Date of event requiring this shell company report _____

For the transition period from _____ to _____

Commission file number: 000-49888

RANDGOLD RESOURCES LIMITED

(Exact name of Registrant as specified in its charter)

Not Applicable

(Translation of Registrant's name into English)

JERSEY, CHANNEL ISLANDS

(Jurisdiction of incorporation or organization)

3rd Floor Unity Chambers, 28 Halkett Street, St. Helier, Jersey JE2 4WJ, Channel Islands

(Address of principal executive offices)

Securities registered or to be registered pursuant to Section 12(b) of the Act.

Title of each class

Name of each exchange on which registered

Ordinary Shares, par value US \$0.05 per Share*

Nasdaq Global Select Market

American Depositary Shares each represented
by one Ordinary Share

* Not for trading, but only in connection with the listing of American Depositary Shares on the Nasdaq Global Select Market pursuant to the requirements of the Securities and Exchange Commission.

Securities registered or to be registered pursuant to Section 12(g) of the Act.

None

(Title of Class)

Securities for which there is a reporting obligation pursuant to Section 15(d) of the Act.

None

(Title of Class)

Edgar Filing: RANDGOLD RESOURCES LTD - Form 20-F

Indicate the number of outstanding shares of each of the issuer's classes of capital or common stock as of the close of the period covered by the Annual Report.

As of December 31, 2010, the Registrant had outstanding 91,089,370 ordinary shares, par value \$0.05 per share.

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act.

Yes No

If the report is an annual or transition report, indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934.

Yes No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days.

Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files).

Yes No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of "large accelerated filer," "accelerated filer" and "smaller reporting company" in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer Accelerated filer Non-accelerated filer Smaller reporting company

(Do not check if a smaller reporting company)

Indicate by check mark which basis of accounting the registrant has used to prepare the financial statements included in this filing:

U.S. GAAP International Financial Reporting Standards as issued by the International Accounting Standards Board Other

If "Other" has been checked in response to the previous question, indicate by check mark which financial statement item the registrant has elected to follow.

Item 17 Item 18

If this is an annual report, indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act).

Yes No

Table of Contents

GLOSSARY OF MINING TECHNICAL TERMS

The following explanations are not intended as technical definitions, but rather are intended to assist the reader in understanding some of the terms as used in this annual report (Annual Report).

Alteration:	The chemical change in a rock due to hydrothermal and other fluids.
Archaean:	A geological eon before 2.5 Ga.
Arsenopyrite:	An iron arsenic sulfide mineral.
Birimian:	Geological time era, about 2.1 billion years ago.
Carbonate:	A mineral salt typically found in quartz veins and as a product of hydrothermal alteration of sedimentary rock.
Chalcopyrite:	A copper iron sulfide mineral.
Clastic:	Rocks built up of fragments of pre-existing rocks which have been produced by the processes of weathering and erosion.
Cut-off grade:	The lowest grade of material that can be mined and processed considering all applicable costs, without incurring a loss or gaining a profit.
Development:	Activities required to prepare for mining activities and maintain a planned production level.
Diamond Drilling (DDH):	A drilling method.
Dilution:	Mixing of ore grade material with non-ore grade/waste material in the mining process.
Discordant:	Structurally unconformable.
Disseminated:	A term used to describe fine particles of ore or other minerals dispersed through the enclosing rock.
Dyke:	A sheet-like body of igneous rock which is discordant to bedding or foliation.
EEP:	Exclusive exploration permit.
Electromagnetic:	A geophysical tool used to test the electrical properties of rock to aid exploration.
EP:	Exploration permit.
Exploration:	Activities associated with ascertaining the existence, location, extent or quality of mineralized material, including economic and technical evaluations of mineralized material.

Fault:	A fracture or a zone of fractures within a body of rock.
Feasibility Study:	A comprehensive study of a mineral deposit in which all geological, engineering, legal, operating, economic, social, environmental and other relevant factors are considered in sufficient detail that it could reasonably serve as the basis for a final decision by a financial institution to finance the development of the deposit for mineral production.
Feldspar:	An alumino-silicate mineral.

Table of Contents

Felsic:	A light colored igneous rock composed of quartz, feldspar and muscovite.
Foliation:	A term used to describe planar arrangements of minerals or mineral bands within rocks.
Footwall:	The underlying side of a fault, orebody or stope.
g/t:	Gram of gold per metric tonne.
Gabbro:	A dark granular igneous rock composed essentially of labradorite and augite.
Gneiss:	A coarse-grained, foliated rock produced by metamorphism.
Gold reserves:	The gold contained within proven and probable reserves on the basis of recoverable material (reported as mill delivered tonnes and head grade).
Gold sales:	Represents the sales of gold at spot and the gains/losses on hedge contracts which have been delivered into at the designated maturity date. It excludes gains/losses which have been rolled forward to match future sales. This adjustment is considered appropriate because no cash is received/paid in respect of such contracts.
Grade:	The quantity of metal per unit mass of ore expressed as a percentage or, for gold, as grams of gold per tonne of ore.
Granite:	A light colored granular igneous rock composed of quartz and feldspar.
Greenstone:	A field term used to describe any weakly metamorphosed rock.
Greywacke:	A dark gray, coarse grained, indurated sedimentary rock consisting essentially of quartz, feldspar, and fragments of other rock types.
Head grade:	The grade of the ore as delivered to the metallurgical plant.
Hydrothermal:	Pertaining to the action of hot aqueous solutions on rocks.
Igneous:	A rock or mineral that solidified from molten or partially molten material.
In situ:	In place or within unbroken rock or still in the ground.
Kibalian:	A geological time era.
Lower proterozoic:	Era of geological time between 2.5 billion and 1.8 billion years before the present.
Mafic:	A term used to describe an igneous rock that has a large percentage of iron magnesium minerals.

Measures:

Conversion factors from metric units to US units are provided below:

Metric Unit		US Equivalent
1 tonne	= 1 t	1.10231 tons
1 gram	= 1 g	0.03215 ounces
	= 1 g/t	0.02917 ounces
1 gram per ton		per ton
	= 1 kg/t	29.16642
1 kilogram per ton		ounces per ton
1 kilometer	= 1 km	0.621371 miles
1 meter	= 1 m	3.28084 feet
1 centimeter	= 1 cm	0.3937 inches
1 millimeter	= 1 mm	0.03937 inches
	= 1 sq km	0.3861 square
1 square kilometer		miles

Table of Contents

Metamorphism:	A change in the structure or constitution of a rock due to natural agencies, such as pressure and heat.
Mill delivered tonnes:	A quantity, expressed in tonnes, of ore delivered to the metallurgical plant.
Milling/mill:	The comminution of the ore, although the term has come to cover the broad range of machinery inside the treatment plant where the gold is separated from the ore.
Mineable:	That portion of a mineralized deposit for which extraction is technically and economically feasible.
Mineralization:	The presence of a target mineral in a mass of host rock.
Mineralized material:	A mineralized body which has been delineated by appropriately spaced drilling and/or underground sampling to support a sufficient tonnage and average grade of metals to warrant further exploration. A deposit of mineralized material does not qualify as a reserve until a comprehensive evaluation based upon unit cost, grade, recoveries, and other material factors conclude legal and economic feasibility.
Moz:	Million troy ounces.
Mt:	Million metric tonnes.
Open pit:	Mining in which the ore is extracted from a pit. The geometry of the pit may vary with the characteristics of the orebody.
Orebody:	A continuous, well-defined mass of material containing sufficient minerals of economic value to make extraction economically feasible.
Ounce:	One troy ounce, which equals 31.1035 grams.
Oxide Ore:	Soft, weathered rock that is oxidized.
Prefeasibility Study:	A comprehensive study of the viability of a mineral project that has advanced to a stage where the mining method, in the case of underground mining, or the pit configuration, in the case of an open pit, has been established, and which, if an effective method of mineral processing has been determined and includes a financial analysis based on reasonable assumptions of technical, engineering, operating, economic, social and environmental factors and the evaluation of other relevant factors which are sufficient for a qualified person, acting reasonably, to determine if all or part of the mineral resource may be classified as a mineral reserve.
Probable reserves:	Reserves for which quantity and grade and/or quality are computed from information similar to that used for proven reserves, but the sites for inspection, sampling, and measurement are farther apart or are otherwise less

adequately spaced. The degree of assurance, although lower than that for proven reserves, is high enough to assume continuity between points of observation.

Prospect:

An area of land with insufficient data available on the mineralization to determine if it is economically recoverable, but warranting further investigation.

Table of Contents

Proven reserves:	Reserves for which quantity is computed from dimensions revealed in outcrops, trenches, workings or drill holes; grade and/or quality are computed from the results of detailed sampling; and the sites for inspection, sampling and measurement are spaced so closely and the geologic character is so well defined that size, shape, depth and mineral content of reserves are well-established.
Pyrite:	A brassy-colored mineral of iron sulfide (compound of iron and sulfur).
Quartz:	A mineral compound of silicon and oxygen.
Quartzite:	Metamorphic rock with interlocking quartz grains displaying a mosaic texture.
Quartz-tourmaline:	A rock unit created by alteration due to the addition of silica and boron.
Refining:	The final stage of metal production in which final impurities are removed from the molten metal by introducing air and fluxes. The impurities are removed as gases or slag.
Regolith:	Weathered products of fresh rock, such as soil, alluvium, colluvium, sands, and hardened oxidized materials.
Rehabilitation:	The process of restoring mined land to a condition approximating its original state.
Reserve:	That part of a mineral deposit which could be economically and legally extracted or produced at the time of the reserve determination.
Reverse circulation (RC) drilling:	A drilling method.
Rotary Air Blast (RAB) drilling:	A drilling method.
RP:	Reconnaissance Permit.
Sampling:	Taking small pieces of rock at intervals along exposed mineralization for assay (to determine the mineral content).
Satellite deposit:	A smaller subsidiary deposit proximal to a main deposit.
Scoping study:	A conceptual study and the preliminary evaluation of the mining project. The principal parameters for a scoping study are mostly assumed and/or factored. Accordingly, the level of accuracy is low. A conceptual study is useful as a tool to determine if subsequent engineering studies are warranted. However, it is not valid for economic decision making nor is it sufficient for reserve reporting.

