ENPRO INDUSTRIES, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (UNAUDITED)

1. Overview and Basis of Presentation

Overview

EnPro Industries, Inc. (EnPro or the Company) is a leader in the design, development, manufacturing and marketing of proprietary engineered industrial products that include sealing products, self-lubricating, non-rolling bearing products and heavy-duty, medium-speed diesel, natural gas and dual fuel reciprocating engines.

Basis of Presentation

The accompanying consolidated financial statements have been prepared in accordance with United States generally accepted accounting principles (GAAP) for interim financial information and with the instructions to Form 10-Q and Article 10 of Regulation S-X. Accordingly, they do not include all of the information and footnotes required by GAAP for complete financial statements. The Consolidated Balance Sheet as of December 31, 2009, was derived from the audited financial statements included in the Company s annual report on Form 10-K for the year ended December 31, 2009. In the opinion of management, all adjustments, consisting of normal recurring accruals, considered necessary for a fair statement of results for the periods presented, have been included. Management believes that the assumptions underlying the consolidated financial statements are reasonable. These interim financial statements should be read in conjunction with the Company s consolidated financial statements and notes thereto that are included in its annual report on Form 10-K for the year ended December 31, 2009.

Revenues, expenses, cash flows, assets and liabilities can and do vary during each quarter of the year. Therefore, the results and trends in these interim financial statements may not be indicative of those for a full year.

All significant intercompany accounts and transactions between the Company s operations have been eliminated.

2. Discontinued Operations

During the fourth quarter of 2009, the Company announced its plans to sell the Quincy Compressor business (Quincy) that had been reported within the Engineered Products segment. Accordingly, the Company has reported, for all periods presented, the financial condition, results of operations and cash flows of Quincy as a discontinued operation in the accompanying consolidated financial statements.

For the quarters ended March 31, 2010 and 2009, results of operations from Quincy were as follows:

Table of Contents

	Quarters Ended March 31,	
	2010	2009
Sales	\$ 20.9	\$ 31.3
Income from discontinued operations	\$ 2.4	\$ 3.1
Income tax expense	(0.9)	(1.0)
Income from discontinued operations, net of taxes	1.5	2.1
Gain from disposal of discontinued operations, net of tax	91.9	
Net income from discontinued operations	\$ 93.4	\$ 2.1

On March 1, 2010, the Company completed the previously announced sale of Quincy, other than the equity interests in Kunshan Q-Tech Air Systems Technologies Ltd., its operation in China (Q-Tech). Completion of the sale of the equity interests in Q-Tech is pending receipt of necessary regulatory authorizations in China. The purchase price for the assets sold on March 1, 2010 was \$184.2 million in cash and the assumption of certain liabilities of Quincy, and an additional \$5.8 million is payable in cash upon the closing of the sale of Q-Tech (or at December 18, 2010 if the sale of Q-Tech is not completed by that date). The sale resulted in a gain of \$147.1 million (\$91.9 million, net of tax).

The major classes of assets and liabilities for Quincy are shown below:

	March 31, 2010	December 31, 2009
	(in millions)	
Assets:		
Accounts and notes receivable	\$ 3.5	\$ 18.0
Inventories	1.8	8.2
Other current assets	0.1	0.9
Property, plant and equipment	0.5	18.3
Goodwill		6.4
Other intangible assets		4.6
Other assets	0.2	1.1
Assets of discontinued operations	\$ 6.1	\$ 57.5
Liabilities:		
Accounts payable	\$ 1.1	\$ 9.5
Other accrued expenses	0.9	6.4
Other liabilities		0.3
Liabilities of discontinued operations	\$ 2.0	\$ 16.2

3. Income Taxes

As of March 31, 2010 and December 31, 2009, the Company had \$7.9 million of liabilities recorded for unrecognized tax benefits. The liabilities included interest of \$0.8 million and \$0.7 million, respectively. The unrecognized tax benefit balances as of March 31, 2010 and December 31, 2009, also included \$3.1 million and \$3.4 million, respectively, for tax positions for which the ultimate deductibility was highly certain but for which there was uncertainty about the timing of such deductibility. Included in the unrecognized tax benefits as of March 31, 2010 and December 31, 2009, were cumulative amounts of \$4.8 million and \$4.5 million, respectively, for uncertain tax positions that would affect the Company's effective tax rate if recognized. The Company records interest and penalties related to unrecognized tax benefits in income tax expense.

Table of Contents

The Company and its subsidiaries are subject to U.S. federal income tax as well as income tax in multiple state and foreign jurisdictions. Substantially all state, local and foreign income tax returns for the years 2003 through 2008 are open to examination. The U.S. federal income tax returns for 2007 and 2008 are also open to examination. Various foreign and state tax returns are currently under examination and may conclude within the next twelve months. The final outcomes of these audits are not yet determinable; however, management believes that any assessments that may arise will not be material to the Company's financial condition or results of operations.

4. Comprehensive Income (Loss)

Total comprehensive income (loss) consists of the following:

	Quarters Ended March 31,	
	2010	2009
	(in millions)	
Net income	\$ 99.0	\$ 3.2
Foreign currency translation adjustments	(7.9)	(6.9)
Pensions and postretirement benefits	1.1	1.1
Net unrealized losses from cash flow hedges	(0.6)	(0.4)
Total comprehensive income (loss)	\$ 91.6	\$ (3.0)

5. Earnings Per Share

The computation of basic and diluted earnings per share is as follows:

	Quarters Ended March 31,	
	2010	2009
	(in millions, except per share amounts)	
Numerator (basic and diluted):		
Net income	\$ 99.0	\$ 3.2
Denominator:		
Weighted-average shares basic	20.3	19.9
Share-based awards	0.2	0.2
Weighted-average shares diluted	20.5	20.1
Earnings per share:		
Basic	\$ 4.89	\$ 0.16
Diluted	\$ 4.83	\$ 0.16

As discussed further in Note 8, the Company previously issued \$172.5 million in aggregate principal amount of Convertible Senior Debentures (the Debentures). Under the terms of the Debentures, the Company would settle the par amount of its obligations in cash and the remaining obligations, if any, in common shares. Pursuant to applicable accounting guidelines, the Company includes the conversion option effect in diluted earnings per share during such periods when the Company's average stock price exceeds the conversion price of \$33.79 per share. The Company's average stock price did not exceed \$33.79 per share in either period presented, so there is no impact on diluted

earnings per share from the Debentures.

Table of Contents**6. Inventories**

Inventories consist of the following:

	As of March 31, 2010	As of December 31, 2009
	(in millions)	
Finished products	\$ 54.8	\$ 60.1
Deferred costs relating to long-term contracts	48.7	42.9
Work in process	18.9	16.2
Raw materials and supplies	23.0	24.4
	145.4	143.6
Reserve to reduce certain inventories to LIFO basis	(14.2)	(14.2)
Progress payments	(49.6)	(43.3)
Total	\$ 81.6	\$ 86.1

The Company uses the last-in, first-out (LIFO) method of valuing certain of its inventories. An actual valuation of inventory under the LIFO method can be made only at the end of each year based on the inventory levels and costs at that time. Accordingly, interim LIFO calculations are based on management's estimates of expected year-end inventory levels and costs, which are subject to change in the final year-end LIFO inventory valuation.

7. Goodwill and Other Intangible Assets

The changes in the net carrying value of goodwill by reportable segment for the quarter ended March 31, 2010, are as follows:

	Sealing Products	Engineered Products	Engine Products and Services	Total
	(in millions)			
Gross goodwill as of December 31, 2009	\$ 112.8	\$ 142.3	\$ 7.1	\$ 262.2
Accumulated impairment losses	(27.8)	(108.7)		(136.5)
Goodwill as of December 31, 2009	85.0	33.6	7.1	125.7
Foreign currency translation	(1.2)	(1.4)		(2.6)
Purchase accounting adjustment	(0.3)			(0.3)
Gross goodwill as of March 31, 2010	111.3	140.9	7.1	259.3
Accumulated impairment losses	(27.8)	(108.7)		(136.5)
Goodwill as of March 31, 2010	\$ 83.5	\$ 32.2	\$ 7.1	\$ 122.8

The gross carrying amount and accumulated amortization of identifiable intangible assets is as follows:

Table of Contents

	As of March 31, 2010		As of December 31, 2009	
	Gross Carrying Amount	Accumulated Amortization (in millions)	Gross Carrying Amount	Accumulated Amortization
Customer relationships	\$ 90.3	\$ 35.9	\$ 90.4	\$ 34.1
Existing technology	26.3	6.9	26.5	6.5
Trademarks	38.4	7.4	39.3	7.3
Other	17.4	10.3	17.4	9.7
	\$ 172.4	\$ 60.5	\$ 173.6	\$ 57.6

Amortization expense for the quarters ended March 31, 2010 and 2009, was \$3.5 million and \$2.4 million, respectively. The Company has trademarks with indefinite lives that are included in the table above with a carrying amount of approximately \$23 million as of March 31, 2010 that are not amortized.

8. Long-Term Debt

In 2005, the Company issued \$172.5 million in aggregate principal amount of Debentures. The Debentures bear interest at the annual rate of 3.9375%, with interest due on April 15 and October 15 of each year and will mature on October 15, 2015 unless they are converted prior to that date. The Debentures are the Company's direct, unsecured and unsubordinated obligations and would rank equal in priority with all unsecured and unsubordinated indebtedness and senior in right of payment to all subordinated indebtedness. They would effectively rank junior to all secured indebtedness to the extent of the value of the assets securing such indebtedness. The Debentures do not contain any financial covenants.

Holder may convert the Debentures into cash and shares of the Company's common stock, under certain circumstances. The initial conversion rate, which is subject to adjustment, is 29.5972 shares of common stock per \$1,000 principal amount of Debentures. This is equal to an initial conversion price of \$33.79 per share. The Debentures may be converted under any of the following circumstances:

during any fiscal quarter (and only during such fiscal quarter), if the closing price of the Company's common stock for at least 20 trading days in the 30 consecutive trading-day period ending on the last trading day of the preceding fiscal quarter was 130% or more of the then current conversion price per share of common stock on that 30th trading day;

during the five business day period after any five consecutive trading-day period (which is referred to as the measurement period) in which the trading price per debenture for each day of the measurement period was less than 98% of the product of the closing price of the Company's common stock and the applicable conversion rate for the debentures;

on or after September 15, 2015;

upon the occurrence of specified corporate transactions; or

in connection with a transaction or event constituting a change of control.

None of the conditions that permit conversion were satisfied at, or during the quarter ended, March 31, 2010.

Table of Contents

Upon conversion of any Debentures, the principal amount would be settled in cash. Specifically, in connection with any conversion, the Company will satisfy its obligations under the Debentures by delivering to holders, in respect of each \$1,000 aggregate principal amount of Debentures being converted:

cash equal to the lesser of \$1,000 or the Conversion Value (defined below), and

to the extent the Conversion Value exceeds \$1,000, a number of shares equal to the sum of, for each day of the cash settlement period, (1) 5% of the difference between (A) the product of the conversion rate (plus any additional shares as an adjustment upon a change of control) and the closing price of the Company's common stock for such date and (B) \$1,000, divided by (2) the closing price of the Company's common stock for such day.

Conversion Value means the product of (1) the conversion rate in effect (plus any additional shares as an adjustment upon a change of control) and (2) the average of the closing prices of the Company's common stock for the 20 consecutive trading days beginning on the second trading day after the conversion date for those Debentures.

The Company used a portion of the net proceeds from the sale of the Debentures to enter into call options (hedge and warrant transactions), which entitle the Company to purchase shares of its stock from a financial institution at \$33.79 per share and entitle the financial institution to purchase shares from the Company at \$46.78 per share. This will reduce potential dilution to the Company's common shareholders from conversion of the Debentures by increasing the effective conversion price to \$46.78 per share.

