PART I

FORWARD-LOOKING STATEMENTS

Certain statements contained in this filing are "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995, such as statements relating to financial results and plans for future business development activities, and are thus prospective. These statements appear in a number of places in this Form 10-KSB and include all statements that are not statements of historical fact regarding intent, belief or our current expectations, with respect to, among other things: (i) our financing plans; (ii) trends affecting our financial condition or results of operations; (iii) our growth strategy and operating strategy; and (iv) the declaration and payment of dividends. The words "may," "would," "could," "will," "expect," "estimate," "anticipate," "believe," "intend," "plan," and similar expressions and variations thereof are intended to identify forward-looking statements.

Investors and prospective investors are cautioned that any such forward-looking statements are not guarantees of future performance and involve risks and uncertainties, many of which are beyond our ability to control. Actual results may differ materially from those projected in the forward-looking statements as a result of various factors. The factors that might cause such differences include, among others, the following: (i) any material inability of us to successfully internally develop our products; (ii) any changes in technology that might affect the competitive positioning of our products and services; (iii) any inability to manage our growth; (iv) any adverse effect or limitations caused by Governmental regulations; (v) any adverse effect on our cash flow and abilities to obtain acceptable financing in connection with our growth plans; (vi) any increased competition in business; (vii) any inability of us to successfully conduct our business in new markets; and (viii) other risks including those identified in our filings with the Securities and Exchange Commission. We undertake no obligation to publicly update or revise the forward looking statements made in this Form 10-KSB to reflect events or circumstances after the date of this Form 10-KSB or to reflect the occurrence of unanticipated events.

ITEM 1. DESCRIPTION OF BUSINESS

Edgar Filing: NEOGENOMICS INC - Form 10KSB

NeoGenomics, Inc., a Nevada corporation (referred to individually or collectively with all of its subsidiaries as the "Company" in this Form 10-KSB) is the registrant for SEC reporting purposes and was originally incorporated as American Communications, Enterprises, Inc. in October 1998. In November 2001, following a reverse acquisition of NeoGenomics, Inc, a Florida company (referred to as "NeoGenomics" or the "Operating Subsidiary" in this Form 10-KSB), the registrant changed its name to NeoGenomics, Inc. as well. All share references in this Form 10-KSB have been adjusted to reflect a 1:100 reverse stock split which was effected by the Company on April 16, 2002.

NeoGenomics, Inc. owns and operates a medical testing laboratory and research facility based in Naples, Florida that is targeting the rapidly growing genetic and molecular testing subsegment of the medical laboratory market. Our common stock is listed on the NASDAQ Bulletin Board (OTCBB) under the symbol "NGNM." Our business plan features two concurrent objectives:

1. Development of a clinical laboratory to offer routine cytogenetics and molecular biology testing services; and
2. Development of a research laboratory to offer sponsored research services to other companies that are seeking to develop genomic products that will determine the genetic basis for female and neonatal diseases, cancers and other forms of disease (See "Research and Development").

The vision of NeoGenomics is to merge a high-end genetic and molecular testing laboratory with ongoing research activities to help bridge the gap between clinical medicine and genomic research. We believe that this combination will allow the Company to speed the process of discovery and innovation and develop new advanced testing methods to identify the genetic and molecular causes of disease. Over the last 2-3 years, advances in technology and genetic research, including the complete sequencing of the human genome, have made possible a whole new set of tools to diagnose and treat diseases. This has opened up a vast opportunity for laboratory companies that are positioned to address this growing market segment.

The medical testing laboratory market can be broken down into three primary segments: clinical lab testing, anatomic pathology testing, and genetic/molecular testing. Clinical labs typically are engaged in high volume, high automation tests on blood and urine. Clinical lab tests often involve testing of a less urgent nature, for example, cholesterol testing and testing associated with routine physical exams. This type of testing yields relatively low average revenue per test. Anatomic pathology ("AP") testing involves evaluation of tissue, as in surgical pathology, or cells as in cytopathology. AP testing typically seeks to answer the question: is it cancer? The most widely known AP tests are Pap smears, skin biopsies, and tissue biopsies. AP tests are typically more labor and technology intensive than clinical lab tests and thus typically have higher average revenue per test than clinical lab tests.

Genetic/molecular testing is the newest and fastest growing subset of the laboratory market. Genetic testing or "cytogenetics" involves analyzing chromosomes taken from the nucleus of cells for abnormalities in a process called karyotyping. A karyotype evaluates the entire 46 human chromosomes by number, and banding patterns to identify abnormalities associated with diseases. Examples of cytogenetics testing include amniocentesis testing of pregnant women to screen for genetic anomalies such as Down's syndrome in a fetus and bone marrow testing to screen for types of leukemia. Molecular biology involves testing for even more specific causes of diseases based on very small alterations in cellular biology and DNA. Examples of common molecular biology testing include screening for cystic fibrosis or Tay-Sachs disease. Both cytogenetics and molecular biology have become important and accurate diagnostic tools over the last five years and new tests are being developed monthly, thus this market segment is expanding rapidly. Genetic/molecular testing requires

Edgar Filing: NEOGENOMICS INC - Form 10KSB

very specialized equipment and credentialed individuals (typically PhD level) to certify the results. As a result of the sophistication involved in performing these tests, we believe that genetic/molecular testing typically has the highest average revenue/test of the medical testing sub segments.

3

Comparison of the Medical Testing Laboratory Market Segments:

ATTRIBUTES	CLINICAL	ANATOMIC PATHOLOGY	GENETIC/MOLECULAR
Testing Performed On	Blood, Urine	Tissue/cells	Chromosomes/ molecules
Volume	High	Low	Low
Physician Involvement	Low	High - Pathologist	Low
Malpractice Insur. Required	Low	High	Low
Other Professionals Req.	None	None	Cyto Geneticist/ Molecular Geneticist
Level of Automation	High	None	moderate
Diagnostic in Nature	Usually Not	Yes	Yes
Types of Diseases Tested	Many Possible	Cancer	Rapidly Growing
Estimated Revenue/Test	\$5 - \$35/Test	\$25 - \$100/Test	\$200 - \$800/Test
Estimated Size of Market	\$25 - \$30 Billion	\$6.0 - \$7.0 Billion	\$1.0 - \$2.0 Billion
Annual Est. Growth Rate of Market	4.0 - 5.0%	6.0 - 7.0%	25.0 - 40%

HISTORICAL DEVELOPMENT OF THE COMPANY

NeoGenomics, Inc. (f/k/a American Communications Enterprises, Inc.) was incorporated in Nevada in 1998 and became publicly-traded in August 1999.

The original purpose of the Company was to acquire and operate radio stations in Texas and other geographic regions of the United States and to develop related Internet services to complement the planned regional clusters of radio stations in such markets. However, the Company was unable to raise the capital necessary to implement this business plan and began to pursue different opportunities.

In November 2000, after a change in control of the Company, a new management team reevaluated the Company's strategic plan. At that time, the then management concluded that shareholder value could be augmented by broadening the Company's focus from the radio industry to the broader telecommunications industry. After serious difficulties in the entire telecommunications industry became apparent, management concluded that it should focus on opportunities relating to the genomics industry.

In the second half of 2001, we entered into negotiations to acquire NeoGenomics, Inc., a Florida corporation ("NeoGenomics"). NeoGenomics, which was incorporated in Florida on June 1, 2001, traces its roots back to its founder Dr. Michael Dent's 10 years of clinical experience in women's healthcare. Dr. Dent realized the potential for a multi-specialty approach to studying diseases in women and neonates; therefore, Dr. Dent sought to combine a group of research scientists from different fields including oncology, molecular biology, cytogenetics, oncogenomics and proteonomics for the purposes of creating a state-of-the-art clinical and research laboratory dedicated to genetic issues in medicine.

Edgar Filing: NEOGENOMICS INC - Form 10KSB

4

The Company acquired NeoGenomics on November 14, 2001 in a reverse acquisition transaction that resulted in another change in control of the Company. From a legal perspective, the Company was the surviving company and thus continues its public reporting obligations. However, from an accounting perspective using generally accepted accounting principles, NeoGenomics acquired the Company. Therefore, all financial information presented in this 10-KSB includes NeoGenomics' standalone results from the period June 1, 2001 to November 13, 2001 and the combined companies' results from November 2001 to December 31, 2002. Pursuant to the reverse acquisition, we entered into a Plan of Exchange with NeoGenomics, Tampa Bay Financial, Inc. ("TBF") and Michael T. Dent, M.D. This transaction had the following principal terms:

- The Company acquired 100% of the outstanding shares of NeoGenomics, which became a wholly-owned subsidiary of the Company (hereinafter referred to as the "Operating Subsidiary"). In January 2002, the name of the parent company was changed to "NeoGenomics, Inc." as well.

- Dr. Dent received 1,192,500 shares of our common stock. He also received the right to receive an additional 1,192,500 shares based upon the achievement of certain milestones by NeoGenomics.

- Dr. Dent was appointed President of the Company and received the right to appoint a majority of the directors of the Company. Dr. Dent subsequently appointed Kevin J. Lindheim as a director.

- Tampa Bay Financial, Inc. agreed to purchase 450,000 shares of the Company's common stock for a price of \$3.333 cents per share, or a total of \$1,500,000, payable upon the achievement of certain milestones.

- The Company agreed to engage Tampa Bay Financial to provide consulting services to the Company. Under this agreement, the Company agreed to pay TBF \$10,000 per month for an initial term of one year. The agreement was renewable at TBF's option for two additional terms of one year each. Under the consulting agreement, Tampa Bay Financial also had the right of first refusal with respect to any future issuance of shares by the Company at a price per share which was 50% of the price per share paid by any third party.

- The Company agreed that it would not engage in any reverse stock split without the consent of Tampa Bay Financial for a period of two (2) years.

- Dr. Dent received options to purchase up to 1,350,000 shares of the Company's common stock, which were to vest upon the achievement of certain milestones set forth in the option agreement.

On May 16, 2002, the Company, Dr. Dent and Tampa Bay Financial entered into a letter agreement amending the terms of the Plan of Exchange and certain of the related documents (collectively referred to as the "Modification Agreement"). Under the terms of the Modification Agreement, the parties agreed as follows:

5

1. The parties restructured the obligation of Tampa Bay Financial to purchase 450,000 shares of the Company's common stock. In particular, the Company agreed that TBF would immediately purchase 90,000 shares of common stock at a price of \$3.333 per share, or \$300,000. This amount was paid through the cancellation of \$190,000 of advances made by TBF to the Company together with the additional payments of \$110,000 during May 2002. Tampa Bay Financial agreed to purchase the remaining 360,000 shares at a price of \$3.333 per share, or an

Edgar Filing: NEOGENOMICS INC - Form 10KSB

aggregate price of \$1.2 million, payable in 12 equal installments over a period of 12 months commencing on June 15, 2002.

2. The Company agreed to issue 715,500 shares to Dr. Dent based upon his fulfillment of the first three milestones set forth in the Plan of Exchange. The Company agreed to deliver the remaining 477,000 shares to Dr. Dent upon the fulfillment of the last two milestones set forth in the Plan of Exchange.

3. The Company agreed that Tampa Bay Financial would have the right to receive the fees payable under its consulting agreement through the issuance of shares rather than the payment of cash. In connection with this, the Company agreed to issue 60,000 shares to TBF in exchange for \$60,000 of consulting fees accrued through May 16, 2002. The Company further agreed to issue shares in lieu of consulting fees during the next six months based upon the Company's current stock price, provided, that in no event would Tampa Bay Financial receive more than 10,000 shares per month.

