of alteration characteristics, grade and thickness of mineralization to that currently identified in the Lost Creek deposit.

Hauber Project LLC

In 2007, the Corporation entered into agreements with Trigon Uranium Corporation and its subsidiary ("Trigon"). Under the terms of the agreements, the Corporation contributed its Hauber property to Hauber Project. The Hauber Project is located in Crook County, Wyoming and consists of 205 unpatented lode mining claims and one state uranium lease totaling approximately 4,570 mineral acres. Effective August 1, 2008, Trigon tendered its resignation as a Member and the Manager of the Hauber Project, after which management of the Hauber Project was returned to the Corporation. A settlement of the remaining obligations of Trigon was reached in July 2009.

Effective December 1, 2009, the Corporation entered into an agreement with Bayswater. Under the terms of the agreement, Bayswater joined the Hauber Project as the earn-in Member and Manager of Hauber Project, and can earn a 75% interest by incurring eligible exploration expenditures of US\$1 million dollars over a four-year period. The first year's expenditures will include at least two core drill holes for the purpose of testing the ISR amenability through selected mineralized zones. On January 11, 2010, the Corporation further announced that Bayswater completed an independent NI 43-101 mineral resource estimate on the Hauber Project which concludes the properties hold approximately 1.45 million pounds eU₃O₈ indicated resources in 432,000 tons at an average grade of 0.17% eU₃O₈.

The Bootheel Project, LLC

Crosshair completed its earn-in of a 75% interest in the Corporation's subsidiary, The Bootheel Project, LLC during third quarter 2009. The interest arises from a venture agreement entered into by the Corporation and a subsidiary of then-Target in June 2007. Effective March 31, 2009, Target became a wholly-owned subsidiary of Crosshair through a plan of arrangement. Crosshair's 75% interest was acquired by spending US\$3.0 million in qualified exploration costs, and issuing 125,000 common shares of Target to the Corporation (which was exchanged for 150,000 shares of Crosshair in its acquisition of Target).

Under the terms of the 2007 agreement, the Corporation contributed its Bootheel and Buck Point properties to the Bootheel Project. The properties cover an area of known uranium occurrences within the Shirley Basin. Crosshair completed agreements in 2008 for additional rights and leased lands in the Bootheel property area, in which the lessor

has a 75% mineral interest in the net mineral acres. With the completion of those agreements, the Bootheel Project covers total defined areas at the Bootheel property and the Buck Point property of approximately 8,524 gross, and 7,895 net, mineral acres. Various royalties exist on future production of uranium and other minerals from the Bootheel Project.

Crosshair released an independent resource estimate on the Bootheel property under NI 43-101 in the third quarter of 2009. This NI 43-101 resource estimate reports that the Bootheel property contains an indicated resource of 1.09 million pounds U₃O₈ (indicated resource) in 1.4 million short tons, at a grade of 0.038% U₃O₈ and an inferred resource of 3.25 million pounds U₃O₈ (in 4.4 million short tons) at an average grade of 0.037% U₃O₈. This NI 43-101 report was filed by Crosshair on www.sedar.com. As a result of the Corporation having a 25% interest in the project, it is no longer the controlling Member of the Bootheel Project. Therefore the manner in which the costs for the project's Bootheel and Buck Point properties are reported in the financial statements has changed from being fully consolidated in the Corporation's accounts to the investment in the project being treated as an equity investment. This equity investment is accounted for under the equity accounting method with the net investment reflected on the Corporation's Balance Sheet. The Corporation's share of expenses incurred is shown as loss from affiliate on the Statement of Operations.

Table of Contents

Additional U.S. Exploration Activities and Corporation Databases

Ongoing evaluation continues on the Corporation's historic exploration databases. Throughout 2009, the Corporation acquired rights in additional lands, and field exploration programs continued. The Corporation dropped its mining claims in Arizona in the third quarter of 2009. The Corporation holds production royalty interests in various properties in the United States by virtue of land transactions and the sale of the Moorcroft Database.

Canadian Properties

The Corporation has three properties in northern Canada: Screech Lake, Gravel Hill and Bugs. The Corporation also retains a 5% royalty interest in the Mountain Lake and Dismal Lake West properties held by Triex Minerals Corporation, which together comprise 58 claims.

Screech Lake and Gravel Hill Properties, Thelon Basin, Northwest Territories Canada

The Thelon Basin is host to the undeveloped Kiggavik-Andrew Lake and End uranium deposits. The Corporation's Thelon Basin properties are grass roots projects which the Corporation believes have potential for discovery of high-grade unconformity uranium deposits of the Athabasca style. Of these, the Screech Lake project remains the Corporation's priority. The Corporation holds 24 claims, totaling more than 24,000 hectares (59,000 acres).

Various geophysical work has been conducted on the property since 2005, including a field exploration program in 2009. Highly anomalous radon concentrations and trends have been identified. The coincidence of consistent high to extremely high radon with deep structure and conductivity combine to make the North Screech radon trend the primary focus of more advanced exploration on the Screech Lake project.

In 2006, an environmental screening study was completed, and an application for a land use permit to conduct drill testing of the Screech Lake anomalies was referred to the Mackenzie Valley Environmental Impact Review Board ("Review Board") for environmental assessment. In 2007, an environmental assessment was completed and a report and recommendation from the Review Board was issued. The Review Board recommended to the Minister of Indian and Northern Affairs Canada (the "Minister") that the Corporation's application to conduct exploratory drilling at the Screech Lake property be rejected due to local native community concerns. In October 2007, the Corporation received notification that the Minister had adopted the recommendation of the Review Board. As part of the decision, the Minister did confirm that the decision does not affect the legal standing of the Corporation's Screech Lake mineral claims.

To date, the Corporation continues its discussions with First Nations groups toward securing an exploration agreement to facilitate the Review Board permitting process for a drill program and further exploration. In July 2009, an agreement was secured with Lutsel K'e Dene First Nation to conduct surface exploration work (not drilling). Work carried out in the third quarter of 2009 included claim maintenance, an audio-magnetotelluric ("AMT") survey and collection of over 500 surface samples for bio-leach and soil gas analysis. Commenced in August 2009, this field program was completed in early September 2009. The primary purpose of the AMT geophysics was to determine depth to the top of the unconformity. The two geochemical techniques utilized are tools recently developed in the Athabasca Basin to locate anomalous geochemical signatures over blind uranium orebodies. The choice of the survey parameters resulted from the Corporation's participation in the Canadian Mining Industry Research Organization research program on the application of surface geochemical methods in the Athabasca Basin. Although no drilling was conducted in 2009, the calculated depth measurements will better define drill equipment requirements for future programs and defined, in part, near-surface unconformity targets and better definition of cross-structures.

Table of Contents

The Gravel Hill property consists of approximately 14,000 hectares (35,000 acres). Assessment work was conducted at Gravel Hill in 2008. No work was conducted at Gravel Hill in 2009 and there are currently no plans for exploration work in 2010.

Bugs Property, Baker Lake Basin, Nunavut Canada

The Corporation conducted a drilling and field exploration program in 2008 on the Bugs property in the Kivalliq region of the Baker Lake Basin, incurring total exploration and acquisition costs of approximately \$2.0 million. As part of this program, the Corporation utilized funds from the flow-through financing it raised in March 2008. No field work was conducted at the Bugs property in 2009. The Corporation earned its 100% interest in the property in 2007 by issuing 85,000 Common Shares and reserving a 2% net smelter royalty to the vendor. The Bugs property consists of 19 mineral claims totaling approximately 45,000 acres (18,000 hectares). There are currently no plans for exploration work at the Bugs property in 2010.

Item 4A. Unresolved Staff Comments.

Not applicable.

Item 5. Operating and Financial Review and Prospects.

AMENDED MANAGEMENT'S DISCUSSION AND ANALYSIS

Introduction

The following provides management's discussion and analysis of results of operations and financial condition for the years ended December 31, 2009, 2008 and 2007. Management's Discussion and Analysis ("MD&A") was prepared by Company management and approved by the board of directors on March 5, 2010. This discussion and analysis should be read in conjunction with the Company's audited consolidated financial statements for the years ended December 31, 2009, 2008 and 2007. All figures are presented in Canadian dollars, unless otherwise noted, and are in accordance with Canadian generally accepted accounting principles.

The Company was incorporated on March 22, 2004 and completed its first year-end on December 31, 2004. The consolidated financial statements include all of the assets, liabilities and expenses of the Company and its wholly-owned subsidiaries Ur-Energy USA Inc.; NFU Wyoming, LLC; Lost Creek ISR, LLC; NFUR Bootheel, LLC; Hauber Project LLC; NFUR Hauber, LLC; ISL Resources Corporation; ISL Wyoming, Inc.; and CBM-Energy Inc. All inter-company balances and transactions have been eliminated upon consolidation. Ur-Energy Inc. and its wholly-owned subsidiaries are collectively referred to herein as "Ur-Energy" or the "Company".

Table of Contents

Forward-Looking Information

This MD&A contains "forward-looking statements" within the meaning of applicable United States and Canadian securities laws. Shareholders can identify these forward-looking statements by the use of words such as "expect", "anticipate", "estimate", "believe", "may", "potential", "intends", "plans" and other similar expressions or statements that an action, event or result "may", "could" or "should" be taken, occur or be achieved, or the negative thereof or other similar statements. These statements are only predictions and involve known and unknown risks, uncertainties and other factors which may cause the Company's actual results, performance or achievements, or industry results, to be materially different from any future results, performance, or achievements expressed or implied by these forward-looking statements. Such statements include, but are not limited to: (i) the Company's belief that it will have sufficient cash to fund its capital requirements; (ii) receipt of (and related timing of) a United States Nuclear Regulatory Commission Source and Byproduct Material License; Wyoming Department of Environmental Quality Permit and License to Mine and all other necessary permits related to Lost Creek; (iii) Lost Creek and Lost Soldier will advance to production and the production timeline at Lost Creek scheduled for early 2011; (iv) production rates, timetables and methods at Lost Creek and Lost Soldier; (v) the Company's procurement and construction plans at Lost Creek; (vi) the licensing process at Lost Soldier; (vii) the timing, the mine design planning and the preliminary assessment at Lost Soldier; (viii) the completion and timing of various exploration programs, including without limitation, those as LC North and LC South ; (ix) the potential of new exploration targets in the area of Lost Creek, including those at LC North and LC South, to contain 24 – 28 million pounds of U3O8 (not an NI 43-101 compliant resource); (x) timing, completion, and funding for and results of further exploration programs at the Bootheel Project and Hauber Project; and (xi) the community and regulatory issues with the Screech Lake project and related exploration. These other factors include, among others, the following: future estimates for production, production start-up and operations (including any difficulties with startup), capital expenditures, operating costs, mineral resources, recovery rates, grades and prices; business strategies and measures to implement such strategies; competitive strengths; estimated goals; expansion and growth of the business and operations; plans and references to the Company's future successes; the Company's history of operating losses and uncertainty of future profitability; the Company's status as an exploration stage company; the Company's lack of mineral reserves; the hazards associated with mining construction and production; compliance with environmental laws and regulations; risks associated with obtaining permits in Canada and the United States; risks associated with current variable economic conditions; the possible impact of future financings; uncertainty regarding the pricing and collection of accounts; risks associated with dependence on sales in foreign countries; the possibility for adverse results in potential litigation; fluctuations in foreign exchange rates; uncertainties associated with changes in government policy and regulation; uncertainties associated with the Canadian Revenue Agency's audit of any of the Company's cross border transactions; adverse changes in general business conditions in any of the countries in which the Company does business; changes in the Company's size and structure; the effectiveness of the Company's management and its strategic relationships; risks associated with the Company's ability to attract and retain key personnel; uncertainties regarding the Company's need for additional capital; uncertainty regarding the fluctuations of the Company's quarterly results; uncertainties relating to the Company's status as a non-U.S. corporation; uncertainties related to the volatility of the Company's shares price and trading volumes; foreign currency exchange risks; ability to enforce civil liabilities under U.S. securities laws outside the United States; ability to maintain the Company's listing on the NYSE Amex (the "NYSE Amex") and Toronto Stock Exchange (the "TSX"); risks associated with the Company's possible status as a "passive foreign investment corporation" or a "controlled foreign corporation" under the applicable provisions of the U.S. Internal Revenue Code of 1986, as amended; risks associated with the Company's investments and other risks and uncertainties described under the heading "Risk Factors" of the Company's Annual Report on Form 20-F ("Annual Information Form") dated March 5, 2010 which is filed on SEDAR at www.sedar.com and with the U.S. Securities and Exchange Commission at www.sec.gov.

The potential quantity and grade ranges set forth in regards exploration targets at Lost Creek, LC North and LC South are conceptual in nature only. There has been insufficient exploration to define a mineral resource at the new

exploration targets at Lost Creek, LC North and LC South. It is uncertain if further exploration will result in the target(s) being delineated as a mineral resource.

Nature of Operations and Description of Business

The Company is an exploration stage junior mining company engaged in the identification, acquisition, evaluation, exploration and development of uranium mineral properties in Canada and the United States. Due to the nature of the uranium mining methods to be used by the Company on the Lost Creek property, and the definition of “mineral reserves” under National Instrument 43-101 (“NI 43-101”), which uses the CIM Definition Standards, the Company has not determined whether the properties contain mineral reserves. However, the Company’s April 2008 NI 43-101 “Preliminary Assessment for the Lost Creek Project Sweetwater County, Wyoming” outlines the economic viability of the Lost Creek project, which is currently in the permitting process with state and federal regulators. The recoverability of amounts recorded for mineral properties is dependent upon the discovery of economically recoverable resources, the ability of the Company to obtain the necessary financing to develop the properties and upon attaining future profitable production from the properties or sufficient proceeds from disposition of the properties.

Table of Contents

The Company is primarily focused on uranium exploration in Wyoming, USA where the Company has 12 properties. Of those, ten properties are in the Great Divide Basin, and two of those (Lost Creek and Lost Soldier) contain defined resources that the Company expects to advance to production. Among its other properties, the Company also has two uranium exploration properties in the Thelon Basin, Northwest Territories, Canada.

Selected Information

The following table contains selected financial information as at December 31, 2009 and December 31, 2008.

	As at December 31, 2009 \$	As at December 31, 2008 \$
Total assets	81,702,205	101,533,965
Liabilities	(1,550,675)	(3,256,634)
Net assets	80,151,530	98,277,331
Capital stock and contributed surplus	157,725,036	157,118,019
Deficit	(77,573,506)	(58,840,688)
Shareholders' equity	80,151,530	98,277,331

Table of Contents

The following table contains selected financial information for the years ended December 31, 2009, 2008 and 2007 and cumulative information from inception of the Company on March 22, 2004 to December 31, 2009.

	Year Ended December 31, 2009 \$	Year Ended December 31, 2008 \$	Year Ended December 31, 2007 \$	Cumulative from March 22, 2004 through December 31, 2009 \$
Revenue	Nil	Nil	Nil	Nil
Total expenses (1)	(17,408,449)	(25,967,711)	(22,959,356)	(88,288,232)
Interest income	890,915	2,494,445	2,816,398	6,969,354
Loss from equity investment	(17,855)	-	-	(17,855)
Foreign exchange gain (loss)	(3,506,111)	5,656,319	(806,420)	2,062,128
Other income (loss)	940,237	(36,638)	-	903,599
Loss before income taxes	(19,101,263)	(17,853,585)	(20,949,378)	(78,371,006)
Recovery of future income taxes	368,445	-	429,055	797,500
Net loss for the period	(18,732,818)	(17,853,585)	(20,520,323)	(77,573,506)
(1) Stock based compensation included in total expenses	950,874	4,567,206	6,138,922	15,713,071
Loss per common share:				
Basic and diluted	(0.20)	(0.19)	(0.24)	
Cash dividends per common share	Nil	Nil	Nil	

The Company has not generated any revenue from its operating activities to date. The Company's expenses include general and administrative ("G&A") expense, exploration and evaluation expense, development expense and write-off of mineral property costs. Acquisition costs of mineral properties are capitalized. Exploration, evaluation and development expenditures, including annual maintenance and lease fees, are charged to earnings as incurred until the mineral property becomes commercially mineable.

No cash dividends have been paid by the Company. The Company has no present intention of paying cash dividends on its common shares as it anticipates that all presently available funds will be invested to finance new and existing exploration and development activities.

Overall Performance and Results of Operations

From inception to December 31, 2009, the Company has raised net cash proceeds from the issuance of common shares and warrants and from the exercise of warrants and stock options of \$138.7 million. As at December 31, 2009, the Company held cash and cash equivalents, and short-term investments of \$43.4 million. The Company's cash resources are invested with banks in Canada and the United States in deposit accounts, guaranteed investment certificates, certificates of deposit, and money market accounts. The Company has made significant investments in mineral properties and exploration, evaluation and development expenditures.

Mineral Properties

The Company holds mineral properties in the United States and Canada, including in Wyoming and the Northwest Territories, which total more than 220,000 acres (approximately 89,000 hectares).

USA Properties

Lost Creek Project – Great Divide Basin, Wyoming

The Company acquired certain of its Wyoming properties when Ur-Energy USA entered into a Membership Interest Purchase Agreement (“MIPA”) with New Frontiers Uranium, LLC effective June 30, 2005. Under the terms of the MIPA, the Company purchased all of the issued and outstanding membership interests in NFU Wyoming, LLC. Assets acquired in this transaction include the extensively explored and drilled Lost Creek and Lost Soldier projects, other properties, and a development database including more than 10,000 electric well logs, over 100 geologic reports and over 1,000 geologic and uranium maps covering large areas of Wyoming, Montana and South Dakota. The 100% interest in NFU Wyoming was purchased for an aggregate consideration of \$24,515,832 (US\$20,000,000), plus capitalized interest.

Table of Contents

A royalty on future production of 1.67% is in place with respect to 20 claims comprising a small portion of the Lost Creek Project claims.

The Lost Creek uranium deposit is located in the Great Divide Basin, Wyoming. The deposit is approximately three miles (4.8 kilometers) long and the mineralization occurs in four main sandstone horizons between 315 feet (96 meters) and 700 feet (213 meters) in depth.

