ANGLOGOLD SPEAKS ABOUT ITS ORGANIC GROWTH PROJECTS

AngloGold has targeted growing return on capital from 13% in 2001 to 16% in 2006 and US\$ earnings per share by 5% over the same period on an annualised basis, under current assumptions, AngloGold's Finance Director, Jonathan Best, said today. He was addressing the BMO Nesbitt Burns Metals and Mining Conference in Tampa, Florida.

These are commercial objectives, not production or ore reserve metrics, he commented. However, as all producers have assets that will all eventually be depleted, objectives like these can only be met by replacing or growing producing assets. In the context of world gold production becoming ex growth, the focus would be on companies that could grow in such an environment. The ultimate winners will be those companies that have low-cost, long-life assets, he said.

Speaking at the same conference, Dave Hodgson, the company's Chief Operating Officer, reviewed the company's existing organic growth projects in South Africa and the United States, which would add around 13 million ounces to AngloGold's life-of-mine production profile. In addition to these ventures, a further 11 expansion projects at the company's existing operations in South Africa, South America and Australia were expected to add a further 18 million ounces to AngloGold's production over the life of these operations, subject to a formal, capital approval process, at a capital cost of some \$740 million. He commented that AngloGold had revised downwards its forecast capital expenditure for 2003 to an estimated \$307 million.

The company had a number of organic growth initiatives which, he said, had tangible potential. These had the capacity to bring an additional 14 million ounces to the production profile over the lives of the operations at a capital cost of some \$600 million. Together, these new organic growth projects could add 32 million ounces to production over the life of the operations at a total estimated capital cost of \$1.3 billion.

This organic growth was expected to result in AngloGold's annual production growing from its current level of 6 million ounces to 6.5 million ounces in 2006. Target unit cash costs in 2006 are around \$182 per ounce in 2006 money terms or \$170 per ounce in real (2003) terms.

The full presentation, which includes the assumptions used and risks involved in forecasting future production and cost performance, is available on AngloGold's website at www.anglogold.com. In addition, for a discussion of risks that could have an impact on the company's future performance, see AngloGold's Annual Report on Form 20F for the year ended 31 December 2001, filed with the SEC on 28 June, 2002.