The current accounting rules require that the liability component of the Debentures be recorded at its fair value as of the issuance date. This resulted in the Company recording debt in the amount of \$111.2 million with the \$61.3 million offset to the debt discount being recorded in equity on a net of tax basis. The debt discount, \$41.1 million as of March 31, 2010, is being amortized through interest expense until the maturity date of October 15, 2015, resulting in an effective interest rate of approximately 9.5% and a \$131.4 million net carrying amount of the liability component at March 31, 2010. As of December 31, 2009, the unamortized debt discount was \$42.5 million and the net carrying amount of the liability component was \$130.0 million. Interest expense related to the Debentures for the quarters ended March 31, 2010 and 2009 includes \$1.7 million of contractual interest coupon in both periods and \$1.4 million and \$1.3 million, respectively, of debt discount amortization.

9. Pensions and Postretirement Benefits

The components of net periodic benefit cost for the Company's U.S. and foreign defined benefit pension and other postretirement plans for the quarters ended March 31, 2010 and 2009, are as follows:

	Quarters Ended March 31,			
	Pension Benefits		Other Benefits	
	2010	2009	2010	2009
	(in millions)			
Service cost	\$ 1.5	\$ 1.7	\$ 0.2	\$ 0.3
Interest cost	3.2	3.1	0.2	0.3
Expected return on plan assets	(2.4)	(2.7)		
Prior service cost component	0.2	0.2	0.1	
Net loss component	1.8	1.6		
Curtailement loss	0.7			
	\$ 5.0	\$ 3.9	\$ 0.5	\$ 0.6

Table of Contents

The Company anticipates that there will be a required funding of \$3.4 million to its U.S. defined benefit plans in 2010. The Company expects to make total contributions of approximately \$0.9 million in 2010 to its foreign pension plans.

10. Derivative Instruments

The Company uses derivative financial instruments to manage its exposure to various risks. The use of these financial instruments modifies the exposure with the intent of reducing the risk to the Company. The Company does not use financial instruments for trading purposes, nor does it use leveraged financial instruments. The counterparties to these contractual arrangements are major financial institutions. The Company uses multiple financial institutions for derivative contracts to minimize the concentration of credit risk. The current accounting rules require that all derivative instruments be reported in the Consolidated Balance Sheets at fair value and that changes in a derivative's fair value be recognized currently in earnings unless specific hedge criteria are met.

The Company is exposed to foreign currency risks that arise from normal business operations. These risks include the translation of local currency balances on its foreign subsidiaries' balance sheets, intercompany loans with foreign subsidiaries and transactions denominated in foreign currencies. The Company strives to control its exposure to these risks through its normal operating activities and, where appropriate, through derivative instruments. The Company has entered into contracts to hedge forecasted transactions occurring at various dates through November 2011 that are denominated in foreign currencies. The notional amount of foreign exchange contracts hedging foreign currency transactions was \$127.6 million and \$106.0 million at March 31, 2010 and December 31, 2009, respectively. At March 31, 2010, foreign exchange contracts with notional amounts totaling \$84.6 million are accounted for as cash flow hedges. As cash flow hedges, the effective portion of the gain or loss on the contracts is reported in accumulated other comprehensive income and the ineffective portion is reported in income. Amounts in accumulated other comprehensive income are reclassified into income, primarily cost of sales, in the period that the hedged transactions affect earnings. The balances of derivative assets are generally recorded in other current assets and the balances of derivative liabilities are generally recorded in other accrued expenses in the Consolidated Balance Sheets. The remaining notional amounts of \$43.0 million of foreign exchange contracts, all of which have a maturity date of a month or less, are recorded at their fair market value with changes in market value recorded in income.

11. Business Segment Information

The Company has three reportable segments. The Sealing Products segment manufactures sealing products, heavy-duty wheel end components, polytetrafluoroethylene (PTFE) products and rubber products. The Engineered Products segment manufactures self-lubricating, non-rolling bearing products, aluminum blocks for hydraulic applications and compressor components. The Engine Products and Services segment manufactures and services heavy-duty, medium-speed diesel, natural gas and dual fuel reciprocating engines. The Company's reportable segments are managed separately based on differences in their products and services and their end-customers. Segment profit is total segment revenue reduced by operating expenses and restructuring and other costs identifiable with the segment. Corporate expenses include general corporate administrative costs. Expenses not directly attributable to the segments, corporate expenses, net interest expense, asbestos-related expenses, gains/losses related to the sale of assets, impairments and income taxes are not included in the computation of segment profit. The accounting policies of the reportable segments are the same as those for the Company.

Segment operating results and other financial data for the quarters ended March 31, 2010 and 2009, are as follows:

Table of Contents

	Quarters Ended March 31, 2010 2009 (in millions)	
Sales		
Sealing Products	\$ 113.8	\$ 97.1
Engineered Products	75.1	56.8

Engineered Products	316.9	314.1
Engine Products and Services	88.7	87.9
Corporate	590.4	440.6
Discontinued operations	6.1	57.5
	\$ 1,328.2	\$ 1,221.2

12. Fair Value Measurements

The Company utilizes a fair value hierarchy that prioritizes the inputs to valuation techniques used to measure fair value into three broad levels. The following is a brief description of those three levels:

Level 1: Observable inputs such as quoted prices in active markets for identical assets or liabilities.

Edgar Filing: ENPRO INDUSTRIES, INC - Form 10-Q

Level 2: Inputs other than quoted prices that are observable for the asset or liability, either directly or indirectly. These include quoted prices for similar assets or liabilities in active markets and quoted prices for identical or similar assets or liabilities in markets that are not active.

Level 3: Unobservable inputs that reflect the reporting entity's own assumptions.

Table of Contents

Assets and liabilities measured at fair value on a recurring basis are summarized as follows:

	Fair Value Measurements as of March 31, 2010			
	Total	Level 1	Level 2	Level 3
	(in millions)			
Assets				
Cash equivalents	\$ 234.7	\$ 234.7	\$	\$
Crucible back-up trust assets	19.1	19.1		
Foreign currency derivatives	1.9		1.9	
Deferred compensation assets	2.5	2.5		
	\$ 258.2	\$ 256.3	\$ 1.9	\$
Liabilities				
Deferred compensation liabilities	\$ 4.6	\$ 4.6	\$	\$
Foreign currency derivatives	1.9		1.9	
	\$ 6.5	\$ 4.6	\$ 1.9	\$

	Fair Value Measurements as of December 31, 2009			
	Total	Level 1	Level 2	Level 3
	(in millions)			
Assets				
Cash equivalents	\$ 71.2	\$ 71.2	\$	\$
Crucible back-up trust assets	18.7	18.7		
Foreign currency derivatives	1.2		1.2	
Deferred compensation assets	2.6	2.6		
	\$ 93.7	\$ 92.5	\$ 1.2	\$
Liabilities				
Deferred compensation liabilities	\$ 4.9	\$ 4.9	\$	\$
Foreign currency derivatives	0.2		0.2	
	\$ 5.1	\$ 4.9	\$ 0.2	\$

The Company's cash equivalents, Crucible back-up trust assets and deferred compensation assets and liabilities are classified within Level 1 of the fair value hierarchy because they are valued using quoted market prices. For further discussion of the Crucible back-up trust, see Note 13, Commitments and Contingencies - Crucible Materials Corporation. The fair values for foreign currency derivatives are based on quoted market prices from various banks for similar instruments.

The carrying values of the Company's significant financial instruments reflected in the Consolidated Balance Sheet approximate their respective fair values at March 31, 2010 and December 31, 2009, except for the following

instruments:

	March 31, 2010		December 31, 2009	
	Carrying Value	Fair Value	Carrying Value	Fair Value
	(in millions)			
Long-term debt	\$131.7	\$188.5	\$130.4	\$175.9

The fair values for long-term debt are based on quoted market prices or on rates available to the Company for debt with similar terms and maturities.

Table of Contents

13. Commitments and Contingencies

General

Various claims, lawsuits and administrative proceedings, all arising in the ordinary course of business with respect to commercial, product liability and environmental matters, are pending or threatened against the Company or its subsidiaries and seek monetary damages and/or other remedies. In addition, asbestos litigation against certain of the Company's subsidiaries is described in this section in more detail. The Company believes that any liability that may finally be determined with respect to commercial and non-asbestos product liability claims should not have a material effect on the Company's consolidated financial condition or results of operations. From time to time, the Company and its subsidiaries are also involved as plaintiffs in legal proceedings involving contract, patent protection, environmental, insurance and other matters.

Environmental

The Company's facilities and operations are subject to federal, state and local environmental and occupational health and safety requirements of the U.S. and foreign countries. The Company takes a proactive approach in its efforts to comply with environmental, health and safety laws as they relate to its manufacturing operations and in proposing and implementing any remedial plans that may be necessary. The Company also conducts comprehensive compliance and management system audits at its facilities to maintain compliance and improve operational efficiency.

Although the Company believes past operations were in substantial compliance with the then applicable regulations, the Company or one of its subsidiaries has been named as a potentially responsible party or is otherwise involved at 17 sites at each of which the costs to the Company or its subsidiary are expected to exceed \$100,000. Investigations have been completed for 13 sites and are in progress at the other 4 sites. The majority of these sites relate to remediation projects at former operating facilities that were sold or closed and primarily deal with soil and groundwater contamination. The laws governing investigation and remediation of these sites can impose joint and several liability for the associated costs. Liability for these costs can be imposed on present and former owners or operators of the properties or on parties that generated the wastes that contributed to the contamination.

The Company's policy is to accrue environmental investigation and remediation costs when it is probable that a liability has been incurred and the amount can be reasonably estimated. The measurement of the liability is based on an evaluation of currently available facts with respect to each individual situation and takes into consideration factors such as existing technology, presently enacted laws and regulations and prior experience in remediation of contaminated sites. Liabilities are established for all sites based on these factors. As assessments and remediation progress at individual sites, these liabilities are reviewed periodically and adjusted to reflect additional technical data and legal information. As of March 31, 2010 and December 31, 2009, EnPro had accrued liabilities of \$19.5 million and \$20.5 million, respectively, for estimated future expenditures relating to environmental contingencies. These amounts have been recorded on an undiscounted basis in the Consolidated Financial Statements.

The Company believes that its accruals for environmental liabilities are adequate based on currently available information. Actual costs to be incurred for identified situations in future periods may vary from estimates because of the inherent uncertainties in evaluating environmental exposures due to unknown conditions, changing government regulations and legal standards regarding liability. Subject to the imprecision in estimating future environmental costs, the Company believes that maintaining compliance with current environmental laws and government regulations will not require significant capital expenditures or have a material adverse effect on its financial condition, but could be material to its results of operations or cash flows in a given period.

Table of Contents***Colt Firearms and Central Moloney***

The Company has contingent liabilities related to divested businesses for which certain of its subsidiaries retained liability or are obligated under indemnity agreements. These contingent liabilities include, but are not limited to, potential product liability and associated claims related to firearms manufactured prior to 1990 by Colt Firearms, a former operation of Coltec, and for electrical transformers manufactured prior to 1994 by Central Moloney, another former Coltec operation. The Company also has ongoing obligations, which are included in retained liabilities of previously owned businesses in the Consolidated Balance Sheets, with regard to workers' compensation, retiree medical and other retiree benefit matters that relate to the Company's periods of ownership of these operations.

Crucible Materials Corporation

Crucible, which is engaged primarily in the manufacture and distribution of high technology specialty metal products, was a wholly owned subsidiary of Coltec until 1985 when a majority of the outstanding shares were sold. Coltec divested its remaining minority interest in 2004. Crucible filed for Chapter 11 bankruptcy protection in May 2009.

In conjunction with the closure of a Crucible plant in the early 1980s, Coltec was required to fund two trusts for retiree medical benefits for union employees at the plant. The first trust (the Benefits Trust) pays for these retiree medical benefits on an ongoing basis. Coltec has no ownership interest in the Benefits Trust, and thus the assets and liabilities of this trust are not included in the Company's Consolidated Balance Sheets. Under the terms of the Benefits Trust agreement, the trustees retained an actuary to assess the adequacy of the assets in the Benefits Trust in 1995 and 2005. A third and final report will be required in 2015. The actuarial reports in 1995 and 2005 determined that there were adequate assets to fund the payment of future benefits. If it is determined in 2015 that the Benefits Trust assets are not adequate to fund the payment of future medical benefits, the Back-Up Trust (discussed below) will be required to contribute additional amounts to the Benefits Trust. In the event there are ever excess assets in the Benefits Trust, those excess assets will not revert to Coltec.