Sedimentary:	Pertaining to or containing sediment. Used in reference to rocks which are derived from weathering and are deposited by natural agents, such as air, water and ice.
Shear zone:	An elongated area of structural deformation.
Silica:	A naturally occurring dioxide of silicon.
Stockpile:	A store of unprocessed ore.
Strike length:	The direction and length of a geological plane.
Stripping:	The process of removing overburden to expose ore.

Table of Contents

Strip ratio:	Ratio of waste material to ore material in an open pit mine.
Sulfide:	A mineral characterized by the linkages of sulfur with a metal or semi-metal, such as pyrite or iron sulfide. Also a zone in which sulfide minerals occur.
Tailings:	Finely ground rock from which valuable minerals have been extracted by milling.
Tonnage:	Quantities where the ton or tonne is an appropriate unit of measure. Typically used to measure reserves of gold-bearing material in situ or quantities of ore and waste material mined, transported or milled.
Tonne:	One tonne is equal to 1,000 kilograms (also known as a metric ton).
Total cash costs:	Total cash costs, as defined in the Gold Institute standard, include mine production, transport and refinery costs, general and administrative costs, movement in production inventories and ore stockpiles, transfers to and from deferred stripping where relevant and royalties.
Trend:	The arrangement of a group of ore deposits or a geological feature or zone of similar grade occurring in a linear pattern.
Ultramafica:	An igneous rock with a very low silica content and rich in iron magnesium minerals.
Volcaniclastic:	Where volcanic derived material has been transported and reworked through mechanical processes.
Volcanisedimentary:	Where volcanic and sedimentary material have been transported and reworked through mechanical processes.
Waste:	Rock mined with an insufficient gold content to justify processing.
Weathered:	Rock broken down by erosion.

Statements in this Annual Report concerning our business outlook or future economic performance; anticipated revenues, expenses or other financial items; and statements concerning assumptions made or expectations as to any future events, conditions, performance or other matters, are forward-looking statements as that term is defined under the United States federal securities laws. Forward-looking statements are subject to risks, uncertainties and other factors which could cause actual results to differ materially from those stated in such statements. Factors that could cause or contribute to such differences include, but are not limited to, those set forth under Item 3. Key Information D. Risk Factors in this Annual Report as well as those discussed elsewhere in this Annual Report and in our other filings with the Securities and Exchange Commission.

We are incorporated under the laws of Jersey, Channel Islands with the majority of our operations located in West and Central Africa. Our books of account are maintained in US dollars and our annual and interim financial statements are prepared on a historical cost basis, except as otherwise required under International Financial Reporting Standards as issued by International Accounting Standards Board (IFRS), and in accordance with IFRS. IFRS differs in significant respects from generally accepted accounting principles in the United States, or US GAAP. This Annual Report includes our audited consolidated financial statements prepared in accordance with IFRS. The financial information

included in this Annual Report has been prepared in accordance with IFRS and, except where otherwise indicated, is presented in US dollars. For a definition of cash costs, please see Item 3. Key Information A. Selected Financial Data . Unless the context otherwise requires, us , we , our , or words of similar import, refer to Randgold Resources Limited and its subsidiaries and affiliated companies.

Table of Contents**PART I****Item 1. Identity of Directors, Senior Management and Advisers**

Not applicable.

Item 2. Offer Statistics and Expected Timetable

Not applicable.

Item 3. Key Information**A. SELECTED FINANCIAL DATA**

The following selected historical consolidated financial data have been derived from, and should be read in conjunction with, the more detailed information and financial statements, including our audited consolidated financial statements for the years ended December 31, 2010, 2009, and 2008 and as at December 31, 2010 and 2009, which appear elsewhere in this Annual Report. The historical consolidated financial data as at December 31, 2008, 2007 and 2006, and for the years ended December 31, 2007 and 2006 have been derived from our audited consolidated financial statements not included in this Annual Report.

The financial data have been prepared in accordance with IFRS, unless otherwise noted.

\$000:	Year Ended December 31, 2010	Year Ended December 31, 2009	Year Ended December 31, 2008	Year Ended December 31, 2007	Year Ended December 31, 2006
STATEMENT OF COMPREHENSIVE INCOME DATA:					
Amounts in accordance with IFRS					
Revenues	484,553	432,780	338,572	282,805	258,304
Profit from operations#	136,141	113,764	75,937	63,539	71,616
Net profit attributable to owners of the parent	103,501	69,400	41,569	42,041	47,564
Basic earnings per share (\$)	1.14	0.86	0.54	0.60	0.70
Fully diluted earnings per share (\$)	1.13	0.84	0.54	0.60	0.69

Non-GAAP Measures					

We have identified certain measures that it believes will assist understanding of the performance of the business. As the measures are not defined under IFRS, they may not be directly comparable with other companies' adjusted measures. The non-GAAP measures are not intended to be a substitute for, or superior to, any IFRS measures or performance, but management has included them as these are considered to be important comparables and key measures used within the business for assessing performance. These measures are further explained below. Total cash cost and total cash cost per ounce are non-GAAP measures. We have calculated total cash costs and total cash costs per ounce using guidance issued by the Gold Institute. The Gold Institute was a non-profit industry association comprised of leading gold producers, refiners, bullion suppliers and manufacturers. This institute has now been incorporated into the National Mining Association. The guidance was first issued in 1996 and revised in November 1999. Total cash costs, as defined in the Gold Institute's guidance, include mine production, transport and refinery costs, general and administrative costs, movement in production inventories and ore stockpiles, transfers to and from deferred stripping where relevant, and royalties.

Under our accounting policies, there are no transfers to and from deferred stripping. Total cash costs per ounce are calculated by dividing total cash costs, as determined using the Gold Institute guidance, by gold ounces sold for the periods presented. We have calculated total cash costs and total cash costs per ounce on a consistent basis for all periods presented. Total cash costs and total cash costs per ounce should not be considered by investors as an alternative to net profit attributable to shareholders, as an alternative to other IFRS measures or an indicator of our performance. The data does not have a meaning prescribed by IFRS and therefore amounts presented may not be comparable to data presented by gold producers who do not follow the guidance provided by the Gold Institute. In particular depreciation and amortization would be included in a measure of total costs of producing gold under IFRS, but are not included in total cash costs under the guidance provided by the Gold Institute. Furthermore, while the Gold Institute has provided a definition for the calculation of total cash costs and total cash costs per ounce, the calculation of these numbers may vary from company to company and may not be comparable to other similarly titled measures of other companies. However, we believe that total cash costs per ounce is a useful indicator to investors and management of a mining company's performance as it provides an indication of a company's profitability and efficiency, the trends in cash costs as the company's operations mature, and a benchmark of performance to allow for comparison against other companies. Within this Annual Report our discussion and analysis is focused on the total cash cost measure as defined by the Gold Institute.

We previously calculated total cash costs per ounce by dividing total cash costs, as defined above, by ounces produced, as permitted under the guidance. Given the significant difference between ounces produced and ounces sold

in the year, together with the fact that, under the definitions above, costs relating to ounces produced but not sold are recognized in the quarter when the ounces are actually sold, we deemed it appropriate to change the bases for these calculations by dividing total costs by ounces sold, as this would better match the timing of costs and sales recorded. Historically, this change would not have resulted in materially different cash costs per ounce; however, in the current year the difference was significant and consequently the numbers have been restated on this basis.

Table of Contents

The following table lists the costs of producing gold, determined in accordance with IFRS, and reconciles this GAAP measure to total cash costs as defined by the Gold Institute's guidance, as a non-GAAP measure, for each of the periods set forth below:

\$000: Costs	Year Ended December 31, 2010	Year Ended December 31, 2009	Year Ended December 31, 2008	Year Ended December 31, 2007	Year Ended December 31, 2006
Mine production costs	\$ 247,850	\$ 196,318	\$ 186,377	\$ 136,312	\$ 115,217
Depreciation and amortization	28,127	28,502	21,333	20,987	22,844
Other mining and processing costs	20,598	19,073	13,675	13,638	13,006
Transport and refinery costs	1,653	1,594	2,053	1,595	711
Royalties	27,680	25,410	19,730	18,307	16,979
Elimination of inter-company sales	7,414	1,047			
Movement in production inventory and ore stockpiles	(16,152)	5,741	(21,865)	(11,534)	(13,373)
Total cost of producing gold determined in accordance with IFRS	317,170	277,685	221,303	179,305	155,384
Less: Non-cash costs included in total cost of producing gold:					
Depreciation and amortization	(28,127)	(28,502)	(21,333)	(20,987)	(22,844)
Total cash costs using the Gold Institute's guidance	289,043	249,183	199,970	158,318	132,540
As previously disclosed:					
Ounces produced *	440,107	488,255	428,426	444,573	448,242
Total production costs per ounce under IFRS (\$ per ounce)	721	569	517	403	347
Total cash costs per ounce (\$ per ounce)	657	510	467	356	296
As now measured:					
Ounces sold*	413,262	486,324	427,713	444,597	452,523
Total production costs per ounce under IFRS (\$ per ounce)	767	571	517	403	343
Total cash costs per ounce (\$ per ounce)	699	512	468	356	293

C. REASONS FOR THE OFFER AND USE OF PROCEEDS

Not applicable.

D. RISK FACTORS

In addition to the other information included in this Annual Report, you should carefully consider the following factors, which individually or in combination could have a material adverse effect on our business, financial condition and results of operations. There may be additional risks and uncertainties not presently known to us, or that we currently see as immaterial, which may also harm our business. If any of the risks or uncertainties described below or any such additional risks and uncertainties actually occur, our business, results of operations and financial condition could be materially and adversely affected. In this case, the trading price of our ordinary shares and American Depositary Shares, or ADS, could decline and you might lose all or part of your investment.

Risks Relating to Our Operations

The profitability of our operations, and the cash flows generated by our operations, are affected by changes in the market price for gold which in the past has fluctuated widely.