The Company also agreed to amend the employment agreement with Dr. Dent to provide that Dr. Dent would have the right to receive his salary under the employment agreement in the form of shares of common stock. In connection with this, the Company agreed to issue 62,496 shares to Dr. Dent in exchange for \$62,496 of salary accrued through May 16, 2002. The Company further agreed that Dr. Dent, at his option, could receive shares of the Company in lieu of a cash salary during the next six months, based upon the current stock price, provided, that in no event would Dr. Dent receive more than 10,416 shares per month.

4. The Company agreed to file a Form S-8 to cover any resale of shares received by Dr. Dent under his employment agreement or by Tampa Bay Financial under their consulting agreement.

5. The Company agreed that upon the occurrence of a "substitution event," the Company would promptly issue to Tampa Bay Financial or its designees the balance of the 450,000 to be purchased by TBF under the Plan of Exchange. Tampa Bay Financial would pay the purchase price for the shares pursuant to a non-recourse promissory note payable over a period of three years without interest. Tampa Bay Financial's financial obligations under the promissory note would be secured by a pledge on the shares purchased by TBF. Additionally, the consulting agreement with Tampa Bay Financial would be terminated.

For purposes of the Modification Agreement, a "substitution event" was defined to mean the acquisition of any person of more than 20% of the outstanding shares of the Company (other than an acquisition by Tampa Bay Financial or Dr. Dent), the sale of all or substantially all of the assets of the Company, or a merger, share exchange or similar transaction, unless the beneficial owners of the Company prior to the transaction continue to own at least 80% of the outstanding shares of the Company after the transaction.

6

6. The Company agreed to release Tampa Bay Financial for any failure to fulfill its funding obligations in the original Plan of Exchange. TBF agreed to release Dr. Dent and the Company from any failure to complete the any of the stages set forth in the Plan of Exchange.

During the Fall of 2002, Tampa Bay Financial failed to provide the agreed upon funding at the times and in the amounts set forth in the Modification Agreement. As a result the Company was unable to implement important parts of its business plan and encountered severe liquidity problems. To assist the Company, Dr. Dent arranged for his Medical practice to advance approximately \$117,000 to the Company and he further agreed to defer all of his salary.

Edgar Filing: NEOGENOMICS INC - Form 10KSB

On November 25, 2002, the Company notified Tampa Bay Financial that it was in breach of its obligations under the Plan of Exchange and Modification Agreement due to TBF's failure to provide the Company with \$100,000 of funding due on October 15, 2002 and an additional \$100,000 of funding due on November 15, 2002. The Company also immediately began to seek a new source of funding. In late December 2002, the Company's Board of Director's, based on feedback from funding sources, determined that it would be infeasible to attract the amount of capital needed for the Company's business plan unless it formally terminated its relationship with Tampa Bay Financial and secured a full release of all of its obligations there under, and specifically its obligations to TBF with respect to a "substitution event" (as defined above), TBF's right of first refusal to purchase securities at a 50% discount to the price paid by any third parties, and the Company's restriction on effecting a reverse stock split.

On December 23, 2002, the Company and Tampa Bay Financial agreed to formally terminate all of their agreements with one another in order to facilitate attracting new capital to the Company and Carl L. Smith, an affiliate of Tampa Bay, resigned from the Company's Board of Directors. As part of this termination agreement the Company and Tampa Bay Financial fully released one another from any claims arising out of any breaches of the Plan of Exchange or the Modification Agreement.

On April 15th, 2003, the Company entered into agreements with MVP 3 LP, a fund controlled by Medical Venture Partners, LLC, and its principals to provide approximately \$139,000 of equity financing and up to \$1.5 million of debt financing in the form of a revolving credit facility to the Company. Under the terms of the equity agreements, MVP 3 LP purchased 9,303,279 shares and each of the three principals of Medical Venture Partners LLC purchased 1,541,261 shares of the Company at a price per share of \$0.01 per share. As a result of these equity purchases, the Company experienced another change of control and MVP 3 LP and its affiliates received approximately 75% of the outstanding common stock of the Company.

As a condition to these transactions, the Company, Dr. Michael Dent, MVP 3 LP and the principals of Medical Venture Partners have entered into a shareholders agreement that provides that MVP 3, LP will have the right to appoint up to four of seven directors of the Company. The Company has also entered into a Registration Rights Agreement with MVP 3 LP and the principals of Medical Venture Partners granting them certain demand and piggyback registration rights.

As a precondition to closing these transactions, Medical Venture Partners required the Company to undertake a 1 for 100 reverse stock split, and cancel Dr. Dent's existing option agreement and employment agreement. The reverse stock split became effective on April 16, 2003 and all share references in this Form 10-KSB have been adjusted to reflect this stock split. Dr. Dent agreed to terminate his option agreement effective as of October 1, 2002 and his employment agreement effective as of December 31, 2002. Simultaneous with the closing of the equity and debt transactions with MVP 3 LP and its affiliates, Dr. Dent and the Company entered into a new employment agreement appointing Dr. Dent as President and Chief Medical Officer of the Company for an initial term of 12 months, subject to renewal. Dr. Dent's salary under the new employment agreement will be equal to 20% of net cash flow provided by operating activities, up to a maximum of \$20,000 per month, plus an incentive bonus.

7

BUSINESS OF NEOGENOMICS

SERVICES

Edgar Filing: NEOGENOMICS INC - Form 10KSB

We operate a medical testing and research laboratory located in Naples, Florida. We provide genetic and molecular testing services for the following purposes:

- To find out if a person is a carrier for a certain disease.
- To learn if a person has an inherited predisposition to a certain disease, like breast or ovarian cancer (also known as susceptibility testing).
- To help expecting parents know whether their unborn child will have a genetic disease or disorder (prenatal testing).
- To confirm diagnosis of certain diseases or disorders (for example, Leukemia and Down's Syndrome).

We currently offer three types of services: cytogenetics testing, molecular biology testing and sponsored research services:

CYTOGENETICS TESTING. Cytogenetics testing is routinely used to identify genetic abnormalities in pregnancy, as well as hematologic cancers. Most of our cytogenetics testing is chromosome analysis done through a process called karyotyping, which is an analysis of the chromosomes in a single cell from one individual. Currently, we offer the following types of cytogenetics tests, each of which is performed on different types of biological samples: bone marrow tests to assist in the diagnosis of leukemia and lymphoma, amniocentesis tests to assist in the diagnosis of pre-natal genetic anomalies such as Down's syndrome, products of conception tests to assist in determining the causes of miscarriage during pregnancy, and various other specialty tests.

We believe that historically cytogenetics testing by large national laboratories and other competitors has taken anywhere from 5-12 days on average to obtain a complete diagnostic report. We believe that as a result of this, many practitioners have refrained from ordering such tests because the results traditionally were not returned within an acceptable diagnostic window. We have designed our business operations in order to complete our cytogenetics tests for most types of biological samples and produce a complete diagnostic report and make it available electronically with 2-3 days. We believe these turn around times are among the best in the industry. Furthermore, we believe that as we continue to demonstrate these turnaround times to customers and the awareness of the benefits of cytogenetics testing continues to increase, more and more practitioners will incorporate cytogenetics testing into their diagnostic regimes and thus drive incremental growth in our business.

As an adjunct to traditional chromosome analysis, we plan to offer Fluorescence In Situ Hybridization (FISH) technology to expand the capabilities of routine chromosome analysis in prenatal testing. FISH technology permits preliminary

identification of the most frequently occurring numerical chromosomal abnormalities in a relatively rapid manner. FISH, already commonly used as an additional staining method (the colorization of chromosomes to highlight markers and abnormalities) for metaphase analysis (cells in a divided state after they are cultured), is now being applied to interphase chromosome analysis (uncultured, single cells). During the past 5 years, FISH has begun to demonstrate its considerable diagnostic potential. The development of molecular probes by using DNA sequences of differing sizes, complexity, and specificity, coupled with technological enhancements (direct labeling, multicolor probes, computerized signal amplification, and image analysis) make FISH a powerful investigative tool. Although FISH has great potential in a variety of cytogenetics studies, particular attention has been focused on its use in

Edgar Filing: NEOGENOMICS INC - Form 10KSB

prenatal diagnosis of chromosomal anomalies, because of the speed with which results are attainable (traditional amniocentesis tests take 6-7 days to complete). However, as with all emerging technologies, the transition from the developmental phase to application as a standard diagnostic procedure must be accompanied by assurance of reliability, reproducibility, and accuracy, as well as by guidelines for appropriate use.

MOLECULAR BIOLOGY TESTING. Molecular biology testing involves testing DNA and other molecular structures to screen for and diagnose single gene disorders and hematological cancers such as cystic fibrosis and Tay-Sachs disease. Today there are tests for about 450 genetic diseases. However, the majority of these tests remain available only to research laboratories and are only offered on a limited basis to family members of someone who has been diagnosed with a genetic condition. About 50 genetic tests are more widely available for clinical use. We currently provide these tests on an outsourced basis. We anticipate in the near future performing these tests within our facility as the number of requests we receive for these types of tests continues to increase and we expand our clinical staff. Molecular biology testing is a growing market with many new diagnostic tests being developed every year. The Company is committed to providing the latest and most accurate testing to its clients, where demand warrants it.

SPONSORED RESEARCH. Our research initiatives are currently focused on discovering the underlying genetic causes of female diseases. Cancers and other diseases of the ovary, uterus, cervix, and breast all have an underlying genetic basis. Identifying the genetic sequences unique to these diseases will allow us to develop tests to identify which individuals are at increased genetic risk of developing these diseases. We plan to collaborate with pharmaceutical and other healthcare companies to develop intellectual property that can be a source of revenue. In addition, we believe that we have the ability to develop proprietary tests that will allow for accurate screening and early detection of various female and other genetic diseases.

In order to facilitate our research initiatives, we have formed alliances with Naples Women's Center, Naples Community Hospital, and Florida Gynecologic Oncology for the purpose of collecting blood and tissue study samples. We are collecting these samples at no charge to the Company through an informed consent process with each patient. Naples Women's Center is a medical practice controlled by Dr. Michael Dent, our President and currently has over 8,000 active patients.

We are using these samples to compile a genetic database which ultimately will link phenotypic (medical history) data with patients' genetic material. We plan to use this information as a resource for our ongoing research projects as well as in the bio/genetic-informatics arena. We believe that our collection of genetic samples and our genetic database will be a significant attraction for companies that are desirous of studying the underlying causes of disease. We expect to protect our genetic database, as well as any future testing methodology discovered in order to sell the proprietary rights to such information and tests to various other research and clinical laboratories and pharmaceutical companies.

Currently, the Company's primary sponsored research project is a collaboration with CIPHERGEN BioSystems, Inc. to discover a bio-marker for pre-eclampsia. Pre-eclampsia is a disease that only affects pregnant mothers and typically is indicated by elevated blood pressure, edema, and proteinuria. Pre-eclampsia is a very serious disease and is the most common cause of fetal and maternal mortality during pregnancy. Pre-eclampsia is also fairly widespread, affecting some 10-15% of first time pregnant mothers worldwide. Unfortunately, a definitive diagnosis for pre-eclampsia is generally not

Edgar Filing: NEOGENOMICS INC - Form 10KSB

possible until the third trimester of pregnancy and the only known cure for the disease is to deliver the fetus prematurely. Currently the determination as to when to induce labor is very difficult and fraught with risks to both mothers and infants. If the infant is delivered too early, there are significant risks of complications from premature delivery. If obstetricians wait too long to induce labor, there are significant risks to both the mother and the infant from pre-eclampsia, including the risk of death.

Bio-markers are unique sequences of proteins which categorically indicate the presence of a disease condition and provide a mechanism for measuring the severity of the condition. In the event, we are able to discover this bio-marker, we believe that we can develop a test that will verify and quantify the pre-eclampsia disease state. We believe such a test would have a potentially wide application for obstetricians and gynecologists worldwide to help them determine when to optimally induce labor for pre-eclamptic mothers and thereby reduce the risk of death to both mother and baby. We have purchased a protein chip mass spectrometer to facilitate our discovery of potential proteins that may be associated with the disease. We expect to have completed this project over the next six to nine months.