Because of the possibility there could be insufficient funds in the Benefits Trust, Coltec was required to establish and make a contribution to a second trust (the Back-Up Trust). The trust assets of the Back-Up Trust are reflected in the Company's Consolidated Balance Sheets in other non-current assets and amounted to \$19.1 million at March 31, 2010. As noted above, based on the valuation completed in early 2005, an actuary determined there were adequate assets in the Benefits Trust to fund the estimated payments from the trust until the final valuation date in 2015. If there is no payment required or the amount of the payment is less than the value of the assets in the Back-Up Trust, the remaining assets of the Back-Up Trust will revert to the Company.

The Company also has ongoing obligations, which are included in other liabilities in the Consolidated Balance Sheets, including workers' compensation, retiree medical and other retiree benefit matters, in addition to those mentioned previously, that relate to the Company's period of ownership of this operation.

Debt Guarantees

As of March 31, 2010, the Company had contingent liabilities for potential payments on guarantees of certain debt and lease obligations totaling \$0.6 million. These guarantees arose from the divestiture of Crucible, and expire in 2010. In the event that Crucible, or a successor to its interests, does not fulfill their obligations under the agreements, the Company could be responsible for their payment. There is no liability for these guarantees reflected in the Company's Consolidated Balance Sheets because

Table of Contents

the Company believes that it will not be required to make payments on these obligations. The federal court overseeing the Crucible Chapter 11 bankruptcy ordered that the proceeds from a scheduled asset sale be applied to settle the related debt and lease obligations, which account for most of these guaranteed obligations.

Other Contingent Liability Matters

The Company provides warranties on many of its products. The specific terms and conditions of these warranties vary depending on the product and the market in which the product is sold. The Company records a liability based upon estimates of the costs that may be incurred under its warranties after a review of historical warranty experience and information about specific warranty claims. Adjustments are made to the liability as claims data and historical experience warrant.

Changes in the carrying amount of the product warranty liability for the quarters ended March 31, 2010 and 2009 are as follows:

	2010	2009
	(in millions)	
Balance at beginning of year	\$ 3.6	\$ 2.4
Charges to expense	1.5	0.2
Settlements made (primarily payments)	(0.8)	(0.1)
Balance at end of period	\$ 4.3	\$ 2.5

Asbestos

History. Certain of the Company's subsidiaries, primarily Garlock Sealing Technologies LLC (Garlock) and The Anchor Packing Company (Anchor), are among a large number of defendants in actions filed in various states by plaintiffs alleging injury or death as a result of exposure to asbestos fibers. Among the many products at issue in these actions are industrial sealing products, including gaskets and packing products. The damages claimed vary from action to action, and in some cases plaintiffs seek both compensatory and punitive damages. To date, neither Garlock nor Anchor has been required to pay any punitive damage awards, although there can be no assurance that they will not be required to do so in the future. Since the first asbestos-related lawsuits were filed against Garlock in 1975, Garlock and Anchor have processed more than 900,000 asbestos claims to conclusion (including judgments, settlements and dismissals) and, together with their insurers, have paid over \$1.4 billion in settlements and judgments and over \$400 million in fees and expenses.

Claims Mix. Of those claims resolved, approximately 3% have been claims of plaintiffs alleging the disease mesothelioma, approximately 7% have been claims of plaintiffs alleging lung or other cancers, and approximately 90% have been claims of plaintiffs alleging asbestosis, pleural plaques or other non-malignant impairment of the respiratory system. Of the approximately 92,900 open cases at March 31, 2010, the Company is aware of approximately 5,500 (5.9%) that involve claimants alleging mesothelioma. A large majority of the amount of settlement payments made by the Company are paid in connection with mesothelioma claims.

New Filings. About 1,300 new claims were filed against the Company's subsidiaries in the first quarter of 2010, up from the 1,100 claims filed in the first quarter of 2009. The number of new actions filed against the Company's subsidiaries in 2009 (4,400) was about 20% lower than the number filed in 2008 (5,500) and also lower than the number filed in 2007 (5,200). The number filed against our subsidiaries in each of the three years was much lower than the number filed in the peak filing year, 2003, when 44,700 new claims were filed. The overall trend of declining new filings has been principally in non-malignant claims, but there has also been a fairly significant decline in claims alleging lung and other

Table of Contents

cancers (other than mesothelioma). Conversely, the number of new filings of claims alleging mesothelioma increased in each of 2007, 2008 and 2009. Because the disease alleged is not yet known in about 12% of the 2009 filings and the first quarter of 2010, the number of claims alleging mesothelioma could increase further. Factors in the overall decline include, but are not limited to, tort reform in some high profile states, especially Mississippi, Texas and Ohio; tort reform in Florida, Georgia, South Carolina, Kansas and Tennessee; actions taken and rulings by some judges and court administrators that have had the effect of limiting access to their courts for claimants without sufficient ties to the jurisdiction or claimants with no discernible disease; acceleration of claims into past years; and declining incidence of asbestos-related disease. Factors in the increase of mesothelioma claims against the Company's subsidiaries in the last three years appear to include an increase in the propensity to sue by mesothelioma patients generally and also an increase in the percentage of claimants who sue to name Garlock as a defendant.

Product Defenses. The asbestos in products formerly sold by Garlock and Anchor was encapsulated, which means the asbestos fibers were incorporated into the products during the manufacturing process and sealed in a binder. The products were also nonfriable, which means they could not be crumbled by hand pressure. The U.S. Occupational Safety and Health Administration, which began generally requiring warnings on asbestos-containing products in 1972, has never required that a warning be placed on products such as Garlock's gaskets. Even though no warning label was required, Garlock included one on all of its asbestos-containing products beginning in 1978. Further, gaskets such as those previously manufactured and sold by Garlock are one of the few asbestos-containing products still permitted to be manufactured under regulations of the U.S. Environmental Protection Agency. Nevertheless, Garlock discontinued all manufacture and distribution of asbestos-containing products in the U.S. during 2000 and worldwide in mid-2001. From the mid-1980s until 2000, U.S. sales of asbestos-containing industrial sealing products were not a material part of Garlock's sales and were predominantly to sophisticated purchasers such as the U.S. Navy and large petrochemical facilities.

Garlock's product defenses have enabled it to achieve some success at trial, but it has also incurred some adverse verdicts. An adverse verdict was rendered against Garlock in the one case tried to verdict in the first quarter of 2010. Garlock won defense verdicts in ten of eighteen cases tried to verdict in the years 2006 through 2009. In the ten successful jury trials, the juries determined that either Garlock's products were not defective, that Garlock was not negligent, or that the claimant was not exposed to Garlock's products. Garlock's share of the nine adverse verdicts, most of which are being appealed, ranged from \$0 to \$1,350,000 and averaged about \$490,000.

Recent Trial Results. During the first quarter of 2010, Garlock began one trial. In a Texas mesothelioma case, the jury awarded the plaintiff \$3 million; Garlock's 45% share of this verdict was \$1,350,000. Garlock plans to appeal.

In 2009, Garlock began sixteen trials involving eighteen plaintiffs. Garlock prevailed in six mesothelioma trials, receiving defense verdicts in its favor from three juries, in South Carolina, Kentucky and Pennsylvania, dismissals in its favor from judges in California and Pennsylvania trials, and a \$0 share (after set-offs) of a \$700,000 jury verdict in a second South Carolina mesothelioma case. Adverse verdicts were rendered against Garlock in two mesothelioma cases: a second Kentucky case, where the jury awarded the plaintiff \$2.1 million and Garlock's share was \$525,000; and a New York case, where the jury awarded the plaintiff \$8 million and Garlock's apportioned 2% share was \$160,000. Garlock has since settled the New York case, and the Kentucky verdict has been appealed. The remaining eight lawsuits in which Garlock began trial involved 10 plaintiffs in Pennsylvania, New York, Massachusetts and Florida. All of them settled during trial before the juries reached a verdict. One of the settlements resolved a Philadelphia trial involving two mesothelioma plaintiffs. The lawsuit was tried under Philadelphia's reverse bifurcation process. In reverse bifurcation, the jury assesses damages in the first

Table of Contents

phase and then considers liability in a second phase. In phase 1, the Philadelphia jury determined that each plaintiff had suffered \$8.5 million in damages. During phase 2, before the jury determined the liability of specific defendants and apportioned the liability among them, Garlock resolved both cases as part of a settlement of several hundred claims.

In 2008, Garlock began eleven trials involving thirteen plaintiffs. Garlock received three jury verdicts in its favor, one in an Ohio case and two in a Pennsylvania trial involving two plaintiffs. A lawsuit in California was dismissed during trial. In South Carolina, Garlock obtained a dismissal in one case during trial because there was insufficient evidence of exposure to Garlock products. In a Kentucky lung cancer case, the jury awarded the plaintiff \$1.52 million. Garlock's share of this verdict was approximately \$682,000; Garlock has appealed. In a Pennsylvania lung cancer case the jury awarded the plaintiff \$400,000. Garlock's share was \$200,000, 50% of the total verdict. Garlock paid this verdict in the first quarter of 2009. In an Illinois case the jury awarded \$500,000 against Garlock to a plaintiff with asbestosis. Garlock has appealed. Also in Pennsylvania, four lawsuits involving five plaintiffs settled during trial before the jury reached a verdict.

In 2007, Garlock began nine trials involving twelve plaintiffs. A Massachusetts jury returned a defense verdict in favor of Garlock. In a Kentucky case, the jury awarded the plaintiff \$145,000 against Garlock. Garlock has appealed. Four lawsuits in Pennsylvania settled during trial before the juries had reached a verdict. Garlock also settled cases during trial in Louisiana, Maryland and Washington.

In 2006, Garlock began ten trials involving eleven plaintiffs. Garlock received jury verdicts in its favor in Oakland, California; Easton, Pennsylvania; and Louisville, Kentucky. In Pennsylvania, three other lawsuits involving four plaintiffs settled during trial before the juries reached verdict. Garlock also settled cases in Massachusetts, California and Texas during trial. In a Kentucky case, the jury awarded the plaintiff \$900,000 against Garlock. The award was significantly less than the \$1.75 million award against Garlock in a previous trial of the same case, which Garlock successfully appealed. In addition, Garlock obtained dismissals in two cases in Philadelphia after the juries were selected but before the trials began because there was insufficient evidence of exposure to Garlock products.

Appeals. Garlock has historically enjoyed success in a majority of its appeals. The Company believes that Garlock will continue to be successful in the appellate process, although there can be no assurance of success in any particular pending or future appeal. In March 2010, the Illinois Court of Appeals, in a unanimous decision, overturned a \$500,000 verdict that was entered against Garlock in 2008, granting a new trial. In June 2007, the New York Court of Appeals, in a unanimous decision, overturned an \$800,000 verdict that was entered against Garlock in 2004, granting a new trial. In March 2006, a three-judge panel of the Ohio Court of Appeals, in a unanimous decision, overturned a \$6.4 million verdict that was entered against Garlock in 2003, granting a new trial. The case subsequently settled. The Maryland Court of Appeals denied Garlock's appeal from a 2005 verdict in a mesothelioma case in Baltimore and Garlock paid that verdict, with post-judgment interest, in 2006. In a separate Baltimore case in 2006, the Maryland Court of Special Appeals denied Garlock's appeal from another 2005 verdict. The subsequent appeal of that decision was also denied and Garlock paid that verdict in 2007, also with interest. At March 31, 2010, five Garlock appeals were pending from adverse verdicts totaling \$3.6 million, up from \$2.7 million at December 31, 2009 and \$2.2 million at December 31, 2008.