As identified in the June 2006 Technical Report on Lost Creek, NI 43-101 compliant resources are 9.8 million pounds of U₃O₈ at 0.058 % as an indicated resource and an additional 1.1 million pounds of U₃O₈ at 0.076 % as an inferred resource.

Lost Creek Regulatory History

The Company continues to advance matters to obtain an NRC Source and Byproduct Material License (the “NRC License”) for the Lost Creek project. The NRC is required to complete two reports, the Safety and Environmental Report (“SER”) and the Supplemental Environmental Impact Statement (“SEIS”), prior to issuing an NRC License. Based upon guidance from the NRC, Ur-Energy anticipates the issuance of its NRC License in the third quarter 2010. The history and milestones to date of the NRC application process for Lost Creek are as follows:

DATE	EVENT
October 2007	Company submitted Application to the NRC
June 2008	NRC notified the Company that the Acceptance Review was complete: the Application was found sufficient to proceed with technical review
September 2008	NRC delay in completion of the draft Generic Environmental Impact Study (“GEIS”) for in-situ recovery announced; anticipated publication delayed until June 2009
November 2008	NRC provided the Company with a Request for Additional Information (“RAI”) for the technical review portion of the Application
Fourth quarter 2008- first quarter 2009	The Company submitted responses to the NRC’s RAI for Lost Creek technical review.
March 2009	NRC provided the Company with an RAI for the environmental review portion of the Application
May 2009	NRC advised all applicants for new ISR operations that, in addition to the GEIS guidelines, a site-specific SEIS will be required
June 2009	The Company submitted responses to the NRC’s RAI for Lost Creek environmental review
June 2009	GEIS issued by NRC
August 2009	The Company submitted additional responses to health physics RAI items
December 2009	Draft SEIS on Lost Creek issued by NRC and draft SER completed by NRC
February 2010	The Company submitted comments regarding Draft SEIS

The U.S. Bureau of Land Management (“BLM”) has determined that its project environmental review and approval will be independent of the environmental review process carried out by the NRC. In response, the Company submitted a Plan of Operations to the BLM in November 2009. The BLM appointed a coordinator for the review process and the review, including public comment and selection of a contractor for the environmental review, has commenced. The BLM’s decision of record on the Plan is expected in the summer of 2010.

Table of Contents

The Company continues to advance matters to obtain a WDEQ Permit to Mine for the Lost Creek project. In December 2007, the Company submitted the Lost Creek Permit to Mine Application to the WDEQ. The WDEQ Application was deemed complete in May 2008. Throughout 2009, WDEQ issued various technical comments in its review of the Application, and the Company has filed responses to those comments. The data package for Mine Unit #1 was submitted to the WDEQ in December 2009 and initial comments were received from WDEQ in February 2010. The Company anticipates filing its responses to those comments before the end of first quarter 2010. Ur-Energy anticipates the issuance of Lost Creek's WDEQ Permit to Mine in the summer of 2010.

On March 5, 2010, the U.S. Fish and Wildlife Service (“USFWS”), in compliance with a federal court order, submitted a finding of “warranted for listing but precluded by higher priorities” with regard to the greater sage grouse – whose habitat includes Wyoming. A finding that listing is “warranted but precluded” results in recognition of the greater sage grouse as a candidate for listing. This finding is reconsidered annually, taking into account changes in the status of the species. When higher priority listing actions have been addressed by the USFWS for other species, a proposed listing rule is prepared and issued for public comment. This means that until the USFWS finalizes a listing determination, the greater sage grouse will remain under state management. As a part of its WDEQ Application, the Company has submitted a Wildlife Protection Plan regarding, among other issues, the sage grouse. The Company conducted several meetings during 2009 and early 2010 with the WDEQ and Wyoming Department of Game and Fish to facilitate the processing and acceptance of the mitigation plan as a part of the WDEQ Permit.

The Company has submitted to the WDEQ-Water Quality Division an application for a permit for up to five Class 1 Underground Injection Control (“UIC”) disposal wells. These wells, utilized for deep geologic disposal of liquid waste, will be located within the Lost Creek permit area. The Company acquired detailed data including formation stratigraphy, reservoir extent and properties, water quality and assessment of well injection rates from a deep test well drilled in 2008. This data set was used to support the application which was submitted to WDEQ – Water Quality Division on June 29, 2009. WDEQ processing of this particular application was delayed initially as a result of WDEQ staffing issues, but progressed with the issuance in late November 2009 of technical comments, to which the Company submitted its responses on February 1, 2010. The Company anticipates the receipt of this permit in the second quarter of 2010.

The Sweetwater County Development Plan was approved in December 2009. The Air Quality permit was issued by the WDEQ to Lost Creek on January 20, 2010. Additional permit applications are under review by various agencies, with approvals expected in advance of the NRC License.

Lost Creek Development Program – Drilling, Planning and Procurement

The Company established a framework to demonstrate the economic viability of the Lost Creek project. In April 2008, the Company released an independent technical report under NI 43-101 prepared by Lyntek Inc. (“Lyntek”), entitled Preliminary Assessment for the Lost Creek Project Sweetwater County, Wyoming (“Preliminary Assessment”). The Preliminary Assessment provides an analysis of the economic viability of the mineral resource of the Lost Creek project. The base case in the Preliminary Assessment returned a pre-tax internal rate of return of 43.6% at a price of US\$80 per pound U₃O₈, and demonstrated that the project would be economic at prices above US\$40 per pound U₃O₈. Lyntek also concluded that the uranium is leachable with a reasonable solution of bicarbonate and peroxide (and by extension, oxygen) and that an overall recovery of uranium in the range of 85% appears reasonable. The Preliminary Assessment is available for review on www.sedar.com.

Table of Contents

The Company continued its development program at Lost Creek during 2009. The first phase of the 2009 program included the drilling and installation of 15 monitoring wells (11,770 feet / 3,590 meters) to obtain and monitor water quality and hydrologic data for the purpose of permitting an additional mineralized horizon underlying the horizon presently being permitted. The Company also completed mechanical integrity testing of installed baseline and monitoring wells and the installation of submersible pump equipment to facilitate ongoing water sampling requirements.

In July 2009, the delineation drilling program at Lost Creek continued with 235 additional drill holes originally planned. As the program progressed, additional drill holes were planned and the program was extended through February 2010, to further investigate mineralization found in unanticipated locations. As of February 28, 2010, 277 holes were completed (for a total of 196,840 feet (59,341 meters)) to support definition of future proposed mining areas. As well, in early 2010, additional monitor wells were drilled and other work completed

During 2009, the Company's engineering staff, assisted by TREC Inc., completed the detailed designs and specifications for all components of the Lost Creek plant. The Company's bid process was completed in fourth quarter 2009, when the Company announced its selection of Fagen, Inc. as general contractor of the Lost Creek plant construction project. Although construction of the Lost Creek plant will not begin until receipt of the necessary permits, requests for quotations for all major process equipment at Lost Creek were prepared and solicited from vendors and contractors. Bids were evaluated and procurement was ongoing throughout 2009.

One purchase order totaling US\$1,323,834 was issued during the second quarter of 2009 for ion exchange columns and other process equipment. Payments of US\$861,525 have been made, with a final payment due upon completion. An additional purchase order for US\$319,357 was issued during the second quarter of 2009 to initiate the drawing and approval process for other plant equipment. Progress payments will be required once the final drawings are approved, the final configuration is decided upon and the final price is determined.

Company Projects Adjacent to Lost Creek

In 2009, the Company expanded its land holdings around Lost Creek and currently controls a total of 1,753 unpatented mining claims and two State of Wyoming sections for a total of almost 34,000 mineral acres including the Lost Creek permit area, LC North, LC South, EN and Toby project areas. These totals include the 292 lode mining claims acquired by the Company during 2009 by way of staking and purchase agreements.

Initial drilling at LC North in 2007 was conducted for the purpose of investigating numerous occurrences of uranium-bearing intercepts detected by historical exploration drilling by previous operators in the 1970s and examining their relationships to the mineralization to be mined at the Lost Creek project. In the 2007 drill program, 30 holes were drilled for a total of 29,600 feet (9,022 meters).

In 2008, exploration drilling of 11,370 feet (3,468 meters) was completed at the EN project. In January 2009, the Company completed an agreement with regard to the EN project reducing an existing royalty from two percent (2%) to one percent (1%) on specified mining claims and eliminating an area of interest arising from transactions dating back to 2006. The results of the 2007 and 2008 drilling programs outside of the Lost Creek permit area along with information from over 725 historic drill holes confirmed mineralization occurring in multiple horizons within the EN project area.

In August 2009, the Company announced the results of in-house geologic evaluations of the Lost Creek permit area and adjacent properties held by the Company which contain multiple exploration targets demonstrating the potential to contain 24 to 28 million pounds U3O8 in 20.7 to 24.1 million tons, with an average grade of 0.058% U3O8 (not an NI 43-101 compliant resource). Individual redox fronts (reduction – oxidation fronts) which are amenable to ISR mining

technology are commonly in the range of 10 to 20 feet (3 to 6 meters) thick. Depths of mineralization are from 200 feet to 900 feet with GTs (Grade X Thickness) of 0.3 to 2.23 (averaging 0.7), with an assumption, based upon knowledge of roll fronts in the Great Divide Basin, of 50 - 100 foot width, all of which are similar to the Lost Creek deposit. These potential quantity and grade ranges are conceptual in nature, only. There has been insufficient exploration to define a mineral resource. It is uncertain if further exploration will result in the target(s) being delineated as a mineral resource. Company geologists, using Ur-Energy drilling and historic data, have identified a minimum of an additional 120 compiled linear miles (193 kilometers) of new redox fronts with potential for resource development on these properties. This is in addition to the approximately 36 miles of redox fronts containing the current Lost Creek deposit. The new exploration targets on LC North and LC South properties (adjacent to the Lost Creek permit area) consist of at least 10 individual sinuous redox fronts within four major stratigraphic horizons identified by Ur-Energy geologists during the evaluation. The Company continues to evaluate the exploration potential and is recommending future exploration programs for these areas. The newly identified fronts occur within the same stratigraphic horizons that are present in the area of the Lost Creek deposit. Estimation of the potential of the new fronts is based on the observed similarity of alteration characteristics, grade and thickness of mineralization to that currently identified in the Lost Creek deposit.

Table of Contents

Lost Soldier Project – Great Divide Basin, Wyoming

The Lost Soldier project is located approximately 14 miles (22.5 kilometers) to the northeast of the Lost Creek project. The property has over 3,700 historical drill holes defining 14 mineralized sandstone units. The Company maintains 143 lode mining claims at Lost Soldier, totaling approximately 2,710 mineral acres. A royalty on future production of one percent (1%), which arises from a data purchase, is in place with respect to certain claims within the project. In 2009, the Company's staff continued with engineering studies and mine design analysis of Lost Soldier. The Company continues to anticipate development of regulatory applications for Lost Soldier will come be made the Company obtains the Lost Creek licenses and permit to mine, and as corporate priorities are determined for the development of the lands adjacent to Lost Creek.

Hauber Project LLC – Northeastern Wyoming

The Company's Hauber property is located in Crook County, Wyoming and consists of 205 unpatented lode mining claims and one state uranium lease totaling approximately 4,570 mineral acres. In 2007, the Company entered into agreements with Trigon Uranium Corporation and its subsidiary ("Trigon") for the formation of a venture project to be known as Hauber Project LLC (the "Hauber Project"). Under the terms of the agreements, the Company contributed its Hauber property, and Trigon was to make contributions through eligible exploration expenditures on the property. Having resigned from the Hauber Project effective August 1, 2008, Trigon and the Company resolved the continuing obligations of Trigon by settlement agreement in July 2009.

Effective December 1, 2009, NCA Nuclear, Inc. ("NCA Nuclear"), a subsidiary of Bayswater Uranium Corporation, entered the Hauber Project as a Member, entitled to earn in to 75% interest through the expenditure of US\$1,000,000 in qualified exploration costs over a four-year period. NCA Nuclear will also act as Manager of Hauber Project.

In January 2010, NCA Nuclear completed an NI 43-101 mineral resource estimate of the properties at the Hauber Project, authored by Thomas C. Pool, P.E., of International Nuclear, Inc. The resource estimate concludes the Hauber Project properties hold approximately 1.45 million pounds of eU3O8 (Indicated Resources) in 423,000 tons at an average grade of 0.17% eU3O8. Bayswater has filed the NI 43-101 report on www.sedar.com.

As a part of its 2010 obligations under the venture agreement, NCA Nuclear will drill at least two drill holes for the purpose of testing in situ recovery amenability of the uranium mineralization.

Table of Contents

The Bootheel Project, LLC – Shirley Basin, Wyoming

Crosshair Exploration & Mining Corp (“Crosshair”) completed its earn-in of a 75% interest in the Company’s subsidiary, The Bootheel Project, LLC (the “Bootheel Project”) during the third quarter of 2009. The interest arises from a venture agreement entered into by the Company and a subsidiary of then Target Exploration & Mining Corp. (“Target”) in June 2007. Effective March 31, 2009, Target became a wholly-owned subsidiary of Crosshair through a plan of arrangement. Crosshair’s 75% interest was acquired by spending US\$3.0 million in qualified exploration costs, and issuing 125,000 common shares of Target to the Company (which was exchanged for 150,000 common shares of Crosshair in its acquisition of Target).

Under the terms of the 2007 agreement, the Company contributed its Bootheel and Buck Point properties to the Bootheel Project. The properties cover an area of known uranium occurrences within the Shirley Basin. Crosshair completed agreements in 2008 for additional rights and leased lands in the Bootheel property area, in which the lessor has a 75% mineral interest in the net mineral acres. With the completion of those agreements, the Bootheel Project covers total defined areas at the Bootheel property and the Buck Point property of approximately 8,524 gross, and 7,895 net, mineral acres. Various royalties exist on future production of uranium and other minerals from the Bootheel Project properties.

In 2008, Crosshair completed a 50,000 feet (15,250 meters) drilling program on the Bootheel property. In January 2009, Crosshair announced that, on behalf of the Bootheel Project, it had completed the acquisition of the final historic data package comprising geophysical and geological data from approximately 290,000 feet (88,400 meters) of drilling carried out by Cameco, Kerr McGee and Uradco. Additional historic data, acquired by the Company in 2007, has also been made available to the Bootheel Project.

Crosshair released an independent resource estimate on the Bootheel property under NI 43-101 in the third quarter of 2009. This NI 43-101 resource estimate reports that the Bootheel property contains 1.09 million pounds of U3O8 (indicated resource) in 1.4 million short tons, at a grade of 0.038% U3O8, and an inferred resource of 3.25 million pounds U3O8 (in 4.4 million short tons) at an average grade of 0.037% U3O8. This NI 43-101 report was filed by Crosshair on www.sedar.com.

As a result of Crosshair’s earn-in, the Company now has a 25% interest in the Bootheel Project. As the Company is no longer the controlling Member of the Bootheel Project from the date Crosshair completed its earn-in, the Project is now accounted for using the equity accounting method with the Company’s proportionate share of the Project’s loss included in the Statement of Operations from the date of earn-in and the Company’s net investment reflected on the Balance Sheet.

Additional U.S. Exploration Activities and Company Databases

In August 2009, the Company completed the sale of the Moorcroft Database to Peninsula Minerals Limited (“Peninsula”) for US\$1,000,000, and a royalty on future production from a broad-ranging project area in the Eastern Powder River Basin of Wyoming in which Peninsula reports that it is the dominant mineral rights holder in the area. The Company obtained the Moorcroft Database as a part of its acquisition of NFU Wyoming, LLC in 2005, which also included several other historic databases. The net profit of \$1,079,475 from this sale is included in the Company’s Other Income in the Statement of Operations.

Ongoing evaluation continues of the exploration databases owned by the Company.

Throughout 2009, the Company acquired rights in additional lands, and field exploration programs continued. The Company dropped its mining claims in Arizona in the third quarter of 2009.

Table of Contents

Canadian Properties

Screech Lake Property, Thelon Basin, Northwest Territories

Throughout 2009, the Company continued its discussions with First Nations groups in respect to its Screech Lake property. An agreement was secured with Lutsel K'e Dene First Nation to conduct surface exploration work in 2009 but no agreement has been obtained to carry out drilling.

Work carried out in the third quarter of 2009 included claim maintenance, an audio-magnetotelluric ("AMT") survey and collection of over 500 surface samples for bio-leach and soil gas analysis. Commenced in August 2009, this field program was completed in early September 2009. The primary purpose of the AMT geophysics was to determine depth to the top of the unconformity. The two geochemical techniques utilized are tools recently developed in the Athabasca Basin to locate anomalous geochemical signatures over blind uranium ore bodies. The choice of the survey parameters resulted from Ur-Energy's participation in the Canadian Mining Industry Research Organization research program on the application of surface geochemical methods in the Athabasca Basin. No drilling was conducted in 2009. However, for future programs, the calculated depth measurements obtained through this year's geophysical work will better define drill equipment requirements and have defined, in part, near-surface unconformity targets and better definition of cross-structures.

Year Ended December 31, 2009 Compared to Year Ended December 31, 2008

The following table summarizes the results of operations for the years ended December 31, 2009 and 2008.

	2009		2008		Year Ended December 31,	
	\$	\$	\$	\$	Change	Change
					%	%

Expenses

Total expenses for the year 2009 were \$17.4 million which include G&A expense, exploration and evaluation expense, development expense and write-off of mineral property costs. These expenses decreased by \$8.6 million from a 2008 total of \$26.0 million. This decrease was driven in large part by the decrease in stock compensation expense of \$3.6 million. This decrease is a result of lower ongoing expense due to a decrease in the weighted-average

option price and the voluntary return to the Company by option holders of options with an exercise price of \$4.75 or higher in the third quarter of 2008. Previously unrecognized stock based compensation cost of \$2.2 million was recognized at the cancellation date out of which \$0.9 million was recorded in G&A expense and \$1.3 million was recorded in exploration and evaluation expense.