Table of Contents

Substantially all of our revenue and cash flows have come from the sale of gold. Historically, the market price for gold has fluctuated widely and has been affected by numerous factors, over which we have no control, including:

the demand for gold for investment purposes, industrial uses and for use in jewelry;

international or regional political and economic trends;

the strength of the US dollar, the currency in which gold prices generally are quoted, and of other currencies;

market expectations regarding inflation rates;

interest rates;

speculative activities;

actual or expected purchases and sales of gold bullion holdings by central banks, the International Monetary Fund, or other large gold bullion holders or dealers;

hedging activities by gold producers; and

the production and cost levels for gold in major gold-producing nations.

The volatility of gold prices is illustrated in the following table, which shows the approximate annual high, low and average of the afternoon London Bullion Market fixing price of gold in US dollars for the past ten years.

Year	Price Per Ounce (\$)		
	High	Low	Average
2001	293	256	271
2002	349	278	310
2003	416	320	363
2004	454	375	409
2005	537	411	444
2006	725	525	604
2007	841	608	695
2008	1,011	712	871
2009	1,213	810	972

If gold prices should fall below and remain below our cost of production for any sustained period we may experience losses, and if gold prices should fall below our cash costs of production we may be forced to curtail or suspend some or all of our mining operations. In addition, we would also have to assess the economic impact of low gold prices on our ability to recover from any losses we may incur during that period and on our ability to maintain adequate reserves. Our total cash cost of production per ounce of gold sold was \$699 in the year ended December 31, 2010, \$512 in the year ended December 31, 2009, and \$468 in the year ended December 31, 2008. We expect that Morila's cash costs per ounce will rise as the life of the mine advances as a result of expected declining grade, which will adversely affect our profitability in the absence of any mitigating factors. The high grades expected from the underground mining at Loulo will, in the absence of any other increases, have a positive impact on unit costs.

Our mining operations may yield less gold under actual production conditions than indicated by our gold reserve figures, which are estimates based on a number of assumptions, including assumptions as to mining and recovery factors, production costs and the price of gold.

The ore reserve estimates contained in this Annual Report are estimates of the mill delivered quantity and grade of gold in our deposits and stockpiles. They represent the amount of gold that we believe can be mined, processed and sold at prices sufficient to recover our estimated total cash costs of production, remaining investment and anticipated additional capital expenditures. Our ore reserves are estimated based upon many factors, including:

Table of Contents

the results of exploratory drilling and an ongoing sampling of the orebodies;

past experience with mining properties;

gold price; and

operating costs.

Because our ore reserve estimates are calculated based on current estimates of future production costs and gold prices, they should not be interpreted as assurances of the economic life of our gold deposits or the profitability of our future operations.

Reserve estimates may require revisions based on actual production experience. Further, a sustained decline in the market price of gold may render the recovery of ore reserves containing relatively lower grades of gold mineralization uneconomical and ultimately result in a restatement of reserves. The failure of the reserves to meet our recovery expectations may have a materially adverse effect on our business, financial condition and results of operations. *The profitability of operations and the cash flows generated by these operations are significantly affected by the fluctuations in the price, cost and supply of inputs.*

Fuel, power and consumables, including diesel, steel, chemical reagents, explosives and tires, form a relatively large part of our operating costs. The cost of these consumables is impacted to varying degrees, by fluctuations in the price of oil, exchange rates and a shortage of supplies.

Such fluctuations have a significant impact upon our operating costs and capital expenditure estimates and, in the absence of other economic fluctuations, could result in significant changes in the total expenditure estimates for mining projects, new and existing, and could even render certain projects non-viable.

We are subject to various political and economic uncertainties associated with operating in Côte d'Ivoire, which is currently experiencing a state of political unrest, and the success of the Tongon mine will depend in large part on our ability to overcome significant challenges.

We are subject to risks associated with operating the Tongon mine in Côte d'Ivoire. Côte d'Ivoire has experienced several years of political chaos, including an attempted coup d'état. A dispute over the recent Côte d'Ivoire presidential election in November 2010 has resulted in the establishment of two rival governments. The Electoral Commission declared Mr. A. Ouattara as the winner. However, the incumbent president challenged the results and refused to give up office. Presently a stalemate exists while representatives from the African Union attempt to resolve the impasse. International sanctions have been imposed on the incumbent president and those individuals and institutions supporting him. Included in the list of entities against whom sanctions have been imposed are the Ports of Abidjan and San Pedro, the two key shipping ports of Côte d'Ivoire, and the SIR, the Ivorian Petroleum refinery. As a result of the sanctions we have had to re-arrange our logistics arrangements for our Tongon mine and we will now be shipping all materials for Tongon through the Port of Dakar in Senegal. At times, we have been unable to ship and sell our Tongon gold production, which has resulted in timing discrepancy between our gold produced and the recognition of revenue from gold sales. We are unable to predict when or how the disputed election will be resolved. Accordingly, we are unable to predict when sales of Tongon gold produced will be delayed and how this could impact our financial results, or whether the issues associated with the disputed election will require us to cease operations at the Tongon mine, which would have a material adverse effect on our gold production and financial results.

Any appreciation of the currencies in which we incur costs against the US dollar could adversely affect our results of operations.

While our revenue is derived from the sale of gold in US dollars, a significant portion of our input costs are incurred in currencies other than the dollar, primarily Euro, Communauté Financière Africaine franc, South African Rand, and the Congolese franc. Accordingly, any appreciation in such other currencies could adversely affect our results of operations.

Our results of operations have been adversely affected by increases in fuel prices, and we would be adversely affected by future increases in fuel prices or disruptions in the supply of fuel.

Table of Contents

Our results are significantly affected by the price and availability of fuel, which are in turn affected by a number of factors beyond our control. Fuel prices are volatile. During 2010, the average price of our landed fuel was higher than 2009, and it has been rising in 2011. In the year ended December 31, 2010, the cost of fuel and other power generation costs comprised 25% of our operating costs and the annual price increase of our landed fuel was 10%.

Historically, fuel costs have been subject to wide price fluctuations based on geopolitical factors and supply and demand. While we do not currently anticipate a significant reduction in fuel availability, factors beyond our control make it impossible to predict the future availability of fuel. Recent political unrest in certain oil producing countries has led to an increase in the cost of fuel. If there are additional outbreaks of hostilities or other conflicts in oil producing areas or elsewhere, or a reduction in refining capacity (due to weather events, for example), or governmental limits on the production or sale of fuel, or restrictions on the transport of fuel, there could be reductions in the supply of fuel and significant increases in the cost of fuel.

We are not parties to any agreements that protect us against price increases or guarantee the availability of fuel. Major reductions in the availability of fuel or significant increases in its cost, or a continuation of current high prices for a significant period of time, would have a material adverse impact on us.

Our business may be adversely affected if the Government of Mali fails to repay Value Added Tax, or TVA, owing to Morila and Loulo.

Our mining companies operating in Mali are exonerated by their Establishment Conventions from paying TVA for the three years following first commercial production. After that, TVA is payable and reimbursable. TVA is only reclaimable insofar as it is expended in the production of income. A key aspect in TVA recovery is managing the completion of the Government of Mali's audit of the taxpayer's payments, at which time the Government of Mali recognizes a liability.

By December 2007, Morila had successfully concluded a reimbursement protocol with the Government of Mali for all TVA reimbursements it was owed up to June 2005. Morila was unable to conclude a second protocol subsequent to December 2007, however, and pursuant to its establishment convention, began offsetting TVA reimbursements it was owed against corporate and other taxes payable by Morila to the Government of Mali. As a result of the offsets, the TVA owed by the Government of Mali to Morila declined to \$2.6 million at December 31, 2009. As of December 31, 2010, Morila had recouped all its outstanding TVA, as the Government of Mali repaid all outstanding amounts by this date. While all the TVA at Morila was recovered and the Government of Mali recognized the tax offsets, we cannot guarantee that they will continue to reimburse the TVA going forward.

At June 30, 2009, TVA owed by the Government of Mali to Loulo stood at \$16.2 million. This amount has increased by \$20.8 million to \$37.0 million at December 31, 2009 due to the end of the exoneration period on November 8, 2008. As at December 31, 2010, Loulo had a balance of \$11.6 million outstanding on TVA after receiving payment from the Government of Mali.

If Morila and Loulo are unable to recover these or future amounts due, or if the future tax offsets are not recognized, then their results of operations and financial position would be adversely affected, as would their ability to pay dividends to their shareholders. Accordingly, our business, cash flows and financial condition will be adversely affected if anticipated dividends are not paid.

Certain factors may affect our ability to support the carrying value of our property, plant and equipment, and other assets on our consolidated statement of financial position.

We review and test the carrying amount of our assets on an annual basis when events or changes in circumstances suggest that the net book value may not be recoverable. If there are indications that impairment may have occurred, we prepare estimates of expected future discounted cash flows for each group of assets. Assets are grouped at the lowest levels for which there are separately identifiable cash flows (cash-generating units) for purposes of assessing impairment. Expected future cash flows are inherently uncertain, and could materially change over time. Such cash flows are significantly affected by reserve and production estimates, together with economic factors such as spot and forward gold prices, discount rates, currency exchange rates, estimates of costs to produce reserves and future capital expenditures.

Table of Contents

We may not be able to recover certain funds from MDM Ferroman (Pty) Limited.

In August 2004, we entered into a fixed lump sum turnkey contract for \$63 million for the design, supply, construction and commissioning of the Loulo processing plant and infrastructure with MDM Ferroman (Pty) Ltd, or MDM. At the end of 2005, after making advances and additional payments to MDM totaling \$26 million in excess of the contract, we determined that MDM was unable to perform its obligations under the MDM Contract, at which time we enforced a contractual remedy which allowed us to act as our own general contractor and to complete the remaining work on the Loulo project that was required under the MDM Contract.

We believe that we are entitled to recover certain amounts from MDM, including advances of \$10.7 million included in receivables as at December 31, 2010. Of this amount, \$7 million is secured by performance bonds and the remainder is secured by various personal guarantees and other assets. In January 2009 and 2010, the liquidator declared and paid dividends of \$1.6 million from the insolvent estate, leaving an outstanding balance of \$10.7 million (stated net of an impairment provision of \$1.3 million) as at December 31, 2010.