In some cases, appeals require the provision of security in the form of appeal bonds, potentially in amounts greater than the verdicts. The Company has been required to provide cash collateral or letters of credit to secure the full amount of the bonds, which can restrict the use of a significant amount of the Company's cash for the periods of such appeals. At March 31, 2010, the Company had approximately \$3.3 million of appeal bonds secured by letters of credit.

Table of Contents

Settlements. Garlock settles and disposes of actions on a regular basis. Garlock's historical settlement strategy was to settle only cases in advanced stages of litigation. In 1999 and 2000, however, Garlock employed a more aggressive settlement strategy. The purpose of this strategy was to achieve a permanent reduction in the number of overall asbestos claims through the settlement of a large number of claims, including some early-stage claims and some claims not yet filed as lawsuits. Due to this short-term aggressive settlement strategy and a significant overall increase in claims filings, the settlement amounts paid in those years and several subsequent years were greater than the amounts paid in any year prior to 1999. In 2001, Garlock resumed its historical settlement strategy and focused on reducing settlement payments to match insurance recoveries. As a result, Garlock reduced settlement payments from \$106 million in 2000 to \$143 million in 2001 and \$120 million in 2002. Settlement payments continued to decline in 2007 through 2009, totaling \$88 million in 2007, \$83 million in 2008, and \$79 million in 2009. Settlement payments in the first quarter of 2010 were \$22.9 million, up from \$8.5 million in the first quarter of 2009. Most of the increase is related to the timing of payments, which were heavily weighted to the first quarter of 2010 and relatively light in the first quarter of 2009.

Settlements are made without any admission of liability. Settlement amounts vary depending upon a number of factors, including the jurisdiction where the action was brought, the nature and extent of the disease alleged and the associated medical evidence, the age and occupation of the plaintiff, the presence or absence of other possible causes of the plaintiff's alleged illness and other defendants, alternative sources of payment available to the plaintiff, the availability of legal defenses, and whether the action is an individual one or part of a group.

Before any payment on a settled claim is made, the claimant is required to submit a medical report acceptable to Garlock substantiating the asbestos-related illness and meeting specific criteria of disability. In addition, sworn testimony or other reliable evidence that the claimant worked with or around Garlock asbestos-containing products is required. The claimant is also required to sign a full and unconditional release of Garlock, its subsidiaries, parent, officers, directors, affiliates and related parties from any liability for asbestos-related injuries or claims.

Status of Anchor. Anchor is an inactive and insolvent indirect subsidiary of Coltec. There is no remaining insurance coverage available to Anchor. Anchor has no remaining assets and has not committed to settle any actions since 1998. As cases reach the trial stage, Anchor is typically dismissed without payment.

Insurance Coverage. At March 31, 2010, Garlock had \$219.4 million of insurance coverage and trust assets that the Company believes will be available to cover current and future asbestos claims and certain expense payments. In addition, at March 31, 2010, Garlock had classified \$5.0 million of otherwise available insurance as insolvent. Garlock collected approximately \$1.0 million from insolvent carriers in 2009, and the Company believes that Garlock may collect some additional amounts from insolvent carriers in the future. There can be no assurance that Garlock will collect any additional insurance from insolvent carriers.

Of the \$219.4 million of collectible insurance coverage and trust assets, the Company considers \$216.0 million (98%) to be of high quality because (a) the insurance policies are written or guaranteed by U.S.-based carriers whose credit rating by S&P is investment grade (BBB) or better, and whose AM Best rating is excellent (A-) or better, or (b) the assets are in the form of cash or liquid investments held in insurance trusts resulting from commutation agreements. The Company considers \$3.4 million (2%) to be of moderate quality because the insurance policies are written with various London market carriers. Of the \$219.4 million, \$177.8 million is allocated to claims that have been paid by Garlock and submitted to its insurance companies for reimbursement and the remainder is allocated to pending and estimated future claims as described later in this section.

Table of Contents

Arrangements with Garlock's insurance carriers limit the amount of insurance proceeds that Garlock is entitled to receive in any one year. Based on these arrangements, which include settlement agreements in place with most of the carriers involved, the Company anticipates that it will collect about \$70 million of insurance in 2010 and an average of \$20 million per year in each of the years 2011 through 2018. After 2018, Garlock will no longer have solvent insurance remaining for asbestos claims.

During the fourth quarter of 2006, the Company reached an agreement with a significant group of related U.S. insurers. These insurers had withheld payments pending resolution of a dispute. The agreement provided for the payment of the full amount of the insurance policies (\$194 million) in various annual payments to be made from 2007 through 2018. Under the agreement, Garlock received \$22 million in 2007, \$20 million in 2008, \$20 million in 2009 and is scheduled to receive \$15 million in 2010 and another \$117 million in the future. The future payments are included in the \$219.4 million of remaining coverage available to pay current and future Garlock asbestos-related claims and expenses.

In May 2006, the Company reached agreement with a U.S. insurer that resolved two lawsuits and an arbitration proceeding. Pursuant to the settlement, Garlock received \$3 million in 2009, \$3 million in 2008, \$3 million in 2007 and \$4 million in 2006 and is scheduled to receive \$2 million in 2010 and another \$6 million in the future. The future payments are included in the \$219.4 million of remaining coverage available to pay current and future Garlock asbestos-related claims and expenses.

In the second quarter of 2004, the Company reached agreement with Equitas, the London-based entity responsible for the pre-1993 Lloyds' of London policies in the Company's insurance block, concerning settlement of its exposure to the Company's subsidiaries' asbestos claims. As a result of the settlement, \$88 million was placed in an independent trust. In the fourth quarter of 2004, the Company reached agreement with a group of London market carriers (other than Equitas) and one of its U.S. carriers that has some policies reinsured through the London market. As a result of the settlement, \$55.5 million was placed in an independent trust. At March 31, 2010, the aggregate market value of the funds remaining in the two trusts was \$12.0 million, which is included in the \$219.4 million of insurance coverage and trust assets available to pay current and future Garlock asbestos-related claims and expenses.

Insurance coverage for asbestos claims is not available to cover exposures initially occurring on and after July 1, 1984. Although Garlock and Anchor continue to be named as defendants in new actions, only a few allege initial exposure after July 1, 1984. To date, no payments have been made with respect to these few claims, pursuant to a settlement or otherwise. Garlock and Anchor believe that they have substantial defenses to these claims and therefore automatically reject them for settlement. However, there can be no assurance that any or all of these defenses will be successful in the future.

The Company's Liability Estimate. Prior to mid-2004, the Company maintained that its subsidiaries' liability for unasserted claims was not reasonably estimable. The Company estimated and recorded liabilities only for pending claims in advanced stages of processing, for which it believed it had a basis for making a reasonable estimate. The Company disclosed the significance of the total potential liability for unasserted claims in considerable detail. During 2004, the Company authorized counsel to retain Bates White, a recognized expert, to assist in estimating the Company's subsidiaries' liability for pending and future asbestos claims.

Bates White's first report, dated February 17, 2005, provided an estimate of the liability as of December 31, 2004 for the following ten years, which represented a time horizon within which Bates White believed such liability was both probable and estimable within a range of values. Bates White has updated its estimate regularly since the end of 2004.

Each quarter until the fourth quarter of 2006, the Company adopted the Bates White estimate and adjusted the liability to equal the low end of the then-current range. Until the second quarter of 2006, the

Table of Contents

additional liability was recorded with a corresponding increase in the Company's insurance receivable, and thus did not affect net income. During the second quarter of 2006, however, the Company's insurance was fully allocated to past, present and future claims, and therefore subsequent changes to the Bates White estimate were recorded as charges to income.

The Company has independently developed internal goals for asbestos-related liabilities. The Company has used these goals for a variety of purposes, including guidance for settlement negotiations and trial strategy, in its strategic planning, budgeting and cash flow planning processes, in setting targets for annual and long-term incentive compensation, and in producing its own estimate of the current and future liability. The Company's internal estimate has been within the Bates White range of equally likely estimates each time the estimate has been updated. As a result, Bates White and management believe that management's internal estimate for the next ten years represents the most likely point within the range. Accordingly, the Company's recorded liability is derived from its internal estimate.

The Company focuses on future cash flows to prepare its estimate. It makes assumptions about future asbestos spending based on (1) past trends, (2) publicly available epidemiological data, (3) current and anticipated agreements with plaintiff firms and management's judgment about the current and future negotiations and the litigation environment, (4) the availability to claimants of other payment sources, both co-defendants and the 524(g) trusts, (5) the Company's remaining available insurance, (6) general developments in the asbestos litigation, and (7) the input and insight provided to the Company by Bates White. The Company adjusts its estimate when current cash flow results and long-term trends suggest that its targets cannot be met. As a result, the Company has a process that it believes produces the best estimate of the future liability for the ten-year time period within the Bates White range.

The Company currently estimates that the liability of its subsidiaries for the indemnity costs of resolving asbestos claims for the next ten years will be \$468 million. The estimated liability of \$468 million is before any tax benefit and is not discounted to present value, and it does not include fees and expenses, which are recorded as incurred. The recorded liability will continue to be impacted by actual claims and settlement experience and any change in the legal environment that could cause a significant increase or decrease in the long-term expectations of management and Bates White. The Company expects the recorded liability to fluctuate, perhaps significantly. Any significant change in the estimated liability could have a material effect on the Company's consolidated financial position and results of operations.

The estimated range of potential liabilities provided by Bates White at December 31, 2009 was \$480 million to \$602 million. (Garlock made \$22.9 million in indemnity payments in the first quarter.) Increases in the range over time have been attributable primarily to (1) the increasing propensity to sue Garlock in mesothelioma cases; (2) an increase in settlement values of mesothelioma claims resulting from the transfer of joint and several liability of former co-defendants who filed for bankruptcy protection; (3) an increase in claims filings and values in some jurisdictions, most notably California; (4) the delay in, and uncertain impact of, the funding and implementation of trusts formed under Section 524(g) of the United States Bankruptcy Code to pay asbestos claims against numerous defendants in Chapter 11 reorganization cases; and (5) the difficulty for defendants in the tort system to obtain credit for payments made from the 524g trusts that are funded and paying claims. The 524(g) trusts are estimated by some, including Bates White, to have more than \$20 billion dollars available for the payment of asbestos claims, with billions more scheduled to fund new trusts in cases currently nearing confirmation. Trust payments could have a significant impact on the Company's future settlement payments and could therefore significantly affect its liability.

At December 31, 2009, Bates White also indicated a broader range of potential estimates from \$252 million to \$698 million. The Company cautions that points within that broader range remain possible outcomes. Also, while the Company agrees with Bates White that beyond two to four years for

Table of Contents

Garlock's economically-driven non-malignant claims and beyond ten years for Garlock's cancer claims and medically-driven non-malignant claims, there are reasonable scenarios in which the [asbestos] expenditure is *de minimus*, it cautions that the process of estimating future liabilities is highly uncertain. Adjusting the Company's liability to the best estimate within the range does not change that fact. In the words of the Bates White report, the reliability of estimates of future probable expenditures of Garlock for asbestos-related personal injury claims declines significantly for each year further into the future. Scenarios continue to exist that could result in total future asbestos-related expenditures for Garlock in excess of \$1 billion.

As previously mentioned, the liability estimate does not include legal fees and expenses, which add considerably to the costs each year. In 2008 and 2009, these expenses averaged approximately \$7 million per quarter. In addition to these legal fees and expenses, the Company expects to continue to record charges or credits to income in future quarters for:

Increases or decreases, if any, in the Company's estimate of Garlock's potential liability, plus

Increases, if any, that result from additional quarters added to maintain the ten-year estimation period (increases of this type have averaged approximately \$6 million per quarter for the last two years), plus

Amounts, if any, of solvent insurance lost or commuted, amounts of recoveries from insolvent carriers, and earnings from insurance settlement trusts.