Table of Contents

G&A expense relates to the Company's administration, finance, investor relations, land and legal functions. The primary reason for the decrease in these expenses in 2009 was lower stock compensation expense, which decreased \$1.5 million during the year due to the 2008 cancellation discussed above. Excluding stock compensation expense, G&A expense remained constant for the year.

The primary reason for the decrease in exploration and evaluation expense was the transition of the Company's Lost Creek property from the evaluation stage to the development stage. This transition happens when sufficient evidence of mineral resources has been identified to justify the development of the property for mining activities and filing the applications for the mining permits. As a result, direct project evaluation expenditures decreased \$1.6 million during the year. Exploration costs in Canada decreased \$1.1 million as a result of a larger exploration program at the Company's Bugs project in Nunavut in 2008 compared to the program conducted at Screech Lake in 2009. Stock compensation expense charged to exploration and evaluation declined \$1.4 million in the year.

Development expense relates entirely to the Company's Lost Creek property, which entered the development stage in the second quarter of 2008. Total costs were lower by \$1.9 million for the year compared with 2008. The primary changes in development costs for the year were reductions in costs related to the deep test well for ground water sampling in support of the application for Class I UIC permit of \$2.2 million, decreases in drilling costs of \$0.9 million, decrease in stock compensation of \$0.3 million and decreases in logging costs of \$0.2 million. These were offset by increases in labor of \$0.6 million and permitting of \$1.2 million for the year. Combined expenditures for mineral development activities (exploration, evaluation and development) decreased by \$6.0 million for the year ended December 31, 2009, when compared to the comparable period in 2008.

During 2009, the Company wrote off \$38,878 in mineral property costs associated with claims in Yuma County, Arizona and \$63,561 of Eyeberry property costs in Canada. In 2008, the Company wrote off \$0.3 million of mineral property costs related to the Harding and Fall River projects in South Dakota.

Other income and expenses

The Company's cash resources are invested with banks in deposit accounts, guaranteed investment certificates, certificates of deposit, and money market accounts. The decrease in interest income was driven by lower average cash resources and lower average interest rates in 2009 as compared to those in 2008.

During the year ended December 31, 2009, the Company sold its database of geologic information related to its Moorcroft project in Wyoming for US\$1.0 million. The gain of \$1.1 million on this sale is reported in Other Income for 2009.

The net foreign exchange loss for the year ended December 31, 2009 arose primarily due to cash resources held in U.S. dollar accounts as the U.S. dollar weakened relative to the Canadian dollar during the period.

Income Taxes

During 2008, the Company raised \$2,750,000 through the sale of common shares covered by a flow-through election. This election requires that all capital raised under this election be used for exploration and evaluation of Canadian mineral interests prior to the end of the following calendar year. The Company then files a document with Revenue Canada renouncing its right to claim those expenditures for income tax purposes and passes them through to the purchasers of the common shares.

Table of Contents

During 2009, the Company filed the renouncement with the taxing authorities and completed the expenditure of the funds raised in 2008. As a result, the Company recognized a future tax liability in 2009 for the tax benefit that was renounced, while reducing capital stock by the same amount.

In 2009 and 2008, the Company recorded operating losses in both Canada and the United States. The benefit of these losses has been recognized only to the extent that the Company had future income tax liabilities arising from the issuance of flow-through shares. Consequently, the Company recorded an income tax recovery in 2009 to offset the future income tax. Management has concluded that it is not yet more likely than not that the remaining losses, and prior years' loss carryforwards and other tax assets will be realized, and therefore the Company has recorded a full valuation allowance against these amounts.

Loss per Common Share

Both basic and diluted loss per common share for the year ended December 31, 2009 were \$0.20 (2008 – \$0.19). The diluted loss per common share is equal to the basic loss per common share due to the anti-dilutive effect of all convertible securities outstanding given that net losses were experienced.

Year Ended December 31, 2008 Compared to Year Ended December 31, 2007

The following table summarizes the results of operations for the years ended December 31, 2008 and 2007.

	2008 \$	2007 \$	Year Ended December 31,	
			Change \$	Change %
Revenue	Nil	Nil	Nil	Nil
General and administrative	(6,904,564)	(7,305,315)	400,751	-5 %
Exploration and evaluation expense	(9,922,798)	(15,654,041)	5,731,243	-37 %
Development expense	(8,854,536)	Nil	(8,854,536)	NA
Write-off of mineral properties	(285,813)	Nil	(285,813)	NA
Total expenses	(25,967,711)	(22,959,356)	(3,008,355)	13 %
Interest income	2,494,445	2,816,398	(321,953)	-11 %
Foreign exchange gain (loss)	5,656,319	(806,420)	6,462,739	-801 %
Other income (loss)	(36,638)	Nil	(36,638)	NA
Loss before income taxes	(17,853,585)	(20,949,378)	3,095,793	-15 %
Recovery of future income taxes	Nil	429,055	(429,055)	NA
Net loss for the period	(17,853,585)	(20,520,323)	2,666,738	-13 %
Loss per share – basic and diluted	(0.19)	(0.24)	0.05	-21 %

Expenses

Total expenses for the year ended December 31, 2008 were \$26.0 million as compared to \$23.0 million in 2007. Total expenses include G&A expense, exploration and evaluation expense, development expense and write-off of mineral property costs.

Overall, 2008 total expenses increased \$3.0 million as compared to 2007. The increase in total expenses was primarily due to increased expenditures on the Company's exploration and development projects, the continued expansion of the Littleton, Colorado and Casper, Wyoming offices, and increases in non-cash amortization of capital

assets and write-off expenses. The increase in total expenses was partially offset by a decrease in non-cash stock based compensation expense.

Table of Contents

G&A expense relates primarily to the Company's administration, finance, investor relations, land and legal functions in Littleton, Colorado. During 2008, the Company continued to expand the Casper, Wyoming office. The Company strengthened key staffing areas adding eight positions primarily aimed at enhancing operating expertise at the Casper office. Accordingly, the Denver and Casper offices were also expanded to accommodate and support the staffing additions.

Exploration, evaluation and development expenditures increased \$3.1 million in 2008, primarily due to the transition of the Company's Lost Creek property from the evaluation stage to the development stage. During 2008, the Company spent approximately \$1.9 million in evaluation activities and \$8.8 million in development activities related to the Lost Creek property, which were expensed in accordance with the Company's revised accounting policies. Additionally, the Company incurred significant expenditures on other exploration and evaluation properties including the Bugs property in Canada and the Lost Soldier property in the United States.

During the year, the Company recorded significant non-cash stock based compensation expenses related to stock options. In September 2008, the Company gave the holders of options with an exercise price of \$4.75 or higher the opportunity to voluntarily return all or a portion of these options to the Company by September 30, 2008 without any promise or guarantee that the option holders will receive any further options. Options for 2,490,000 shares with a weighted exercise price of \$4.82 were returned to the Company. Previously unrecognized stock based compensation cost of \$2.2 million was recognized at the cancellation date. Including the above, for 2008, stock based compensation expenses of \$4.6 million (2007 – \$6.1 million) were included in total expenses. These non-cash expenses represent approximately 18% of total expenses (2007 – 27%).

During the third quarter of 2008, the Company relinquished leases associated with the Harding and Fall River projects in South Dakota and wrote-off the approximately \$0.3 million in costs related to these projects. There were no write offs in 2007.

Other income and expenses

The Company's cash resources are invested with major banks in bankers' acceptances, guaranteed investment certificates, certificates of deposit, and money market accounts. During the year ended December 31, 2008, the Company earned interest income on these investments of \$2.5 million, as compared to \$2.8 million in 2007. After the May 2007 bought deal public offering and the March 2008 flow-through share private placement financing, the Company's average cash resources increased significantly. However, the Company does not generate any revenue from operating activities and its average cash resources, and the resulting interest income, have declined since the two financings were completed.

During the year ended December 31, 2008, the Company recorded a net foreign exchange gain of \$5.7 million as compared to a \$0.8 million loss during the same period in 2007. This 2008 net foreign exchange gain arose primarily due to cash balances held in U.S. dollar accounts as the U.S. dollar strengthened relative to the Canadian dollar during the period, while in 2007 the U.S. dollar declined in value relative to the Canadian dollar.

Income Taxes

In 2008, the Company recorded operating losses in both Canada and the United States. Management has concluded that it is not yet more likely than not that these losses, and prior years' loss carryforwards and other tax assets will be realized, and therefore the Company has recorded a full valuation allowance against these amounts.

Table of Contents

In 2007, the Company also recorded losses in both jurisdictions against which full valuation allowances were applied, except in respect of the Company's ISL Resources Corporation ("ISL Resources") subsidiary. The Company acquired ISL Resources in 2004 and recorded a future tax liability upon the acquisition related to the difference between management's estimate of the tax basis and the fair value assigned to the assets acquired. In 2007, management filed tax returns for ISL Resources for the pre-acquisition period and established additional tax basis for the ISL Resources assets and consequently recorded a reduction in the future tax liability related to these assets.

Loss per Common Share

Both basic and diluted loss per common share for the year ended December 31, 2008 were \$0.19 (2007 – \$0.24). The diluted loss per common share is equal to the basic loss per common share due to the anti-dilutive effect of all convertible securities outstanding given that net losses were experienced.

Liquidity and Capital Resources

As at December 31, 2009, the Company had cash resources, consisting of cash and cash equivalents and short-term investments, of \$43.4 million, a decrease of \$21.6 million from the December 31, 2008 balance of \$65.0 million. The Company's cash resources consist of Canadian and U.S. dollar denominated deposit accounts, guaranteed investment certificates, money market funds and certificates of deposit. During the twelve months ended December 31, 2009, the Company used \$17.0 million of its cash resources to fund operating activities and \$1.5 million for investing activities (excluding short term investment transactions), with the remaining \$2.7 million decrease being related to the effects of foreign exchange rate changes on cash resources.

The Company has financed its operations from its inception primarily through the issuance of equity securities and has no source of cash flow from operations. The Company does not expect to generate any cash resources from operations until it is successful in commencing production from its properties. Operating activities used \$17.0 million of cash resources during the year ended December 31, 2009, as compared to \$16.5 million for the same period in 2008. The primary reasons for the increased expenditures was cash used to settle payables, and lower interest income that was offset by the sale of the Moorcroft Database. The Company received less interest income in 2009 due to lower average cash resource balances and lower interest rates.

During the year ended December 31, 2009, the Company invested cash resources of \$2.0 million in mineral properties, bonding deposits, capital assets and pre-construction activities related to plant design and equipment purchases at Lost Creek. The majority of these expenditures went toward increased bonding deposits (\$0.9 million) and deposits related to ordering Lost Creek processing facility equipment that has a long manufacturing lead time (\$1.1 million).

Financing Transactions

On November 7, 2008, the Company's board of directors approved the adoption of a shareholder rights plan (the "Rights Plan") designed to encourage the fair and equal treatment of shareholders in connection with any take-over bid for the Company's outstanding securities. The Rights Plan is intended to provide the Company's board of directors with adequate time to assess a take-over bid, to consider alternatives to a take-over bid as a means of maximizing shareholder value, to allow competing bids to emerge, and to provide the Company's shareholders with adequate time to properly assess a take-over bid without undue pressure.

Although the Rights Plan took effect immediately, in accordance with TSX requirements, the Company sought approval and ratification by its shareholders. At the annual and special meeting of shareholders held on April 28, 2009, the shareholders of the Company approved and ratified the Rights Plan.

Table of Contents

Effective January 1, 2010, the Rights Agent was changed to Computershare Investor Services Inc., pursuant to a successor agreement to the Rights Plan. Notice of the change of Rights Agent was provided to shareholders of the Company.

The Company has established a corporate credit card facility with a U.S. bank. This facility has an aggregate borrowing limit of US\$250,000 and is used for corporate travel and incidental expenses. The Company has provided a letter of credit and a guaranteed investment certificate in the amount of \$287,500 as collateral for this facility.

Outstanding Share Data

Information with respect to outstanding common shares, warrants, compensation options and stock options as at December 31, 2009 and December 31, 2008 is as follows:

	December 31, 2009	December 31, 2008	Change
Common shares	93,940,568	93,243,607	696,961
Stock options	8,361,452	6,228,700	2,132,752
Fully diluted shares outstanding	102,302,020	99,472,307	2,829,713

Off-Balance Sheet Arrangements

The Company has not entered into any material off-balance sheet arrangements such as guarantee contracts, contingent interests in assets transferred to unconsolidated entities, derivative instrument obligations, or with respect to any obligations under a variable interest entity arrangement.

Financial Instruments and Other Instruments

The Company's cash and cash equivalents are composed of:

	As at December 31, 2009	As at December 31, 2008
	\$	\$
Cash on deposit at banks	308,918	392,170
Guaranteed investment certificates	287,500	9,087,500
Money market funds	25,564,505	1,031,882
Certificates of deposit	6,296,400	15,288,183
	32,457,323	25,799,735

Table of Contents

The Company's short term investments are composed of:

	As at December 31, 2009 \$	As at December 31, 2008 \$
Guaranteed investment certificates	2,342,637	25,693,540
Certificates of deposit	8,589,464	13,480,660
	10,932,101	39,174,200

Credit risk

Financial instruments that potentially subject the Company to concentrations of credit risk consist of cash and cash equivalents, short term investments and bonding deposits. The Company's cash equivalents and short-term investments consist of Canadian dollar and U.S. dollar denominated guaranteed investment certificates and certificates of deposits. They bear interest at annual rates ranging from 0.25% to 2.50% and mature at various dates up to December 15, 2010. These instruments are maintained at financial institutions in Canada and the United States. Of the amount held on deposit, approximately \$7.2 million is covered by either the Canada Deposit Insurance Corporation or the Federal Deposit Insurance Corporation. Another \$1.3 million is guaranteed by a Canadian provincial government, leaving approximately \$37.7 million at risk should the financial institutions with which these amounts are invested cease trading. As at December 31, 2009, the Company does not consider any of its financial assets to be impaired.

Liquidity risk

Liquidity risk is the risk that the Company will not be able to meet its financial obligations as they fall due.

The Company manages liquidity risk through regular cash flow forecasting of cash requirements to fund exploration and development projects and operating costs.

As at December 31, 2009 the Company's liabilities consisted of trade accounts payable of \$1,046,963, all of which are due within normal trade terms of generally 30 to 60 days.

Market risk

Market risk is the risk to the Company of adverse financial impact due to changes in the fair value or future cash flows of financial instruments as a result of fluctuations in interest rates and foreign currency exchange rates. Market risk arises as a result of the Company incurring a significant portion of its expenditures and a significant portion of its cash equivalents and short-term investments in U.S. dollars, and holding cash equivalents and short term investments which earn interest.

Table of Contents

Interest rate risk

Financial instruments that expose the Company to interest rate risk are its cash equivalents and short term investments. The Company's objectives for managing its cash and cash equivalents are to ensure sufficient funds are maintained on hand at all times to meet day to day requirements and to place any amounts which are considered in excess of day to day requirements on short-term deposit with the Company's banks so that they earn interest. When placing amounts of cash and cash equivalents on short-term deposit, the Company only uses high quality commercial banks and ensures that access to the amounts placed can generally be obtained on short notice.

Currency risk

The Company incurs expenses and expenditures in Canada and the United States and is exposed to risk from changes in foreign currency rates. In addition, the Company holds financial assets and liabilities in Canadian and U.S. dollars. The Company does not utilize any financial instruments or cash management policies to mitigate the risks arising from changes in foreign currency rates.

At December 31, 2009 the Company had cash and cash equivalents, short term investments and bonding deposits of approximately US\$38.1 million (US\$26.5 million as at December 31, 2008) and had accounts payable of US\$0.8 million (US\$1.7 million as at December 31, 2008) which were denominated in U.S. dollars.

Sensitivity analysis

The Company has completed a sensitivity analysis to estimate the impact that a change in foreign exchange rates would have on the net loss of the Company, based on the Company's net U.S. dollar denominated assets and liabilities at year end. This sensitivity analysis assumes that changes in market interest rates do not cause a change in foreign exchange rates. This sensitivity analysis shows that a change of +/- 10% in U.S. dollar foreign exchange rate would have a +/- \$3.9 million impact on net loss for the year ended December 31, 2009. This impact is primarily as a result of the Company having yearend cash and investment balances denominated in U.S. dollars and U.S. dollar denominated trade accounts payables. The financial position of the Company may vary at the time that a change in exchange rates occurs causing the impact on the Company's results to differ from that shown above.

The Company has also completed a sensitivity analysis to estimate the impact that a change in interest rates would have on the net loss of the Company. This sensitivity analysis assumes that changes in market foreign exchange rates do not cause a change in interest rates. This sensitivity analysis shows that a change of +/- 100 basis points in interest rate would have a +/- \$0.6 million impact on net loss for the year ended December 31, 2009. This impact is primarily as a result of the Company having cash and short-term investments invested in interest bearing accounts. The financial position of the Company may vary at the time that a change in interest rates occurs causing the impact on the Company's results to differ from that shown above.

Transactions with Related Parties

During the twelve months ended December 31, 2009 and 2008, the Company did not participate in any material transactions with related parties.

Table of Contents

Proposed Transactions

As is typical of the mineral exploration and development industry, the Company is continually reviewing potential merger, acquisition, investment and venture transactions and opportunities that could enhance shareholder value. Timely disclosure of such transactions is made as soon as reportable events arise.

Critical Accounting Policies and Estimates

Mineral Properties

Acquisition costs of mineral properties are capitalized. When production is attained, these costs will be amortized on the unit-of-production method based upon the estimated recoverable resource of the mineral property.

As a part of their annual mineral property analysis, management reviewed all of the Company's significant mineral properties for potential impairment as at December 31, 2009.

For the Company's Lost Creek property, management reviewed the calculations done as of December 31, 2009 and determined that despite a slight decline in the future prices of uranium, the underlying costs, assumptions and timelines had not changed significantly and therefore no impairment existed as of December 31, 2009. Management calculated the future net cash flows using estimated future prices, indicated resources, and estimated operating, capital and reclamation costs.

Other than for those properties written off during the year, management did not identify impairment indicators for any of the Company's mineral properties.