TARGET MARKETS AND CUSTOMERS

We have initially targeted all oncologists in southwest Florida that perform bone marrow sampling. In addition, we are currently servicing a few select obstetricians that perform amniocentesis testing. We expect to continue to expand our client base in this area over the next six months and to gradually expand our market presence into southeastern Florida and central Florida. Within this geography, we currently serve the following types of testing markets:

CANCER TESTING: Historically, the majority of cytogenetics testing has been performed on bone marrow samples in testing for leukemia and lymphomas. Cells obtained from bone marrow are grown in culture and used to determine if certain genetic anomalies exist in patients with leukemia. This information is used to determine the nature of the cancer and determine an appropriate treatment regimen. In addition to cytogenetics testing, oncologists routinely use flow cytometry of bone marrow samples to diagnose cancers. Flow cytometry is a method of separating blood into its different cell types. This methodology is used to determine what cell types within the blood of leukemia and cancer patients is abnormal. Flow cytometry is important in developing an accurate diagnosis and defining what treatment options are best for specific patients. The combination of the two types of tests allows the findings from one test to confirm the findings of another test, which leads to an even more accurate diagnosis.

10

The Company currently offers cytogenetics testing and plans to begin offering flow cytometry sometime later this year. Management believes that by offering both of these tests together as a bundled product while maintaining its industry leading turnaround times, the Company can significantly increase its testing volumes. Management estimates that flow cytometry tests are performed on approximately three times as many bone marrow samples as are cytogenetics tests. Furthermore, we believe that many of the local oncologists that send samples to us for cytogenetics testing, would welcome the convenience of having a local laboratory perform both types of tests. Thus we believe that by offering flow cytometry we can derive significant increases in our testing volumes through our existing customer base, thereby affording the Company significant synergies and efficiencies in our sales and marketing process.

Edgar Filing: NEOGENOMICS INC - Form 10KSB

PRENATAL TESTING: A prenatal genetic test is an optional medical test available to people who are considered to be at increased risk for having children with a chromosomal abnormality or an inherited genetic condition. Prenatal testing is often used to look for conditions such as Down's Syndrome, spina bifida, cystic fibrosis, Tay-Sachs disease and others that would show up in early childhood. Two procedures are used in prenatal testing. Amniocentesis, which involves taking a sample of amniotic fluid from the womb for analysis, can be done during the 16th through 20th weeks of pregnancy. Another procedure, chorionic villus sampling (CVS), can be done earlier, at nine to 12 weeks. Currently these tests carry a risk of miscarriage. Depending on the mother's age and other factors, amniocentesis causes miscarriage in between 1 in 200 and 1 in 400 cases, and CVS has a risk of 1 in 100. We believe that new genetic tests will be developed over the next three years that will significantly reduce this risk of miscarriage and that prenatal genetic testing will increase as a result. In fact, as part of the Company's planned research initiatives, we intend to conduct research in support of developing a non-invasive amniocentesis test, which we believe could virtually eliminate miscarriage as a result of this type of test.

Historically, prenatal testing is offered to pregnant women over age 35, because their babies are at greater risk for having abnormal chromosomes. For example, a 35-year-old woman has about a 1 in 200 chance of having a baby with a chromosomal abnormality like Down's syndrome. A 40-year-old woman has closer to 1 in 50 chance. But prenatal testing is increasingly being offered to pregnant women of all ages. In the third quarter of 2001, the American College of Obstetricians and Gynecologists (ACOG) issued new guidelines recommending that all caucasian women who are pregnant and couples considering pregnancy be offered a genetic test to determine if they are carriers of cystic fibrosis. Current advances in genetic research make it possible to determine more and more conditions through prenatal testing, and we expect more institutional sponsorship of such prenatal testing in the coming years.

In addition to oncologists and obstetricians, we have identified the following other potential customers for our cytogenetics and molecular biology testing services:

1. Local perinatologists (specialists in high risk pregnancies) and genetics counselors;
2. Hospitals needing karyotyping performed on tissue and blood samples;
3. Hematologists who need the use of diagnostic molecular biology, cytogenetics testing and flow cytometry testing.
4. Regional reference labs or other larger laboratory companies that can benefit by our industry leading turnaround times and/or by bundling our services with their own in order to offer a more complete menu of services.

DISTRIBUTION METHODS

The Company performs all of its genetic testing at its clinical laboratory facility located in Naples, Florida, and then produces a report for the requesting practitioner. The Company currently out sources all of its molecular biology testing to third parties, but expects to purchase the equipment for such testing in the coming year.

11

COMPETITION

We are engaged in segments of the medical testing laboratory industry that are competitive. Competitive factors in the genetic and molecular biology

Edgar Filing: NEOGENOMICS INC - Form 10KSB

testing business generally include reputation of the laboratory, range of services offered, pricing, convenience of sample collection and pick-up, quality of analysis and reporting and timeliness of delivery of completed reports.

Our competitors in the United States are numerous and include major medical testing laboratories and biotechnology research companies. Some of these competitors may have more extensive research and development, regulatory, and production capabilities. Some competitors may have greater financial resources. These companies may succeed in developing products and services that are more effective than any that we have or may develop and may also prove to be more successful than we are in marketing such products and services. In addition, technological advances or different approaches developed by one or more of our competitors may render our products obsolete, less effective or uneconomical.

We estimate that the United States market for cytogenetics and molecular biology testing is divided among approximately 500 laboratories, many of which offer both types of testing. Of this total group, less than 20 laboratories market their services nationally. We believe that the industry as a whole is still quite fragmented, with the top 20 laboratories accounting for approximately 50% of market revenues.

Currently there are no other cytogenetics and molecular biology testing facilities in the Southwest Florida region. Most large labs currently have their customers in this area send their samples via an express mail service to regional centers, which can be as far away as California. We expect to gain a significant market presence in the Southwest Florida region by offering faster turn-around times due to the proximity to our customers and high-quality test reports. In addition, we are developing a fully integrated and interactive web site that will enable us to report real time results to customers in a secure environment.

SUPPLIERS

The Company orders its laboratory and research supplies from large national laboratory supply companies such as Fisher Scientific, Inc. and Physicians Sales and Service Corp. and does not believe any disruption from any one supplier would have a material effect on its business.

DEPENDENCE ON MAJOR CUSTOMERS

We currently market our services to major hospitals and doctor's practices in the Southwest Florida area. During 2002, we performed 215 individual cytogenetics and molecular biology tests. Approximately 54% or 117 of these tests were performed on bone marrow specimens. Of these Bone Marrow tests, 95 were performed by 23 different doctors on patients in the Naples Community Hospital system. In the event the Naples Community Hospital system started offering a competing cytogenetics test capability in-house that could match our industry leading turn-around times at a competitive price, we could potentially lose a large referral source for customers.

12

TRADEMARKS

Our NeoGenomics logo has been filed for trademark with the United States Patent and Trademark Office.

GOVERNMENT REGULATION

Our business is subject to government regulation at the federal, state and local levels, some of which regulations are described under "Laboratory Operations," "Anti-Fraud and Abuse," "Confidentiality of Health Information," "Food and Drug Administration" and "Other" below.

LABORATORY OPERATIONS

Cytogenetics and, Molecular Biology Testing. The Company's laboratory is located in the state of Florida. Our laboratory has obtained certification under the federal Medicare program, the Clinical Laboratories Improvement Act of 1967, as amended by the Clinical Laboratory Improvement Amendments of 1988 (collectively, "CLIA '88"), and the respective clinical laboratory licensure laws of the state of Florida, where such licensure is required. The Clinical Laboratories Improvement Act provides for the regulation of clinical laboratories by the U.S. Department of Health and Human Services. Regulations promulgated under the federal Medicare guidelines, the CLIA and the clinical laboratory licensure laws of the state of Florida affect our genetics laboratory.

The federal and state certification and licensure programs establish standards for the operation of medical laboratories, including, but not limited to, personnel and quality control. Compliance with such standards is verified by periodic inspections by inspectors employed by federal or state regulatory agencies. In addition, federal regulatory authorities require participation in a proficiency testing program approved by HHS for many of the specialties and subspecialties for which a laboratory seeks approval from Medicare or Medicaid and certification under CLIA '88. Proficiency testing programs involve actual testing of specimens that have been prepared by an entity running an approved program for testing by a laboratory.

A final rule implementing CLIA '88, published by HHS on February 28, 1992, became effective September 1, 1992. This rule has been revised on several occasions and further revision is expected. The CLIA '88 rule applies to virtually all clinical laboratories in the United States, including our laboratory. We have reviewed our operations as they relate to CLIA '88, including, among other things, the CLIA '88 rule's requirements regarding laboratory administration, participation in proficiency testing, patient test management, quality control, quality assurance and personnel for the types of testing we undertake, and believe we are in compliance with these requirements. No assurances can be given that our laboratory will pass inspections conducted to ensure compliance with CLIA '88 or with any other applicable licensure or certification laws. The sanctions for failure to comply with CLIA '88 or state licensure requirements might include the inability to perform services for compensation or the suspension, revocation or limitation of the labs' CLIA '88 certificate or state license, as well as civil and/or criminal penalties.

Regulation of Genetic Testing. In 2000, the Secretary of Health and Human Services Advisory Committee on Genetic Testing published recommendations for increased oversight by the Centers for Disease Control and the FDA for all genetic testing. This committee continues to meet and discuss potential regulatory changes, but no additional formal recommendations have been issued.

With respect to genetic therapies, which may become part of our business in the future, in addition to FDA requirements, the National Institutes of Health has established guidelines providing that transfers of recombinant DNA into human subjects at NIH laboratories or with NIH funds must be approved by the NIH Director. The NIH has established the Recombinant DNA Advisory Committee to

Edgar Filing: NEOGENOMICS INC - Form 10KSB

review gene therapy protocols. We expect that all of our gene therapy protocols will be subject to review by the Recombinant DNA Advisory Committee.

ANTI-FRAUD AND ABUSE LAWS

Existing federal laws governing Medicare and Medicaid, as well as some other state and federal laws, also regulate certain aspects of the relationship between healthcare providers, including clinical and anatomic laboratories, and their referral sources, including physicians, hospitals and other laboratories. One provision of these laws, known as the "anti-kickback law," contains extremely broad proscriptions. Violation of this provision may result in criminal penalties, exclusion from Medicare and Medicaid, and significant civil monetary penalties.

In January 1990, following a study of pricing practices in the clinical laboratory industry, the Office of the Inspector General ("OIG") of HHS issued a report addressing how these pricing practices relate to Medicare and Medicaid. The OIG reviewed the industry's use of one fee schedule for physicians and other professional accounts and another fee schedule for patients/third-party payors, including Medicare, in billing for testing services, and focused specifically on the pricing differential when profiles (or established groups of tests) are ordered.

Existing federal law authorizes the Secretary of HHS to exclude providers from participation in the Medicare and Medicaid programs if they charge state Medicaid programs or Medicare fees "substantially in excess" of their "usual charges." On September 2, 1998, the OIG issued a final rule in which it indicated that this provision has limited applicability to services for which Medicare pays under a Prospective Payment System or a fee schedule, such as anatomic pathology services and clinical laboratory services. In several Advisory Opinions, the OIG has provided additional guidance regarding the possible application of this law, as well as the applicability of the anti-kickback laws to pricing arrangements. The OIG concluded in a 1999 Advisory Opinion that an arrangement under which a laboratory offered substantial discounts to physicians for laboratory tests billed directly to the physicians could potentially trigger the "substantially in excess" provision and might violate the anti-kickback law, because the discounts could be viewed as being provided to the physician in exchange for the physician's referral to the laboratory of non-discounted Medicare business, unless the discounts could otherwise be justified. The Medicaid laws in some states also have prohibitions related to discriminatory pricing.