In the first quarter of 2010, the Company recorded a pre-tax charge of \$14.5 million. The charge reflects \$6.2 million of fees and expenses paid during the quarter and an \$8.3 million non-cash charge consisting of \$5.8 million to add an estimate of the liability for the first quarter of 2020 to maintain a ten-year estimate and an increase of \$2.5 million in incurred but unpaid legal fees. In the first quarter of 2009, the Company recorded a pre-tax charge of \$13.6 million to reflect cash outlays of \$4.8 million for fees and expenses and an \$8.8 million non-cash charge.

Quantitative Claims and Insurance Information. The Company's liability as of March 31, 2010 was \$477.8 million (the Company's ten-year estimate of the liability described above of \$468.0 million plus \$9.8 million of accrued legal and other fees already incurred but not yet paid). The liability as of March 31, 2010, included \$81.6 million classified as a current liability and \$396.2 million classified as a noncurrent liability. The recorded amounts do not include legal fees and expenses to be incurred in the future.

As of March 31, 2010, the Company had remaining insurance and trust coverage of \$219.4 million, which is reflected on its balance sheet as a receivable (\$71.3 million classified in current assets and \$148.1 classified in non-current assets) and which it believes will be available for the payment of asbestos-related claims. Included in the receivable is \$177.8 million in insured claims and expenses that our subsidiaries have paid out in excess of amounts recovered from insurance. These amounts are recoverable under the terms of the Company's insurance policies and have been billed to the insurance carriers. The remaining \$41.6 million will be available for pending and future claims.

The table below quantitatively depicts the number of asbestos-related cash flows, the amount that the Company expects Garlock to recover from insurance related to this liability, and an analysis of the liability.

Table of Contents

	As of and for the Three Months Ended March 31,	
	2010	2009
Cash Flow (dollars in millions)		
Payments (1)	\$ (35.6)	\$ (13.3)
Insurance recoveries (2)	19.2	5.2
Net cash flow	\$ (16.4)	\$ (8.1)
Solvent Insurance and Trust Assets (dollars in millions)		
Insurance receivable for previously paid claims (3)	\$ 177.8	\$ 233.6
Insurance available for pending and future claims	41.6	68.6
Remaining solvent insurance and trust assets	\$ 219.4	\$ 302.2
Liability Analysis (dollars in millions)		
Liability for pending and future claims (4)(5)	\$ 477.8	\$ 465.8
Insurance available for pending and future claims	41.6	68.6
Liability in excess of insurance coverage (5)	436.2	397.2
Insurance receivable for previously paid claims	177.8	233.6
Liability in excess of anticipated insurance collections (5)	\$ 258.4	\$ 163.6
(1) Includes all payments for judgments, settlements, fees and expenses made in the period.		
(2) Includes all recoveries from insurance received in the period.		
(3) Includes previous payments for which Garlock is entitled to receive corresponding		

insurance recoveries but has not received payment, in large part due to annual limits imposed under insurance arrangements.

- (4) At March 31, 2010 and 2009, the liability represents management's best estimate of the future payments for the following ten-year period. Amounts shown include \$9.8 million and \$9.4 million at March 31, 2010 and 2009, respectively, of accrued fees and expenses for services previously rendered but unpaid.

- (5) Does not include fees and expenses to be incurred in the future, which are recorded as a charge to income when incurred.

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations.

The following is management's discussion and analysis of certain significant factors that have affected our financial condition, cash flows and operating results during the periods included in the accompanying unaudited consolidated financial statements and the related notes. You should read this in conjunction with those financial statements and the audited consolidated financial statements and related notes included in our annual report on Form 10-K for the fiscal year ended December 31, 2009.

Forward-Looking Information

This quarterly report on Form 10-Q includes statements that reflect projections or expectations of the future financial condition, results of operations and business of EnPro that are subject to risk and uncertainty. We believe those statements to be forward-looking statements within the meaning of Section 27A of the Securities Act of 1933 and Section 21E of the Securities Exchange Act of 1934. When used in this report, the words may, hope, will, should, expect, plan, anticipate,

Table of Contents

intend, believe, estimate, predict, potential, continue, likely, and other expressions generally identify forward-looking statements.

We cannot guarantee that actual results or events will not differ materially from those projected, estimated, assigned or anticipated in any of the forward-looking statements contained in this report. In addition to those factors specifically noted in the forward-looking statements and those identified in the Company's annual report on Form 10-K for the year ended December 31, 2009, other important factors that could result in those differences include:

the resolution of current and potential future asbestos claims against certain of our subsidiaries, which depends on such factors as the amount and timing of payments of claims and related expenses, the negotiation of settlements, the results of litigation, the amount and timing of insurance collections, the financial viability of insurance carriers, and the bankruptcies of other defendants;

the estimated liability for current and potential future asbestos claims that may be received, which is highly uncertain, is based on subjective assumptions and is a point within a range of estimated values;

general economic conditions in the markets served by our businesses, some of which are cyclical and experience periodic downturns;

prices and availability of raw materials; and

the amount of any payments required to satisfy contingent liabilities related to discontinued operations of our predecessors, including liabilities for certain products, environmental matters, guaranteed debt payments, employee benefit obligations and other matters.

We caution our shareholders not to place undue reliance on these statements, which speak only as of the date on which such statements were made.

Whenever you read or hear any subsequent written or oral forward-looking statements attributed to us or any person acting on our behalf, you should keep in mind the cautionary statements contained or referred to in this section. We do not undertake any obligation to release publicly any revisions to these forward-looking statements to reflect events or circumstances after the date of this report or to reflect the occurrence of unanticipated events.

Overview and Outlook

Overview. EnPro was incorporated under the laws of the State of North Carolina on January 11, 2002. We design, develop, manufacture and market proprietary engineered industrial products. We have 44 primary manufacturing facilities located in the United States and 10 countries outside the United States.

We manage our business as three segments: a Sealing Products segment, an Engineered Products segment, and an Engine Products and Services segment.

Our Sealing Products segment designs, manufactures and sells sealing products, including metallic, non-metallic and composite material gaskets, rotary seals, compression packing, resilient metal seals, elastomeric seals, hydraulic components and expansion joints, as well as wheel-end component systems, PTFE products, conveyor belting and sheeted rubber products. These products are used in a variety of industries, including chemical and petrochemical processing, petroleum extraction and refining,

Table of Contents

pulp and paper processing, heavy-duty trucking, power generation, food and pharmaceutical processing, primary metal manufacturing, mining, water and waste treatment, aerospace, medical, filtration and semiconductor fabrication.

Our Engineered Products segment includes operations that design, manufacture and sell self-lubricating, non-rolling, metal-polymer, solid polymer and filament wound bearing products, aluminum blocks for hydraulic applications and precision engineered components for reciprocating compressors. These products are used in a wide range of applications, including the automotive, pharmaceutical, pulp and paper, natural gas, health, pump and compressor construction, power generation, machine tools, air treatment, refining, petrochemical and general industrial markets.

Our Engine Products and Services segment designs, manufactures, sells and services heavy-duty, medium-speed diesel, natural gas and dual fuel reciprocating engines. The United States government and the general markets for marine propulsion, power generation, and pump and compressor applications use these products and services.

The Company's Quincy Compressor business designed, manufactured and sold rotary and reciprocating air compressors, vacuum pumps and air systems used in the automotive, pharmaceutical, natural gas, health, air treatment and general industrial markets. In December 2009, we signed a definitive agreement to sell the Quincy Compressor business to the Atlas Copco Group for approximately \$190 million in cash. The sale of Quincy's U.S.-based operations closed on March 1, 2010 and the sale of Quincy's subsidiary in China is expected to close during the second quarter of 2010. Accordingly, the Quincy Compressor business is presented as a discontinued operation in this Form 10-Q. Additional information regarding the sale of the Quincy Compressor business is included in Item 1 and Note 2.

In February 2009, we purchased PTM (UK) Limited, a privately-owned manufacturer and distributor of sealing products with two locations in the United Kingdom. The acquisition of PTM continued the expansion of Garlock's presence in the U.K., increasing the scale of the U.K. sealing products business and the ability to address new market segments. PTM is included in our Sealing Products segment.

In August and September 2009, we purchased USA Parts & Service, LLC, a privately-owned parts supplier for natural gas compressors located in Gillette, Wyoming, and Player & Cornish P.E.T. Limited, a privately-owned manufacturer of aftermarket components for compressors based in the United Kingdom. These businesses are managed as part of the CPI division in the Engineered Products segment.

In December 2009, we purchased Technetics Corporation, a leading manufacturer of abradable seals, brush seals and acoustic products for turbines used in aerospace and power generation applications. Technetics is located in Deland, Florida. The acquisition of Technetics provides Garlock with a unique line of metal sealing products that is expected to accelerate expansion in aerospace markets and broaden the line of products offered for land-based turbines. Technetics is included in our Sealing Products segment.

During the first quarter of 2009, we concluded that events had occurred and circumstances had changed which required us to perform an interim period goodwill impairment test for all of our reporting units, including GGB in the Engineered Products segment and at Plastomer Technologies in the Sealing Products segment, both of which had experienced reduced volumes as a result of deterioration in the global economic environment. We performed a preliminary analysis and determined that it was necessary to conduct an impairment test for GGB and Plastomer.

During the second quarter of 2009, we conducted a thorough analysis to compare the fair value of GGB and Plastomer Technologies to the respective carrying values assigned to their net assets. The

Table of Contents

excess of the fair value of each reporting unit over the carrying value assigned to its assets and liabilities is the implied fair value of its goodwill. To estimate the fair value, we used both discounted cash flow and market valuation approaches. The discounted cash flow approach uses cash flow projections to calculate the fair value of each reporting unit; the market approach relies on market multiples of similar companies. The key assumptions used for the discounted cash flow approach include business projections, growth rates, and discount rates. The discount rate we used was based on EnPro's weighted average cost of capital. For the market approach, we chose a group of 26 companies that we believed to be representative of our diversified industrial and automotive peers. Based on the results of the test, we determined that the fair values of GGB and Plastomer were less than the carrying values of their net assets, resulting in an implied fair value of goodwill of zero for both GGB and Plastomer. As a result, we recognized a non-cash impairment charge of \$113.1 million, which represented all of the remaining goodwill in these reporting units, in the second quarter of 2009.

During the analysis, we also tested the fair value of all our other reporting units and determined that there was no goodwill impairment for any of the other reporting units. We completed our required annual impairment test of goodwill for all of our reporting units as of October 1, 2009 and the results did not indicate any impairment of the remaining goodwill. Based on the results of the test, we determined that the fair value of one of the reporting units exceeded its carrying value by approximately 60% and the other reporting units having goodwill balances had fair values that exceeded their carrying values by over 100%.

As described elsewhere in this Management's Discussion and Analysis of Financial Condition and Results of Operations, we actively manage the asbestos claims against our subsidiaries and the remaining insurance assets available for the payment of these claims. We accrue an estimated liability for both pending and future asbestos claims for the next ten years. For additional information on this subject discussed in this section, see Contingencies Asbestos.

Outlook. Demand has increased and our markets are showing signs that their recovery will extend into the second half of 2010. While seasonal factors are likely to affect the pace of improvement later in the year, we should continue to see attractive year-over-year comparisons in the performance of our operations throughout 2010. Our financial condition remains strong, and with the proceeds from the Quincy sale, we have substantial capacity to pursue acquisitions and capture other opportunities to improve our company.

Subject to a return to historical levels of profitability, and mix of domestic and foreign earnings, we expect that our effective tax rate in 2010 and for the foreseeable future will be less volatile than it was in 2009. As a result of structural and organizational changes we have made in our European operations, we anticipate that our effective tax rate should generally be lower than historical rates.

We anticipate that cash flows in 2010 should benefit from improved operating income partially offset by higher capital expenditures, working capital and pension contributions.

Despite significant improvement in the equity and fixed income investment markets in 2009, our U.S. defined benefit plans continue to be underfunded due to an increase in the value of plan liabilities, which more than offset the increase in assets. Based on currently available data, which is subject to change, we estimate that we will be required to make cash contributions in 2010 totaling \$3.4 million. We estimate that the annual U.S. pension expense in 2010 will be flat versus 2009.