As part of our efforts to recoup the monies owed to us, MDM was put into liquidation on February 1, 2006. This resulted in a South African Companies Act Section 417 investigation into the business and financial activities of MDM, its affiliated companies and their directors. This investigation was completed in the last quarter of 2007 and the liquidators have issued their report that confirms that MDM's liabilities exceeded its assets. During the second quarter of 2011 we will be involved in arbitration proceedings with the providers of the performance bonds, which have been the subject of legal proceedings in the South African Courts.

Our ability to recover in full the \$10.7 million included in receivables is dependent on the amounts which can be recovered from the performance bonds, personal guarantees and other assets provided as security. Any shortfall is expected to be recovered from any free residue accruing to the insolvent estate. The aggregate amount which will ultimately be recovered cannot presently be determined. The financial statements do not reflect any additional provision that may be required if the \$10.7 million cannot be recovered in full. Our results of operations may be adversely affected if we are unable to recover the amounts advanced by us to MDM. Any part of the \$10.7 million included in accounts receivable which cannot in fact be recovered will need to be charged as an expense. The ultimate outcome of this claim cannot presently be determined and there is significant uncertainty surrounding the amount that will ultimately be recovered.

We may incur losses or lose opportunities for gains as a result of any future use of derivative instruments to protect us against low gold prices.

We have from time to time used derivative instruments to protect the selling price of some of our anticipated gold production. The intended effect of our derivative transactions was to lock in a fixed sale price for some of our future gold production to provide some protection against a subsequent fall in gold prices. Although we have currently ceased using derivative instruments to protect us against low gold prices at our operations, we may in the future determine to implement the use of derivatives in connection with a portion of our anticipated gold production.

Derivative transactions can result in a reduction in revenue if the instrument price is less than the market price at the time the hedged sales are recognized. Moreover, our decision to enter into a given instrument would be based upon market assumptions. If these assumptions are not ultimately met, significant losses or lost opportunities for significant gains may result. In all, the use of these instruments may result in significant losses which will prevent us from realizing the positive impact of any subsequent increase in the price of gold on the portion of production covered by the instrument.

Our underground project at Loulo, developing two mines at Yalea and Gara, is subject to all of the risks associated with project development and underground mining.

Development of the underground mine at Yalea commenced in December 2006 and first ore was mined in April 2008. These planned mines represent our entry into the business of underground mining, and the commencement of underground mining in Mali by any mining company. In connection with the development of the underground mines, we must build the necessary infrastructure, the costs of which are substantial. The underground mines may experience unexpected problems and delays during their development and construction. Delays in the commencement of gold production could occur and the development costs could be larger than expected, which could affect our results of operations and profitability.

Table of Contents

Since the commencement of the underground operations at Yalea, in working with a mining contractor, we have experienced a number of challenges which have led to delays and slower build up of production. These challenges included the availability of the underground fleet, the ability to drill and blast up holes and the contractor's poor safety record.

Following these setbacks experienced during 2009, we terminated the underground mining contract with the contractor and have assumed responsibility for underground mining at Loulo. At the beginning of 2010, we appointed a new contractor to develop the Gara underground mine, and subsequently extended their contract at the end of 2010 to include the development of the Yalea underground mine. The development and operation of the underground mine has been negatively impacted by these issues and resulting delays, and we cannot assure you that such issues are fully resolved or that we will not have future delays.

The business of underground mining by its nature involves significant risks and hazards. In particular, as the development commences the operation could be subject to:

rockbursts;

seismic events;

underground fires;

cave-ins or falls of ground;

discharges of gases or toxic chemicals;

flooding;

accidents; and

other conditions resulting from drilling, blasting and the removal of material from an underground mine.

We are at risk of experiencing any and all of these hazards. The occurrence of any of these hazards could delay the development of the mine, production, increase cash operating costs and result in additional financial liability for us.

Our success may depend on our social and environmental performance.

Our ability to operate successfully in communities will likely depend on our ability to develop, operate and close mines in a manner that is consistent with the health, safety and well-being of our employees, the protection of the environment, and the creation of long-term economic and social opportunities in the communities in which we operate. We seek to promote improvements in health and safety, environmental performance and community relations. However, our ability to operate could be adversely impacted by accidents or events detrimental (or perceived to be detrimental) to the health, safety and well-being of our employees, the environment or the communities in which we operate.

In July 2009, the Loulo mine experienced some disruption, caused by a small group of disaffected people unable to secure long term employment at the mine. The disruption resulted in some damage to the tailings pipeline as well as to some accommodation units and other property. All operations were suspended for 36 hours, following which all mining and processing operations were restored and operating back at normal capacity. We cannot assure you that similar events will not happen in the future, or that such events will not adversely affect our results of operations and properties.

Actual cash costs of production, production results and economic returns may differ significantly from those anticipated by our feasibility studies and scoping studies for new development projects.

It typically takes a number of years from initial feasibility studies of a mining project until development is completed and, during that time, the economic feasibility of production may change. The economic feasibility of development projects is based on many factors, including the accuracy of estimated reserves, metallurgical recoveries, capital and operating costs and future gold prices. The capital expenditures and time required to develop new mines or

other projects are considerable, and changes in costs or construction schedules can affect project economics. Thus it is possible that actual costs and economic returns may differ materially from our estimates.

Table of Contents

In addition, there are a number of uncertainties inherent in the development and construction of any new mine, including:

the availability and timing of necessary environmental and governmental permits;

the timing and cost necessary to construct mining and processing facilities, which can be considerable;

the availability and cost of skilled labor, power, water and other materials;

the accessibility of transportation and other infrastructure, particularly in remote locations; and

the availability of funds to finance construction and development activities.

During 2010, we completed the feasibility study for the Goukoto project. Mining at Goukoto commenced in January 2011 and processing is anticipated to commence by mid-year. Also in 2010, we completed an update to the Kibali project feasibility study. The study will now go through a series of internal and external reviews and optimizations of the mining and processing rates and capital estimates and in particular the scheduling of the capital development ahead of final design and approval targeted for mid-2011. Exploration at our Massawa project has been slowed down as we have advanced Goukoto and Kibali providing the time to fully evaluate the metallurgy and development strategies. Our goal is to progress the Massawa project to complete a feasibility study in 2011. We cannot provide any assurance that the projects will ultimately result in new commercial mining operations, or that new commercial mining operations will be successful.

We conduct mining, development and exploration activities in countries with developing economies and are subject to the risks of political and economic instability associated with these countries.

We currently conduct mining, development and exploration activities in countries with developing economies. These countries and other emerging markets in which we may conduct operations have, from time to time, experienced economic or political instability. It is difficult to predict the future political, social and economic direction of the countries in which we operate, and the impact government decisions may have on our business. Any political or economic instability in the countries in which we currently operate could have a material and adverse effect on our business and results of operations.

The countries of Mali, Senegal, Burkina Faso, DRC and Côte d'Ivoire have, since independence, experienced some form of political upheaval with varying forms of changes of government taking place.

Goods are supplied to our operations in Mali through Ghana and Senegal, which routings have, to date, functioned satisfactorily. Our operations at Morila have been adversely affected by the higher transportation costs for diesel that now has to be delivered via Senegal. Any present or future policy changes in the countries in which we operate may in some way have a significant effect on our operations and interests.

The mining laws of Mali, Côte d'Ivoire, Senegal, Burkina Faso, and DRC stipulate that, should an economic orebody be discovered on a property subject to an exploration permit, a permit that allows processing operations to be undertaken must be issued to the holder. Legislation in these countries currently provides for the relevant government to acquire a free ownership interest in any mining project. The requirements of the various governments as to the foreign ownership and control of mining companies may change in a manner which adversely affects us.

We are subject to various political and economic uncertainties associated with operating in the Democratic Republic of the Congo, and the success of the Kibali project will depend in large part on our ability to overcome significant challenges.

We are subject to risks associated with operating the Kibali project in the Democratic Republic of the Congo (DRC). The Kibali project is located in the north-east region of the DRC and is subject to various levels of political, economic and other risks and uncertainties associated with operating in the DRC. Some of these risks include political and economic instability, high rates of inflation, severely limited infrastructure, lack of law enforcement, labor unrest, and war and civil conflict. In addition, the Kibali project is subject to the risks inherent in operating in any foreign jurisdiction including changes in government policy, restrictions on foreign exchange, changes in taxation policies, and renegotiation or nullification of existing concessions, licenses, permits and contracts.

Table of Contents

The DRC is an impoverished country with physical and institutional infrastructure that is in a debilitated condition. It is in transition from a largely state-controlled economy to one based on free market principles, and from a non-democratic political system with a centralized ethnic power base to one based on more democratic principles. There can be no assurance that these changes will be effected or that the achievement of these objectives will not have material adverse consequences for the Kibali project. It is anticipated that presidential elections should take place during the latter part of 2011.

Any changes in mining or investment policies or shifts in political attitude in the DRC may adversely affect operations and/or profitability of the Kibali project. Operations may be affected in varying degrees by government regulations with respect to, but not limited to, restrictions on production, price controls, export controls, currency remittance, income taxes, foreign investment, maintenance of claims, environmental legislation, land use, land claims of local people, water use and mine safety. These changes may impact the profitability and viability of the Kibali project.

Furthermore, the Kibali project is located in a remote area of the DRC, which lacks basic infrastructure, including adequate roads and other transport, sources of power, water, housing, food and transport. In order to develop any of the mineral interests, facilities and material necessary to support operations in the remote locations in which they are situated must be established. The remoteness of the mineral interests would affect the potential viability of mining operations, as we would also need to establish substantially greater sources of power, water, physical plant, roads and other transport infrastructure than are currently present in the area. More specifically, we must obtain necessary licenses from the government to construct and operate hydropower stations, which will necessarily involve reconfiguring, refurbishing and maintaining existing stations. Our ability to produce sufficient power for the Kibali will be adversely affected to the extent such licenses cannot be obtained, or we are unable to comply with the conditions of such licenses.