At December 31, 2008, the disruption and uncertainty in the global economy and the decrease in the Company's share price over the previous year caused management to review all of the Company's significant mineral properties for potential impairment. Management concluded that the fair value of these properties exceeded the carrying amount. No impairment charges were recorded as at December 31, 2008 as a result of those reviews.

Stock Based Compensation

The Company is required to record all equity instruments including warrants, compensation options and stock options at fair value in the financial statements. Management utilizes the Black-Scholes model to calculate the fair value of these equity instruments at the time they are issued. Use of the Black-Scholes model requires management to make estimates regarding the expected volatility of the Company's stock over the future life of the equity instrument, the estimate of the expected life of the equity instrument, the expected volatility of the Company's common shares, and the number of options that are expected to be forfeited. Determination of these estimates requires significant judgment and requires management to formulate estimates of future events based on a limited history of actual results and by comparison to other companies in the uranium exploration and development segment.

Changes in Accounting Policies Including Initial Adoption

New Accounting Standards

Effective January 1, 2009, the Company adopted CICA Handbook Section 3064, "Goodwill and Intangible Assets", which replaces Section 3062, "Goodwill and Intangible Assets". The new standard establishes revised standards for the recognition, measurement, presentation and disclosure of goodwill and intangible assets. The new standard also provides guidance for the treatment of pre-production and start-up costs and requires that these costs be expensed as

incurred. The adoption of this standard did not have a material impact on these consolidated financial statements.

Table of Contents

International Financial Reporting Standards

In February 2008, the Canadian Accounting Standards Board ("AcSB") announced that the requirement for publicly-accountable companies to adopt International Financial Reporting Standards ("IFRS") will be effective for interim and annual financial statements relating to fiscal years beginning on or after January 1, 2011. The transition date of January 1, 2010 will require the restatement for comparative purposes of amounts reported by the Company for the year ended December 31, 2010.

During the second quarter of 2009, the Company's senior finance staff attended IFRS training classes and identified an IFRS project team leader. In the third quarter of 2009, staff members attended an intensive workshop and conducted an IFRS scoping study and IFRS management plan to assess the impact of the transition to IFRS on the Company's accounting policies and to establish a project plan to implement IFRS. The scoping and management plan were approved by the Company's Audit Committee on October 28, 2009.

The following table summarizes the Company's plans for implementing the IFRS Changeover.

Key Activity	Milestones/Deadlines	Effort Accomplished by December 31, 2009
Phase 1: Preliminary Scoping Study		
Preparation of the IFRS Scoping Study Understand, identify and assess the overall effort required by the Company to produce financial information in accordance with IFRS	IFRS Scoping Study and Project Management Plan prepared by the end of Q4 2009	Draft IFRS Scoping Study and Project Management Plan approved by the Company's Audit Committee on October 28, 2009
Preparation of a Project Management Plan to accomplish the conversion		
Phase 2: Project Setup and Evaluation		
Project set up	Identification of key differences between Canadian GAAP and IFRS for each significant accounting component by end of Q4 2009	Key components identified and ranked in terms of financial statement impact and implementation effort/complexity
Comprehensive Component Evaluation and Issues Resolution	Comprehensive component evaluations completed by Q2 2010	As part of the Phase 1 IFRS Scoping Study, preliminary component evaluations were completed and significant accounting policy choices identified; Comprehensive component evaluations are underway

Table of Contents

Key Activity	Milestones/Deadlines	Effort Accomplished by December 31, 2009
Systems Evaluations and Training	Systems and internal control evaluations completed by Q2 2010	Internal and Financial Reporting Control Documentation was completed with consideration of the changes that the conversion to IFRS will require
	Education and training programs for board members and top management commenced by Q4 2009 and staff by Q2 2010	Executive Summary of Phase 1 Scoping Study presented in October 2009; Training program commenced
Financial Statement Presentation	Preliminary outline of basic financial statements under IFRS by end of Q2 2010 Work to commence following comprehensive component evaluation and issues resolution Ready for implementation by end of Q3 2010	
Phase 3: Implementation and Embedding		
Implement changes	Quantification of changes to Canadian GAAP statements to arrive at IFRS based numbers Will commence in Q2 2010 for the 2010 opening balances and continue through Q1 2011 for all 2010 statements	
Embed the change	Embed the changes into the accounting and reporting systems in order to be ready for conversion in Q1 2011	Overall IFRS implementation on track

Table of Contents

Evaluation of Disclosure Controls and Procedures

As of the end of the period covered by this MD&A under the supervision of our Chief Executive Officer and our Chief Financial Officer, we evaluated the effectiveness of our disclosure controls and procedures, as such term is defined in Rule 13a-15(e) and Rule 15d-15(e) under the Securities Exchange Act of 1934 (the “Exchange Act”). Based on this evaluation, our Chief Executive Officer and our Chief Financial Officer have concluded that the Company’s disclosure controls and procedures are effective to ensure that information the Company is required to disclose in reports that are filed or submitted under the Exchange Act: (1) is recorded, processed and summarized effectively and reported within the time periods specified in Securities and Exchange Commission rules and forms, and (2) is accumulated and communicated to Company management, including our Chief Executive Officer and our Chief Financial Officer, as appropriate to allow timely decisions regarding required disclosure. The Company’s disclosure controls and procedures include components of internal control over financial reporting. Management's assessment of the effectiveness of the Company’s internal control over financial reporting set forth below is expressed at the level of reasonable assurance because a control system, no matter how well designed and operated, can provide only reasonable, but not absolute, assurance that the control system's objectives will be met.

Management’s Report on Internal Control over Financial Reporting

Pursuant to Section 404 of the Sarbanes-Oxley Act of 2002, the Company’s management is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Exchange Act Rules 13a-15(f) and 15d-15(f). The Company’s internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles.

All internal control systems, no matter how well designed, have inherent limitations. Therefore even those systems determined to be effective can provide only reasonable assurance with respect to financial statement preparation and presentation. Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Under the supervision and with the participation of Company’s management, including our Chief Executive Officer and Chief Financial Officer, an evaluation was conducted of the effectiveness of the Company’s internal control over financial reporting as of December 31, 2009 based on the framework set forth in Internal Control — Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). Based on that evaluation, Company management concluded that, as of December 31, 2009, our internal control over financial reporting was effective.

Changes in Internal Control over Financial Reporting

There has been no change in our internal control over financial reporting during the fiscal year ended December 31, 2009 that has materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

Risks and Uncertainties

The Company is subject to a number of risks and uncertainties due to the nature of its business and the present stage of development of its business. Investment in the natural resource industry in general, and the exploration and development sector in particular, involves a great deal of risk and uncertainty. Current and potential investors should

give special consideration to the risk factors involved. These factors are discussed more fully in our Annual Report on Form 20-F (Annual Information Form) dated March 5, 2010 which is filed on SEDAR at www.sedar.com and on the U.S. Securities and Exchange Commission's website at www.sec.gov.

Table of Contents

Other Information

Other information relating to the Company may be found on the SEDAR website at www.sedar.com or on the U.S. Securities and Exchange Commission's website at www.sec.gov.

Item 5C – Research and development, patents and licenses, etc.

None

Item 5D – Trend Information.

As the corporation is still in the exploration stage, there are no trends affecting operations or the related results.

Item 5E – Tabular disclosure of contractual obligations

	Less than 1 year	1 to 3 years	4 to 5 years	As of December 31, 2009 Over 5 years	Total
	\$	\$	\$	\$	\$
Operating Lease commitments	288,082	253,016	-	-	541,098
Asset retirement obligations (1)	348,401	-	-	155,311	503,712
Purchase obligations	820,443	-	-	-	820,443
Total	1,456,926	253,016	-	155,311	1,865,253

(1) Asset retirement obligations include estimates about future reclamation costs, mining schedules, timing of the performance of reclamation work, obtaining permits on a timely basis and the quantity of ore reserves, an analysis of which determines the ultimate closure date and impacts the discounted amounts of future asset retirement liabilities. The amounts shown above are undiscounted to show full expected cash requirements

Item 6. Directors, Senior Management and Employees.

A. Directors and senior management.

Directors

Set out below are the names, committee memberships (as at the date hereof), municipalities of residence, principal occupations and periods of service of the directors of the Corporation.

Name	Position with Corporation and Principal Occupation Within the Past Five Years	Period of Service as a Director
Jeffrey T. Klenda Golden, Colorado	Chair and Executive Director	August 2004 – present
W. William Boberg (5) Morrison, Colorado	President, Chief Executive Officer and Director	January 2006 – present
James M. Franklin (5) Ottawa, Ontario	Director, Consulting Geologist / Adjunct Professor of Geology Queen’s University, Laurentian University and University of Ottawa	March 2004 – present
Paul Macdonell (1)(2)(3)(4)(6) Mississauga, Ontario	Director Senior Mediator, Government of Canada	March 2004 – present
Robert Boaz (1)(2)(3)(4) Mississauga, Ontario	Director Mining Company Executive	March 2006 – present
Thomas Parker (1)(2)(3)(4)(5) Kalispell, Montana	Director Mining Company Executive	July 2007 – present

(1) Member of the Audit Committee.

(2) Member of the Compensation Committee.

(3) Member of the Corporate Governance and Nominating Committee.

(4) Member of the Treasury & Investment Committee.

(5) Member of the Technical Committee.

(6) Mr. Macdonell was a former director of Wedge Energy International Inc. (“Wedge”). Wedge was subject to a Management Cease Trade Order imposed by the Ontario Securities Commission (“OSC”) on May 31, 2007 for the

late filing of Wedge's financial statements for the period ended March 31, 2007. The Order was lifted by the OSC on August 14, 2007.

The following sets out additional information with respect to the age, education, experience and employment history of each of the directors and officers referred to above during the past five years.

Jeffrey T. Klenda, 53, B.A.

Chair & Executive Director

Mr. Klenda graduated from the University of Colorado in 1980 and began his career as a stockbroker specializing in venture capital offerings. Prior to founding the Corporation in 2004, he worked as a Certified Financial Planner and was a member of the International Board of Standards and Practices. In 1986, he started Klenda Financial Services, an independent financial services company providing investment advisory services to high-end individual and corporate clients as well as providing venture capital to corporations seeking entry to the U.S. securities markets. In the same year Mr. Klenda formed Independent Brokers of America, Inc., a national marketing organization. He also served as President of Security First Financial, a company he founded to provide consultation to individuals and corporations seeking investment management and early stage funding. Over the last 30 years, Mr. Klenda has acted as an officer and/or director for numerous publicly traded companies. Mr. Klenda has served as the Chair of the Board of Directors and Executive Director of the Corporation since 2006.

W. William (Bill) Boberg, 70, M.Sc., P Geo

President, Chief Executive Officer & Director

Mr. Boberg is the Corporation's President and Chief Executive Officer and a director (since January 2006). Previously, Mr. Boberg was the Corporation's senior U.S. geologist and Vice President U.S. Operations (September 2004 to January 2006). Before his initial involvement with the Corporation in 2004, he was a consulting geologist having over 40 years experience investigating, assessing and developing a wide variety of mineral resources in a broad variety of geologic environments in western North America, South America and Africa. Companies that Mr. Boberg has worked for include Gulf Minerals, Hecla Mining, Anaconda, Continental Oil Minerals Department, Wold Nuclear, Kennecott, Western Mining, Canyon Resources and Africa Mineral Resource Specialists. Mr. Boberg has over twenty years of experience exploring for uranium in the continental US. He discovered the Moore Ranch Uranium Deposit, the Ruby Ranch Uranium Deposit as well as several smaller deposits in Wyoming's Powder River Basin. He received his Bachelor's Degree in Geology from Montana State University and his Master's Degree in Geology from the University of Colorado. He is a registered Wyoming Professional Geologist and fellow of the Society of Economic Geologists. He is a member of the Society for Mining, Metallurgy & Exploration Inc., American Institute of Professional Geologists (for which he is a certified geologist), the Denver Regional Exploration Society and the American Association of Petroleum Geologists. Mr. Boberg is also a director for Aura Silver Resources Inc. (since June 2008).

Table of Contents

James M. Franklin, 67, Ph. D., FRSC, P. Geo Director & Chair of the Technical Committee

Dr. Franklin has over 40 years experience as a geologist. He is a Fellow of the Royal Society of Canada. Since January 1998, he has been an Adjunct Professor at Queen's University, since 2001, at Laurentian University and since 2006 at the University of Ottawa. He is a past President of the Geological Association of Canada and of the Society of Economic Geologists. He retired as Chief Geoscientist, Earth Sciences Sector, the Geological Survey of Canada in 1998. Since that time, he has been a consulting geologist and is currently a director of Aura Silver Resources Inc. (since October 2003) and Spider Resources Ltd. (since July 2006).

Paul Macdonell, 57, Diploma Public Admin. Director & Chair of Compensation Committee

Mr. Macdonell is a Senior Mediator, Federal Mediation and Conciliation Service for the Government of Canada. Previously Mr. Macdonell was employed since 1976 by the Amalgamated Transit Union, serving as President of the Union from 1996 to 2000 and Financial Secretary 1991 to 1995. Mr. Macdonell was Municipal Councillor of the City of Cumberland from 1978 to 1988 and was on the City's budget committee during that time. He graduated (diploma) at University of Western Ontario in Public Administration and completed programs at University of Waterloo (Economic Development Certificate), The George Meany Centre in Washington (Labour Studies) and Harvard University (Program on Negotiations).

Robert Boaz, 58, M. Economics, Hon. BA Director & Chair of the Corporate Governance and Nominating Committee

Mr. Boaz has 18 years of experience in the investment banking business after a career in the power and natural gas industry where he held management positions for Ontario Hydro, Saskatchewan Power and Consumers Gas. He has held senior management positions in a number of firms in the investment industry with direct responsibilities related to research, portfolio management, institutional sales and investment banking. From 2004 to March 2006, Mr. Boaz served as Managing Director Investment Banking with Raymond James Ltd. in Toronto. From 2000 to 2004, Mr. Boaz was Vice President and Head of Research and in-house portfolio strategist for Dundee Securities Corporation. Mr. Boaz is currently the President, Chief Executive Officer and a director of Aura Silver Resources Inc., a director of AuEx Ventures Inc. and chair of the board of directors and audit committee of Solex Resources Corp.

Thomas Parker, 67, M.Sc., P.E. Director & Chair of the Audit Committee

Mr. Parker has worked extensively in senior management positions in the mining industry for the past 43 years. Mr. Parker is a mining engineer graduate from South Dakota School of Mines, with a Master's Degree in Mineral Engineering Management from Penn State. Mr. Parker is President and CEO of US Silver Corporation before which he was President and CEO of Gold Crest Mines, Inc., a Spokane-based gold exploration company. Prior to such position, he was the President and CEO of High Plains Uranium, Inc. a junior uranium mining company acquired by Energy Metals in January 2007. Mr. Parker also served for 10 years as Executive Vice President of Anderson and Schwab, a management consulting firm. Prior to Anderson and Schwab, Mr. Parker held many executive management positions with, including Costain Minerals Corporation, ARCO, Kerr McGee Coal Corporation and Conoco. He also has worked in the potash, limestone, talc, coal and molybdenum industries and has extensive experience in Niger, France and Venezuela.

Table of Contents

Additional Executive Officers

Roger L. Smith, 51, CPA, MBA

Chief Financial Officer and Vice President,
Finance, IT and Administration

Mr. Smith has 25 years of mining and manufacturing experience including finance, accounting, IT, ERP and systems implementations, mergers, acquisitions, audit, tax and public and private reporting in international environments. Mr. Smith joined Ur-Energy in May 2007 after having served as Vice President, Finance for Luzenac America, Inc., a subsidiary of Rio Tinto PLC and Director of Financial Planning and Analysis for Rio Tinto Minerals, a division of Rio Tinto PLC from September 2000 to May 2007. Mr. Smith has also held such positions as Vice President Finance, Corporate Controller, Accounting Manager, Internal Auditor with companies such as Vista Gold Corporation, Westmont Gold Inc. and Homestake Mining Corporation. He has a Masters of Business Administration and Bachelor of Arts in Accounting from Western State College, Gunnison, Colorado.

Harold A. Backer, 68, B.Sc.

Executive Vice President, Geology &
Exploration

Mr. Backer is the Corporation's Executive Vice President, Geology & Exploration. He has over 42 years experience in the mining industry participating in major exploration programs in the commodities of gold, uranium, copper, and phosphate. In exploration, he has worked for Kalium Chemicals, Chevron Resources and as Senior VP Exploration for Goldbelt Resources. As a Consulting Economic Geologist, he has participated in numerous pre-feasibility mining studies (open pit and underground projects) as a team leader and in a management position on projects in North America and in the countries of the former Soviet Union. Mr. Backer joined Ur-Energy more than five years ago and has assumed various responsibilities as an officer before becoming Executive VP of Geology & Exploration.

Paul W. Pitman, 62, B.Sc. Hon. Geo., P. Geo. Vice President, Canadian Exploration

Mr. Pitman has over 40 years experience as an exploration geologist. He began his career with Gulf Minerals as a field geologist at the Rabbit Lake uranium discovery, Saskatchewan, in 1969, followed by work in the late 1970s -1980s as a senior geologist for BP Minerals exploring for uranium across Canada. Mr. Pitman was President of Ur-Energy from its inception up to January 2006.

Wayne W. Heili, 44, B.Sc.

Vice President, Mining & Engineering

Mr. Heili is the Corporation's Vice President, Mining & Engineering. His career spans more than 20 years in which he has provided engineering, construction, operations and technical support in the uranium mining industry. He spent 16 years in various operations level positions with Total Minerals and Cogema Mining at their properties in Wyoming and Texas. He was Operations Manager of Cogema's Wyoming in-situ recovery projects from 1998 to 2004. Since then, Mr. Heili acted as a consultant for such companies as High Plains Uranium, Energy Metals and Behre Dolbear. His experience includes conventional and ISR uranium processing facility operations. Mr. Heili received a Bachelor of Science in Metallurgical Engineering from Michigan Technological University, with an emphasis in mineral processing.