In connection with our growth strategy, we will continue to evaluate acquisitions and divestitures in 2010; however, the impact of such acquisitions and divestitures cannot be predicted and therefore is not reflected in this outlook.

Table of Contents

We address our outlook on asbestos claims and their impact in this Management's Discussion and Analysis of Financial Condition and Results of Operations in the Asbestos subsection of the Contingencies section.

Results of Operations

	Quarters Ended March 31,	
	2010	2009
	(in millions)	
Sales		
Sealing Products	\$ 113.8	\$ 97.1
Engineered Products	75.1	56.8
Engine Products and Services	39.6	31.7
	228.5	185.6
Intersegment sales	(0.3)	(0.5)
Total sales	\$ 228.2	\$ 185.1
Segment Profit (Loss)		
Sealing Products	\$ 17.8	\$ 12.7
Engineered Products	6.4	(5.1)
Engine Products and Services	10.0	5.5
Total segment profit	34.2	13.1
Corporate expenses	(8.0)	(7.3)
Asbestos-related expenses	(14.5)	(13.6)
Interest expense, net	(2.8)	(3.0)
Other expense, net	(0.6)	(0.8)
Income (loss) from continuing operations before income taxes	\$ 8.3	\$ (11.6)

Segment profit is total segment revenue reduced by operating expenses and restructuring and other costs identifiable with the segment. Corporate expenses include general corporate administrative costs. Expenses not directly attributable to the segments, corporate expenses, net interest expense, asbestos-related expenses, gains/losses or impairments related to the sale of assets, and income taxes are not included in the computation of segment profit. The accounting policies of the reportable segments are the same as those for EnPro.

First Quarter of 2010 Compared to the First Quarter of 2009

Sales of \$228.2 million in the first quarter of 2010 increased 23% from \$185.1 million in the comparable quarter of 2009. The increase in sales was the result of stronger volumes in all of our segments. The volume increases resulted primarily from stronger automotive volumes at GGB, higher OEM and aftermarket truck and trailer volumes at Stemco, and improved aftermarket activity at Fairbanks Morse Engine. The increase in the values of foreign currencies relative to the U.S. dollar accounted for four percentage points of the increase. The additional sales from the acquisitions completed since the first quarter of 2009 contributed three percentage points of the increase.

Segment profit, management's primary measure of how our operations perform, increased 161% from \$13.1 million in the first quarter of 2009 to \$34.2 million in 2010. Segment profit increased primarily due to higher volumes, a

favorable mix of aftermarket sales which carry higher margins than OEM, higher absorption of manufacturing costs due to increased production levels and improved labor

Table of Contents

productivity. Segment margins, defined as segment profit divided by sales, improved from 7.1% in 2009 to 15.0% in 2010. The stronger results at all businesses, particularly GGB and Fairbanks Morse Engine, were the primary cause for the increase in segment margins.

We recorded an income tax expense of \$2.7 million on income from continuing operations before taxes of \$8.3 million in the first quarter of 2010. During the first quarter of 2009, we recorded an income tax benefit of \$12.7 million on a loss from continuing operations before income taxes of \$11.6 million. The return to profitability, and the more balanced jurisdictional mix of earnings, resulted in an income tax expense in the first quarter of 2010 compared to the income tax benefit recorded in the same period of 2009.

Net income from continuing operations was \$5.6 million, or \$0.27 per share, in the first quarter of 2010 compared to net income from continuing operations of \$1.1 million, or \$0.06 per share, in the same quarter of 2009.

Net income was \$99.0 million, or \$4.83 per share in the first quarter of 2010 compared to net income of \$3.2 million, or \$0.16 per share, in the same quarter of 2009. Net income in the first quarter of 2010 included the gain on the sale of Quincy Compressor. Earnings (loss) per share are expressed on a diluted basis.

Following is a discussion of operating results for each segment during the quarter:

Sealing Products. Sales of \$113.8 million in the first quarter of 2010 were 17% higher than the \$97.1 million reported in the same quarter of 2009. Organic increases accounted for eleven percentage points of the increase and the favorable impact of foreign currency exchange rates versus the U.S. dollar accounted for three percentage points of the increase. Acquisitions completed since the first quarter of 2009 favorably impacted revenue by three percentage points. Sales at Garlock Sealing Technologies increased due to the inclusion of Technetics in the first quarter of 2010, the weaker U.S. dollar and selected price increases and improved industrial markets. Stemco's sales during the quarter increased primarily as a result of the higher volumes for its OEM and aftermarket business and the introduction of new brake products. Plastomer Technologies experienced sales increases during the first quarter of 2010 compared to the same quarter last year due to higher volumes in its semiconductor and aerospace markets.

Segment profit of \$17.8 million in the first quarter of 2010 increased 40% compared to the \$12.7 million reported in the first quarter of 2009. The increase in profit at Garlock Sealing Technologies reflected the impact of selected price increases and the inclusion of Technetics, partially offset by a higher mix of lower margin product. Stemco reported an increase in profit primarily due to improvement in the heavy-duty vehicle markets and the resulting higher volume. Productivity improvements and lower material costs favorably impacted Plastomer Technologies' results as they reported an increase in earnings compared to last year. Operating margins for the segment increased to 15.6% in 2010 from 13.1% in 2009 as a result of the earnings increases at these operations.

Engineered Products. Sales of \$75.1 million in the first quarter of 2010 were 32% higher than the \$56.8 million reported in 2009. Acquisitions completed since the first quarter of 2009 favorably impacted revenue by five percentage points and the year-over-year increase in the value of foreign currencies produced seven percentage points of the sales increase. The remaining twenty percentage points of the sales increase resulted from improving market conditions within the segment. Sales for GGB in the first quarter of 2010 were significantly higher than the amount reported in the comparable quarter of 2009 primarily due to increased volume in automotive and industrial markets. Sales for Compressor Products International in the first quarter of 2010 were higher due to the increased value of foreign currencies and the inclusion of USA Parts & Service, LLC and Player & Cornish P.E.T. Limited, which were acquired in the third quarter of 2009.

Table of Contents

The segment profit in the first quarter of 2010 was \$6.4 million, compared to the \$5.1 million segment loss reported in the same quarter of 2009. GGB's profitability improved in 2010 primarily due to higher volume in its automotive and industrial markets. Profits at Compressor Products International increased as a result of lower restructuring costs in the first quarter of 2010 than during the same quarter of 2009 and lower material and direct labor costs. The 8.5% operating margin in the quarter for the segment compares to a negative 9% margin in the first quarter of 2009.

Engine Products and Services. Sales increased 25% from \$31.7 million in the first quarter of 2009 to \$39.6 million in the first quarter of 2010. The increase was attributable to higher parts and service sales while new engine sales were flat.

The segment reported a profit of \$10.0 million in the first quarter of 2010 compared to \$5.5 million in the first quarter of 2009. The year-over-year improvement was a result of higher sales of more profitable parts and service, productivity improvements and cost reductions. Operating margins for the segment increased to 25.3% in the first quarter of 2010 from 17.4% in the same quarter of 2009.

Liquidity and Capital Resources

Cash requirements for working capital, capital expenditures, acquisitions and debt repayments have been funded from cash balances on hand. The Company is proactively pursuing acquisition opportunities, most of which can be funded with our available cash balances. Should we need additional capital in the future, we have other resources available, which are discussed in this section under the heading of Capital Resources.

Cash Flows

Operating activities used cash in the amount of \$3.8 million in the first quarter of 2010 compared to \$1.0 million used in the same period last year. The increased operating cash flow use was primarily attributable to increased working capital levels, which were driven by the increase in sales volumes, and higher net asbestos payments. Net asbestos payments increased due to higher settlements and legal fees, partially offset by increased insurance recoveries.

Investing activities from continuing operations generated \$181.0 million of cash during the first quarter of 2010, primarily due to the divestiture of Quincy Compressor, and used \$9.2 million during the same period in 2009. We received \$184.2 million from the divestiture of Quincy Compressor during the first quarter of 2010 and there were no divestitures in the similar period of 2009. We received \$0.2 million during the first quarter of 2010 due to a post-closing adjustment from a prior acquisition and in the similar period of 2009 we made net payments of \$5.3 million to complete acquisitions.

In the first quarter of 2009, we retired \$9.6 million in industrial revenue bonds.

Capital Resources

Our primary U.S. operating subsidiaries have a senior secured revolving credit facility with a group of banks, which matures on April 21, 2011. We have not borrowed against this facility. The facility is collateralized by our receivables, inventories, intellectual property, insurance receivables and all other personal property assets (other than fixed assets), and by pledges of 65% of the capital stock of our direct foreign subsidiaries and 100% of the capital stock of our direct and indirect U.S. subsidiaries. The facility contains covenants and restrictions that are customary for an asset-based loan, including limitations on dividends, limitations on incurrence of indebtedness and maintenance of a fixed charge

Table of Contents

coverage financial ratio. Certain of the covenants and restrictions apply only if availability under the facility falls below certain levels.

The maximum amount available for borrowings under the facility is \$75 million. Under certain conditions, we may request that the facility be increased by up to \$25 million, to \$100 million in total. Actual borrowing availability at any date is determined by reference to a borrowing base of specified percentages of eligible accounts receivable and inventory and is reduced by usage of the facility, which includes outstanding letters of credit, and any reserves. The actual borrowing availability at March 31, 2010 under our senior secured revolving credit facility was \$63.8 million after giving consideration to \$7.4 million of letters of credit outstanding.

We issued \$172.5 million of convertible debentures in 2005. The debentures bear interest at an annual rate of 3.9375%, and we pay accrued interest on April 15 and October 15 of each year. The debentures will mature on October 15, 2015. The debentures are direct, unsecured and unsubordinated obligations and rank equal in priority with our unsecured and unsubordinated indebtedness and will be senior in right of payment to all subordinated indebtedness. They effectively rank junior to our secured indebtedness to the extent of the value of the assets securing such indebtedness. The debentures do not contain any financial covenants. Holders may convert the debentures into cash and shares of our common stock, if any, at an initial conversion rate of 29.5972 shares of common stock per \$1,000 principal amount of debentures (which is equal to an initial conversion price of \$33.79 per share), subject to adjustment, before the close of business on October 15, 2015. Upon conversion, we would deliver (i) cash equal to the lesser of the aggregate principal amount of the debentures to be converted or our total conversion obligation, and (ii) shares of our common stock in respect of the remainder, if any, of our conversion obligation. Conversion is permitted only under certain circumstances that had not occurred at March 31, 2010.

We used a portion of the net proceeds from the sale of the debentures to enter into call options (hedge and warrant transactions), which entitle us to purchase shares of our stock from a financial institution at \$33.79 per share and entitle the financial institution to purchase shares of our stock from us at \$46.78 per share. This will reduce potential dilution to our common stockholders from conversion of the Debentures and have the effect to us of increasing the conversion price of the debentures to \$46.78 per share.

Critical Accounting Policies and Estimates

Please refer to our annual report on Form 10-K for the fiscal year ended December 31, 2009, for a complete list of our critical accounting policies and estimates.

Contingencies***General***

Various claims, lawsuits and administrative proceedings with respect to commercial, product liability, asbestos and environmental matters, all arising in the ordinary course of business, are pending or threatened against us or our subsidiaries and seek monetary damages and/or other remedies. We believe that any liability that may finally be determined with respect to commercial and non-asbestos product liability claims should not have a material effect on our consolidated financial condition, results of operations or cash flows. From time to time, we and our subsidiaries are also involved as plaintiffs in legal proceedings involving contract, patent protection, environmental, insurance and other matters.

Table of Contents***Environmental***

Our facilities and operations are subject to federal, state and local environmental and occupational health and safety requirements of the U.S. and foreign countries. We take a proactive approach in our efforts to comply with environmental, health and safety laws as they relate to our manufacturing operations and in proposing and implementing any remedial plans that may be necessary. We also regularly conduct comprehensive environmental, health and safety audits at our facilities to maintain compliance and improve operational efficiency.