Moreover, the north-east region of the DRC has undergone civil unrest and instability that could have an impact on political, social or economic conditions in the DRC generally. Stability must be maintained in order for us to build and operate a mine at the Kibali project site. The impact of unrest and instability on political, social or economic conditions in the DRC could result in the impairment of the exploration, development and operations at the Kibali project.

The communities near the Kibali project need to be resettled in an orderly manner and peaceful manner to allow the development and operation of a mine at the site. The first phase of houses are currently being built which will allow the management to commence the resettlement program, which has been implemented following agreement with the local authorities and communities affected by the project. We have committed to assist the DRC government in these efforts. Any failure to complete the settlement plan successfully will materially and adversely affect our ability to build and operate a mine at the Kibali project site.

Under our joint venture agreements with AngloGold Ashanti Limited, or AngloGold Ashanti, we operate Morila and the Kibali project through a joint venture agreement and joint venture committee, and any disputes with AngloGold Ashanti over the management of Morila or the Kibali project could adversely affect our business.

We jointly control Morila SA, the owner of the Morila mine, and Kibali Goldmines SPRL, the owner of the Kibali project, with AngloGold Ashanti under joint venture agreements. We are responsible for the day-to-day operations of Morila and the Kibali project, subject to the overall management control of the Morila SA and Kibali Goldmines boards, respectively. Substantially all major management decisions, including approval of a budget for Morila and the Kibali project, must be approved by the Morila SA and Kibali Goldmines boards, respectively. We and AngloGold Ashanti retain equal representation on the boards, with neither party holding a deciding vote. If a dispute arises between us and AngloGold Ashanti with respect to the management of Morila SA or Kibali Goldmines, and we are unable to amicably resolve the dispute, we may have to participate in arbitration or other proceeding to resolve the dispute, which could materially and adversely affect our business.

The use of mining contractors at certain of our operations may expose it to delays or suspensions in mining activities.

Mining contractors are used at Loulo and Morila to mine and deliver ore to processing plants. These mining contractors rely on third-party vendors to supply them with required mining equipment, many of which have been adversely affected by the global economic slowdown. Consequently, at these mines, we do not own all of the mining

equipment and may face disruption of operations and incur costs and liabilities in the event that any of the mining contractors at these mines, or any of the vendors that supply them, has financial difficulties, or should there be a dispute in renegotiating a mining contract, or a delay in replacing an existing contractor.

Following setbacks experienced during 2009 at Loulo, we terminated the underground mining contract with the contractor and assumed responsibility for the underground mining.

Table of Contents

We may be required to seek funding from the global credit and capital markets to develop our properties, and the recent weaknesses in those markets could adversely affect our ability to obtain financing and capital resources.

We require substantial funding to develop our properties, and may be required to seek funding from the credit and capital markets to finance these activities. Our ability to obtain outside financing will depend upon the price of gold and the market's perception of its future price, and other factors outside of our control. We may not be able to obtain funding on acceptable terms when required, or at all.

The credit and capital markets experienced significant deterioration in 2008, including the failure of significant and established financial institutions in the US and abroad, which continued throughout 2009 and 2010 and may continue in 2011 and beyond, all of which will have an impact on the availability and terms of credit and capital in the near term. If uncertainties in these markets continue, or these markets deteriorate further, it could have a material adverse effect on our ability to raise capital. Failure to raise capital when needed or on reasonable terms may have a material adverse effect on our business, financial condition and results of operations.

Regulations and pending legislation governing issues involving climate change could result in increased operating costs which could have a material adverse effect on our business.

A number of governments or governmental bodies have introduced or are contemplating regulatory changes in response to various climate change interest groups and the potential impact of climate change. Legislation and increased regulation regarding climate change could impose significant costs on us, our venture partners and our suppliers, including increased energy, capital equipment, environmental monitoring and reporting and other costs to comply with such regulations. Any adopted future climate change regulations could also negatively impact our ability to compete with companies situated in areas not subject to such limitations. Given the emotion, political significance and uncertainty around the impacts of climate change and how it should be dealt with, we cannot predict how legislation and regulation will affect our financial condition, operating performance and ability to compete.

Furthermore, even without such regulation, increased awareness and any adverse publicity in the global marketplace about potential impacts on climate change by us or other companies in our industry could harm our reputation. The potential physical impacts of climate change on our operations are highly uncertain, and would be particular to the geographic circumstances in areas in which we operate. These may include changes in rainfall and storm patterns and intensities, water shortages, changing sea levels and changing temperatures. These impacts may adversely impact the cost, production and financial performance of our operations.

We may not pay dividends to shareholders in the near future.

We have proposed the payment of our fifth dividend to ordinary shareholders, subject to approval by our shareholders at our AGM in May 2011. It is our policy to pay dividends if profits and funds are available for that purpose. Whether or not funds are available depends on a variety of factors, including capital expenditures. We cannot guarantee that dividends will be paid in the future.

If we are unable to attract and retain key personnel our business may be harmed.

Our ability to bring additional mineral properties into production and explore our extensive portfolio of mineral rights will depend, in large part, upon the skills and efforts of a small group of management and technical personnel, including D. Mark Bristow, our Chief Executive Officer. If we are not successful in retaining or attracting highly qualified individuals in key management positions our business may be harmed. The loss of any of our key personnel could adversely impact our ability to execute our business plan.

Our insurance coverage may prove inadequate to satisfy future claims against us.

We may become subject to liabilities, including liabilities for pollution or other hazards, against which we have not insured adequately or at all, or cannot insure. Our insurance policies contain exclusions and limitations on coverage. Our current insurance policies provide worldwide indemnity of £50 million in relation to legal liability incurred as a result of death, injury, disease of persons and/or loss of or damage to property. Main exclusions under this insurance policy, which relates to our industry, include war, nuclear risks, silicosis, asbestosis or other fibrosis of the lungs or diseases of the respiratory system with regard to employees, and gradual pollution. In addition, our insurance policies may not continue to be available at economically acceptable premiums. As a result, in the future our insurance coverage may not cover the extent of claims against us.

Table of Contents

It may be difficult for you to effect service of process and enforce legal judgments against us or our affiliates.

We are incorporated in Jersey, Channel Islands and a majority of our directors and senior executives are not residents of the United States. Virtually all of our assets and the assets of those persons are located outside the United States. As a result, it may not be possible for you to effect service of process within the United States upon those persons or us. Furthermore, the United States and Jersey currently do not have a treaty providing for the reciprocal recognition and enforcement of judgments (other than arbitration awards) in civil and commercial matters. Consequently, it may not be possible for you to enforce a final judgment for payment rendered by any federal or state court in the United States based on civil liability, whether or not predicated solely upon United States Federal securities laws against those persons or us.

In order to enforce any judgment rendered by any Federal or state court in the United States in Jersey, proceedings must be initiated by way of common law action before a court of competent jurisdiction in Jersey. The entry of an enforcement order by a court in Jersey is conditional upon the following:

that the court which pronounced the judgment has jurisdiction to entertain the case according to the principles recognized by Jersey law with reference to the jurisdiction of the foreign courts;

that the judgment is final and conclusive it cannot be altered by the courts which pronounced it;

that there is payable pursuant to a judgment a sum of money, not being a sum payable in respect of tax or other charges of a like nature or in respect of a fine or other penalty;

that the judgment has not been prescribed;

that the courts of the foreign country have jurisdiction in the circumstances of the case;

that the judgment was not obtained by fraud; and

that the recognition and enforcement of the judgment is not contrary to public policy in Jersey, including observance of the rules of natural justice which require that documents in the United States proceeding were properly served on the defendant and that the defendant was given the right to be heard and represented by counsel in a free and fair trial before an impartial tribunal.

Furthermore, it is doubtful whether you could bring an original action based on United States Federal securities laws in a Jersey court.

We are subject to significant corporate regulation as a public company and failure to comply with all applicable regulations could subject us to liability or negatively affect our share price.

As a publicly traded company, we are subject to a significant body of regulation. While we have developed and instituted a corporate compliance program based on what we believe are the current best practices in corporate governance and continue to update this program in response to newly implemented or changing regulatory requirements, we cannot provide absolute assurance that we are or will be in compliance with all potentially applicable corporate regulations. For example, we cannot provide assurance that in the future our management will not find a material weakness in connection with its annual review of our internal control over financial reporting pursuant to Section 404 of the US Sarbanes-Oxley Act of 2002. If we fail to comply with any of these regulations, we could be subject to a range of regulatory actions, fines or other sanctions or litigation. If we must disclose any material weakness in our internal control over financial reporting, our share price could decline.

In addition, we are subject to the U.S. Foreign Corrupt Practices Act and the recently enacted UK Bribery Act, which generally prohibit companies and their intermediaries from making improper payments to officials for the purpose of obtaining or retaining business. The compliance mechanisms and monitoring programs that we have in place may not adequately prevent or detect possible violations under applicable anti-bribery and corruption legislation. Failure to comply with such legislation could expose us to civil and criminal sanction, including fines, prosecution, potential debarment from public procurement and reputational damage, all of which could have a material adverse

effect on our financial results and could cause our share price to decline.

Table of Contents

Risks Relating to Our Industry

The exploration of mineral properties is highly speculative in nature, involves substantial expenditures, and is frequently unproductive.

We must continually seek to replenish our ore reserves depleted by production to maintain production levels over the long term. Ore reserves can be replaced by expanding known ore bodies or exploring for new deposits. Exploration for gold is highly speculative in nature. Our future growth and profitability will depend, in part, on our ability to identify and acquire additional mineral rights, and on the costs and results of our continued exploration and development programs. Many exploration programs, including some of ours, do not result in the discovery of mineralization and any mineralization discovered may not be of sufficient quantity or quality to be profitably mined. Our mineral exploration rights may not contain commercially exploitable reserves of gold. Uncertainties as to the metallurgical recovery of any gold discovered may not warrant mining on the basis of available technology. Our operations are subject to all of the operating hazards and risks normally incident to exploring for and developing mineral properties, such as:

encountering unusual or unexpected formations;

environmental pollution;

personal injury and flooding; and

decrease in reserves due to a lower gold price.

If we discover a viable deposit, it usually takes several years from the initial phases of exploration until production is possible. During this time, the economic feasibility of production may change.