Paul G. Goss, 67, JD, MBA

General Counsel & Corporate Secretary

Mr. Goss has over 35 years of diverse transactional experience in complex business, real estate and natural resources transactions, including more than five years with a national-practice firm. In addition to his transactional experience, he has represented clients in commercial litigation, arbitration and mediation, involving mining, oil and gas, real estate, corporate law, securities and environmental law. He served in the capacities of President and General Counsel

of Polaris Coal Company from 1990 through 2001. He obtained his Juris Doctor, cum laude from the University of Denver College of Law. He also obtained a Master of Business Administration from Indiana State University and a Bachelor of Science from Rose-Hulman Institute of Technology.

As at March 5, 2010, the directors and executive officers of the Corporation, as a group, beneficially own, directly or indirectly, or exercised control or direction over 1,877,307 Common Shares, representing approximately 6.93% of the Corporation's outstanding Common Shares. The information as to securities beneficially owned or over which control or direction is exercised is not within the knowledge of the Corporation and has been furnished by the directors and executive officers individually.

Table of Contents

B. Compensation.

Compensation of Executive Officers

The following table sets forth the summary information concerning compensation paid to or earned during the financial years ended December 31, 2007, 2008 and 2009 by the Corporation's Chief Executive Officer and Chief Financial Officer and the three highest paid executive officers, who were serving as executive officers at December 31, 2009 (collectively, the "Named Executive Officers").

Summary Compensation Table (1)

Name and principal position	Year	Salary (\$)	Share-based awards (\$)	Option-based awards (\$)	Non-equity incentive plan compensation			All other compensation (\$)	Total compensation (\$)
					Annual incentive plans (\$)	Long-term incentive plans (\$)	Pension Value (\$)		
W. William Boberg (2) (3) Director, President, and Chief Executive Officer	2009	\$ 289,190	Nil	\$ 91,803	\$ 4,215	Nil	Nil	Nil	\$ 385,208

Chair and Executive	2008	\$ 204,675	Nil \$ 68,000	\$ 3,147	Nil	Nil	Nil \$ 275,822
Director	2007	\$ 176,300	Nil \$ 490,000	Nil	Nil	Nil	Nil \$ 666,300

- (1) United States dollar figures have been converted to Canadian dollar figures at the average exchange rate for 2009 of US\$1.00 = CDN\$1.14235 as quoted by OANDA Corporation on its website www.oanda.com. The figures for 2008 and 2007 have been converted to Canadian dollar figures at the average exchange rate for 2008 of US\$1.00 = CDN\$1.0660 and 2007 of US\$1.00 = CDN\$1.075 as posted by the Bank of Canada.
- (2) Mr. Boberg was a consultant to the Corporation from September 21, 2004 to December 31, 2006. Mr. Boberg entered into an employment agreement with the Corporation dated January 1, 2007, as amended. See heading "Employment Contracts" below. Mr. Boberg was confirmed as President and Chief Executive Officer on May 29, 2006 after having been appointed President, Acting Chief Executive Officer and a Director on January 11, 2006. Previously, from September 2004 to January 11, 2006, Mr. Boberg had been a consultant and Vice President, US Operations of the Corporation.
- (3) In 2009, Mr. Boberg received options for 107,143 Common Shares on February 9, 2009 at an exercise price of \$0.71. These options expire on February 9, 2014. In addition, he received options for 107,143 Common Shares on September 2, 2009 at an exercise price of \$0.90. These options expire on September 2, 2014. In 2008, Mr. Boberg received options for 80,000 Common Shares on May 8, 2008 at an exercise price of \$1.65 per share. These options expire on May 8, 2013. In 2007, Mr. Boberg received options for 400,000 Common Shares on May 22, 2007, at an exercise price of \$4.75. These options were to expire on May 15, 2012. On September 30, 2008, Mr. Boberg voluntarily forfeited options for 400,000 Common Shares that were granted on May 22, 2007 at an exercise price of \$4.75 per share and these options were subsequently cancelled by the Corporation.
- (4) Roger Smith joined the Corporation in May 2007 and was appointed to the position of Chief Financial Officer pursuant to an employment agreement with the Corporation. In August 2007, Mr. Smith was further appointed as Vice President, Finance, IT & Administration. See heading "Employment Contracts" below.

Table of Contents

- (5) In 2009, Mr. Smith received options for 72,321 Common Shares on February 9, 2009 at an exercise price of \$0.71. These options expire on February 9, 2014. In addition, he received options for 72,321 Common Shares on September 2, 2009 at an exercise price of \$0.90. These options expire on September 2, 2014. In 2008, Mr. Smith received options for 40,000 Common Shares on May 8, 2008 at an exercise price of \$1.65 per share. These options expire on May 8, 2013. In 2007, Mr. Smith received options for 225,000 Common Shares on May 22, 2007 at an exercise price of \$4.75 per share. These options were to expire on May 15, 2012. Mr. Smith also received options for 112,500 Common Shares on August 9, 2007 at an exercise price of \$3.00. These options expire on August 9, 2012. On September 30, 2008, Mr. Smith voluntarily forfeited options for 225,000 Common Shares at an exercise price of \$4.75 per share that were granted on May 22, 2007 and these options were subsequently cancelled by the Corporation.
- (6) Mr. Backer was a consultant to the Corporation from May 2005 to December 31, 2006. Mr. Backer entered into an employment agreement with the Corporation on January 1, 2007, as amended. See heading “Employment Contracts” below.
- (7) In 2009, Mr. Backer received options for 64,286 Common Shares on February 9, 2009 at an exercise price of \$0.71. These options expire on February 9, 2014. In addition, he received options for 64,286 Common Shares on September 2, 2009 at an exercise price of \$0.90. These options expire on September 2, 2014. In 2008, Mr. Backer received options for 60,000 Common Shares on May 8, 2008 at an exercise price of \$1.65 per share. These options expire on May 8, 2013. In 2007, Mr. Backer received options for 150,000 Common Shares on May 22, 2007 at an exercise price of \$4.75 per share. These options were to expire on May 15, 2012. On September 30, 2008, Mr. Backer voluntarily forfeited options for 150,000 Common Shares at an exercise price of \$4.75 per share that were granted on May 22, 2007 and these options were subsequently cancelled by the Corporation.
- (8) Mr. Heili joined the Corporation in February 2007 pursuant to an employment agreement with the Corporation and was appointed to the position of Vice President, Mining & Engineering. Until April 23, 2007, Mr. Heili worked for the Corporation on a part time basis for a reduced salary while finalizing certain personal matters. See “Employment Contracts” below.
- (9) In 2009, Mr. Heili received options for 101,250 Common Shares on February 9, 2009 at an exercise price of \$0.71. These options expire on February 9, 2014. In addition, he received options for 101,250 Common Shares on September 2, 2009 at an exercise price of \$0.90. These options expire on September 2, 2014. In 2008, Mr. Heili received options for 40,000 Common Shares on May 8, 2008 at an exercise price of \$1.65 per share. These options expire on May 8, 2013. In 2007, Mr. Heili received options for 600,000 Common Shares, subject to certain performance milestones, on February 19, 2007 at an exercise price of \$5.03 per share. These options were to expire on February 15, 2012. Mr. Heili also received options for 100,000 Common Shares on August 9, 2007 at an exercise price of \$3.00 per share. These options expire on August 9, 2012. On September 30, 2008, Mr. Heili voluntarily forfeited options for 600,000 Common Shares at an exercise price of \$5.03 per share that were granted on February 19, 2007 and these options were subsequently cancelled by the Corporation.
- (10) Mr. Klenda became a director of the Corporation in August 2004 and Chair of the Board of Directors and Executive Director in January 2006. Mr. Klenda was a consultant to the Corporation from August 2004 to December 31, 2006. Mr. Klenda entered into an employment agreement with the Corporation on January 1, 2007, as amended. See heading “Employment Contracts” below.
- (11) In 2009, Mr. Klenda received options for 68,571 Common Shares on February 9, 2009 at an exercise price of \$0.71. These options expire on February 9, 2014. In addition, he received options for 68,571 Common Shares on September 2, 2009 at an exercise price of \$0.90. These options expire on September 2, 2014. In 2008, Mr. Klenda received options for 80,000 Common Shares on May 8, 2008, at an exercise price of \$1.65 per share. These options expire on May 8, 2013. In 2007, Mr. Klenda received options for 200,000 Common Shares on May 22, 2007 at an exercise price of \$4.75 per share. These options were to expire on May 15, 2012. On September 30, 2008, Mr. Klenda voluntarily forfeited options for 200,000 Common Shares at an exercise price of \$4.75 per share which were granted on May 22, 2007 and these options were subsequently cancelled by the Corporation.

Employment Contracts

The Corporation entered into an employment agreement with Mr. W. William Boberg dated January 1, 2007, as amended. Currently, Mr. Boberg is entitled to a salary of US\$252,150 per year and a discretionary bonus to be set by the Board of Directors. Mr. Boberg is entitled to receive stock option grants under the terms and conditions of the Option Plan and as determined by the Board of Directors. In the event that the Corporation terminates the employment agreement with Mr. Boberg for non-causal reasons, Mr. Boberg will be entitled to a lump sum payment equivalent to two years base salary. In the event of a change of control of the Corporation and Mr. Boberg's termination by, or resignation from, the Corporation within 12 months of the change of control, Mr. Boberg may be entitled to a lump sum payment equivalent to two years base salary. Mr. Boberg is subject to non-competition and non-solicitation restrictions for a period of one year upon termination of the employment agreement.

Table of Contents

The Corporation entered into an employment agreement with Mr. Roger Smith dated May 15, 2007, as amended. Currently, Mr. Smith is entitled to a salary of US\$236,391 per year and a discretionary bonus to be set up by the Board of Directors. Mr. Smith is entitled to receive stock option grants under the terms and conditions of the Option Plan and as determined by the Board of Directors. In the event that the Corporation terminates the employment agreement with Mr. Smith for non-causal reasons, Mr. Smith will be entitled to a lump sum payment equivalent to two years base salary. In the event of a change of control of the Corporation, and Mr. Smith's termination by, or resignation from, the Corporation within 12 months of the change of control, Mr. Smith may be entitled to a lump sum payment equivalent to two years base salary. Mr. Smith is subject to non-competition and non-solicitation restrictions for a period of one year upon termination of the employment agreement.

The Corporation entered into an employment agreement with Mr. Harold Backer dated January 1, 2007, as amended. Currently, Mr. Backer is entitled to a salary of US\$210,125 per year and a discretionary bonus to be set by the Board of Directors of the Corporation. Mr. Backer is entitled to receive stock option grants under the terms and conditions of the Option Plan and as determined by the Board of Directors. In the event the Corporation terminates the employment agreement with Mr. Backer for non-causal reasons, Mr. Backer will be entitled to a lump sum payment equivalent to two years base salary. In the event of change of control of the Corporation and Mr. Backer's termination by, or resignation from, the Corporation within 12 months of the change of control, Mr. Backer may be entitled to a lump sum payment equivalent to two years base salary. Mr. Backer is subject to non-competition and non-solicitation restrictions for a period of one year upon termination of the employment agreement.

The Corporation entered into an employment agreement with Mr. Wayne Heili dated February 19, 2007, as amended. Currently, Mr. Heili is entitled to a salary of US\$220,631 per year and a discretionary bonus to be set by the Board of Directors of the Corporation. Mr. Heili is entitled to receive stock option grants under the terms and conditions of the Option Plan and as determined by the Board of Directors. In the event the Corporation terminates the employment agreement with Mr. Heili for non-causal reasons, Mr. Heili will be entitled to a lump sum payment equivalent to two years base salary. In the event of change of control of the Corporation, and Mr. Heili's termination by, or resignation from, the Corporation within 12 months of the change of control, Mr. Heili may be entitled to a lump sum payment equivalent to two years base salary. Mr. Heili is subject to non-competition and non-solicitation restrictions for a period of one year upon termination of the employment agreement.

The Corporation entered into an employment agreement with Mr. Jeffrey Klenda dated January 1, 2007, as amended. Currently, Mr. Klenda is entitled to a salary of US\$201,720 per year and a discretionary bonus to be set by the Board of Directors. Mr. Klenda is entitled to receive stock option grants under the terms and conditions of the Option Plan and as determined by the Board of Directors. In the event that the Corporation terminates the employment agreement with Mr. Klenda for non-causal reasons, Mr. Klenda will be entitled to a lump sum payment equivalent to two years base salary. In the event of a change of control of the Corporation and Mr. Klenda's termination by, or resignation from, the Corporation within 12 months of the change of control Mr. Klenda may be entitled to a lump sum payment equivalent to two years base salary. Mr. Klenda is subject to non-solicitation restrictions for a period of one year upon termination of the employment agreement.

On December 31, 2008, all the executive employment agreements were amended to insert necessary provisions for compliance with Section 409A provision of the Internal Revenue Code of 1986 ("IRC"), as amended, including the timing of payments or deferred compensation in the event of a change of control or termination from the Corporation.

In November 2009, all the executive employment agreements were amended to insert provisions to provide for the establishment of a trust to hold and invest certain separation payments which the Corporation becomes obligated to pay because of a voluntary termination by the executive or involuntary termination by the Corporation or in the event of a change of a control but which payments have been delayed under Section 490A of the IRC.

Table of Contents

Compensation of Directors

In December 2008, the Compensation Committee reviewed the director compensation and recommended changes to the director compensation scheme which was adopted by the Compensation Committee and the Board of Directors in January 2009. Commencing in 2009, each non-management director received a base retainer for the fiscal year ended December 31, 2009 in cash of \$18,000. In addition to the base retainer, each non-management director receives compensation for each meeting attended (\$1,000 attendance in person; \$500 attendance by telephone). The non-management directors are also eligible to receive grants of options at the discretion of the Board of Directors. In addition, the Compensation Committee recommended, and Board of Directors adopted, a resolution requiring mandatory minimum share ownership by the non-management directors to encourage the alignment of interests between the Corporation and its shareholders. Non-management directors are required to invest an amount equal to the non-management director's annual retainer in shares or securities exercisable into shares on or before the later of (i) December 31, 2013, or (ii) the fifth anniversary of the non-management director's election or appointment. The retainer amount will be calculated using the amount of the annual retainer at the later of (i) January 1, 2009, or (ii) the date of the non-management director's election or appointment.

In addition to other compensation received by directors of the Corporation, the Compensation Committee recommended, and the Board of Directors adopted a resolution in 2008 that non-management directors participating on ad hoc or special committees of the Board of Directors, which may be constituted from time to time, would be entitled to additional director fees, to be determined in accordance with additional duties and requirements requested of those individuals from time to time. In respect of the Ad Hoc Committee on Screech Lake, it was determined that non-management directors would receive fees of \$1,000 per day spent in respect of the Ad Hoc Committee activities except in the event that such non-management director is already under a consulting agreement with the Corporation.

Non-Management Director Compensation For the Financial Year Ended December 31, 2009

Name	Fees earned (\$)	Share-based awards (\$)	Option-based awards (\$)	Non-equity incentive plan compensation (\$)	Pension value (\$)	All other compensation (\$)	Total (\$)
Robert Boaz (1)	\$ 23,000	Nil	\$ 11,016	Nil	Nil	\$ 25,000	\$ 59,016
James M. Franklin (2)	\$ 24,000	Nil	\$ 11,016	Nil	Nil	\$ 20,000	\$ 55,016
Paul Macdonell	\$ 22,500	Nil	\$ 11,016	Nil	Nil	Nil	\$ 33,516
Thomas Parker	\$ 23,500	Nil	\$ 11,016	Nil	Nil	Nil	\$ 34,516

(1) Mr. Boaz has received additional per diem fees as a director for his work on the Ad Hoc Committee on Screech Lake.

(2) Dr. Franklin has a consulting agreement with the Corporation and invoices the Corporation for consulting projects on which he is involved.

C. Board practices.

Director Term

The term of office for each director is from the date of the meeting at which he or she is elected until the next annual meeting of shareholders of the Corporation or until his or her successor is elected or appointed, unless his or her office is vacated before that time in accordance with the by-laws of the Corporation. None of the non-management directors has a service contract with the Corporation. One of the non-management directors, James Franklin, has a consulting agreement with the Corporation.

Audit Committee

The Audit Committee assists the Board of Directors in carrying out its responsibilities relating to corporate accounting and financial reporting practices. The duties and responsibilities of the Audit Committee include the following:

- reviewing for recommendation to the Board of Directors for its approval the principal documents comprising the Corporation's continuous disclosure record, including interim and annual financial statements and management's discussion and analysis;
- recommending to the Board of Directors a firm of independent auditors for appointment by the shareholders and reporting to the Board of Directors on the fees and expenses of such auditors. The Audit Committee has the authority and responsibility to select, evaluate and if necessary, replace the independent auditor. The Audit Committee has the authority to approve all audit engagement fees and terms and the Audit Committee, or a member of the Audit Committee, must review and pre-approve any non-audit services provided to the Corporation by the Corporation's independent auditor and consider the impact on the independence of the auditor;

Table of Contents

- reviewing periodic reports from the Chief Financial Officer;
- discussing with management and the independent auditor, as appropriate, any audit problems or difficulties and management's response; and
- establishing procedures for the receipt, retention and treatment of complaints regarding accounting, internal accounting controls or auditing matters.

The Audit Committee maintains direct communication during the year with the Corporation's independent auditor and the Corporation's officers responsible for accounting and financial matters.

All of the members of the Audit Committee, Messrs. Macdonell, Boaz and Parker, are independent directors pursuant to National Instrument 52-110 Audit Committees ("NI 52-110") and the listing standards of the NYSE Amex. Each of the members is financially literate as defined in NI 52-110. The Audit Committee has designated Robert Boaz as an "audit committee financial expert" as currently defined by the rules of the SEC regulating such disclosures. The members of the Audit Committee were during 2009, and currently are, Thomas Parker (Chair), Robert Boaz and Paul Macdonell. The education and experience of each member of the Audit Committee that is relevant to the performance of his responsibilities as an Audit Committee member is set out under the Heading Item 6 – Directors, Senior Management and Employees.