Although we believe past operations were in substantial compliance with the then applicable regulations, we or one of our subsidiaries have been named as a potentially responsible party, or are otherwise involved, at 17 sites where the costs to us are expected to exceed \$100,000. Investigations have been completed for 13 sites and are in progress at the other 4 sites. The majority of these sites relate to remediation projects at former operating facilities that were sold or closed and primarily deal with soil and groundwater contamination.

As of March 31, 2010 and December 31, 2009, EnPro had accrued liabilities of \$19.5 million and \$20.5 million, respectively, for estimated future expenditures relating to environmental contingencies. See Note 13 to the Consolidated Financial Statements for additional information regarding our environmental contingencies.

Colt Firearms and Central Moloney

We have contingent liabilities related to divested businesses for which certain of our subsidiaries retained liability or are obligated under indemnity agreements. These contingent liabilities include, but are not limited to, potential product liability and associated claims related to firearms manufactured prior to 1990 by Colt Firearms, a former operation of Coltec, and for electrical transformers manufactured prior to 1994 by Central Moloney, another former Coltec operation. Coltec also has ongoing obligations, which are included in retained liabilities of previously owned businesses in our Consolidated Balance Sheets, with regard to workers' compensation, retiree medical and other retiree benefit matters that relate to Coltec's periods of ownership of these operations.

Crucible Materials Corporation

Crucible Materials Corporation (Crucible), which is engaged primarily in the manufacture and distribution of high technology specialty metal products, was a wholly owned subsidiary of Coltec until 1985 when a majority of the outstanding shares were sold. Coltec divested its remaining minority interest in 2004. Crucible filed for Chapter 11 bankruptcy protection in May 2009. See Note 13 to the Consolidated Financial Statements for information about certain liabilities relating to Coltec's ownership of Crucible.

Asbestos

History. Certain of our subsidiaries, primarily Garlock Sealing Technologies LLC (Garlock) and The Anchor Packing Company (Anchor), are among a large number of defendants in actions filed in various states by plaintiffs alleging injury or death as a result of exposure to asbestos fibers. Among the many products at issue in these actions are industrial sealing products, including gaskets and packing products. Since the first asbestos-related lawsuits were filed against Garlock in 1975, Garlock and Anchor have processed more than 900,000 asbestos claims to conclusion (including judgments, settlements and dismissals) and, together with their insurers, have paid over \$1.4 billion in settlements and judgments and over \$400 million in fees and expenses. See Note 13 to the Consolidated Financial

Table of Contents

Statements for information on the disease mix in the claims, new claims recently filed, product defenses asserted by our subsidiaries, recent trial and appellate results, and settlements.

Status of Anchor. Anchor is an inactive and insolvent indirect subsidiary of Coltec. There is no remaining insurance coverage available to Anchor. Anchor has no remaining assets and has not committed to settle any actions since 1998. As cases reach the trial stage, Anchor is typically dismissed without payment.

Insurance Coverage. At March 31, 2010, Garlock had \$219.4 million of insurance coverage and trust assets that we believe will be available to cover current and future asbestos claims and certain expense payments. At March 31, 2010, Garlock had classified \$5.0 million of otherwise available insurance as insolvent. Garlock collected approximately \$1.0 million from insolvent carriers in 2009, and we believe that Garlock may collect some additional amounts from insolvent carriers in the future. There can be no assurance that Garlock will collect any additional insurance from insolvent carriers. See Note 13 to the Consolidated Financial Statements for additional information about the quality of Garlock's insurance, arrangements for payments with certain insurers, the resolution of past insurance disputes, and coverage exclusions for exposure after July 1, 1984.

Our Liability Estimate. Prior to mid-2004, we maintained that our subsidiaries' liability for unasserted claims was not reasonably estimable. We estimated and recorded liabilities only for pending claims in advanced stages of processing, for which we believed we had a basis for making a reasonable estimate. We disclosed the significance of the total potential liability for unasserted claims in considerable detail. During 2004 we authorized counsel to retain Bates White, a recognized expert, to assist in estimating our subsidiaries' liability for pending and future asbestos claims.

Bates White's first report, dated February 17, 2005, provided an estimate of the liability as of December 31, 2004 for the following ten years, which represented a time horizon within which Bates White believed such liability was both probable and estimable within a range of values. Bates White has updated its estimate regularly since the end of 2004.

We have independently developed internal goals for asbestos-related liabilities. We have used these goals for a variety of purposes, including guidance for settlement negotiations and trial strategy, in our strategic planning, budgeting and cash flow planning processes, in setting targets for annual and long-term incentive compensation, and in producing our own estimate of the current and future liability. Our internal estimate has been within the Bates White range of equally likely estimates each time the estimate has been updated. As a result, Bates White and management believe that management's internal estimate for the next ten years represents the most likely point within the range. Accordingly, our recorded liability is derived from our internal estimate.

We currently estimate that the liability of our subsidiaries for the indemnity costs of resolving asbestos claims for the next ten years will be \$468 million. The estimated liability of \$468 million is before any tax benefit and is not discounted to present value, and it does not include fees and expenses, which are recorded as incurred. The recorded liability will continue to be impacted by actual claims and settlement experience and any change in the legal environment that could cause a significant increase or decrease in the long-term expectations of management and Bates White. We expect the recorded liability to fluctuate, perhaps significantly. Any significant change in the estimated liability could have a material effect on our consolidated financial position and results of operations.

We made a significant adjustment (discussed below) to our liability based on an adjustment to our management estimate in the fourth quarter of 2009. We adjusted our estimate based on trends and factors also reflected in an increase in the high and low ends of the Bates White liability estimate. Our estimate continues to fall within the Bates White range, developed independently, (taking into account indemnity

Table of Contents

payments of \$22.9 million made in the first quarter of 2010), and we believe that our estimate continues to be the best of the reasonable and probable estimates of Garlock's future obligation.

At December 31, 2009, Bates White also indicated a broader range of potential estimates from \$252 million to \$698 million. We caution that points within that broader range remain possible outcomes. Also, while we agree with Bates White that beyond two to four years for Garlock's economically-driven non-malignant claims and beyond ten years for Garlock's cancer claims and medically-driven non-malignant claims, there are reasonable scenarios in which the [asbestos] expenditure is *de minimus*, we caution that the process of estimating future liabilities is highly uncertain. Adjusting our liability to the best estimate within the range does not change that fact. In the words of the Bates White report, the reliability of estimates of future probable expenditures of Garlock for asbestos-related personal injury claims declines significantly for each year further into the future. Scenarios continue to exist that could result in total future asbestos-related expenditures for Garlock in excess of \$1 billion.

As previously mentioned, the liability estimate does not include legal fees and expenses, which add considerably to the costs each year. In 2008 and 2009, these expenses averaged approximately \$7 million per quarter. In addition to these legal fees and expenses, we expect to continue to record charges to income in future quarters for:

Increases or decreases, if any, in management's estimate of Garlock's potential liability, plus

Increases, if any, that result from additional quarters added to maintain the ten-year estimation period (increases of this type have averaged approximately \$6 million per quarter for the last two years), plus

Amounts, if any, of solvent insurance lost or commuted, offset by insolvent recoveries and earnings from insurance settlement trusts.

In the first quarter of 2010, we recorded a pre-tax charge of \$14.5 million. The charge reflects \$6.2 million for fees and expenses paid during the quarter and an \$8.3 million non-cash charge consisting of \$5.8 million to add an estimate of the liability for the first quarter of 2020 to maintain a ten-year estimate and an increase of \$2.5 million in incurred but unpaid legal fees. In the first quarter of 2009, we recorded a pre-tax charge of \$13.6 million to reflect cash outlays of \$4.8 million for fees and expenses and an \$8.8 million non-cash charge.

In 2009, we recorded a pre-tax charge of \$135.5 million to reflect net cash outlays of \$29.3 million for legal fees and expenses paid during the year and a \$106.2 million non-cash charge. The non-cash charge included (1) \$25.5 million, primarily to add an estimate of the liability for 2019 to maintain a ten-year estimate and (2) \$80.7 million resulting from an adjustment in the fourth quarter of 2009 to management's estimate of the first nine years of the ten-year period. Management's adjustment to its previous estimate was based on its review of mesothelioma claims filings and trends with respect to parties named as defendants in claims, settlement and payment trends, continued high activity in the court system, particularly in certain jurisdictions that management believes present particularly high risks for asbestos defendants, and, most importantly, the continuing difficulty caused by the lack of transparency in the distribution procedures of large 524(g) trusts of former co-defendants that have emerged from bankruptcy proceedings.

The ten-year liability projections of management and Bates White have both included an assumption that Garlock's liability in the tort system would decrease as 524(g) trusts begin paying the liabilities of bankrupt former co-defendants that contributed to injuries of plaintiffs who sue Garlock. This assumption has been based on:

(1) principles of joint and several liability that caused the amount of

Table of Contents

payments to resolve asbestos claims against Garlock to increase beginning in 2000 to 2002, when the most prominent asbestos defendants sought bankruptcy protection and ceased paying claims in the tort system; (2) the emergence, beginning in 2007 and continuing today, of numerous wealthy 524(g) trusts, established by such bankrupt companies to pay asbestos claims caused by their products, and (3) state law that protects defendants like Garlock from having to pay plaintiffs' damages to the extent paid by such trusts and other co-defendants. Payments from such trusts accordingly should offset and reduce damages claims against Garlock.

While 524(g) trusts have begun making substantial payments to the claimants, Garlock has not experienced a reduction in the damages being sought from Garlock. The distribution procedures of the 524(g) trusts do not permit Garlock and other tort-system co-defendants from having any access to claims made to the trusts or the accompanying evidence of exposure to the asbestos-containing products addressed by such trusts.

To date, despite billions of dollars of 524(g) trust distributions, many plaintiffs continue to seek damages from Garlock on the basis that no evidence exists permitting them to recover from 524(g) trusts. Garlock and Bates White are working on a variety of strategies to expose the unfairness of trust distribution procedures and bring fairness to the trust payment system. Both Bates White and management assume that Garlock will have some success in those endeavors over time, and that assumption continues to be embedded in our and Bates White's liability estimates.

In 2008, we recorded a pre-tax charge of \$52.1 million to reflect net cash outlays of \$26.2 million for legal fees and expenses paid during the year and a \$25.9 million non-cash charge. The non-cash charge included \$23.8 million, primarily to add an estimate of the liability for 2018 to maintain a ten-year estimate and \$2.1 million to reduce the remaining insurance estimated to be available from remaining policies with various London market carriers.

In 2007, we recorded a pre-tax charge to income of \$68.4 million to reflect net cash outlays of \$25.8 million for legal fees and expenses incurred during the year, and a \$42.6 million non-cash charge. The non-cash charge included \$23.2 million related to the addition of periods and \$19.4 million to adjust the liability based on revisions to management's estimate in the fourth quarter of 2007. We made this adjustment based on our review of negotiations and payment trends and our belief that it is more likely that, in the future, a higher percentage of settlement commitments made in any year will also be paid in that same year.

See Note 13 to the Consolidated Financial Statements for additional information about our liability estimate.

Quantitative Claims and Insurance Information. Our liability as of March 31, 2010 was \$477.8 million (our ten-year estimate of the liability described above of \$468.0 million plus \$9.8 million of accrued legal and other fees already incurred but not yet paid). The liability as of March 31, 2010 included \$81.6 million classified as a current liability and \$396.2 million classified as a noncurrent liability. The recorded amounts do not include legal fees and expenses to be incurred in the future.

The table below quantitatively depicts the number of pending cases, asbestos-related cash flows, the amount that we expect Garlock to recover from insurance related to this liability, and an analysis of the liability.