Under another federal law, known as the "Stark" law or "self-referral prohibition," physicians who have an investment or compensation relationship with an entity furnishing clinical laboratory services (including anatomic pathology and clinical chemistry services) may not, subject to certain exceptions, refer clinical laboratory testing for Medicare patients to that entity. Similarly, laboratories may not bill Medicare or Medicaid or any other party for services furnished pursuant to a prohibited referral. Violation of these provisions may result in disallowance of Medicare and Medicaid claims for the affected testing services, as well as the imposition of civil monetary penalties. Some states also have laws similar to the Stark law.

We will seek to structure our arrangements with physicians and other customers to be in compliance with the anti-kickback, Stark and state laws, and to keep up-to-date on developments concerning their application by various means, including consultation with legal counsel. However, we are unable to predict how these laws will be applied in the future, and no assurances can be given that its arrangements will not become subject to scrutiny under them.

Edgar Filing: NEOGENOMICS INC - Form 10KSB

In February 1997 (as revised in August 1998), the OIG released a model compliance plan for laboratories that is based largely on corporate integrity agreements negotiated with laboratories that had settled enforcement action brought by the federal government related to allegations of submitting false claims. We have adopted aspects of the model plan that we deem appropriate to the conduct of our business. We are unable to predict whether, or to what extent, these developments may have an impact on the utilization of our services.

CONFIDENTIALITY

The Health Insurance Portability and Accountability Act of 1996 ("HIPAA") contains provisions that affect the handling of claims and other patient information that are, or have been, transmitted electronically. These provisions, which address security and confidentiality of patient information as well as the administrative aspects of claims handling, have very broad applicability and they specifically apply to healthcare providers, which include physicians and clinical laboratories. Rules implementing various aspects of HIPAA are continuing to be developed. National standards for electronic healthcare transactions were published by HHS on August 17, 2000. The regulations establish standard data content and formats for submitting electronic claims and other administrative health transactions. All healthcare providers will be able to use the electronic format to bill for their services and all health plans and providers will be required to accept standard electronic claims, referrals, authorizations, and other transactions. Under the regulation, all electronic claims transactions must follow a single standardized format. All health plans, providers and clearinghouses must comply with the standards by October 2003. Failure to comply with this rule could result in significant civil and/or criminal penalties. Despite the initial costs, the use of uniform standards for all electronic transactions could lead to greater efficiency in processing claims and in handling health care information.

On December 28, 2000, HHS published rules governing the use of individually identifiable health information. The regulation protects certain health information ("protected health information" or "PHI") transmitted or maintained in any form or medium, and requires specific patient consent for the use of PHI for purposes of treatment, payment or health care operations. For most other uses or disclosures of PHI, the rule requires that covered entities (healthcare plans, providers and clearinghouses) obtain a valid patient authorization. For purposes of the criminal and civil penalties imposed under Title XI of the Social Security Act, the current date for compliance is 2003. Complying with the Standards, Security and Privacy rules under HIPAA will require significant effort and expense for virtually all entities that conduct healthcare transactions electronically and handle patient health information. We are unable to accurately estimate the total cost or impact of the regulations at this time. Those costs, however, are not expected to be material.

In addition to the HIPAA rules described above, we are subject to state laws regarding the handling and disclosure of patient records and patient health information. These laws vary widely, and many states are passing new laws in this area. Penalties for violation include sanctions against a laboratory's licensure as well as civil or criminal penalties. We believe we are in compliance with applicable state law regarding the confidentiality of health information.

15

FOOD AND DRUG ADMINISTRATION

The FDA does not currently regulate laboratory testing services, which is

Edgar Filing: NEOGENOMICS INC - Form 10KSB

our principal business. However, we plan to perform some testing services using test kits purchased from manufacturers for which FDA premarket clearance or approval for commercial distribution in the United States has not been obtained by the manufacturers ("investigational test kits"). Under current FDA regulations and policies, such investigational test kits may be sold by manufacturers for investigational use only if certain requirements are met to prevent commercial distribution. The manufacturers of these investigational test kits are responsible for marketing them under conditions meeting applicable FDA requirements. In January 1998, the FDA issued a revised draft Compliance Policy Guide ("CPG") that sets forth FDA's intent to undertake a heightened enforcement effort with respect to investigational test kits improperly commercialized prior to receipt of FDA premarket clearance or approval. That draft CPG is not presently in effect but, if implemented as written, would place greater restrictions on the distribution of investigational test kits. If we were to be substantially limited in or prevented from purchasing investigational test kits by reason of the FDA finalizing the new draft CPG, there could be an adverse effect on our ability to access new technology, which could have a material adverse effect on our business.

We also may perform some testing services using reagents, known as analyte specific reagents ("ASRs"), purchased from companies in bulk rather than as part of a test kit. In November 1997, the FDA issued a new regulation placing restrictions on the sale, distribution, labeling and use of ASRs. Most ASRs are treated by the FDA as low risk devices, requiring the manufacturer to register with the agency, list its ASRs (and any other devices), conform to good manufacturing practice requirements, and comply with medical device reporting of adverse events.

A smaller group of ASRs, primarily those used in blood banking and/or screening for fatal contagious diseases (e.g., HIV/AIDS), are treated as higher risk devices requiring premarket clearance or approval from the FDA before commercial distribution is permitted. The imposition of this regulatory framework on ASR sellers may reduce the availability or raise the price of ASRs purchased by laboratories like ours. In addition, when we perform a test developed in-house, using reagents rather than a test kit cleared or approved by the FDA, we are required to disclose those facts in the test report. However, by clearly declining to impose any requirement for FDA premarket approval or clearance for most ASRs, the rule removes one barrier to reimbursement for tests performed using these ASRs. We have no plans to perform testing in these high risk areas.

OTHER

Our operations currently are, or may be in the future, subject to various federal, state and local laws, regulations and recommendations relating to data protection, safe working conditions, laboratory and manufacturing practices and the purchase, storage, movement, use and disposal of hazardous or potentially hazardous substances used in connection with our research work and manufacturing operations, including radioactive compounds and infectious disease agents. Although we believe that our safety procedures comply with the standards prescribed by federal, state and local regulations, the risk of contamination, injury or other accidental harm cannot be eliminated completely. In the event of an accident, we could be held liable for any damages that result and any liabilities could exceed our resources. Failure to comply with such laws could subject an entity covered by these laws to fines, criminal penalties and/or other enforcement actions.

Pursuant to the Occupational Safety and Health Act, laboratories have a general duty to provide a work place to their employees that is safe from hazard. Over

Edgar Filing: NEOGENOMICS INC - Form 10KSB

the past few years, the Occupational Safety and Health Administration ("OSHA") has issued rules relevant to certain hazards that are found in the laboratory. In addition, OSHA has promulgated regulations containing requirements healthcare providers must follow to protect workers from blood borne pathogens. Failure to comply with these regulations, other applicable OSHA rules or with the general duty to provide a safe work place could subject employers, including a laboratory employer such as the Company, to substantial fines and penalties.

NUMBER OF EMPLOYEES

As of May 15, 2003, we had seven employees, of which five were full-time employees. Our President and one other person serve on a part-time basis. Unions represent none of our employees and we believe our employee relations are good.

ITEM 2. PROPERTIES

Our executive offices are located at the offices the Naples Women's Center located at 1726 Medical Blvd, Suite 101, Naples, Florida. Dr. Michael Dent, our President, provides this space to us without charge.

Our laboratory is currently located in a 2200 square foot facility at 1085 Business Lane, #8, Naples, Florida, 34108. We lease this space from an unaffiliated third party on a month to month basis at a cost of \$2,500/month.

On May 13, 2003, we entered into a new three year lease agreement with an unaffiliated third party to relocate our laboratory to a 5,175 square foot facility located at 12701 Commonwealth Drive, #8, Fort Myers, Florida 33913. This lease will become effective in July 2003 and will have an annual cost of approximately \$72,000.

ITEM 3. LEGAL PROCEEDINGS

Not applicable.

ITEM 4. SUBMISSION OF MATTERS TO A VOTE OF SECURITY HOLDERS

Not applicable.

PART II

ITEM 5. MARKET FOR THE COMPANY'S COMMON EQUITY AND RELATED STOCKHOLDER MATTERS

Our common stock is quoted on the OTC Bulletin Board. Set forth below is a table summarizing the high and low bid quotations for our common stock during its last two fiscal years adjusted for the 1:100 reverse stock split consummated on April 16, 2003. All other share references in this Form 10-KSB have also been adjusted to reflect this 1:100 reverse stock split.

17

QUARTER	HIGH BID	LOW BID
---------	----------	---------

Edgar Filing: NEOGENOMICS INC - Form 10KSB

1st Quarter 2001	\$ 17.50	\$ 2.50
2nd Quarter 2001	\$ 5.00	\$ 1.20
3rd Quarter 2001	\$ 3.90	\$ 0.70
4th Quarter 2001	\$ 3.50	\$ 1.20
1st Quarter 2002	\$ 2.50	\$ 0.90
2nd Quarter 2002	\$ 2.00	\$ 0.90
3rd Quarter 2002	\$ 1.40	\$ 0.70
4th Quarter 2002	\$ 1.50	\$ 0.60
1st Quarter 2003	\$ 1.00	\$ 0.35

The above table is based on over-the-counter quotations. These quotations reflect inter-dealer prices, without retail mark-up, markdown or commissions, and may not represent actual transaction. All historical data was obtained from the BigCharts.com web site.

As of March 31, 2003 there were 344 stockholders of record of the common stock. We have never declared or paid cash dividends on our common stock. We intend to retain all future earnings to finance future growth and therefore, do not anticipate paying any cash dividends in the foreseeable future.

SALES OF UNREGISTERED SECURITIES

In 2001, we issued 78,358 shares of common stock to Tampa Bay Financial, Inc. in settlement of debts in the amount of \$156,410. The transaction was valued at \$2.00 per share based on the trading value of our stock at the time of the transaction. The transaction involved the issuance of unregistered stock to a small group of sophisticated investors in a transaction that we believed was exempt from registration under Section 4(2) of the Securities Act of 1933.

In 2001, we issued 2,385,000 shares of common stock in connection with the reverse acquisition transaction with NeoGenomics. The transaction involved the issuance of unregistered stock to a single sophisticated investor (Dr. Michael Dent) in a transaction that we believed was exempt from registration under Section 4(2) of the Securities Act of 1933.

In 2002, we issued 222,385 shares of common stock in exchange for employment and consulting services valued at \$229,021, and 210,000 shares of common stock in exchange for the cancellation of \$700,000 in cash advances from Tampa Bay Financial, Inc. All of the stock was issued to a small group of sophisticated investors in a transaction that the Company believes was exempt from registration under Rule 506 promulgated under the Securities Act of 1933.

In April 2003, we issued 13,927,062 shares of common stock to MVP 3, LP and three individuals who are principals of MVP 3, LP in exchange for \$139,271. This transaction involved the issuance of unregistered stock to accredited investors in transactions that we believed were exempt from registration under Section 4(2) of the Securities Act of 1933.

SECURITIES AUTHORIZED FOR ISSUANCE UNDER EQUITY COMPENSATION PLANS

Edgar Filing: NEOGENOMICS INC - Form 10KSB

(a) Currently there are no awards outstanding under the Company's 2001 Stock Plan.

ITEM 6. MANagements Discussion and Analysis of Financial Condition and Results of Operations

OVERVIEW.

The following discussion should be read in conjunction with the financial statements for the period ended December 31, 2002 included with this Form 10-KSB.

