Press Release

CVRD Inaugurates Sao Luis Pellet Plant

Rio de Janeiro, March 28, 2002 - Companhia Vale do Rio Doce (CVRD) has announced the inauguration of its twelfth iron ore pellet production plant located in the port of Ponta da Madeira, Sao Luis, state of Maranhao. This plant is a wholly-owned asset of CVRD. It is expected to produce 2 million tons of pellets this year and according to its production ramp up it will reach full nominal capacity on 2003.

The Sao Luis pellet plant, which has a nominal production capacity of 6 million tons per year, will use the high quality Carajas iron ore. This investment, brings CVRD's consolidated pellet production capacity to 43 million tons per year.

The new pellet plant is the most automated of its kind in the world, using new concepts of network communication with the use of fibre optics and intelligent instruments which send data already processed to control computers.

Pursuant to CVRD commitment to environmental preservation and taking advantage of the knowledge accumulated with the operation of the pellet plants based in the port of Tubarao, state of Espirito Santo, significant investment was made in latest-generation equipment to ensure that the best environmental protection practices are used. Ninety seven local technicians were trained at the Tubarao

Edgar Filing: VALLEY OF THE RIO DOCE CO - Form 6-K

units to work in the Sao Luis pellet plant.

The pellet plant uses a travelling grate process developed by Lurgi-Mettalurgie, the same used in the seven pellet plants located on Tubarao. Of the equipment used in this industrial unit, of special mention are two rolling presses used in the grinding of iron ore, which produce considerable savings in energy consumption, reducing therefore, the plant's operating costs.

Total capital expenditure for the project was US\$ 408 million. This amount comprises investments in plant construction and all the infrastructure for the project. Investments were made to increase capacity of the Carajas iron ore mines, the Carajas Railroad and the port of Ponta da Madeira to cope with the extra volume generated by the new plant. The plant's capex cost per ton is US\$ 31.

The world's steel production profile is changing. There is a growing trend towards a higher participation of electric arc furnaces steel mills (mini-mills) which consume direct reduced iron, a product made from pellets. At the same time, basic oxygen furnaces mills are seeking to minimize their environmental impact, which is reduced by more intense use of pellets. As a consequence of this process of change, CVRD believes that global demand for pellets will grow at a faster pace than iron ore fines over the next ten years. Therefore, the Company is investing to meet client needs.