Table of Contents

	As of and for the Three Months Ended March 31,	
	2010	2009
Pending Cases (1)		
New actions filed during period	1,300	1,100
Open actions at period-end	92,900	103,900
Cash Flow (dollars in millions)		
Payments (2)	\$ (35.6)	\$ (13.3)
Insurance recoveries (3)	19.2	5.2
Net cash flow	\$ (16.4)	\$ (8.1)
Solvent Insurance and Trust Assets (dollars in millions)		
Insurance receivable for previously paid claims (4)	\$ 177.8	\$ 233.6
Insurance available for pending and future claims	41.6	68.6
Remaining solvent insurance and trust assets	\$ 219.4	\$ 302.2
Liability Analysis (dollars in millions)		
Liability for pending and future claims (5)(6)	\$ 477.8	\$ 465.8
Insurance available for pending and future claims	41.6	68.6
Liability in excess of insurance coverage (6)	436.2	397.2
Insurance receivable for previously paid claims	177.8	233.6
Liability in excess of anticipated insurance collections (6)	\$ 258.4	\$ 163.6

(1) Includes actions actually filed with a court of competent jurisdiction. Each action in which both Garlock and one or more other of our subsidiaries is named as a defendant is shown as a single action. Multiple actions filed on behalf of the same plaintiff in multiple

jurisdictions are also counted as one action.

Claims not filed as actions in court but that are submitted and paid as part of previous settlements (approximately 1,400 in 2009, 800 in 2008 and 900 in 2007) are not included.

- (2) Includes all payments for judgments, settlements, fees and expenses made in the period.
- (3) Includes all recoveries from insurance received in the period.
- (4) Includes previous payments for which Garlock is entitled to receive corresponding insurance recoveries but has not received payment, in large part due to annual limits imposed under insurance arrangements.
- (5) At March 31, 2010 and 2009, the liability represents

management's best estimate of the future payments for the following ten-year period. Amounts shown include \$9.8 million and \$9.4 million at March 31, 2010 and 2009, respectively, of accrued fees and expenses for services previously rendered but unpaid.

- (6) Does not include fees and expenses to be incurred in the future, which are recorded as a charge to income when incurred.

Strategy and Outlook. Garlock's asbestos claims management strategy is to focus on trial-listed cases, pursue training initiatives and research projects to improve its defense at trial, aggressively negotiate reduced settlement commitments and payments each year, carefully manage and maximize collections from a declining pool of available insurance coverage, and proactively support efforts to achieve meaningful asbestos reform.

Table of Contents

Beginning in 2000, when the largest asbestos defendants filed bankruptcy cases to resolve their asbestos liabilities and thereby withdrew from the civil court system, plaintiffs pursued Garlock and other surviving peripheral defendants in civil court actions to recover the full amounts of their alleged damages under state law principles of joint and several liability. The plaintiffs could no longer pursue actions against these large defendants during the pendency of their bankruptcy proceedings, even though these defendants had historically been determined to be the largest contributors to asbestos-related injuries. As a result, the amount generally required to resolve each claim against Garlock increased.

Almost all of the high-profile defendants that sought bankruptcy relief in the early 2000s have now emerged, or are positioning to emerge, from bankruptcy. Their asbestos liabilities have been assumed by wealthy trusts created in the bankruptcies with assets contributed by the emerging former defendants and their affiliates. With the emergence of these companies from bankruptcy, plaintiffs may seek to recover damages from the trusts. Legal principles of contribution and fundamental fairness should dictate that there be a consequent reduction in recoveries against other defendants, including Garlock, who remain subject to the civil court system. The bankruptcy trusts, however, operate pursuant to trust distribution procedures that do not permit Garlock and other tort-system co-defendants to gain access to claims against trusts and accompanying evidence of exposure to asbestos-containing products addressed by such trusts.

Garlock's current efforts to achieve meaningful asbestos reform are focused on changing the trust distribution procedures to ensure full and transparent disclosure of evidence of the identities of recipients and amounts of payments from the trusts, and to facilitate credit for those payments in state civil court proceedings. We believe Garlock's efforts and similar efforts underway by other defendants and experts should result over time in a reduction of the value of damages claims against Garlock to account for trust recoveries and thereby reduce Garlock's payments necessary to resolve asbestos claims. We and Garlock are reviewing Garlock's strategy and alternatives with respect to the resolution of Garlock's asbestos claims in light of changing trends and developments, including recent developments in pending bankruptcy proceedings of former co-defendants.

We do not believe reductions resulting from trust payments over the next several years will offset the significant decline in insurance collections available to Garlock in such years. We therefore estimate that, while total payments to defend and resolve Garlock's asbestos claims should continue to decline each year, the cash outflows, net of insurance, will increase, perhaps significantly, beginning in 2011.

We believe that the continued risks inherent in the tort system may also impact Garlock's future cash outflows. Despite Garlock's successful recent track record at trial, the risk (largely due to the exit from the civil court system of the high-profile defendants that sought bankruptcy relief in the early 2000s) of large adverse verdicts in certain jurisdictions that have historically favored claims by asbestos plaintiffs continues to impact Garlock's ability to negotiate reduced payments. Thus, there can be no assurance that Garlock will be able to achieve significant payment reductions in the civil court system, particularly if claimants continue to have the ability to pursue claims in those plaintiff-oriented jurisdictions, target selected defendants, and obscure evidence of their exposures to the products of former co-defendants who have emerged from bankruptcy proceedings.

We believe that, as predicted in various epidemiological studies that are publicly available, the incidence of asbestos-related disease is in decline and should continue to decline steadily over the next decade and thereafter. As a result, claims activity against Garlock should eventually decline to a level that can be paid from the cash flow from Garlock's operations, even after Garlock exhausts available insurance coverage. However, there can be no assurance that epidemiological predictions about incidence of asbestos-related disease will prove to be accurate, or that, even if they are, there will be a commensurate decline in the number of asbestos-related claims filings against Garlock. In fact, after a

Table of Contents

significant decline in new mesothelioma filings in 2006, the number of mesothelioma claims filed against Garlock has increased in each of the last three fiscal years.

Considering the foregoing, as well as the experience of our subsidiaries and other defendants in asbestos litigation, the likely sharing of judgments among multiple responsible defendants, and the amount of insurance coverage available to our subsidiaries from solvent insurance carriers, we believe that pending asbestos actions are not likely to have a material adverse effect on our financial condition, but could be material to our results of operations or cash flows in any given future period. We anticipate that asbestos claims will continue to be filed against Garlock. Because of (1) the uncertainty as to the number and timing of such potential future claims and the amount that will have to be paid to litigate, settle or satisfy claims, and (2) the finite amount of insurance available for future payments, future asbestos claims against Garlock could have a material adverse effect on our financial condition, results of operations and cash flows. As a result, there can be no assurance that Garlock's asbestos liabilities will not have a material adverse effect on the Company's financial condition.

Item 3. Quantitative and Qualitative Disclosures About Market Risk

We are exposed to certain market risks as part of our ongoing business operations, including risks from changes in foreign currency exchange rates and interest rates that could impact our financial condition, results of operations and cash flows. We manage our exposure to these and other market risks through regular operating and financing activities and through the use of derivative financial instruments. We intend to use derivative financial instruments as risk management tools and not for speculative investment purposes. For information about our interest rate risk, see

Quantitative and Qualitative Disclosures about Market Risk – Interest Rate Risk in our annual report on Form 10-K for the year ended December 31, 2009, and the following section.

Foreign Currency Risk

We are exposed to foreign currency risks that arise from normal business operations. These risks include the translation of local currency balances of our foreign subsidiaries, intercompany loans with foreign subsidiaries and transactions denominated in foreign currencies. Our objective is to control our exposure to these risks and limit the volatility in our reported earnings due to foreign currency fluctuations through our normal operating activities and, where appropriate, through foreign currency forward contracts and option contracts. The following table provides information about our outstanding foreign currency forward and option contracts as of March 31, 2010:

Table of Contents

Transaction Type	Notional Amount Outstanding in Millions of U.S. Dollars (USD)	Maturity Dates		Exchange Rate Ranges
Forward Contracts				
Sell British pound/buy euro	\$ 27.4	Apr 2010	Dec 2010	0.885 to 0.886 pound/euro
Buy euro/sell USD	26.7	Apr 2010	Mar 2011	1.332 to 1.504 USD/euro
Buy USD/sell euro	18.0	Apr 2010	Mar 2011	1.332 to 1.502 USD/euro
Sell British pound/buy Australian dollar	14.8	Apr 2010		1.643 Australian dollar/pound
Sell USD/buy Canadian dollar	5.5	Apr 2010	Mar 2011	1.018 to 1.047 Canadian dollar/USD
Buy USD/sell Australian dollar	3.6	Apr 2010	Mar 2011	0.850 to 0.910 USD/Australian dollar
Buy Mexican peso/sell USD	2.4	Apr 2010	Mar 2011	12.984 to 13.351 peso/USD
Buy British pound/sell euro	1.9	Apr 2010	Mar 2011	0.868 to 0.903 pound/euro
	100.3			
Option Contracts				
Buy Brazilian real/sell USD	11.7	Nov 2010	Nov 2011	1.735 real/USD
Sell Brazilian real/buy USD	9.3	Nov 2010	Nov 2011	1.980 to 2.390 real/USD
Buy euro/sell USD	6.3	Dec 2010		1.336 USD/euro
	27.3			
	\$ 127.6			

Item 4. Controls and Procedures

As of the end of the period covered by this report, we carried out an evaluation, under the supervision and with the participation of our chief executive officer and chief financial officer, of the effectiveness of the design and operation of our disclosure controls and procedures. The purpose of our disclosure controls and procedures is to provide reasonable assurance that information required to be disclosed in our reports filed under the Securities Exchange Act of 1934 (the Exchange Act), including this report, is recorded, processed, summarized and reported within the time periods specified, and that such information is accumulated and communicated to our management to allow timely decisions regarding disclosure.

Based on the controls evaluation, our chief executive officer and chief financial officer have concluded that our disclosure controls and procedures are effective to reasonably ensure that information required to be disclosed in our reports filed under the Exchange Act is recorded, processed, summarized and reported within the time periods specified, and that management will be timely alerted to material information required to be included in our periodic reports filed with the Securities and Exchange Commission.

In addition, no change in our internal control over financial reporting has occurred during the quarter ended March 31, 2010, that has materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

Table of Contents

**PART II
OTHER INFORMATION**

Item 1. Legal Proceedings.

A description of environmental, asbestos and other legal matters is included in Note 13 to the Consolidated Financial Statements included in this report, which is incorporated herein by reference. In addition to the matters noted therein, we are from time to time subject to, and are presently involved in, other litigation and legal proceedings arising in the ordinary course of business. We believe that the outcome of such other litigation and legal proceedings will not have a material adverse affect on our financial condition, results of operations and cash flows.

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds.

The following table sets forth all purchases made by or on behalf of the Company or any affiliated purchaser, as defined in Rule 10b-18(a)(3) under the Exchange Act, of shares of the Company's common stock during each month in the first quarter of 2010.

Period	(a) Total Number of Shares (or Units) Purchased (1)	(b) Average Price Paid per Share (or Unit) (1)	(c) Total Number of Shares (or Units) Purchased as Part of Publicly Announced Plans or Programs	(d) Maximum Number (or Approximate Dollar Value) of Shares (or Units) That May Yet Be Purchased Under the Plans or Programs
January 1 - January 31, 2010				
February 1 - February 28, 2010				
March 1 - March 31, 2010	645	\$29.08		
Total	645	\$29.08		

(1) A total of 645 shares were transferred to a rabbi trust that we established in connection with our Deferred Compensation Plan for Non-Employee Directors, pursuant to which

non-employee directors may elect to defer directors fees into common stock units.

Coltec, which is a wholly owned subsidiary of EnPro, furnished these shares in exchange for management and other services provided by EnPro. These shares were valued at a price of \$29.08 per share, the closing price of our common stock on March 31, 2010. We do not consider the transfer of shares from Coltec in this context to be pursuant to a publicly announced plan or program.

Item 6. Exhibits.

The exhibits to this report on Form 10-Q are listed in the accompanying Exhibit Index.