Moreover, we will use the evaluation work of professional geologists, geophysicists, and engineers for estimates in determining whether to commence or continue mining. These estimates generally rely on scientific and economic assumptions, which in some instances may not be correct, and could result in the expenditure of substantial amounts of money on a deposit before it can be determined whether or not the deposit contains economically recoverable mineralization. As a result of these uncertainties, we may not successfully acquire additional mineral rights, or identify new proven and probable reserves in sufficient quantities to justify commercial operations in any of our properties.

If management determines that capitalized costs associated with any of our gold interests are not likely to be recovered, we would recognize an impairment provision against the amounts capitalized for that interest. All of these factors may result in losses in relation to amounts spent which are found not to be recoverable.

Title to our mineral properties may be challenged which may prevent or severely curtail our use of the affected properties.

Title to our properties may be challenged or impugned, and title insurance is generally not available. Each sovereign state is the sole authority able to grant mineral property rights, and our ability to ensure that we have obtained secure title to individual mineral properties or mining concessions may be severely constrained. Our mineral properties may be subject to prior unregistered agreements, transfers or claims, and title may be affected by, among other things, undetected defects. In addition, we may be unable to operate our properties as permitted or to enforce our rights with respect to our properties.

Our ability to obtain desirable mineral exploration projects in the future may be adversely affected by competition from other exploration companies.

We compete with other mining companies in connection with the search for and acquisition of properties producing or possessing the potential to produce gold. Existing or future competition in the mining industry could materially and adversely affect our prospects for mineral exploration and success in the future.

Our operations are subject to extensive governmental and environmental regulations, which could cause us to incur costs that adversely affect our results of operations.

Our mining facilities and operations are subject to substantial government laws and regulations, concerning mine safety, land use and environmental protection. We must comply with requirements regarding exploration operations,

public safety, employee health

Table of Contents

and safety, use of explosives, air quality, water pollution, noxious odor, noise and dust controls, reclamation, solid waste, hazardous waste and wildlife as well as laws protecting the rights of other property owners and the public.

Any failure on our part to be in compliance with these laws, regulations, and requirements with respect to our properties could result in us being subject to substantial penalties, fees and expenses, significant delays in our operations or even the complete shutdown of our operations. We provide for estimated environmental rehabilitation costs when the related environmental disturbance takes place. Estimates of rehabilitation costs are subject to revision as a result of future changes in regulations and cost estimates. The costs associated with compliance with government regulations may ultimately be material and adversely affect our results of operations and financial condition.

If our environmental and other governmental permits are not renewed or additional conditions are imposed on our permits, our financial condition and results of operations may be adversely affected.

Generally, compliance with environmental and other government regulations requires us to obtain permits issued by governmental agencies. Some permits require periodic renewal or review of their conditions. We cannot predict whether we will be able to renew these permits or whether material changes in permit conditions will be imposed. Non-renewal of a permit may cause us to discontinue the operations requiring the permit, and the imposition of additional conditions on a permit may cause us to incur additional compliance costs, either of which could have a material adverse effect on our financial condition and results of operations.

Labor disruptions could have an adverse effect on our operating results and financial condition.

Our operations in West Africa are highly unionized, and strikes are legal in the countries in which we operate. Therefore, our operations are at risk of having work interrupted for indefinite periods due to industrial action, such as strikes by employee collectives. Should long disruptions take place on our operations, the results from our operations and their financial condition could be materially and adversely affected.

AIDS poses risks to us in terms of productivity and costs.

The incidence of AIDS in Mali, Côte d'Ivoire, Senegal and the DRC, which has been forecast to increase over the next decade, poses risks to us in terms of potentially reduced productivity and increased medical and insurance costs. The exact extent to which our workforce is infected is not known at present. The prevalence of AIDS in the countries in which we operate and among our workforce could become significant. Significant increases in the incidence of AIDS infection and AIDS-related diseases among members of our workforce in the future could adversely impact our operations and financial condition.

Item 4. Information on the Company

A. HISTORY AND DEVELOPMENT OF THE COMPANY

Randgold Resources Limited was incorporated under the laws of Jersey, Channel Islands in August 1995, to engage in the exploration and development of gold deposits in Sub-Saharan Africa. Our principal executive offices are located at 3rd Floor Unity Chambers, 28 Halkett Street, St. Helier, Jersey, JE2 4WJ Channel Islands and our telephone number is (011 44) 1534 735-333. Our agent in the United States is CT Corporation System, 111 Eighth Avenue, New York, New York 10011.

We discovered the Morila deposit during December 1996 and we subsequently financed, built and commissioned the Morila mine.

During July 2000, we concluded the sale of 50% of our interest in Morila Limited (and also a shareholder loan made by us to Morila Limited) to AngloGold Ashanti for \$132 million in cash.

We have an 80% controlling interest in Société des Mines de Loulo SA, or Somilo, through a series of transactions culminating in April 2001. The Loulo mine commenced operations in October 2005 and mines the Gara (formerly Loulo 0) and Yalea deposits. We discovered the Yalea deposit in 1997.

We have an 89% controlling interest in Société des Mines de Tongon SA, or Tongon.

We conduct our mining operations through:

Table of Contents

a 50% joint venture interest in Morila Limited (which in turn owns an 80% interest in the Morila mine);

an 80% interest in Somilo; and

an 89% interest in Tongon.

In July 2002, we completed a public offering of 5,000,000 of our ordinary shares, including American Depositary Shares, or ADSs, resulting in gross proceeds to us of \$32.5 million. These proceeds were used to repay a syndicated term loan and revolving credit facility in November 2002 and for feasibility studies and development activities. In connection with this offering, we listed our ADSs on the Nasdaq National Market (our ADSs are now listed on the Nasdaq Global Select Market).

In February 2004, we announced that we would develop a new mine at Loulo in western Mali. Construction continued through 2005 and the new open pit mine went into production in October 2005. In addition, our board agreed to proceed with the development of the underground mine and, after the award of the development contract, work commenced with the construction of the boxcut at the Yalea mine in August 2006. We accessed first ore at Yalea in April 2008 with full production beginning in 2010. We commenced development of Loulo's second underground mine, Gara, in 2010 with first ore scheduled to be delivered to the plant by the second quarter of 2011.

In April 2004, Resolute Mining Limited, or Resolute, acquired the Syama mine from us. Resolute has subsequently paid us \$6 million in cash and has assumed liabilities of \$7 million, of which \$4 million owing to ourselves has been settled. The agreement entered into in June 2004 between the parties provides for the payment of a production royalty by Resolute to us relating to Syama's production equal to \$10 per ounce on the first million ounces produced by Syama and \$5 per ounce on the next three million ounces produced by Syama. This royalty payment is capped at \$25 million. We received our first royalties in 2009.

Effective on June 11, 2004, we undertook a split of our ordinary shares, which increased our issued share capital from 29,263,385 to 58,526,770 ordinary shares. In connection with this share split our ordinary shareholders of record on June 11, 2004 received two \$0.05 ordinary shares for every one \$0.10 ordinary share they held. Following the share split, each shareholder held the same percentage interest in us; however, the trading price of each share was adjusted to reflect the share split. ADS holders were affected the same way as shareholders and the ADS ratio remains one ADS to one ordinary share.

On November 1, 2005, we completed a public offering of 8,125,000 of our ordinary shares, including ADSs, resulting in gross proceeds to us of \$109.7 million. The new shares were allocated to institutional shareholders in the United Kingdom, the United States, Canada and the rest of the world.

On December 6, 2007, we completed a public offering of 6,821,000 of our ordinary shares, including ADSs, resulting in gross proceeds to us of \$240 million. A portion of the proceeds from the offering were used for the development of the Tongon project, and any remaining proceeds will be used for such organic and corporate opportunities, including possible acquisitions, as might arise.

During 2007, peace initiatives in Côte d'Ivoire continued and we completed a feasibility study which allowed our board to approve the development of the new mine at Tongon subject to the approval of the mining convention by the Côte d'Ivoire Minister of Mines and Energy. Construction of the mine started at the end of 2008 and its first gold was produced in November 2010.

On August 4, 2009, we completed a public offering of 5,750,000 of our ordinary shares, including ADSs, resulting in gross proceeds to us of \$341.8 million. The proceeds from the offering are being used to fund the feasibility studies for the Goukoto and Massawa projects, to develop the Goukoto, Massawa and Kibali projects, and for other organic and corporate opportunities, including possible acquisitions.

On October 15, 2009, we completed the acquisition of 50% of Moto Goldmines Limited (Moto Goldmines), in conjunction with AngloGold Ashanti, which resulted in a 50:50 joint venture control of the Kibali project in the DRC. On December 22, 2009 we completed a further acquisition of a 20% interest, on behalf of the joint venture, from Société des Mines d'Or de Kilo-Moto (Sokimo), the parastatal mining company of the DRC, resulting in an effective interest in the Kibali project of 45%.

During November 2009, we completed the sale of our Kiaka gold project to Volta Resources Inc., for \$2 million in cash and 20 million Volta Resources Inc. shares. During 2010, we sold 15.5 million Volta Resources Inc. shares for a net profit of \$19.3 million.

Table of Contents

Developments during 2010 relating to MDM are discussed more fully in Item 4. Information on the Company B. Business Overview Legal Proceedings .

Principal Capital Expenditures

Capital expenditures incurred for the year ended December 31, 2010 totaled \$410.8 million compared to \$196.7 million for the year ended December 31, 2009, and \$85 million for the year ended December 31, 2008. As of December 31, 2010, our capital commitments amounted to \$85 million, principally for the Loulo underground project, Tongon mine, Goukoto project and the Kibali project. The capital expenditures will be financed out of internal funds. The capital cost for both Loulo underground mines is expected to amount to approximately \$137 million for the next three years. The capital cost for the Tongon mine is expected to amount to approximately \$66 million for the next three years. The capital cost for Goukoto is expected to amount to approximately \$98 million for the next three years. The capital cost for our share of the Kibali project is expected to amount to approximately \$363 million for the next three years. The capital cost for Massawa is expected to amount to approximately \$26 million for the next three years.