Information related to our predecessor entity, American Communications Enterprises, Inc. ("ACE"), has been omitted. ACE was formed in 1998 for the purpose of operating radio stations and businesses within the communications industry. ACE later changed its focus to genomics, which included acquiring NeoGenomics, Inc. ("NeoGenomics"), a private company desiring to become public, in a reverse acquisition in November 2001. From a legal perspective, the Company was the surviving company and thus continues its public reporting obligations. However, from an accounting perspective, NeoGenomics acquired the Company. Therefore, all financial information presented in this 10-KSB includes NeoGenomics' standalone results from the period June 1, 2001 (date of incorporation) to November 13, 2001 and the combined companies' results from November 2001 to December 31, 2002.

Certain information included herein contains statements that constitute "forward-looking statements" containing certain risks and uncertainties. Readers are referred to the cautionary statement at the beginning of this report, which addresses forward-looking statements made by us.

NeoGenomics, Inc. is considered to be in the development stage as defined in Financial Accounting Standards Board Statement No. 7. The Company is currently focused on genetic and molecular biology laboratory testing and genomic research.

CRITICAL ACCOUNTING POLICIES

Our critical accounting policies, including the assumptions and judgments underlying them, are disclosed in the Notes to the Financial Statements. We have consistently applied these policies in all material respects. At this stage of our development, these policies primarily address matters of expense

Edgar Filing: NEOGENOMICS INC - Form 10KSB

recognition. Although we anticipate that revenue recognition issues will become critical in future years, the small amount of revenue that we have earned at this stage minimizes the impact of any judgments regarding revenue recognition. Management does not believe that our operations to date have involved uncertainty of accounting treatment, subjective judgment, or estimates, to any significant degree.

19

RESULTS OF OPERATIONS FOR THE TWELVE MONTHS ENDED DECEMBER 31, 2002

We commenced revenue operations in May of 2002, thus comparisons to the prior year is not meaningful.

During the twelve months ended December 31, 2002, we generated revenues of approximately \$93,500, of which approximately \$57,000 occurred in the fourth quarter of 2002. Our costs of revenue approximated \$190,000, which resulted in a negative gross margin of approximately \$96,500 primarily as a result of costs incurred to obtain our laboratory certification and start our operations. We expect our gross margin to improve significantly in 2003 as our sales increase and we no longer have the costs associated with the laboratory certification. Our general and administrative expenses were approximately \$482,000 and are mainly comprised of administrative service expenses, wages and depreciation. Research and development expenses were approximately \$46,500 and are mainly comprised of wages and other expenses to put our research program into place. Interest expenses were approximately \$7,000 and are mainly comprised of interest payable on advances from Naples Women's Center, a company owned by our president.

As a result of the foregoing, we incurred a net loss of approximately \$590,500 for the year ended December 31, 2002. This loss is significantly lower than our reported net loss of approximately \$2,053,000 for the nine months ended September 30, 2002 resulting primarily from the reversal of approximately \$1,721,000 in stock based compensation charges, during the fourth quarter of 2002 related to the cancellation of an option agreement with our president during that quarter. We also increased our revenues to approximately \$57,000 during the fourth quarter of 2002 compared to approximately \$36,000 in revenues during the previous nine months of 2002.

We received our clinical laboratory certification under the Clinical Laboratories Improvement Act ("CLIA") in April 2002. CLIA provides for the regulation of clinical laboratories by the U.S. Department of Health and Human Services. Regulations promulgated under the CLIA act, among other government regulations, govern the operations of our genetics laboratory. We commenced our genetics and molecular biology testing operations in May 2002. Between May 1, 2002 and December 31, 2002, we billed approximately \$93,500 for 215 cytogenetics and molecular biology tests, of which approximately \$57,000 was billed for 120 cytogenetics and molecular biology tests in the fourth quarter.

Revenues per test are a function of both the nature of the test and the payer (Medicare, Medicaid, third party insurer, etc.). Our policy is to record as revenue amounts that we expect to collect based on published or contracted amounts and prior experience with the payer. We have established a reserve for uncollectible amounts based on estimates of what we will collect from co-payments and those procedures performed that are not covered by insurance. On December 31, 2002, our Allowance for Doubtful Accounts reserve was \$12,762.

20

Edgar Filing: NEOGENOMICS INC - Form 10KSB

RESULTS OF OPERATIONS FOR THE PERIOD FROM JUNE 1, 2001 TO DECEMBER 31, 2002.

During the period from June 1, 2001 to December 31, 2002, we generated revenues and costs of revenue of approximately \$94,000 and \$190,000, and we incurred a net loss of approximately \$8,668,000. Our net loss included non-cash stock-based compensation expense of approximately \$7,944,000. This expense included \$7,715,000 of compensation expense incurred in connection with our reverse acquisition of NeoGenomics in November 2001 and other stock based compensation and consulting expenses since that time. Our general and administrative expenses were approximately \$600,000 and are mainly comprised of administrative service expenses, wages and depreciation. Research and development expenses were approximately \$46,500 and are mainly comprised of wages and other expenses to put our research program into place. Interest expenses were approximately \$7,000 and are mainly comprised of interest payable on advances from our President.

LIQUIDITY AND CAPITAL RESOURCES

During the twelve months ended December 31, 2002, our operating activities used approximately \$385,000 in cash. This amount primarily represented cash used to pay general and administrative expenses associated with our operations. We also spent approximately \$418,000 on new equipment. We were able to finance operations and equipment purchases primarily through net advances of approximately \$726,000 received from significant shareholders and other affiliates. At December 31, 2002, we had no cash or cash equivalents and owed approximately \$13,500 to our bank.

On May 16, 2002, Tampa Bay Financial, Inc. ("TBF") agreed in a letter agreement to purchase 450,000 shares of our common stock for a price of \$3.33 per share, or a total of \$1,500,000. Through October 2002, TBF had advanced \$700,000 under this agreement. In November 2002, a dispute arose between the Company and TBF with respect to the parties obligations to each other. On November 25, 2002, the Company notified TBF that it was in breach of its obligations under the agreement due to TBF's failure to provide the Company with \$100,000 of funding due on October 15, 2002 and an additional \$100,000 of funding due on November 15, 2002. The Company also immediately began to seek a new source of funding. In late December 2002, the Company's Board of Director's, based on feedback from funding sources, determined that it would be infeasible to attract the amount of capital needed for the Company's business plan unless it formally terminated its relationship with Tampa Bay Financial and secured a full release of all of its obligations thereunder, and specifically its obligations to TBF with respect to selling a significant stake in the Company, TBF's right of first refusal on such sales to purchase stock at a 50% discount, and the Company's restriction on effecting a reverse stock split.

On December 23, 2002, the Company and Tampa Bay Financial agreed to formally terminate all of their agreements with one another in order to facilitate attracting new capital to the Company and Carl L. Smith, an affiliate of TBF, resigned from the Company's Board of Directors. As part of this termination agreement the Company and Tampa Bay Financial fully released one another from any claims arising out of any breaches of the original Plan of Exchange, dated November 14, 2001 or the subsequent Letter Agreement, dated May 16, 2002 which amended the terms of the original Plan of Exchange and various other documents.

On April 15th, 2003, the Company entered into agreements with MVP 3 LP ("MVP 3"), a fund controlled by Medical Venture Partners, LLC, and its principals to provide approximately \$139,000 of equity financing and up to \$1.5 million of debt financing in the form of a revolving credit facility to the Company. On April 16, 2003, under the terms of the equity agreements, MVP 3 purchased 9,303,279 shares and each of the three principals of Medical Venture Partners

Edgar Filing: NEOGENOMICS INC - Form 10KSB

LLC purchased 1,541,261 shares of the Company at a price per share of \$0.01 per share for a total of approximately \$139,000 and the Company drew down an initial advance of \$225,000 under the revolving credit facility. As a result of the equity purchases, the Company experienced a change of control and MVP 3 and its affiliates received approximately 75% of the outstanding common stock of the Company.

21

Under the terms of the revolving credit agreement, advances to the Company are limited, at any given time, to the sum of i) 50% of our net property, plant and equipment; (ii) 80% of our accounts receivable that are less than 90 days old; and (iii) beginning on July 1, 2003, \$500,000 that is not tied to any specific collateral. Interest under the revolving credit agreement is payable monthly at the prime rate plus a spread of 8.0%. In order to facilitate the administration of this revolving credit facility and fund the Company, MVP 3, arranged a similar credit facility with Fifth Third Bank. The Company has provided a guaranty of MVP 3's obligations to Fifth Third Bank for all amounts that are directly passed through MVP 3 and further loaned to the Company and has pledged all of its business assets to both Fifth Third Bank and MVP 3, LP.

As a condition to these transactions, the Company, Dr. Michael Dent, MVP 3 and the principals of Medical Venture Partners have entered into a shareholders agreement that provides that MVP 3 will have the right to appoint up to four of seven directors of the Company. The Company has also entered into a Registration Rights Agreement with MVP 3 and the principals of Medical Venture Partners granting them certain demand and piggyback registration rights.

As a precondition to closing these transactions, Medical Venture Partners required the Company to undertake a 1 for 100 reverse stock split, and cancel Dr. Dent's existing option agreement and employment agreement. The reverse stock split became effective on April 16, 2003 and Dr. Dent agreed to terminate his option agreement effective as of October 1, 2002 and his employment agreement effective as of December 31, 2002. Simultaneous with the closing of the equity and debt transactions with MVP 3 and its affiliates, Dr. Dent and the Company entered into a new employment agreement appointing Dr. Dent as President and Chief Medical Officer of the Company for an initial term of 12 months, subject to renewal. Dr. Dent's salary under the new employment agreement will be equal to 20% of net cash flow provided by operating activities, up to a maximum of \$20,000 per month, plus an incentive bonus.

Also, in September 2002, we entered into an agreement to perform collaborative research with CIPHERGEN Biosystems, Inc. ("CIPHERGEN"). If a patented product or service results from this research, the patenting party will be obligated to pay a 4% royalty to the other party. In addition, each of us are to own 50% of any inventions developed jointly as a result of this research. In October 2002, CIPHERGEN awarded us with a \$100,000 research grant, which we have agreed to use to purchase supplies, labor and equipment for the research. As of December 31, 2002, we had not performed any of the testing, nor spent any of the \$100,000; accordingly, such amount has been recorded as a deferred revenue liability in the accompanying consolidated balance sheet.

At the present time, we have very limited cash resources. We do not anticipate that we will generate significant cash flow from operating activities until 2004. As a result, we anticipate that we will require at least \$700,000 of additional working capital financing during the next 12 months in order to meet our working capital requirements during this period. We currently plan to finance our operations through borrowings under our revolving credit facility with MVP 3. Advances under this revolving credit facility are limited, at any given time, based on a formula contained in the loan agreement. There can be no assurance that the Company will be eligible to obtain all of its working capital

Edgar Filing: NEOGENOMICS INC - Form 10KSB

funding needs from MVP 3, LP or another source. If the Company is unable to obtain such funding, the Company will be required to curtail or discontinue operations.

22

CAPITAL EXPENDITURES

Management currently forecasts capital expenditures for the coming year to be approximately \$500,000. We plan to fund these expenditures through borrowings under our revolving credit facility with MVP 3, LP and through traditional lease financing from equipment lessors. There can be no assurance that the Company will be eligible to obtain all of its capital equipment funding needs from MVP 3, LP or another source. If the Company is unable to obtain such funding, the Company will be required to curtail its equipment purchases which may have an impact on the Company's ability to generate revenues.

STAFFING

We plan to increase our work force. Currently, we have five full-time and two part-time employees. We plan to add additional laboratory technicians and research scientists to assist us in handling a greater volume of tests and to perform sponsored research projects. We also plan to continue building our sales force to continue to increase our sales to customers and we intend to add personnel in the management, accounting, and administrative areas. Management added six employees during 2002 and expects to add further personnel during the balance of 2003. We expect the cost of these additional employees will be approximately \$300,000 in 2003.