Report of the Audit Committee

During 2009, the Audit Committee met five times. The activities of the Audit Committee over the past year included the following:

- reviewing annual financial statements of the Corporation and management's discussion and analysis prior to filing with the regulatory authorities;
- reviewing the quarterly interim financial statements of the Corporation and management's discussion and analysis prior to filing with regulatory authorities;
 - reviewing periodic reports from the Chief Financial Officer;
- reviewing applicable Canadian corporate disclosure reporting and control processes, including Chief Executive Officer and Chief Financial Officer certifications;
- reviewing and approval of International Financial Reporting Standards ("IFRS") changeover and project management plan as developed;
- reviewing Audit Committee governance practices to ensure its terms of reference incorporate all regulatory requirements; and
- reviewing the engagement letter with the independent auditors and annual audit fees prior to approval by the Board of Directors, as well as pre-approving non-audit services and their cost prior to commencement.

The Audit Committee has reviewed and discussed with management and the independent auditors the Consolidated Financial Statements of the Corporation as at December 31, 2009 and Management's Discussion and Analysis. Based on that review and on the report of the independent auditor of the Corporation, the Audit Committee recommended to the Board of Directors that such Financial Statements and Management's Discussion and Analysis be approved and filed with Canadian regulatory authorities and the SEC. The Audit Committee reviews its charter on a yearly basis.

Compensation Committee

The Compensation Committee assists the Board of Directors in carrying out its responsibilities relating to personnel matters, including performance, compensation and succession. The Compensation Committee has prepared terms of reference which include annual objectives against which to assess members of management including the President and Chief Executive Officer and reviews and makes recommendations to the Board of Directors with respect to

employee and consultant compensation arrangements including stock options and management succession planning. The Compensation Committee reviews its charter on a yearly basis.

Table of Contents

The Compensation Committee met four times in 2009. Portions of meetings are conducted without management present, including for the purpose of specifically discussing the compensation of the President and Chief Executive Officer. The members of the Committee during 2009 were, and currently are, Paul Macdonell (Chair), Thomas Parker and Robert Boaz. All the members of the Compensation Committee are independent pursuant to NI 52-110 and the listing standards of the NYSE Amex.

D. Employees.

At December 31 2009, the Corporation had 49 employees. Currently, approximately 25 employees are located at the Corporation's offices in Littleton, Colorado and 23 employees are located at the Corporation's offices in Casper, Wyoming.

Employment category	2009	As of December 31,	
		2008	2007

* Represents less than 1% of the Corporation's outstanding shares.

(1) For purposes of this table, beneficial ownership has been determined in accordance with the provisions of Rule 13d-3 of the Exchange Act under which, in general, a person is deemed to be the beneficial owner of a security if he has or shares the power to vote or direct the voting of the security or the power to dispose of or direct the disposition of the security, or if he has the right to acquire beneficial ownership of the security within sixty days.

(2) Based on 93,940,568 Common Shares outstanding as of March 5, 2010.

(3) Includes 53,125 shares Mr. Boberg holds jointly with his spouse.

(4) Dr. Franklin holds these shares jointly with his spouse.

(5) Mr. Klenda holds these shares jointly with his spouse.

(6) Does not include 20,000 shares held in Mr. Macdonell's spouse's name. Mr. Macdonell disclaims beneficial ownership of such shares.

Ur-Energy Inc. Stock Option Plan 2005

The Corporation adopted the Ur-Energy Inc. Stock Option Plan 2005, as amended (the "Option Plan"), in order to advance the interests of the Corporation by providing directors, officers, employees and consultants with a financial incentive tied to the long-term financial performance of the Corporation and continued service or employment with the Corporation.

A total of 10% of the Corporation's issued and outstanding Common Shares are reserved for issuance pursuant to the Option Plan. Of these, 8,287,102 (representing 8.82% of the currently outstanding Common Shares) are issuable upon the exercise of currently outstanding options. The number of shares reserved is subject to adjustment if the Common Shares are subdivided, consolidated, converted or reclassified or the number of Common Shares varies as a result of a stock dividend or an increase or a reduction in the share capital of the Corporation.

Under the Option Plan, options may be granted to all directors, officers, employees and consultants of the Corporation. The maximum number of Common Shares that may be reserved for issuance to any one person under the Option Plan is 5% of the number of Common Shares outstanding at the time of reservation. The exercise price for Common Shares subject to an option is determined by the Board of Directors at the time of grant and may not be less than the market price of the Common Shares at the time the option is granted. Options are generally exercisable as to 10% immediately on the date of grant; with an additional 22% becoming exercisable four and one-half months after the date of grant; 22% becoming exercisable nine months after the date of grant; 22% thirteen and one-half months after the date of grant; and, the balance of 24% becoming exercisable eighteen months after the date of grant, subject to the right of the Board of Directors to determine at the time of a particular grant that such options will become exercisable on different dates. An option may be for a term of up to five years and may not be assigned.

Table of Contents

Options granted under the Option Plan are subject to early termination under certain circumstances, including (i) one year after the death of the option holder, (ii) three months after the option holder's resignation or dismissal without cause as an employee, or (iii) immediately upon the option holder's dismissal for cause as an employee. In each case, only options exercisable at the time of the event which gave rise to such early termination may be exercised by the option holder during such period. The Option Plan also provides that on a change of control all options under the Option Plan vest immediately and are immediately exercisable. On November 8, 2007, the Board amended the Option Plan to allow the CEO the ability to grant options for up to an aggregate 100,000 Common Shares between Board meetings to non-executive employees and consultants. All such grants must be reported to the Board at the next meeting. This amendment did not require shareholder approval.

The Option Plan and the terms of any outstanding option may be amended at any time by the Board of Directors subject to any required regulatory or shareholder approvals, provided that where such an amendment would prejudice the rights of an option holder under any outstanding option, the consent of the option holder is required to be obtained.

The Board of Directors of the Corporation implemented of a Restricted Share Unit Plan ("RSU Plan") in January 2009, subject to shareholder approval; however, the shareholders did not approve the implementation of the RSU Plan at the annual shareholders' meeting in April 2009.

Item 7. Major Shareholders and Related Party Transactions.

A. Major shareholders.

As of March 5, 2010, to the knowledge of the directors and senior officers of the Corporation, the following persons beneficially own, directly or indirectly, or exercise control or direction over more than 5% of the Common Shares:

Name of Holder	Number of Common Shares of the Corporation	Percentage of Issued and Outstanding Common Shares of the Corporation
BlackRock, Inc (1).	10,176,450 Common Shares	10.83%

(1) On behalf of its investment advisory subsidiaries: BlackRock Asset Management U.K. Limited, and BlackRock (Luxembourg) S.A. As reported by BlackRock, Inc. on Form 13G dated January 8, 2010 filed with the SEC.

These entities do not having voting rights that differ from any other shareholder of the Corporation.

As of June 30, 2009, there were 21 registered holders of Ur-Energy's 93,893,607 outstanding Common Shares, of which 43,980,742 were held in Canada and 40,546,926 were held in the United States.

The Corporation is not aware of any arrangements the operation of which may at a subsequent date result in a change in control of the Corporation. To the knowledge of the Corporation, it is not directly or indirectly owned or controlled by another corporation, by any government or by any natural or legal person severally or jointly.

B. Related party transactions.

Other than employment agreements with executive officers and a consulting arrangement with Dr. James Franklin, stock option grants described elsewhere in this report or as otherwise disclosed in this report, the Corporation is not aware of any related party transactions occurring or being made, or any loans made by the Corporation or any of its subsidiaries to related parties, since January 1, 2007.

C. Interests of experts and counsel.

Not applicable.

Item 10. Additional Information.

A. Share capital.

Not applicable.

B. Memorandum and articles of association.

The Corporation's articles of continuance do not place any restrictions on the Corporation's objects and purposes. The authorized capital of the Corporation consists of an unlimited number of Common Shares and an unlimited number of Class A Preference Shares. As of March 5, 2010, 93,940,568 Common Shares were issued and outstanding and no preferred shares were issued and outstanding. The holders of the Common Shares are entitled to one vote per share at all meetings of the shareholders of the Corporation. The holders of Common Shares are also entitled to dividends, if and when declared by the directors of the Corporation and the distribution of the residual assets of the Corporation in the event of a liquidation, dissolution or winding up of the Corporation. The Corporation's Common Shares do not have pre-emptive rights to purchase additional shares.

The Corporation's Class A Preference Shares are issuable by the directors in one or more series and the directors have the right and obligation to fix the number of shares in, and determine the designation, rights, privileges, restrictions and conditions attaching to the shares of each series. The rights of the holders of Common Shares will be subject to, and may be adversely affected by, the rights of the holders of any Class A Preference Shares that may be issued in the future. The Class A Preference Shares, may, at the discretion of the Board of Directors, be entitled to a preference over the Common Shares and any other shares ranking junior to the Class A Preference Shares with respect to the payment of dividends and distribution of assets in the event of liquidation, dissolution or winding up.

Certain Powers of Directors

The CBCA requires that every director or officer who is a party to a material contract or transaction or a proposed material contract or transaction with the corporation, or who is a director or officer of, or has a material interest in, any person who is a party to a material contract or transaction or a proposed material contract or transaction with the corporation, shall disclose in writing to the corporation or request to have entered in the minutes of the meetings of directors the nature and extent of his or her interest, and shall refrain from voting in respect of the material contract or transaction or proposed material contract or transaction unless the contract or transaction is: (a) one relating primarily to his or her remuneration as a director, officer, employee or agent of the corporation or an affiliate; (b) one for indemnity of or insurance for directors as contemplated under the CBCA; or (c) one with an affiliate. However, a director who is prohibited by the CBCA from voting on a material contract or proposed material contract may be counted in determining whether a quorum is present for the purpose of the resolution, if the director disclosed his or her interest in accordance with the CBCA, the directors approved the contract or transaction and the contract or transaction was reasonable and fair to the corporation at the time it was approved.

The directors may, by resolution, amend or repeal any by-laws that regulate the business or affairs of the Corporation unless the articles, the by-laws or a unanimous shareholder agreement provide otherwise. The CBCA requires the directors to submit any such amendment or repeal to the Corporation's shareholders at the next meeting of shareholders, and the shareholders may confirm, reject or amend the amendment or repeal.

Directors' Share Ownership

In December 2008, the Compensation Committee reviewed the director compensation and recommended changes to the director compensation scheme which was adopted by the Compensation Committee and the Board of Directors in January 2009. Each non-management director will receive a base retainer in cash of \$18,000 and will be eligible to receive grants of options at the discretion of the Board of Directors. In addition, the Compensation Committee recommended, and Board of Directors adopted, a resolution requiring mandatory ownership of the non-management directors to encourage the alignment of interests between the Corporation and its shareholders. Non-management directors are required to invest an amount equal to the non-management director's annual retainer in shares or securities exercisable into shares on or before the later of (i) December 31, 2013, or (ii) the fifth anniversary of the non-management director's election or appointment. The retainer amount will be calculated using the amount of the annual retainer at the later of (i) January 1, 2009, or (ii) the date of the non-management director's election or appointment.

Table of Contents

See Item 6.B – Compensation – Compensation of Directors.

Meetings of Shareholders

The CBCA requires the Corporation to call an annual shareholders' meeting within 15 months after holding the last preceding annual meeting but not later than six months after the end of the Corporation's preceding financial year and permits the Corporation to call a special shareholders' meeting at any time. In addition, in accordance with the CBCA, the holders of not less than 5% of the Corporation's shares carrying the right to vote at a meeting sought to be held may requisition the Corporation's directors to call a special shareholders' meeting for the purposes stated in the requisition. The Corporation is required to mail a notice of meeting and management information circular to registered shareholders not less than 21 days and not more than 60 days prior to the date of any annual or special shareholders' meeting. These materials also are filed with Canadian securities regulatory authorities and the SEC. The Corporation's by-laws provide that a quorum of two shareholders in person or represented by proxy holding or representing by proxy not less than 10% of the Corporation's issued shares carrying the right to vote at the meeting is required to transact business at a shareholders' meeting. Shareholders, and their duly appointed proxies and corporate representatives, as well as the Corporation's auditors, are entitled to be admitted to the Corporation's annual and special shareholders' meetings.

Disclosure of Share Ownership

The Securities Act (Ontario) provides that a person or company that beneficially owns, directly or indirectly, voting securities of an issuer or that exercises control or direction over voting securities of an issuer or a combination of both, carrying more than 10% of the voting rights attached to all the issuer's outstanding voting securities (an "insider") must, within 10 days of becoming an insider, file a report in the required form effective the date on which the person became an insider, disclosing any direct or indirect beneficial ownership of, or control or direction over, securities of the reporting issuer. The Securities Act (Ontario) also provides for the filing of a report by an insider of a reporting issuer who acquires or transfers securities of the issuer. This report must be filed within 10 days after the end of the month in which the acquisition or transfer takes place.

The Securities Act (Ontario) also provides that a person or company that acquires (whether or not by way of a take-over bid, issuer bid or offer to acquire) beneficial ownership of voting or equity securities or securities convertible into voting or equity securities of a reporting issuer that, together with previously held securities brings the total holdings of such holder to 10% or more of the outstanding securities of that class, must (a) issue and file forthwith a news release containing the prescribed information and (b) file a report within two business days containing the same information set out in the news release. The acquiring person or company must also issue a press release and file a report each time it acquires an additional 2% or more of the outstanding securities of the same class and every time there is a "material change" to the contents of the news release and report previously issued and filed.

The rules in the United States governing the ownership threshold above which shareholder ownership must be disclosed are more stringent than those discussed above. Section 13 of the Exchange Act imposes reporting requirements on persons who acquire beneficial ownership (as such term is defined in Rule 13d-3 under the Exchange Act) of more than 5% of a class of an equity security registered under Section 12 of the Exchange Act. In general, such persons must file, within 10 days after such acquisition, a report of beneficial ownership with the SEC containing the information prescribed by the regulations under Section 13 of the Exchange Act. This information is also required to be sent to the issuer of the securities and to each exchange where the securities are traded.

Table of Contents

C. Material contracts.

No material contracts were entered into by the Corporation for each of the fiscal years ending December 31, 2008 and 2009 which were material and entered into outside the ordinary course of business.

D. Exchange controls.

There is no law, governmental decree or regulation in Canada that restricts the export or import of capital or affects the remittance of dividends, interest or other payments to a non-resident holder of common shares other than withholding tax requirements. Any such remittances to United States residents are subject to withholding tax. See Item 10E – Taxation. There is no limitation imposed by the laws of Canada or by the charter or other constituent documents of the Corporation on the right of a non-resident to hold or vote the common shares, other than as provided in the Investment Canada Act.

The following discussion summarizes the principal features of the Investment Canada Act for a non-resident who proposes to acquire the common shares. The Investment Canada Act generally prohibits implementation of a reviewable investment by an individual, government or agency thereof, corporation, partnership, trust or joint venture (each an “entity”) that is not a “Canadian” as defined in the Investment Canada Act (a “non-Canadian”), unless after review, the minister responsible for the Investment Canada Act is satisfied that the investment is likely to be of net benefit to Canada. Certain Government of Canada uranium policies may be material in respect of such a review.

An investment in the common shares by a non-Canadian other than a “WTO Investor” (as that term is defined by the Investment Canada Act, and which term includes entities which are nationals of or are controlled by nationals of member states of the World Trade Organization) when the Corporation was not controlled by a WTO Investor, would be reviewable under the Investment Canada Act if it was an investment to acquire control of the Corporation and the value of the assets of the Corporation, as determined in accordance with the regulations promulgated under the Investment Canada Act, was \$5 million or more. An investment in the common shares by a WTO Investor, or by a non-Canadian when the Corporation was controlled by a WTO Investor, would be reviewable under the Investment Canada Act if it was an investment to acquire control of the Corporation and the value of the assets of the Corporation, as determined in accordance with the regulations promulgated under the Investment Canada Act was not less than a specified amount, which for 2010 was any amount in excess of \$299 million. Amendments to the Investment Canada Act are expected to come into force that will change the financial threshold that will trigger a review. These amendments will make an acquisition of control reviewable if the enterprise value (which term is to be defined in regulations not yet in force) of the Corporation exceeds \$5 million (in respect of a non-WTO Investor transaction) or \$600 million (in respect of a WTO Investor transaction), as the case may be (which amount will increase in subsequent years).

A non-Canadian would acquire control of the Corporation for the purposes of the Investment Canada Act if the non-Canadian acquired a majority of the common shares. The acquisition of one third or more, but less than a majority of the common shares would be presumed to be an acquisition of control of the Corporation unless it could be established that, on the acquisition, the Corporation was not controlled in fact by the acquirer through the ownership of the common shares.

A completed or proposed acquisition of common shares of the Corporation (whether or not control is acquired) may also be reviewable if the Minister of Industry, after consultation with the Minister of Public Safety and Emergency Preparedness, considers that the investment could be injurious to national security and the Canadian federal cabinet makes an order for the review of the investment. Furthermore, to the extent that the investor has not implemented the proposed acquisition of common shares of the Corporation and the Minister of Industry has reasonable grounds to believe that the investment could be injurious to national security, the investor may not implement the acquisition

without clearance if the minister sends a notice to the investor that an order for the review of the investment may be made.

Certain transactions relating to the common shares may be exempt from the Investment Canada Act, including: (a) an acquisition of the common shares by a person in the ordinary course of that person's business as a trader or dealer in securities; (b) an acquisition of control of the Corporation in connection with the realization of security granted for a loan or other financial assistance and not for a purpose related to the provisions of the Investment Canada Act; and (c) an acquisition of control of the Corporation by reason of an amalgamation, merger, consolidation or corporate reorganization following which the ultimate direct or indirect control in fact of the Corporation, through the ownership of the common shares, remained unchanged.

Table of Contents

E. Taxation.

Canadian Federal Income Tax Considerations

The following is a summary of the principal Canadian federal income tax consequences generally applicable to the holding and disposition of Common Shares in the capital of the Corporation by a person who is a resident of the United States and not resident in Canada for purposes of the Income Tax Act (Canada) (the “Tax Act”) and the Canada-United States Income Tax Convention, 1980, as amended (the “Treaty”), who is entitled to the benefit of the Treaty, who holds common shares solely as capital property and does not use or hold a common share in carrying on business in Canada (“US Holder”). Generally the common shares will be considered to be capital property to a US Holder provided the holder does not hold the common shares in the course of carrying on a business of trading in securities and has not acquired them in one or more transactions considered to be an adventure in the nature of trade. Special rules, which are not discussed herein, may apply to a holder of common shares who is a non-resident insurer which carries on business in Canada and elsewhere.