Recent Developments

During 2010, we completed the feasibility study for the Goukoto project. The feasibility study is based on a toll treat project whereby the ore is mined and fed through an onsite fixed crusher. The crushed ore is then loaded onto dedicated haul trucks and trucked approximately 25 kilometers to Loulo and fed directly into the Loulo plant. Mining at Goukoto commenced in January 2011 and processing is anticipated to commence by mid-year.

Also in 2010, we completed an update to the Kibali project feasibility study. The study will now go through a series of internal and external reviews and optimizations of the mining and processing rates and capital estimates and in particular the scheduling of the capital ahead of final design and approval targeted for mid-2011. The Kibali project's Resettlement Action Plan has progressed with the construction of the first houses in the resettlement area commencing in January 2011.

B. BUSINESS OVERVIEW**OVERVIEW**

We engage in gold mining, exploration and related activities. Our activities are focused on West and Central Africa, some of the most promising areas for gold discovery in the world. In Mali, we have an 80% controlling interest in the Loulo mine through Somilo SA. The Loulo mine is currently mining from two large open pits, several smaller satellite pits and one underground mine and is developing a further underground mine. We also own 50% of Morila Limited, which in turn owns 80% of Morila SA, the owner of the Morila mine in Mali. In addition, we own an effective 89% controlling interest in the Tongon mine located in the neighboring country of Côte d'Ivoire, which was commissioned in November 2010. We also own an effective 83.25% controlling interest in the Massawa project in Senegal where we completed a prefeasibility study in December 2009. In 2009, we announced a new discovery on our Loulo permit, Goukoto, which is located approximately 25 kilometers south of the existing mine. Also in 2009, we acquired a 45% interest in the Kibali project, which is located in the DRC. We also have exploration permits and licenses covering substantial areas in Burkina Faso, Côte d'Ivoire, DRC, Mali, and Senegal. At December 31, 2010, we declared proven and probable reserves of 16.39 million ounces attributable to our percentage ownership interests in Loulo, Morila, Tongon, Goukoto, Massawa and Kibali.

Our strategy is to create value for all our stakeholders by finding, developing and operating profitable gold mines. We seek to discover significant gold deposits, either from our own phased exploration programs or the acquisition of early stage to mature exploration programs. We actively manage both our portfolio of exploration and development properties and our risk exposure to any particular geographical area. We also routinely review opportunities to acquire development projects and existing mining operations and companies.

Loulo

In February 2004, we announced that we would develop a new mine at Loulo in western Mali. In 2005, we commenced open pit mining operations at the Gara and Yalea pits. In 2010, its fifth year of production, the Loulo mine produced 316,539 ounces of gold at a total cash cost of \$712 per ounce. We estimate that the mine will produce between 420,000 to 440,000 ounces in 2011. We currently anticipate that mining at Loulo will continue through 2029.

Table of Contents

We commenced development of the Yalea underground mine in August 2006, first ore was accessed in April 2008 and we are ramping up to full production anticipated in 2011. We commenced development of Loulo's second underground mine, Gara, in 2010 with first ore scheduled to be delivered to the plant by the second quarter of 2011.

The focus of exploration at Loulo is to continue to explore and discover additional orebodies within the 372 square kilometer permit.

Goukoto

Goukoto is located approximately 25 kilometers south of Loulo's plant.

Following the completion of the feasibility in early 2010 a full feasibility was completed by the end of 2010, following a large drill program and follow up studies. The geological modeling is based on 114 RC holes totaling 11,583 meters and 194 diamond holes totaling 57,613 meters. The Goukoto structure hosting the Goukoto orebody has now been intersected over the 1.7km of strike length and down to 520 vertical meters. The feasibility study has led to the declaration of open pit ore reserves totaling 17.11 million tonnes at a grade of 5.10g/t for 2.80 million ounces. The P64 target, which features 250 strike meters of similar alteration and mineralization, is located 300 meters to the northwest of Goukoto, while the Faraba deposit, with mineralized material of 6.78 million tonnes at an average grade of 2.60g/t for 565,000 ounces, is located 2.5 kilometers to the southeast.

It is anticipated that an updated underground economic scoping study will be completed during 2011.

Morila

In 1996, we discovered the Morila deposit, which we financed and developed and was our major gold producing asset through 2009. Since production began in October 2000, Morila has produced approximately 5.8 million ounces of gold at a total average cash cost of \$216 per ounce. Morila's total production for 2010 was 238,607 ounces at a cash cost of \$669 per ounce. Consistent with the mine plan, Morila ceased pit mining in April 2009 and is currently processing lower grade stockpiles, which will continue through 2013. During 2010 a study of the reprocessing of the Morila Tailings Storage Facility was completed and it is anticipated that a bankable feasibility study will be undertaken in 2011.

Tongon

The Tongon project is located within the Nielle exploitation permit in the north of Côte d'Ivoire, 55 kilometers south of the border with Mali.

We commenced construction of the Tongon gold mine at the end of 2008 and commissioned the first stream in the fourth quarter of 2010 and produced 28,126 ounces at an average cash cost of \$459 per ounce for the year, with first official gold production being recorded. We are forecast to complete and commission the second stream including secondary and tertiary crushing circuit and the sulfide circuit of the processing plant by midyear 2011. Gold production is projected to build up to between 260,000 and 270,000 ounces in 2011 and average 270,000 ounces per annum over a ten year period.

The focus of exploration at Tongon is to continue to explore and discover additional orebodies within the 751 square kilometer Nielle permit.

Kibali

Our interest in the Kibali project was acquired following the acquisition of Moto Goldmines, in conjunction with AngloGold Ashanti, and the further acquisition of a 20% interest from Sokimo on behalf of the joint venture. The Kibali project is located approximately 560 kilometers northeast of the city of Kisangani and 180 kilometers west of the Ugandan border town of Arua in the northeast of the DRC.

During the year the feasibility was updated. Revised ore reserves reflect an increase in underground probable ore reserves to in excess of 6 million ounces, bringing the total probable ore reserve number to 10.05 million ounces.

The overall program to complete the initial investment phase to establish gold production at Kibali is estimated to take approximately three years, with first gold expected at the end of 2013.

Table of Contents

The exploration team completed the analysis of the Karagba Chauffeur Durba (KCD) deposit, resulting in a new geological model. Continuity of mineralization was confirmed between the Sessenge and KCD deposits and remains open down plunge. This will be tested by a program of deep drilling in 2011.

Massawa

Our Massawa project consists of a greenfields exploration find located in eastern Senegal during 2008. The Massawa target was first identified in 2007 and is located approximately 60 kilometers west of the Malian border. A successful scoping study was completed for Massawa in the first quarter of 2009 which met all of our investment criteria and we advanced the project to prefeasibility. The prefeasibility study was completed at the end of 2009 which highlighted the complex nature of the ore, which requires pressure oxidation of the sulfides to liberate the gold. During 2010 significantly more work was conducted in this regard to improve the geochemical and metallurgical understanding of the ore. All studies point towards the Massawa deposit requiring high levels of energy to recover the gold and thus our focus in 2011 will be on defining a power strategy for Massawa and finding further non refractory mineralization. Further infill and twin drilling was completed in 2010 which resulted in a revised geological model. The feasibility modifying factors were applied to this resulting in updated probable open pit mineral reserves of 17.42 million tonnes at a grade of 3.36g/t for 1.88 million ounces.

While the exploration work concentrated on the Massawa feasibility during 2010, the exploration team has been mobilized to delineate and test the large number of satellite targets in the area with the focus of finding additional non-refractory mineralization that could incrementally add to the project.

Exploration

We have an extensive portfolio of exploration projects in both West and Central Africa. In 2010, we concentrated our exploration activities on the continued evaluation of the Massawa deposit in Senegal, the discovery of the new multi-million ounce high grade gold deposit at Goukoto in Mali, the definition of satellite deposits at Loulo, and geological modeling and update of the ore reserves at the Kibali gold deposit in the DRC. We completed a detailed analysis of the KCD deposit, resulting in a new geological model which supported a growth in reserves from 4.5 million ounces at the acquisition to 10.05 million ounces at the end of December 2010. Continuity of mineralization was confirmed between the Sessenge and KCD deposits and remains open down plunge. This will be tested by a program of deep drilling in 2011. We are exploring in five African countries with a portfolio of 275 targets on 13,583 square kilometers of groundholding. We target profitable gold deposits that have the potential to host mineable gold reserves of three million ounces or more. Our business strategy of organic growth through exploration has been validated by our discovery and development track record, including the Morila and Loulo mines, the Tongon project and the Massawa and Goukoto discoveries.

OWNERSHIP OF MINES AND SUBSIDIARIES

Morila is owned by a Malian company, Société des Mines de Morila SA (Morila), which in turn is owned 80% by Morila Limited and 20% by the State of Mali. Morila Limited is jointly owned by ourselves and AngloGold Ashanti Limited and the mine is controlled by a 50:50 joint venture management committee. Responsibility for the day-to-day operations rests with us.

Loulo is owned by a Malian company, Société des Mines de Loulo SA (Somilo), which is owned 80% ourselves and 20% by the State of Mali.

Tongon is owned by an Ivorian company, Société des Mines de Tongon SA, in which we have an 89% interest, the State of Côte d'Ivoire 10% and 1% is held by a local Ivorian company.

The Kibali project is controlled by a 50:50 joint venture, between ourselves and AngloGold Ashanti Limited, which holds an effective 90% interest in Kibali Goldmines SPRL. The remaining 10% of the shares are held by Sokimo, the parastatal mining company of the Democratic Republic of Congo. We thus have an effective 45% interest in the Kibali project. Our interest in this project was acquired following the acquisition of Moto Goldmines Limited, in conjunction with AngloGold Ashanti, and the further acquisition of a 20% interest from Sokimo on behalf of the joint venture.

Table of Contents

The Goukoto project is located on the Loulo Exploitation Permit. Accordingly, we hold an effective 80% interest in the Goukoto project through our interest in Loulo. We are currently engaged in the process of applying for the formation of the new Goukoto Exploitation Permit, which will be owned by a separate company, Société des Mines de Goukoto S.A.