CAUTIONARY STATEMENT

This Form 10-KSB, press releases and certain information provided periodically in writing or orally by our officers or our agents contain statements which constitute forward-looking statements within the meaning of Section 27A of the Securities Act, as amended and Section 21E of the Securities Exchange Act of 1934. The words expect, anticipate, believe, goal, plan, intend, estimate and similar expressions and variations thereof if used are intended to specifically identify forward-looking statements. Those statements appear in a number of places in this Form 10-KSB and in other places, particularly, Management's Discussion and Analysis or Results of Operations, and include statements regarding the intent, belief or current expectations of our directors or our officers with respect to, among other things: (i) our liquidity and capital resources; (ii) our financing opportunities and plans and (iii) our future performance and operating results. Investors and prospective investors are cautioned that any such forward-looking statements are not guarantees of future performance and involve risks and uncertainties, and that actual results may differ materially from those projected in the forward-looking statements as a result of various factors. The factors that might cause such differences include, among others, the following: (i) any material inability of us to successfully internally develop our products; (ii) any changes in technology that might affect the competitive positioning of our products and services; (iii) any inability to manage our growth; (iv) any adverse effect or limitations caused by Governmental regulations; (v) any adverse effect on our positive cash flow and abilities to obtain acceptable financing in connection with our growth plans; (vi) any increased competition in business; (vii) any inability of us to successfully conduct our business in new markets; and (viii) other risks including those identified in our filings with the Securities and Exchange Commission. We undertake no obligation to publicly update or revise the forward looking statements made in this Form 10-KSB to reflect events or circumstances

Edgar Filing: NEOGENOMICS INC - Form 10KSB

after the date of this Form 10-KSB or to reflect the occurrence of unanticipated events.

INDEPENDENT AUDITORS' REPORT

To the Board of Directors and stockholders of NeoGenomics, Inc. and subsidiary:

We have audited the accompanying consolidated balance sheet of NeoGenomics, Inc. and subsidiary (collectively the "Company"), a development stage enterprise, as of December 31, 2002, and the related consolidated statements of operations, stockholders' equity (deficit) and cash flows for the year then ended, and for the periods June 1, 2001 (date of incorporation) to December 31, 2001 and 2002. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with auditing standards generally accepted in the United States of America. Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of the Company as of December 31, 2002, and the results of its operations and its cash flows for the year then ended and for the periods June 1, 2001 (date of incorporation) to December 31, 2001 and 2002, in conformity with accounting principles generally accepted in the United States of America.

The accompanying consolidated financial statements have been prepared assuming that the Company will continue as a going concern. As discussed in Notes A and B to the consolidated financial statements, the Company has suffered recurring losses from operations and will require a significant amount of capital to implement its business plan. These factors, among others, raise substantial doubt about the Company's ability to continue as a going concern. Management's plans in regard to these matters are also described in Note B. The consolidated financial statements do not include any adjustments that might result from the outcome of this uncertainty.

Kingerly, Crouse & Hohl, P.A.

NEOGENOMICS, INC.

(A DEVELOPMENT STAGE ENTERPRISE)

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

NOTE A - FORMATION AND OPERATIONS OF THE COMPANY

NeoGenomics, Inc. ("NEO") was incorporated under the laws of the state of Florida on June 1, 2001 and on November 14, 2001 agreed to be acquired by American Communications Enterprises, Inc. ("ACE"). ACE was formed in 1998 and succeeded to NEO's name on January 3, 2002 (collectively referred to as "we", "us", "our").

For financial statement purposes, the acquisition was treated as a reverse acquisition and a recapitalization with NEO being treated as the acquirer. In connection therewith, ACE issued 2,385,000 shares of its common stock to NEO's founder and sole stockholder in exchange for all of NEO's issued and outstanding common shares. The value of these shares, which was based on the number, and fair value, of shares issued (\$3.00 per share based on the price at which ACE's shares were trading at that time) was included in stock based compensation in the accompanying 2001 consolidated statement of operations. Immediately before the acquisition, ACE had 1,317,339 shares outstanding and liabilities in excess of assets of approximately \$170,000. Since the transaction was accounted for as a purchase, the deficiency of \$170,000 was reflected as an adjustment to stockholders' equity as of the acquisition date. On November 21, 2001, we settled approximately \$157,000 of these liabilities through the issuance of approximately 78,000 shares of our common stock at approximately \$2.00 per share, which approximated the quoted market price of our common shares on that date.

On April 4, 2003, we amended our articles of incorporation to (1) effect a one-for-100 reverse split, (2) reduce the authorized number of common shares from 500,000,000 to 100,000,000, and (3) authorize 10,000,000 shares of preferred stock for future issuance, with such terms, restrictions and limitations as may be established by the Board of Directors.

As a result of the above, all references to the number of shares and par value in the accompanying consolidated financial statements and notes thereto have been adjusted to reflect the reverse acquisition and April 2003 reverse stock split as though all such changes had been completed as of June 1, 2001.

At December 31, 2002, we were considered to be a development stage (as defined in Financial Accounting Standards Board Statement No. 7), bio-tech company organized for the principal purpose of developing a genetic and molecular biology testing and genomic research center. We commenced our planned principal operations in 2003.

Edgar Filing: NEOGENOMICS INC - Form 10KSB

Principles of Consolidation

The accompanying consolidated financial statements include the accounts of NEO and ACE. All significant intercompany accounts and balances have been eliminated in consolidation.

Revenue Recognition

Net revenues are recognized in the period when tests are performed and consist primarily of net patient revenues that are recorded based on established billing rates less estimated discounts for contractual allowances principally for patients covered by Medicare, Medicaid and managed care and other health plans. These revenues also are subject to review and possible audit by the payors. We believe that adequate provision has been made for any adjustments that may result from final determination of amounts earned under all the above arrangements. There are no known material claims, disputes or unsettled matters with any payors that are not adequately provided for in the accompanying consolidated financial statements.

30

Allowance for Doubtful Accounts

We provide for accounts receivable that could become uncollectible in the future by establishing an allowance to reduce the carrying value of such receivables to their estimated net realizable value. We estimate this allowance based on the aging of its accounts receivable and our historical collection experience for each type of payor.

Concentrations of Credit Risk

We grant credit without collateral to our patients, most of whom are local residents and are insured under third-party payor agreements. At of December 31, 2002, approximately 31.1% and 18.6% of our receivables were from Medicare and Blue Cross/Blue Shield, respectively.

Use of Estimates

The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires us to make certain estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements. The reported amounts of revenues and expenses during the reporting period may be affected by the estimates and assumptions we are required to make. Estimates that are critical to the accompanying consolidated financial statements include estimates related to contractual adjustments, and the allowance for doubtful accounts. It is at least reasonably possible that our estimates could change in the near term with respect to these matters

Financial Instruments

We believe the book value of our current assets and liabilities approximates their fair values due to their short-term nature.

Furniture and equipment

Furniture and equipment are stated at cost. Major additions are capitalized, while minor additions and maintenance and repairs, which do not extend the useful life of an asset, are expensed as incurred. Depreciation is provided using the straight-line method over the assets' estimated useful lives of five years.

Long-Lived Assets

Statement of Financial Accounting Standards (SFAS) 144, "Accounting for the Impairment or Disposal of Long-Lived Assets" requires that long-lived assets, including certain identifiable intangibles, be reviewed for impairment whenever events or changes in circumstances indicate that the carrying value of the assets in question may not be recoverable. We evaluated our long-lived assets during 2002 and determined that they were not impaired at of December 31, 2002. Accordingly, the adoption of SFAS 144 did not have a significant impact on our consolidated financial statements.

31

Income Taxes

We compute income taxes in accordance with Financial Accounting Standards Statement No. 109 "Accounting for Income Taxes" ("SFAS 109"). Under SFAS 109, deferred taxes are recognized for the tax consequences of temporary differences by applying enacted statutory rates applicable to future years to differences between the financial statement carrying amounts and the tax basis of existing assets and liabilities. Also, the effect on deferred taxes of a change in tax rates is recognized in income in the period that included the enactment date. There were no significant temporary differences as of December 31, 2002.

Stock-Based Compensation

We account for equity instruments issued to employees for services based on the fair value of the equity instruments issued and account for equity instruments issued to those other than employees based on the fair value of the consideration received or the fair value of the equity instruments, whichever is more reliably measurable.

We have adopted SFAS No 123, "Accounting for Stock-Based Compensation" which requires us to recognize as expense the fair value of all stock-based awards on the date of grant, or continue to apply the provisions of Accounting Principles Board Opinion No. 25 and provide pro-forma net income (loss) earnings per share disclosure for employee stock option grants and all other stock-based compensation as if the fair-value-based method defined in SFAS 123 had been applied. We have elected to continue to apply APB 25 in accounting for our stock option plan.

Statement of Cash Flows

For purposes of the statement of cash flows, we consider all highly liquid investments purchased with an original maturity of three months or less to be cash equivalents.

Net Loss Per Common Share

Edgar Filing: NEOGENOMICS INC - Form 10KSB

We compute loss per share in accordance with Financial Accounting Standards Statement No. 128 "Earnings per Share" ("SFAS 128") and SEC Staff Accounting Bulletin No. 98 ("SAB 98"). Under the provisions of SFAS No. 128 and SAB 98, basic net loss per share is computed by dividing the net loss available to common stockholders by the weighted average number of common shares outstanding during the period. Diluted net loss per share is computed by dividing the net loss for the period by the weighted average number of common and common equivalent shares outstanding during the period. Common equivalent shares outstanding as of December 31, 2001, which consisted of employee stock options, were excluded from diluted net loss per common share calculations as of such date because they were anti-dilutive. There were no such options outstanding at December 31, 2002. Accordingly, basic and diluted net loss per share are identical for the year ended December 31, 2002 and the period June 1, 2001 (date of acquisition) to December 31, 2001.

Advertising Costs

We expense advertising costs as they are incurred. Advertising costs approximated \$2,300 and \$200, respectively, during the year ended December 31, 2002, and the period June 1, 2001 (date of incorporation) to December 31, 2001.

32

Recent Pronouncements

In July 2001 the Financial Accounting Standards Board (FASB) issued SFAS 141, "Business Combinations", and SFAS 142, "Goodwill and Intangible Assets". SFAS 141 is effective for all business combinations completed after June 30, 2001. SFAS 142 is effective for the year beginning January 1, 2002; however certain provisions of that Statement apply to goodwill and other intangible assets acquired between July 1, 2001, and the effective date of SFAS 142. Because we had no goodwill as of December 31, 2001, the adoption of SFAS 142 did not have a significant material impact on our consolidated financial statements.

In June 2001, the FASB issued SFAS No. 143, "Accounting for Asset Retirement Obligations". SFAS No. 143 requires entities to record the fair value of a liability for an asset retirement obligation in the period in which it is incurred, and to capitalize a corresponding amount by increasing the carrying amount of the related long-lived asset. The liability is accreted to its present value each subsequent period, and the capitalized cost is depreciated over the useful life of the related long-lived asset. SFAS No. 143 will be effective for exit or disposal activities initiated after December 31, 2002. We do not anticipate that our adoption of SFAS No. 143, as required on January 1, 2003, will have a material impact on our consolidated financial position or results of operations

In June 2002, the FASB issued SFAS No. 146, "Accounting for Costs Associated with Exit or Disposal Activities". SFAS No. 146 requires that the liability for a cost associated with an exit or disposal activity be recognized at its fair value when the liability is incurred. Under previous guidance, a liability for certain exit costs was recognized at the date that management committed to an exit plan, which was generally before the actual liability has been incurred. SFAS No. 146 will be effective for exit or disposal activities initiated after December 31, 2002. We do not anticipate that our adoption of SFAS No. 146, as required on January 1, 2003, will have a material impact on our consolidated financial position or results of operations.