This summary is based on the current provisions of the Tax Act and the regulations thereunder (the “Regulations”), the Treaty, all specific proposals to amend the Tax Act, the Regulations and the Treaty publicly announced by the Minister of Finance (Canada) prior to the date hereof (the “Proposals”) and the administrative practices and assessing policies of the of Canada Revenue Agency published in writing by it prior to the date hereof.

This summary is not exhaustive of all possible Canadian federal income tax considerations and except for the Proposals, does not take into account or anticipate any changes in the law or practice, whether by judicial, governmental, or legislative decision or action, nor does it take into account any provincial, territorial or foreign (including without limitation, any United States) tax law or treaty, which may differ significantly from those discussed herein. It is assumed that all Proposals will be enacted substantially as proposed and that there is no other relevant change in any governing law or practice, although no assurance can be given in these respects. Each US Holder is advised to obtain tax and legal advice applicable to such US Holder’s particular circumstances.

Dividends

Dividends on common shares paid or credited by the Corporation to a US Holder will be subject to Canadian withholding tax at the rate of 25% of the gross amount of the dividends. In general, the Treaty reduces the rate of withholding with respect to dividends paid to a US Holder to 15% of the gross amount of the dividend. If the US Holder is a company that owns at least 10% of the voting stock of the Corporation and beneficially owns the dividend, the rate of withholding tax is reduced to 5% under the Treaty. Further, under the Treaty dividends paid to certain religious, scientific, literary, educational or charitable organizations and certain pension organizations that are resident in, and generally exempt from tax in the United States, are generally exempt from Canadian withholding tax. The Corporation is required to withhold the applicable tax from the dividend payable to the US Holder, and to remit the tax to the Receiver General of Canada for the account of the US Holder.

Table of Contents

Disposition of Common Shares

A US Holder will not be subject to tax under the Tax Act on any capital gain realized on an actual or deemed disposition of a common share, provided the common shares are not “taxable Canadian property” to the US Holder.

A common share will be taxable Canadian property to a US Holder at a particular time if at any time in the 60-month period that ends at that time, (i) 25% or more of the issued shares of any class of the capital stock of the corporation, were owned by or belonged to one or any combination of (A) the US Holder, and (B) persons with whom the US Holder did not deal at arm’s length, and (ii) more than 50% of the fair market value of the common share was derived directly or indirectly from one or any combination of (A) real or immovable property situated in Canada, (B) Canadian resource properties, (C) timber resource properties, and (D) options in respect of, or interests in, or for civil law rights in, property described in any of subparagraphs (ii)(A) to (C), whether or not the property exists.

United States Federal Income Tax Considerations

TO ENSURE COMPLIANCE WITH TREASURY DEPARTMENT CIRCULAR 230, PROSPECTIVE INVESTORS ARE HEREBY NOTIFIED THAT: (A) ANY DISCUSSION OF U.S. FEDERAL TAX ISSUES IN THIS PROSPECTUS IS NOT INTENDED OR WRITTEN TO BE RELIED UPON, AND CANNOT BE RELIED UPON, BY INVESTORS FOR THE PURPOSE OF AVOIDING PENALTIES THAT MAY BE IMPOSED UNDER THE CODE; (B) SUCH DISCUSSION IS BEING USED IN CONNECTION WITH THE PROMOTION OR MARKETING OF THE TRANSACTIONS OR MATTERS ADDRESSED HEREIN; AND (C) PROSPECTIVE INVESTORS SHOULD SEEK ADVICE BASED ON THEIR PARTICULAR CIRCUMSTANCES FROM AN INDEPENDENT TAX ADVISOR.

The following summary describes certain material U.S. federal income tax considerations generally applicable to U.S. Holders (as defined below) with respect to the ownership and disposition of the Corporation’s Common Shares offered hereunder. It addresses only U.S. Holders that hold the Corporation’s Common Shares as capital assets within the meaning of Section 1221 of the Internal Revenue Code of 1986, as amended (the “Code”) (generally, assets held for investment purposes). The following summary does not purport to be a complete analysis of all of the potential U.S. federal income tax considerations that may be relevant to particular U.S. Holders in light of their particular circumstances, nor does it deal with persons that are subject to special tax rules, such as brokers, dealers in securities or currencies, financial institutions, mutual funds, insurance companies, tax-exempt entities, qualified retirement plans, U.S. Holders that own stock constituting 10% or more of the Corporation’s voting power (whether such stock is directly, indirectly or constructively owned), regulated investment companies, common trust funds, U.S. Holders subject to the alternative minimum tax, U.S. Holders holding the Corporation’s Common Shares as part of a straddle, hedge or conversion transaction or as part of a synthetic security or other integrated transaction, traders in securities that elect to use a mark-to-market method of accounting for their securities holdings, U.S. Holders that have a “functional currency” other than the U.S. dollar, U.S. expatriates, and persons that acquired the Corporation’s Common Shares in connection with the performance of services. In addition, this summary does not address persons that hold an interest in a partnership or other pass-through entity that holds the Corporation’s Common Shares, or tax considerations arising under the laws of any state, local or non-U.S. jurisdiction or other U.S. federal tax considerations (e.g., estate or gift tax) other than those pertaining to the income tax.

The following is based on the Code, Treasury regulations promulgated thereunder (“Treasury Regulations”), and administrative rulings and court decisions, in each case as in effect on the date hereof, all of which are subject to change, possibly with retroactive effect.

As used herein, the term “U.S. Holder” means a beneficial owner of the Corporation’s Common Shares that is (i) a citizen or individual resident of the U.S., (ii) a corporation (or an entity classified as a corporation for U.S. federal

income tax purposes) created or organized in or under the laws of the U.S. or any political subdivision thereof, (iii) an estate, the income of which is subject to U.S. federal income taxation regardless of its source, or (iv) a trust if (A) a U.S. court is able to exercise primary supervision over its administration and one or more U.S. persons, within the meaning of Section 7701(a)(30) of the Code, have authority to control all of its substantial decisions or (B) it has properly elected under applicable Treasury Regulations to be treated as a U.S. person.

The tax treatment of a partner in a partnership (or other entity classified as a partnership for U.S. federal income tax purposes) may depend on both the partner's and the partnership's status and the activities of such partnership. Partnerships that are beneficial owners of the Corporation's Common Shares, and partners in such partnerships, should consult their own tax advisors regarding the U.S. federal, state, local and non-U.S. tax considerations applicable to them with respect to the ownership and disposition of the Corporation's Common Shares.

Table of Contents

This summary is of a general nature only. It is not intended to constitute, and should not be construed to constitute, legal or tax advice to any particular U.S. Holder. U.S. Holders should consult their own tax advisors as to the tax considerations applicable to them in their particular circumstances.

Ownership and Disposition of the Corporation's Common Shares

Distributions. Subject to the discussion below under "Certain United States Federal Income Tax Considerations — Passive Foreign Investment Company Rules" and under "Certain United States Federal Income Tax Considerations — Controlled Foreign Corporations," distributions made with respect to the Corporation's Common Shares (including any Canadian taxes withheld from such distributions) generally will be included in the gross income of a U.S. Holder as dividend income to the extent of the Corporation's current and accumulated earnings and profits, as determined under U.S. federal income tax principles. So long as the Corporation is not a passive foreign investment company (see discussion under "Certain United States Federal Income Tax Considerations — Passive Foreign Investment Company" below), the Corporation is expected to be eligible for the benefits of a comprehensive income tax treaty with the U.S., so that dividends paid by the Corporation to non-corporate U.S. Holders are generally expected to be eligible for the reduced rate of U.S. federal income tax available with respect to certain dividends received in taxable years beginning before January 1, 2011. Note, however, that if the Corporation is a PFIC, for the taxable year during which the Corporation pays a dividend or for the preceding year, the reduced rates described in the preceding sentence will not apply. A corporate U.S. Holder will not be entitled to a dividends received deduction that is otherwise generally available upon the receipt of dividends distributed by U.S. corporations.

Distributions in excess of the Corporation's current and accumulated earnings and profits, if made with respect to the Corporation's Common Shares, will be treated as a return of capital to the extent of the U.S. Holder's adjusted tax basis in such Common Shares, and thereafter as capital gain.

If any dividends are paid in Canadian dollars, the amount includible in gross income will be the U.S. dollar value of such dividend, calculated by reference to the exchange rate in effect on the date of actual or constructive receipt of the payment, regardless of whether the payment is actually converted into U.S. dollars. If any Canadian dollars actually or constructively received by a U.S. Holder are later converted into U.S. dollars, such U.S. Holder may recognize gain or loss on the conversion, which will be treated as ordinary gain or loss. Such gain or loss generally will be treated as gain or loss from sources within the U.S. for U.S. foreign tax credit purposes.

A U.S. Holder may be entitled to deduct or claim a credit for Canadian withholding taxes, subject to applicable limitations in the Code. Dividends paid on the Corporation's Common Shares will be treated as income from sources outside the U.S. and generally will be "passive category income" for U.S. foreign tax credit limitation purposes. The rules governing the foreign tax credit are complex and the availability of the credit is subject to limitations. U.S. Holders should consult their own tax advisors regarding the availability of the foreign tax credit in their particular circumstances.

Dispositions. Subject to the discussion below under "Certain United States Federal Income Tax Considerations — Passive Foreign Investment Company Rules" and "Certain United States Federal Income Tax Considerations — Controlled Foreign Corporations," upon the sale, exchange or other taxable disposition of the Corporation's Common Shares, a U.S. Holder generally will recognize capital gain or loss equal to the difference between (i) the amount of cash and the fair market value of any other property received upon the sale, exchange or other taxable disposition and (ii) the U.S. Holder's adjusted tax basis in such Common Shares. Capital gain or loss recognized upon a sale, exchange or other taxable disposition of the Corporation's Common Shares will generally be long-term capital gain or loss if the U.S. Holder's holding period with respect to such Common Shares disposed of is more than one year at the time of the sale, exchange or other taxable disposition. The deductibility of capital loss is subject to limitations.

Passive Foreign Investment Company Rules

Certain adverse U.S. federal income tax rules generally apply to a U.S. person that owns or disposes of stock in a non-U.S. corporation that is treated as a passive foreign investment company (a “PFIC”). In general, a non-U.S. corporation will be treated as a PFIC for any taxable year during which, after applying relevant look-through rules with respect to the income and assets of subsidiaries, either (i) 75% or more of the non-U.S. corporation’s gross income is passive income, or (ii) 50% or more of the average value of the non-U.S. corporation’s assets produce or are held for the production of passive income. For these purposes, passive income generally includes dividends, interest, certain rents and royalties, and the excess of gains over losses from certain commodities transactions, including transaction involving oil and gas. However, gains and losses from commodities transactions generally are excluded from the definition of passive income if (i) such gains or losses are derived by a non-U.S. corporation in the active conduct of a commodity business, and (ii) “substantially all” of such corporation’s business is as an active producer, processor, merchant or handler of commodities of like kind (the “active commodities business exclusion”).

Table of Contents

The Corporation has not made a determination as to its PFIC status for the current or any past taxable years. PFIC classification is factual in nature, generally cannot be determined until the close of the taxable year in question, and is determined annually. Thus, there can be no assurance that the Corporation is not a PFIC for the current taxable year, has not been for any past taxable years or will not be a PFIC for any future taxable years.

The following U.S. federal income tax consequences generally will apply to a U.S. Holder of the Corporation's Common Shares if the Corporation is treated as a PFIC:

Distributions. Distributions made by the Corporation with respect to its Common Shares, to the extent such distributions are treated as "excess distributions" pursuant to Section 1291 of the Code, must be allocated ratably to each day of the U.S. Holder's holding period for such Common Shares. The amounts allocated to the taxable year during which the distribution is made, and to any taxable years in such U.S. Holder's holding period which are prior to the first taxable year in which the Corporation is treated as a PFIC, are included in such U.S. Holder's gross income as ordinary income for the taxable year of the distribution. The amount allocated to each other taxable year is taxed as ordinary income in the taxable year of the distribution at the highest tax rate in effect for the U.S. Holder in that other taxable year and is subject to an interest charge at the rate applicable to underpayments of tax. Any distribution made by the Corporation that does not constitute an excess distribution would be treated in the manner described under "Certain United States Federal Income Tax Considerations — Ownership and Disposition of the Corporation's Common Shares — Distributions," above.

Dispositions. The entire amount of any gain realized upon the U.S. Holder's disposition of the Corporation's Common Shares generally will be treated as an excess distribution made in the taxable year during which such disposition occurs, with the consequences described above.

Elections. In general, the adverse U.S. federal income tax consequences of holding stock of a PFIC described above may be mitigated if a U.S. shareholder of the PFIC is able to, and timely makes, a valid qualified electing fund ("QEF") election with respect to the PFIC or a valid mark-to-market election with respect to the stock of the PFIC. U.S. Holders should be aware that there can be no assurance that the Corporation will supply U.S. Holders with the information and statements that such U.S. Holder requires to make a QEF election under Section 1295 of the Code.

U.S. Holders should consult their own tax advisors as to the tax consequences of owning and disposing of stock in a PFIC, including the availability of any elections that may mitigate the adverse U.S. federal income tax consequences of holding stock of a PFIC.

Certain Controlled Foreign Corporation Rules

If more than 50% of the total voting power or the total value of the Corporation's outstanding shares is owned, directly or indirectly, by citizens or residents of the U.S., U.S. partnerships or corporations, or U.S. estates or trusts (as defined by Section 7701(a)(30) of the Code), each of which own, directly or indirectly, 10% or more of the total voting power of the Corporation's outstanding shares (each a "10% Shareholder"), the Corporation could be treated as a "Controlled Foreign Corporation" ("CFC") under Section 957 of the Code.

The Corporation's classification as a CFC would effect many complex results, including that under Section 1248 of the Code, gain from the disposition of the Corporation's common stock by a U.S. Holder that is or was a 10% Shareholder at any time during the five-year period ending with the disposition will be treated as a dividend to the extent of the Corporation's earnings and profits attributable to the Common Shares sold or exchanged.

Table of Contents

If the Corporation is classified as both a PFIC and a CFC, the Corporation generally will not be treated as a PFIC with respect to 10% Shareholders.

The Corporation has made no determination as to whether it currently meets or has met the definition of a CFC, and there can be no assurance that it will not be considered a CFC for the current or any future taxable year.

The CFC rules are very complicated, and U.S. Holders should consult their own financial advisor, legal counsel or accountant regarding the CFC rules and how these rules may impact their U.S. federal income tax situation.

Information Reporting and Backup Withholding Tax

If certain information reporting requirements are not met, a U.S. Holder may be subject to backup withholding tax (currently imposed at a rate of 28%) on the distributions made with respect to the Corporation's Common Shares or proceeds received on the disposition of the Corporation's Common Shares. Backup withholding tax is not an additional tax. A U.S. Holder subject to the backup withholding tax rules will be allowed a credit of the amount withheld against such U.S. Holder's U.S. federal income tax liability and, if backup withholding tax results in an overpayment of U.S. federal income tax, such U.S. Holder may be entitled to a refund, provided that the requisite information is correctly furnished to the Internal Revenue Service in a timely manner. U.S. Holders should consult their own tax advisors as to the information reporting and backup withholding tax rules.

THE ABOVE SUMMARY IS NOT INTENDED TO CONSTITUTE A COMPLETE ANALYSIS OF ALL TAX CONSIDERATIONS APPLICABLE TO U.S. HOLDERS WITH RESPECT TO THE OWNERSHIP AND DISPOSITION OF THE CORPORATION'S COMMON SHARES. U.S. HOLDERS SHOULD CONSULT THEIR OWN TAX ADVISORS AS TO THE TAX CONSIDERATIONS APPLICABLE TO THEM IN THEIR PARTICULAR CIRCUMSTANCES.

H. Documents on display.

Public documents are available for inspection at the Corporation's head offices located at 10758 W. Centennial Road, Suite 200, Littleton, Colorado 80127, and, for certain documents, on the Internet at www.sedar.com and at www.sec.gov.

The Corporation is subject to the information requirements of the Exchange Act and, to the extent required of Canadian companies, files periodic reports and other information with the SEC. All such reports and information may be read and copied at the public reference facilities listed below. The Corporation intends to give its shareholders annual reports containing audited financial statements and a report thereon from its independent chartered accountants and quarterly reports for the first three quarters of each fiscal year containing unaudited interim financial information.

Statements made in this Annual Report on Form 20-F (Annual Information Form) about the contents of contracts or other documents are not necessarily complete and shareholders are referred to the copy of such contracts or other documents filed as exhibits to this annual report.

The Corporation's SEC filings, and the exhibits thereto, are available for inspection and copying at the public reference facilities maintained by the SEC in Judiciary Plaza, Room 1580, 100 F Street N.W., Washington, D.C., 20549. Copies of these filings may be obtained from these offices after the payment of prescribed fees. Please call the SEC at 1-800-SEC-0330 for further information on the public reference rooms. These filings are also available on the SEC's website at www.sec.gov.

Table of Contents

The Corporation will also provide its shareholders with proxy statements prepared in accordance with Canadian law. As a Canadian company, the Corporation is exempt from the Exchange Act rules regarding the furnishing and content of proxy statements to shareholders and is also exempt from the short-swing profit recovery and disclosure regime of Section 16 of the Exchange Act.

I. Subsidiary Information.

Not applicable.

Item 11. Quantitative and Qualitative Disclosures About Market Risk.

The Corporation is engaged in the acquisition and development of uranium projects and related activities including exploration, evaluation, development, engineering, permitting, and the preparation of related economical analysis. The value of the Corporation's properties is related to uranium prices and changes in the price of uranium could affect its ability to generate revenue from its portfolio of uranium projects.