In December 2002, the FASB issued SFAS No.148, "Accounting for Stock-Based

Edgar Filing: NEOGENOMICS INC - Form 10KSB

Compensation - Transition and Disclosure, an amendment of SFAS No. 123." This standard provides alternative methods of transition for companies that voluntarily change to the fair value based method of accounting for stock-based employee compensation. It also requires prominent disclosure about the effects on reported net income of the company's accounting policy decisions with respect to stock based employee compensation in both annual and interim financial statements. The transition provisions and annual disclosure requirements are effective for all fiscal years ending after Dec. 15, 2002, while the interim period disclosure requirements are effective for all interim periods beginning after Dec. 15, 2002. The adoption of SFAS No. 148 did not have a significant impact on our consolidated financial position or results of operations.

NOTE B - GOING CONCERN

Our consolidated financial statements were prepared using accounting principles generally accepted in the United States of America applicable to a going concern, which contemplates the realization of assets and liquidation of liabilities in the normal course of business. We have incurred significant losses since our inception, and have experienced and continue to experience negative operating margins and negative cash flows from operations. In addition, we expect to have ongoing requirements for substantial additional capital investment to implement our business plan. Since our inception, our operations have been funded through private equity, and we expect to continue to seek additional funding through private or public equity. As discussed at Note G, in connection with this matter, in April 2003, we secured a commitment from a related entity to provide us with \$1.5 million of debt financing in the form of a revolving credit facility. In addition, we have recently completed laboratory facilities to run scientific tests that we believe will begin to generate operating revenues. However, there can be no assurance that we will be successful in these efforts, or that the credit facility will be adequate to meet our needs. These factors, among others, indicate that we may be unable to continue as a going concern for a reasonable period of time.

33

Our consolidated financial statements do not include any adjustments relating to the recoverability and classification of recorded asset amounts or the amounts and classification of liabilities that might be necessary should we be unable to continue as a going concern.

NOTE C - INCOME TAXES

We recognized losses for both financial and tax reporting purposes during each of the periods in the accompanying consolidate statements of operations. Accordingly, no provision for income taxes and/or deferred income taxes payable have been provided for in the accompanying consolidated financial statements.

Since our incorporation, we have incurred net operating losses for income tax purposes of approximately \$724,500 (the significant difference between this amount, and our deficit of \$8,668,490, arises primarily from certain stock based compensation that is considered to be a permanent difference). Assuming that the transaction discussed at Note G does not trigger certain "change in control" provisions of the Internal Revenue Code, these net operating loss carryforwards will expire in various years through the year ended December 31, 2022. However, we have established a valuation allowance to fully reserve the related deferred income tax asset as such asset did not meet the required asset recognition standard established by SFAS 109.

At December 31, 2002 we had no deferred tax liabilities and our non-current deferred income tax asset (assuming an effective income tax rate of approximately 39%) consisted of the following:

Edgar Filing: NEOGENOMICS INC - Form 10KSB

Non-current deferred income tax asset:	Amounts -----
Net operating loss carryforwards . . .	\$282,600
Less valuation allowance	(282,600)

Total	\$ - =====

The income tax benefit consists of the following for the year ended December 31, 2002:

Current	\$ -
Deferred	156,600
Change in valuation allowance	(156,600)

	\$ - =====

NOTE D - INCENTIVE STOCK OPTIONS AND AWARDS

In October 2002 our president agreed to cancel his option to purchase 1.35 million shares of our common stock that he was granted in 2001.

34

The status of our stock options is summarized as follows:

	Number Of Shares -----	Weighted Average Exercise Price -----
Outstanding at June 1, 2000 . . .	-	-
Granted	1,350,000	\$ 0.01
Exercised	-	-
Canceled	-	-
	-----	-----
Outstanding at December 31, 2001	1,350,000	0.01
Granted	-	-
Exercised	-	-
Canceled	(1,350,000)	0.01
	-----	-----
Outstanding at December 31, 2002	- =====	\$ - =====

We account for our stock-based compensation using the intrinsic value method prescribed by Accounting Principles Board Opinion No. 25, "Accounting for Stock

Edgar Filing: NEOGENOMICS INC - Form 10KSB

Issued to Employees". With respect to stock options granted during 2001, we initially recorded deferred stock compensation of \$4,036,500, for the difference between the exercise price and the fair value of the common stock underlying the options on the date of the grant. This amount was being amortized consistent with the method described in FASB Interpretation No. 28 over the vesting period of the individual options, estimated to be 13-38 months. During 2002, as a result of the cancellations of the options, we reversed all previously recorded amortization of the deferred stock compensation.

Had our compensation expense for stock-based compensation plans been determined based upon fair values at the grant dates for awards under this plan in accordance with SFAS No. 123, "Accounting for Stock-Based Compensation," our net loss and pro forma net loss per share amounts would have been reflected as follows:

	2002	2001
	-----	-----
Net loss:		
As reported	\$(590,524)	\$(8,077,966)
Pro forma .	\$(590,524)	\$(8,083,966)
Loss per share:		
As reported	\$(0.14)	\$(2.14)
Pro forma .	\$(0.14)	\$(2.14)

The weighted average fair value of options granted during 2001, estimated on the date of grant using the Black-Scholes option-pricing model, was approximately \$3.00. The fair value of options granted was estimated on the date of the grants using the following approximate assumptions: dividend yield of 0 %, expected volatility of 5.32%, risk-free interest rate of 4%, and an expected life of 3 years.

35

In addition to the above, we have a stock option plan that provides for the granting of stock options and awards to officers, directors, employees and consultants. We are authorized to grant awards for up to 1 million shares of our common stock, none of which have been granted as of December 31, 2002. Vesting and exercise price provisions will be determined by the board of directors at the time the awards are granted.

NOTE E - COMMITMENT

During September 2002, we entered into an agreement to perform collaborative research with CIPHERGEN Biosystems ("CIPHERGEN"). If a patented product or service results from this research, the patenting party will be obligated to pay a 4% royalty to the other party. In addition, each of us are to own 50% of any inventions developed jointly as a result of this research. In October 2002, CIPHERGEN awarded us with a \$100,000 research grant, which we have agreed to use to purchase supplies, labor and equipment for the research. As of December 31,

Edgar Filing: NEOGENOMICS INC - Form 10KSB

2002, we have not performed any of the testing, or spent any of the \$100,000; accordingly, such amount has been recorded as deferred revenue in the accompanying consolidated balance sheet.

In May 2003, we entered into a three year lease for our operating facility. The lease, which is scheduled to commence on July 1, 2003, requires average monthly rental payments of approximately \$6,000 during the lease term (including estimated operating and maintenance expenses and sales tax). The lease contains a provision that allows us to extend the lease for two terms of three years each. Rent expense under our previous lease arrangement approximated \$25,000 and \$5,500 during the year ended December 31, 2002 and the period June 1, 2001 (date of incorporation) to December 31, 2001, respectively.

NOTE F- OTHER RELATED PARTY TRANSACTIONS

During 2002 and 2001 we received net advances of approximately \$625,000 and \$100,000, respectively, from Tampa Bay Financial, Inc., ("TBF") one of our stockholders. These advances, which were non-interest bearing, unsecured and due on demand, were converted to approximately 210,000 shares of our common stock in 2002 using a conversion price of \$3.33 per share (which amount was greater than the approximate quoted market price of our common shares on the conversion dates).

During November 2001, we entered into an agreement with TBF to provide us with consulting services and pay certain of our expenses, including the salary of our chief financial officer and costs incurred in preparing required filings under securities laws. The term of this agreement was for one year and was terminated in 2002. During 2002 and 2001, we incurred expenses of approximately \$105,000 and \$15,000, respectively, related to this agreement. In 2002 the related liability was settled through three separate issuances (totaling 117,000 shares) of our common stock using a conversion price of approximately \$1.00 per share (which amount approximated the quoted market price of our common shares on the settlement dates).

During 2002, we issued approximately 105,000 shares of our common stock in settlement of approximately \$110,000 of our president's accrued salary. The conversion price of approximately \$1.00 per share approximated the quoted market price of our common shares on the settlement dates.

We occasionally borrow funds from the Naples Women's Center ("NWC"), a company owned by our president, to meet our short-term cash needs. These amounts have been advanced to us with a stated interest rate of 8% and are due upon demand. At December 31, 2002, we owed NWC approximately \$117,000. Approximately \$58,700 of this amount was repaid in April 2003 in connection with the financing transaction described in Note G.

36

In December 2002, in order to meet short term cash needs, we borrowed \$25,000 from two individuals who are affiliates of Medical Venture Partners, LLC ("Medical Venture Partners"), a venture capital firm with whom we were negotiating a financing transaction (see Note G). These amounts, having a stated interest rate of 8%, were repaid in April 2003 in connection with the financing transaction described in Note G.

NOTE G - OTHER SUBSEQUENT EVENTS

On April 15, 2003, we entered into debt and equity financing agreements with Medical Venture Partners and its principals. Under the terms of the agreements, affiliates of Medical Venture Partners purchased approximately 75% of our outstanding common stock and agreed to make available up to \$1.5 million of debt

Edgar Filing: NEOGENOMICS INC - Form 10KSB

financing in the form of a revolving credit facility. The debt financing and approximately 50.5% of the equity investment are being made through MVP 3, LP, a fund controlled by Medical Venture Partners. The remainder of the equity investment was made by the three principals of Medical Venture Partners acting individually.

Under the terms of the loan agreement, we will be able to borrow up to 80% of "eligible" accounts receivable, 50% of our net furniture and equipment balance, and up to \$500,000 on an unsecured basis. As a condition to these transactions, NEO, our President, MVP 3 LP and the principals of Medical Venture Partners entered into a shareholders agreement that provides that MVP 3, LP will have the right to appoint up to four of seven of our directors. We also entered into a Registration Rights Agreement with MVP 3 LP and the principals of Medical Venture Partners granting them certain demand and piggyback registration rights.

At the time of the closing of this transaction, we entered a one year employment agreement with our President. The agreement, which renews automatically for an unlimited number of terms of one year (unless a "Notice of Termination" is delivered), provides for a base salary equal to 20% of the cash flow generated by NEO (subject to a monthly cap of \$20,000). In addition, the agreement provides for a bonus of 10% of any amount by which our quarterly net revenues exceed certain targets as established by our Board of Directors.

End of Financial Statements

37

ITEM 8. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE

On March 18, 2002, we engaged Kingery, Crouse & Hohl, P.A., as our principal independent accountant to audit our financial statements beginning with the fiscal year ending December 31, 2001. The decision to change our principal accountant was recommended by our Board of Directors. Accordingly, the engagement of Sprouse & Anderson, LLP, our prior independent accountants was not renewed, effective March 18, 2002.

During our two most recent fiscal years, and during the period from January 1, 2002 to March 18, 2002, there was no disagreement with Sprouse & Anderson, LLP, on any matter of accounting principles or practices, financial statement disclosure, or auditing scope or procedures, which disagreement, if not solved to their satisfaction would have caused them to make reference in connection with their opinion to the subject matter of the disagreement.

The audit reports on our financial statements as of and for the years ended December 31, 2000 and December 31, 1999 did not contain any adverse opinion or disclaimer opinion, nor were they qualified or modified as to uncertainty, audit scope or accounting principles. However, such reports contained an explanatory paragraph regarding the uncertainty about our ability to continue as a going concern.

PART III

ITEM 9. DIRECTORS AND EXECUTIVE OFFICERS OF THE COMPANY

The following table sets forth certain information regarding our executive officers and directors as of May 15, 2003:

Edgar Filing: NEOGENOMICS INC - Form 10KSB

Name -----	Age -----	Position -----
Michael T. Dent	38	President, Chief Medical Officer, and Chairman
Kevin Lindheim.	43	Director

Michael T. Dent M.D. - President, Chief Medical Officer and Chairman

Dr. Dent has been our President and Chief Medical Officer since April 2003. Prior to that Dr. Dent was our President and Chief Executive Officer from June 2001, when he founded NeoGenomics, to April 2003. Dr. Dent founded the Naples Women's Center in 1996. He received his training in Obstetrics and Gynecology at the University of Texas in Galveston. He received his M.D. degree from the University of South Carolina in Charleston, S.C. in 1992 and a B.S. degree from Davidson College in Davidson, N.C. in 1986. He is a member of the American Association of Cancer Researchers and a Diplomat and fellow of the American College of Obstetricians and Gynecologists. He sits on the Board of the Florida Life science Biotech Initiative.

38

Kevin Lindheim - Director

Mr. Lindheim has served as a director since February, 2002. He is the President and Chief Executive Officer of Florida Valuation and Consultants, Inc., a full service commercial real estate advisory firm, a position he has held since 1992. He holds a B.S. Degree in Accounting from Louisiana University, and a postgraduate degree in Real Estate from Tulane University.

ITEM 10. EXECUTIVE COMPENSATION

The following table provides certain summary information concerning compensation paid by the Company to or on behalf of our most highly compensated executive officers for the fiscal years ended December 31, 2001, 2000 and 1999:

SUMMARY COMPENSATION TABLE

Name and Principal Capacity -----	Year -----	Salary -----	Other Compensat -----
Dr. Michael T. Dent President, Chief Medical Officer, and Chairman . . .	2002	\$130,669 (1)	-
	2001	9,600 (1)	\$ 0 (2)
	2000	-	-
Matthew Veal (3) Former Chief Financial Officer, and Former Director.	2002	\$ -	44,000 (4)
	2001	\$ 0	\$99,679 (4)
	2000	-	-

- (1) During 2002, Dr. Dent Received 105,636 shares of the Company's common stock in lieu of cash salary payments due to him for salary earned in 2001 and the first nine months of 2002. Such shares were collectively valued at \$109,021 at the various times of issue and were issued pursuant to a Registration Statement on Form S-8. As of May 14, 2003, Dr. Dent had not sold any of this stock or any other stock in the Company. The remaining \$31,248 of salary earned by Dr. Dent was earned

Edgar Filing: NEOGENOMICS INC - Form 10KSB

- in the fourth quarter of 2002 and has been accrued as a cash obligation of the Company. As of May 15, 2003, it had not yet been paid.
- (2) In November, 2001, Dr. Dent received options to purchase 1,350,000 shares of common stock at \$0.01 per share pursuant to an Option Agreement. This Option Agreement was terminated effective October 1, 2002 and Dr. Dent gave up any right or claim to such options.
 - (3) Mr. Veal resigned Chief Financial Officer on November 22, 2002 and resigned as a Director on May 22, 2002.
 - (4) Paid in shares of Company common stock issued pursuant to Registration Statement on Form S-8.

EMPLOYMENT AGREEMENTS.

We entered into a new Employment Agreement with Dr. Michael Dent on April 15, 2003 to serve as our President and Chief Medical Officer.

39

The employment agreement has an initial term of one year and will be automatically renewed for an unlimited number of additional terms of one year each unless either party elects to terminate the agreement. During the term of employment, Dr. Dent will serve as the President and Chief Medical Officer of the Company. Dr. Dent has agreed to devote at least 20% of his business time and efforts to the business affairs of the Company during the term of the agreement with such percentage subject to increase in certain instances. During the term of his employment Dr. Dent will be eligible to receive a base salary in any given month equal to 20% of the Operating Subsidiary's cash flow from operating activities for the preceding month (as reported on Operating Subsidiary's Statement of Cash Flows) subject to a \$20,000 cap for any given month. Dr. Dent is also eligible to receive a bonus, on a quarterly basis, equal to 10% of the amount by which the Company's quarterly net revenues exceed targets established by the Company's Board of Directors. For the fiscal year 2003, such quarterly targets are as follows:

For the quarter ending June 30, 2003	\$125,000
For the quarter ending September 30, 2003	\$250,000
For the quarter ending December 31, 2003	\$500,000

The new employment agreement also provides that once Dr. Dent is devoting 50% or more of his time to the business, the Company will pay for health insurance for Dr. Dent and his family.

ITEM 11. SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT

The following table sets forth information as of May 15, 2003, with respect to each person known by the Company to own beneficially more than 5% of the Company's outstanding common stock, each director and officer of the Company and all directors and executive officers of the Company as a group. The Company has no other class of equity securities outstanding other than common stock.

Name And Address Of Beneficial Owner	Amount and Nature Of Beneficial Ownership	Perce
-----	-----	-----
MVP 3, LP (1) 1740 Persimmon Drive Naples, FL 34109	9,303,279	50
-----	-----	-----
John E. Elliott (2)

2709 Buckthorn Way Naples, FL 34105	10,844,540	58
Steven C. Jones (3) 1740 Persimmon Drive Naples, FL 34109	10,844,540	5
Lawrence R. Kuhnert (4) 5120 Timberview Terrace Orlando, FL 32819	10,844,540	5
Michael T. Dent M.D. 1726 Medical Blvd. Naples, FL 34110	2,490,634	1
Kevin Lindheim 9220 Bonita Beach Road Bonita Springs, FL 34135	3,845	
Directors and Officers as a Group (2 persons)	2,494,479	1

40

less than 1.0%

- (1) MVP 3, LP has direct ownership of 9,303,279 shares. The general partner of MVP 3, LP is Medical Venture Partners, LLC, which has John E. Elliott, Steven C. Jones and Larry R. Kuhnert as its members.
- (2) John E. Elliott has direct ownership of 1,541,261 shares, but as a member of the general partner of MVP 3, LP, he has the right to vote all shares held by MVP 3, LP, thus 9,303,279 shares have been added to his total.
- (3) Steven C. Jones has direct ownership of 1,541,261 shares, but as a member of the general partner of MVP 3, LP, he has the right to vote all shares held by MVP 3, LP, thus 9,303,279 shares have been added to his total.
- (4) Larry R. Kuhnert has direct ownership of 1,541,261 shares, but as a member of the general partner of MVP 3, LP, he has the right to vote all shares held by MVP 3, LP, thus 9,303,279 shares have been added to his total.

ITEM 12. CERTAIN RELATIONSHIPS AND RELATED TRANSACTIONS

The executive offices of the Company share space, on a rent-free basis, with Naples Women's Center ("NWC"), a company owned by Dr. Michael Dent, our Chairman and President. In addition, Naples Women's Center provides bookkeeping services to the Company free of charge.

During 2001 and 2002, we borrowed funds from the Naples Women's Center to meet our short-term cash needs. At December 31, 2002, we owed NWC approximately \$117,332. \$58,666 of this amount was repaid on April 17, 2003.

During the period December 2002 to April 2003, AMI Holdings Corp. (a company controlled by John E. Elliott), Steven C. Jones and Lawrence R. Kuhnert advanced

Edgar Filing: NEOGENOMICS INC - Form 10KSB

\$177,000 under various short term bridge loan agreements. Messrs. Elliott, Jones and Kuhnert are the three principals of MVP 3, LP, which consummated debt and equity financing transactions with the Company on April 15, 2003. All of these advances, plus \$2,493 of accrued interest, were repaid to these individuals on April 17, 2003.

In order to facilitate the administration of MVP 3's revolving credit facility with the Company and fund it, MVP 3 arranged a similar credit facility with Fifth Third Bank. On April 15, 2003, the Company provided a guaranty of MVP 3's obligations to Fifth Third Bank for all amounts that are directly passed through MVP 3 and further loaned to the Company and has pledged all of its business assets to both Fifth Third Bank and MVP 3, LP.

41

PART IV

ITEM 13. EXHIBITS, FINANCIAL STATEMENT SCHEDULES, AND REPORTS ON FORM 8-K

(A) EXHIBITS

The following exhibits are filed (or incorporated by reference herein) as part of this Form 10-KSB.

- 10.23 Real Estate Lease Agreement, dated as of May 13, 2003, between the Operating Subsidiary and Cambridge Management Associates LP.
- 21 The Company's only subsidiary is NeoGenomics, Inc., a Florida corporation (the "Operating Subsidiary").
- 99.1 Certification pursuant to Section 906 of the Sarbanes-Oxley Act of 2002.

(B) REPORTS ON FORM 8-K.

The following reports on Form 8-K were filed with the SEC during the period from September 30, 2002 until the date of this report on Form 10-KSB.

1) On April 4, 2003, we filed a Report of Form 8-K announcing that a majority of our shareholders had consented to amending our articles of incorporation to reduce the authorized number of shares of common stock from 500,000,000 shares to 100,000,000 shares and to authorize 10,000,000 shares of a new class of preferred stock. The shareholders also consented to effecting a 1:100 reverse stock split of our common stock.

43

2) On April 17, we filed a Report of Form 8-K announcing that the Company had experienced a change of control by virtue of the fact that MVP 3, LP and its affiliates had purchased 13,927,062 shares of our stock at a price of \$0.01 per share.

ITEM 14. CONTROLS AND PROCEDURES

Within 90 days prior to the date of filing of this report, we carried out

Edgar Filing: NEOGENOMICS INC - Form 10KSB

an evaluation, under the supervision and with the participation of our management, including the Chief Executive Officer, of the design and operation of our disclosure controls and procedures. Based on this evaluation, our Chief Executive Officer concluded that our disclosure controls and procedures are effective for the gathering, analyzing and disclosing the information we are required to disclose in the reports we file under the Securities Exchange Act of 1934, within the time periods specified in the SEC's rules and forms. There have been no significant changes in our internal controls or in other factors that could significantly affect internal controls subsequent to the date of this evaluation.

SIGNATURES

In accordance with Section 13 or 15(d) of the Exchange Act, the registrant caused this report to be signed on its behalf by the undersigned, thereunto duly authorized.

CERTIFICATION

I, Michael T. Dent, M.D., certify that:

1. I have reviewed this annual report on Form 10-KSB of Neogenomics, Inc;
2. Based on my knowledge, this annual report does not contain any untrue statement of a material fact, or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this annual report; and
3. Based on my knowledge, the financial statements, and other financial information included in this annual report, fairly present in all material respects the financial position, results of operations, and cash flows of the registrant as of, and for, the periods presented in this annual report.

Edgar Filing: NEOGENOMICS INC - Form 10KSB

4. I am responsible for establishing and maintaining disclosure controls and procedures for the registrant and I have:

(i) designed such disclosure controls and procedures to ensure that material information relating to the issuer, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this annual report is being prepared;

(ii) evaluated the effectiveness of the registrant's disclosure controls and procedures as of a date within 90 days prior to the filing date of this annual report (the "Evaluation Date"); and

(iii) presented in this annual report our conclusions about the effectiveness of the disclosure controls and procedures based on our evaluation as of the Evaluation Date;

5. I have disclosed, based on my most recent evaluation, to the registrant's auditors and the audit committee of the board of directors (or persons fulfilling the equivalent function):

(i) all significant deficiencies in the design or operation of internal controls which could adversely affect the registrant's ability to record, process, summarize and report financial data and have identified for the registrant's auditors any material weaknesses in internal controls; and

(ii) any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal controls; and

6. I have indicated in this annual report whether or not there were significant changes in internal controls or in other factors that could significantly affect internal controls subsequent to the date of our most recent evaluation, including any corrective actions with regard to significant deficiencies and material weaknesses.