Uranium prices may fluctuate widely from time to time and are affected by numerous factors, including the following: expectations with respect to the rate of inflation, exchange rates, interest rates, global and regional political and economic circumstances and governmental policies, including those with respect to uranium production and nuclear energy. The demand for, and supply of, uranium affect uranium prices, but not necessarily in the same manner as demand and supply affect the prices of other commodities. The supply of uranium consists of a combination of new mine production and existing stocks of uranium held by governments, and public and private organizations. The demand for uranium is primarily derived from nuclear energy production. Uranium cannot be readily sold in commodities markets and its market value cannot be predicted for any particular time.

Because the Corporation has several exploration operations in North America and Canada, it is subject to foreign currency fluctuations. The Corporation holds financial assets and liabilities in Canadian and U.S. dollars. The Corporation does not engage in currency hedging to offset any risk of currency fluctuations.

As of December 31, 2009, the Corporation had neither debt outstanding, nor any investment in debt instruments other than highly liquid short-term investments.

Table of Contents

As of the end of the period covered by this Annual Report on Form 20-F (Annual Information Form) under the supervision of the Corporation's Chief Executive Officer and Chief Financial Officer, the Corporation evaluated the effectiveness of the design and operation of the Corporation's disclosure controls and procedures, as defined in Rule 13a-15(e) under the Exchange Act. Based on this evaluation, the Corporation's Chief Executive Officer and Chief Financial Officer have concluded that as of December 31, 2009, the Corporation's disclosure controls and procedures were effective to ensure that information required to be disclosed in reports that the Corporation files or submits under the Exchange Act: (1) is recorded, processed, summarized and reported within the time periods specified in SEC's rules and forms, and (2) is accumulated and communicated to the Corporation's management, including the Chief Executive Officer and Chief Financial Officer, as appropriate to allow timely decisions regarding required disclosure.

Management's annual report on internal control over financial reporting.

Management of the Corporation is responsible for establishing and maintaining adequate internal control over financial reporting, and has designated such internal control over financial reporting to provide reasonable assurance regarding the reliability of financial reporting and preparation of financial statements for external purposes in accordance with Canadian GAAP, including a reconciliation to GAAP.

Management has used the Internal Control – Integrated Framework to evaluate the effectiveness of internal control over financial reporting, which is a recognized and suitable framework issued by the Committee of Sponsoring Organizations of the Treadway Commission.

Management assessed the effectiveness of the Corporation's internal control over financial reporting as of December 31, 2009. As a result, management concluded that the Corporation's internal control over financial reporting was effective as at that date.

W. William Boberg, President and Chief Executive Officer

Roger L. Smith, Chief Financial Officer and Vice President, Finance

Changes in internal control over financial reporting.

There has been no change in the Corporation's internal control over financial reporting during the fiscal year ended December 31, 2009 that has materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

Item 15T. Controls and Procedures.

Not applicable.

Item 16. [Reserved]

Item 16A. Audit Committee Financial Expert.

The Audit Committee has determined that Robert Boaz is the Corporation's "audit committee financial expert," as defined in the rules promulgated by the SEC.

See Item 6B – Board Practices – Audit Committee for more detailed information on the responsibilities and activities of the Audit Committee.

For biographical information on, and disclosure regarding the independence of, each member of the Audit Committee, see Item 6 – Directors, Senior Management and Employees.

Table of Contents

Item 16B. Code of Ethics.

The Corporation adopted a written Code of Business Conduct and Ethics (the “Code”) on August 9, 2007 and amended and restated the Code on January 29, 2008 in advance of filing its registration statement on Form 40-F with the SEC to comply with U.S. securities law requirements. The Corporation made a non-substantive amendment to the Code effective February 1, 2010 to reflect a change in name of the third party whistle-blower services provider. All directors, officers and employees of the Corporation are expected to be familiar with the Code and to adhere to those principles and procedures set forth in the Code that apply to them. The Corporate Governance and Nominating Committee oversees the implementation of the Code and compliance with various regulatory requirements. The Code is available at the Corporation’s website at www.ur-energy.com.

Item 16C. Principal Accountant Fees and Services.

The following table presents the fees for professional audit services rendered by PricewaterhouseCoopers LLP for the audits of the Corporation’s consolidated financial statements for the fiscal years ended December 31, 2009 and 2008, and fees billed for other services rendered by PricewaterhouseCoopers LLP during those periods. The Corporation paid all amounts in the following table to PricewaterhouseCoopers LLP. All services reflected in the following table for 2009 and 2008 were preapproved in accordance with the policy of the Audit Committee of the Board of Directors.

Principal Accounting Fees

	For the years ended December	
	2009	31, 2008
	\$	\$
Audit Fees (1)	115,000	90,000
Audit Related Fees (2)	50,790	82,300
Tax Fees (3)	41,670	18,760
All Other Fees (4)	-	97,152
Total	207,460	288,212

- (1) Audit fees consisted of audit services, reporting on internal control over financial reporting and review of documents filed with the securities offices. The 2009 audit fees were paid in 2010 and the 2008 fees were paid in 2009.
- (2) Audit related fees were for services in connection with quarterly reviews of the consolidated financial statements and work in connection with the Corporation’s securities filings as required by the Canadian and United States government. Of the 2009 fees, \$7,000 were paid in 2010.
- (3) Tax fees consisted of preparation of Federal and State income tax returns and consultation regarding tax compliance issues. Tax services are normally billed in arrears, so the fees reflected above are for all tax services provided during the year for prior years. All fees were paid in the year incurred.
- (4) Other fees were for other consulting services provided to the Corporation.

The Audit Committee has determined that the provision by PricewaterhouseCoopers LLP of the non-audit services referred to above is compatible with the maintenance of that firm’s independence.

Pre-Approval Policies and Procedures

The Audit Committee has instituted a policy to pre-approve audit and non-audit services (audit-related services, tax services, and all other services). The Chair of the Audit Committee is given limited delegated authority from time to

time by the Committee to pre-approve permitted non-audit services. Pre-approval is obtained prior to the commencement of the services. The Audit Committee also considers on a continuing basis whether the provision of non-audit services is compatible with maintaining the independence of the external auditor.

Item 16D. Exemptions from the Listing Standards for Audit Committees.

Not applicable.

Item 16E. Purchases of Equity Securities by the Issuer and Affiliated Purchasers.

Ur-Energy did not make any purchases of equity securities since January 1, 2009.

Item 16F. Change in Registrant's Certifying Accountant.

None

Item 16G. Corporate Governance.

NYSE Amex Corporate Governance Matters

The Corporation's Common Shares are listed on NYSE Amex. Section 110 of the NYSE Amex Company Guide permits the NYSE Amex to consider the laws, customs and practices of the foreign issuer's country of domicile in relaxing certain NYSE Amex listing criteria, and to grant exemptions from NYSE Amex listing criteria based on these considerations. A corporation seeking relief under these provisions is required to provide written certification from independent local counsel that the non-complying practice is not prohibited by home country law. A description of the significant ways in which the Corporation's governance practices differ from those followed by domestic companies pursuant to NYSE Amex standards is as follows:

- **Shareholder Meeting Quorum Requirement:** The NYSE Amex minimum quorum requirement for a shareholder meeting is one-third of the outstanding common shares. In addition, a Corporation listed on NYSE Amex is required to state its quorum requirement in its bylaws. The Corporation's quorum requirement as set forth in its bylaws is 10% of the issued and outstanding common shares entitled to vote at a meeting of shareholders whether present in person or represented by proxy.
- **Proxy Delivery Requirement:** NYSE Amex requires the solicitation of proxies and delivery of proxy statements for all shareholder meetings, and requires that these proxies shall be solicited pursuant to a proxy statement that conforms to SEC proxy rules. The Corporation is a "foreign private issuer" as defined in Rule 3b-4 under the Exchange Act and Rule 405 under the Securities Act and the equity securities of the Corporation are accordingly exempt from the proxy rules set forth in Sections 14(a), 14(b), 14(c) and 14(f) of the Exchange Act. The Corporation solicits proxies in accordance with applicable rules and regulations in Canada.
- **Shareholder Approval Requirement:** The Corporation intends to follow the Canadian securities regulatory authorities and Toronto Stock Exchange rules for shareholder approval of new issuances of its common shares. Following securities and exchange rules, shareholder approval is required for certain issuances of shares that: (i) materially affect control of the Corporation; or (ii) provide consideration to insiders in the aggregate of 10% or greater of the market capitalization of the listed issuer and have not been negotiated at arm's length. Shareholder approval is also required, pursuant to Toronto Stock Exchange rules, in the case of most private placements: (x) for an aggregate number of listed securities issuable greater than 25% of the number of securities of the listed issuer which are outstanding, on a non-diluted basis, prior to the date of closing of the transaction if the price per security is less than the market price; or (y) that during any six month period are to insiders for listed securities or options, rights or other entitlements to listed securities greater than 10% of the number of securities of the listed issuer which are outstanding, on a non-diluted basis, prior to the date of the closing of the first private placement to an insider during the six month period.

The foregoing are consistent with the laws, customs and practices in Canada.

In addition, the Corporation may from time-to-time seek relief from NYSE Amex corporate governance requirements on specific transactions under Section 110 of the NYSE Amex Company Guide by providing written certification from independent local counsel that the non-complying practice is not prohibited by the Corporation's home country law.

Auditors' Report
To the Shareholders of Ur-Energy Inc.

We have audited the consolidated balance sheets of Ur-Energy Inc. as at December 31, 2009 and 2008 and the consolidated statements of operations, comprehensive loss and deficit and cash flows for the three years ended December 31, 2009, 2008 and 2007 and the cumulative period from March 22, 2004 to December 31, 2009. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards and the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the Company as at December 31, 2009 and 2008 and the results of its operations and its cash flows for the years ended December 31, 2009, 2008 and 2007 and the cumulative period from March 22, 2004 to December 31, 2009 in accordance with Canadian generally accepted accounting principles.

(expressed in Canadian dollars)

1. Nature of operations

Ur-Energy Inc. (the "Company") is an exploration stage junior mining company engaged in the identification, acquisition, evaluation, exploration and development of uranium mineral properties in Canada and the United States. Due to the nature of the uranium mining methods to be used by the Company on the Lost Creek property, and the definition of "mineral reserves" under NI 43-101, which uses the CIM Definition Standards, the Company has not determined whether the properties contain mineral reserves. However, the Company's April 2008 "NI 43-101 Preliminary Assessment for the Lost Creek Project Sweetwater County, Wyoming" outlines the economic viability of the Lost Creek project, which is currently in the permitting process with state and federal regulators. The recoverability of amounts recorded for mineral properties is dependent upon the discovery of economically recoverable resources, the ability of the Company to obtain the necessary financing to develop the properties and upon attaining future profitable production from the properties or sufficient proceeds from disposition of the properties.

2. Significant accounting policies

Basis of presentation

Ur-Energy Inc. was incorporated on March 22, 2004 under the laws of the Province of Ontario. The Company continued under the Canada Business Corporations Act on August 8, 2006. These financial statements have been prepared by management in accordance with Canadian generally accepted accounting principles and include all of the assets, liabilities and expenses of the Company and its wholly-owned subsidiaries Ur-Energy USA Inc., NFU Wyoming, LLC, Lost Creek ISR, LLC, NFUR Bootheel, LLC, Hauber Project LLC, NFUR Hauber, LLC, ISL Resources Corporation, ISL Wyoming, Inc. and CBM-Energy Inc. All inter-company balances and transactions have been eliminated upon consolidation. Ur-Energy Inc. and its wholly-owned subsidiaries are collectively referred to herein as the "Company". The significant measurement differences between Canadian generally accepted accounting principles and those that would be applied under United States generally accepted accounting principles ("US GAAP") as they affect the Company are disclosed in Note 15.

Certain comparative figures have been reclassified to conform to the presentation adopted for the current period.

Use of estimates

The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting periods. The most significant estimates management makes in the preparation of these financial statements relate to potential impairment in the carrying value of the Company's mineral properties and the fair value of stock based compensation. Actual results could differ from those estimates.

Cash and cash equivalents

Cash equivalents are investments in guaranteed investment certificates, certificates of deposit and money market accounts which have a term to maturity at the time of purchase of ninety days or less and which are readily convertible into cash.

Short-term investments

Short-term investments are comprised of guaranteed investment certificates and certificates of deposit which have a term to maturity at the time of purchase in excess of ninety days and less than one year. These investments are readily convertible into cash.

Bonding deposits

Bonding deposits are provided to support reclamation obligations on United States properties. Deposit amounts are invested in certificates of deposit held at United States financial institutions.

Table of Contents

Ur-Energy Inc.
(an Exploration Stage Company)
Notes to Amended Audited Consolidated Financial Statements
December 31, 2009

(expressed in Canadian dollars)

Mineral properties

Acquisition costs of mineral properties are capitalized. When production is attained, these costs will be amortized on the unit-of-production method based upon estimated recoverable resource of the mineral property. If properties are abandoned or sold, they are written off. If properties are considered to be impaired in value, the costs of the properties are written down to their estimated fair value at that time.

Exploration costs

Exploration, evaluation and development expenditures, including annual exploration lease and maintenance fees, are charged to earnings as incurred until a mineral property becomes commercially mineable.

Management considers that a mineral property is commercially mineable when it can be legally mined, as indicated by the receipt of key permits. Development expenditures incurred subsequent to the receipt of key permits are capitalized and amortized on the unit-of-production method based upon the estimated recoverable resource of the mineral property.

The Company capitalizes the direct costs associated with the acquisition of mineral properties and capital assets.

Capital assets

Capital assets are initially recorded at cost and are then amortized using the declining balance method at the following annual rates: computers at 30%, software at 50%, office furniture at 20%, field vehicles at 30%, and field equipment at 30%. Capitalized pre-construction costs consist of design and engineering costs for the construction of the processing facility as well as deposits on equipment with long lead times. The costs will not be amortized until the facility is complete and production has begun at which time it will be amortized over the life of the facility.

Equity Investments

Investments in which the Company has a significant influence or owns between 20% and 50% are accounted for using the equity method, whereby the Company records its proportionate share of the investee's income or loss.

Financing costs

Financing costs, including interest, are capitalized when they arise from indebtedness incurred, directly or indirectly, to finance mineral property acquisitions or construction activities on properties that are not yet subject to depreciation or depletion. Once commercial production is achieved, financing costs are charged against earnings.

Impairment of long-lived assets

The Company assesses the possibility of impairment in the net carrying value of its long-lived assets when events or circumstances indicate that the carrying amounts of the asset or asset group may not be recoverable. Management calculates the estimated undiscounted future net cash flows relating to the asset or asset group using estimated future prices, recoverable indicated resources and other mineral resources, and operating, capital and reclamation costs. When the carrying value of an asset exceeds the related undiscounted cash flows, the asset is written down to its estimated fair value, which is determined using discounted future cash flows or other measures of fair value. Management's estimates of mineral prices, mineral resources, foreign exchange, production levels and operating capital and reclamation costs are subject to risk and uncertainties that may affect the determination of the recoverability of the long-lived asset. It is possible that material changes could occur that may adversely affect management's estimates.

Asset retirement obligation

An asset retirement obligation is a legal obligation associated with the retirement of tangible long-lived assets that the Company is required to settle. The Company recognizes the fair value of a liability for an asset retirement obligation in the period in which it is incurred when a reasonable estimate of fair value can be made. Accretion charges to the asset retirement obligation are charged to the related exploration project. The retirement obligations recorded relate entirely to exploration and development drill holes, related monitor wells and site disturbance on the Company's Wyoming properties and are being expensed currently as a cost of exploration and development.

Table of Contents

Ur-Energy Inc.
(an Exploration Stage Company)
Notes to Amended Audited Consolidated Financial Statements

(expressed in Canadian dollars)

Stock-based compensation

All stock-based compensation payments made to employees and non-employees are accounted for in the financial statements. Stock-based compensation cost is measured at the grant date based on the fair value of the reward and is recognized over the related service period. Stock-based compensation cost is charged to general and administrative expense, or exploration, evaluation and development projects on the same bases as other compensation costs.

Flow-through shares

The Company has financed a portion of its Canadian exploration and development activities through the issuance of flow-through shares. Under the terms of the flow-through share agreements, the tax benefits of the related expenditures are renounced to subscribers. To recognize the foregone tax benefits to the Company, the carrying value of the shares issued is reduced by the tax effect of the tax benefits renounced to subscribers. Recognition of the foregone tax benefit is recorded at the time of the renouncement provided there is reasonable assurance that the expenditures will be incurred.

Foreign currency translation

The functional currency of the Company is the Canadian dollar. Monetary assets and liabilities denominated in currencies other than the Canadian dollar are translated using the exchange rate in effect at the balance sheet date. Non-monetary assets and liabilities denominated in foreign currencies are translated at the average rates of exchange in effect for the month the assets were acquired or obligations incurred. Expenses are translated at the average exchange rates in effect for the month the transaction is entered into. Translation gains or losses are included in the determination of income or loss in the statement of operations in the period in which they arise.

Income taxes

The Company accounts for income taxes under the asset and liability method which requires the recognition of future income tax assets and liabilities for the expected future tax consequences of temporary differences between the carrying amounts and tax bases of assets and liabilities. The Company provides a valuation allowance on net future tax assets unless it is more likely than not that such assets will be realized.

Loss per common share

Basic loss per common share is calculated based upon the weighted average number of common shares outstanding during the period. The diluted loss per common share, which is calculated using the treasury stock method, is equal to the basic loss per common share due to the anti-dilutive effect of stock options and share purchase warrants outstanding.

Classification of financial instruments

The Company's financial instruments consist of cash and cash equivalents, short-term investments, marketable securities, amounts receivable, bonding and other deposits and accounts payable and accrued liabilities. The Company has made the following classifications for these financial instruments:

- Cash and cash equivalents are classified as "held for trading" and are measured at fair value at the end of each period with any resulting gains and losses recognized in operations.
- Short term investments are classified as "held-to-maturity" and carried at cost plus accrued interest using the effective interest rate method, with interest income and exchange gains and losses included in operations.
- Marketable securities are classified as "held for trading" and are measured at fair value at the end of each period with any resulting gains and losses recognized in operations.
- Amounts receivable, bonding and other deposits are classified as "Loans and receivables" and are recorded at amortized cost. Interest income is recorded using the effective interest rate method and is included in income for the period.