We hold an effective 83.25% interest in the Massawa project. The government of Senegal retains a 10% carried interest in the project, with the balance held by our Senegalese joint venture partner.

GEOLOGY

West Africa is one of the more geologically prospective regions for gold deposits in the world. Lower Proterozoic rocks are known to contain significant gold occurrences and exist in West Africa in abundance. The Birimian greenstone belts, part of the Lower Proterozoic, which are younger than the Archaean greenstones of Canada, Australia and South Africa, contain similar types of ore deposits and are located in Ghana, Côte d'Ivoire, Burkina Faso, Guinea, Mali, Senegal and Niger. Although a significant amount of geological information has been collected by government and quasi-government agencies in West Africa, the region has largely been under-explored by mining and exploration companies using modern day technology. Most of our exploration properties are situated within the Birimian Formation, a series of Lower Proterozoic volcanic and sedimentary rocks. The West African Birimian sequences host a number of world class gold deposits and producing gold mines.

The Central African gold belts have a long history of gold production, particularly during the colonial era but due to regional instability they have seen little modern exploration. The Kibalian greenstone belts of northeastern DRC are comprised of Archaean Kibalian (Upper and Lower) volcanisedimentary rocks and ironstone-chert horizons metamorphosed to greenschist facies. They are cut by regional-scale north, east, northeast and northwest trending faults and are bounded to the north by the Middle Archaean West Nile granite-gneiss complex and cut to the south by the Upper Congo granitic complex. Our Kibali gold project is located within the Moto greenstone.

Our strategy was initiated before the current entry of our competitors into West Africa and we believe that this enabled us to secure promising exploration permits in the countries of Côte d'Ivoire, Mali, Burkina Faso, and Senegal at relatively low entry costs.

ORE RESERVES

Only those reserves which qualify as proven and probable reserves for purposes of the SEC's Industry Guide Number 7 are presented in this Annual Report. Pit optimization and open pit designs are carried out at a gold price of \$800 per ounce. Underground reserves are also based on a gold price of \$800 per ounce.

Morila reserves have been estimated by Mr. Stephen Ndede, an officer of the company and competent person. The Loulo open cast mineral reserves were calculated by Mr. Inigo Osei under supervision by Mr. Onno ten Brinke, an officer of the company and competent person. The Loulo underground mineral reserves were calculated by Mr. Chris Moffat, an officer of the company and competent person. The Tongon open pit mineral reserves were calculated by Mr. Samuel Baffoe, an officer of the company under the supervision of Mr. Onno ten Brinke, an officer of the company and competent person. The Goukoto, Kibali and Massawa project open pit mineral reserves were estimated by Mr. Onno ten Brinke, an officer of the company and competent person, while the Kibali project underground mineral reserves were calculated by Mr. Paul Kerr, an officer of SRK Consulting Perth and competent person. All reserves were verified and approved by Mr. Rodney Quick, our General Manager: Evaluation and Environment and competent person.

Total reserves as of December 31, 2010 amounted to 203.93 million tonnes at an average grade of 3.78g/t, for 24.76 million ounces of gold of which 16.39 million ounces are attributable to us.

In calculating proven and probable reserves, current industry standard estimation methods are used. The geological estimates were calculated using classical geostatistical techniques, following geological modeling of the borehole information. The sampling and assaying is done to internationally acceptable standards and routine quality control procedures are in place.

All reserves are based on feasibility or prefeasibility level studies. Factors such as grade distribution of the orebody, planned production rates, forecast working costs, dilution and mining recovery factors, geotechnical parameters and metallurgical factors as well as current forecast gold price are all used to determine a cut-off grade from which a life of mine plan is developed in order to optimize the profitability of the operation.

Table of Contents

The following table summarizes the declared reserves at our mines and s as of December 31, 2010:

Operation/ Project++	Proven Reserves			Probable Reserves			Total Reserves		
	Tonnes (Mt)	Grade (g/t)	Gold (Moz)	Tonnes (Mt)	Grade (g/t)	Gold (Moz)	Tonnes (Mt)	Grade (g/t)	Gold (Moz)
Morila +	5.86	1.68	0.32	6.69	1.14	0.24	12.55	1.39	0.56
Loulo +	4.54	2.98	0.43	40.89	4.63	6.09	45.43	4.47	6.52
Tongon +	0.42	1.93	0.03	36.69	2.47	2.91	37.11	2.46	2.94
Goukoto +				17.11	5.10	2.80	17.11	5.10	2.80
Massawa +				17.42	3.36	1.88	17.42	3.36	1.88
Kibali+				74.32	4.21	10.05	74.32	4.21	10.05
Total	10.82	2.23	0.78	193.12	3.86	23.98	203.93	3.78	24.76

+ Our attributable share of Morila is 40%, Loulo 80%, Goukoto is 80%, Tongon 89%, Massawa 83.25% and Kibali 45%.

++ Our reserves are calculated at a weighted average cut off grade of 2.38g/t for Loulo, 0.97g/t for Morila, 0.85g/t for Tongon, 1.40g/t for Goukoto, 1.10g/t for Massawa, and 1.59g/t for Kibali.

At Loulo, a 10% mining dilution at zero grade and an ore loss of 5% has been incorporated into the estimates of reserves and are reported as mill delivered tonnes and head grades. At the Tongon project a dilution of 15% at zero grade and an ore loss of 2% has been modeled for the Southern zone and for the Northern zone, dilution has been set at 10% with ore loss at 3%. At Goukoto and Massawa a dilution of 10% and an ore loss of 3% has been used. Metallurgical recovery factors have not been applied to the reserve figures since these are the estimates of the material to be delivered to the mill. Metallurgical recovery is used to determine the cut off grade at which to report mineral reserves. The average metallurgical recovery factors used are 89% for the Morila mine, 93.5% for the Loulo open pit material and 90.5% for Loulo underground material, 90.8% for the Tongon project, 92% for the Goukoto project, 90% for the Massawa project and between 83 and 86% for Kibali open pit projects depending on ore type and 91% for Kibali underground material.

MINING OPERATIONS**Loulo**

Loulo is controlled by a Malian company, Société des Mines de Loulo SA (Somilo), which is owned 80% by us and 20% by the Malian government. The Loulo mine complex is comprised of two open pit operations, Yalea and Gara, and two corresponding underground mines, the first of which has commenced operations and the second which is now in construction.

Loulo is located in western Mali, bordering Senegal, adjacent to the Falémé River. The mine is located within the Kedougou-Kéniéba inlier of Birimian rocks which hosts several major gold deposits, namely Gara, Yalea and Goukoto on the Loulo lease as well as Sadiola and Yatela in Mali and the Senegalese deposits of Massawa and Sabodala.

In 2010, Loulo produced 316,539 ounces of gold at a total cash cost of \$712 per ounce. The mine reported gold sales of \$363.7 million and profit from mining of \$140.7 million.

Production results for the 12 months ended December 31,**Mining**

	2010	2009
Tonnes mined (000)	38,932	27,977
Ore tonnes mined (000)	4,597	3,353

Milling

Tonnes processed (000)	3,158	2,947
Head grade milled (g/t)	3.4	4.2

Recovery (%)	92.5	87.7
Ounces produced	316,539	351,591
Ounces sold	313,122	349,660
Average price received+ (\$/oz)	1,162	864
Cash operating costs (\$/oz)	647	475

Table of Contents**Production results for the 12 months ended December 31,**

	2010	2009
Profit from mining activity (\$000)	140,717	118,326
Gold sales+ (\$000)	363,717	301,963

+ Includes 41,748 ounces for the year ended 31 December 2010 (31 December 2009: 84,996 ounces) delivered into the hedge at \$500/oz (year ended 31 December 2009; \$435/oz).

Higher revenues were partially offset by higher mining costs, primarily due to increased open pit mining costs resulting from increased tonnes mined, deepening pits, revised mining rates and the introduction of a second mining contractor at the site, necessitated in part by the slower build up in tonnes from the underground mine.

Ore Reserves

Total ore reserves for the years ended December 31, 2010 and 2009 are inclusive of depletions due to mining and additions from the Loulo 3 open pit.

* Open pit mineral reserves are reported at a gold price of \$800/oz and an average cut-off of 1.23g/t and include dilution and ore loss factors. Open pit mineral reserves were calculated by Mr. Inigo Osei, under supervision of Mr. Onno ten Brinke, an officer of the company and competent person. Underground mineral reserves are reported at a gold price of \$800/oz and a cut-off of 2.5 g/t and include dilution and ore loss factors. Underground mineral reserves were calculated by Mr. Chris Moffatt, an officer of the company and competent person.

** Attributable gold (Moz) refers to the quantity attributable to ourselves based on its 80% interest in Loulo.

*** Loulo reserves calculated at a weighted average cut off grade of 2.38g/t.

Operations

Gold production of 316,539 ounces for the year was below management's guidance of 400,000 ounces mainly due to lower plant throughput as a result of reduced plant availability and efficiency during the first six months of the year and the impact of lower run of mine grades due to the slower than planned build-up of underground production.

Lower gold production negatively impacted gold sales which totaled \$363.7 million for the year. This was offset by the higher gold price received. Total royalties paid during the year amounted to \$20.4 million and cash operating costs totaled \$202.6 million, resulting in profit from mining activities of \$140.7 million for 2010.

The total cash cost for the year was \$712/oz of gold sold. Capital expenditure for the year was \$86.9 million and this was covered by the cash flows generated by the mine during the year.

Underground Mining and Development

Following the termination due to poor health, safety and environmental performance of the former underground contractor at the end of 2009, African Underground Mining Services Mali SARL (AUMS) has been contracted for the underground development of

Table of Contents

Gara and recently joined us in the further development of the Yalea underground mine with the commencement of another decline from the base of the Yalea pit.

Yalea Underground Development: During 2010, a total of 4,806 meters of development was completed and 647,810 tonnes of ore at a grade of 3.69g/t was hauled to surface. The Yalea declines have now been advanced to a distance of 2,004 meters from surface and a vertical depth of 327 meters. Overall development was down on budget and against 2009. Stopping saw an improved performance during 2010 against 2009 but was also below target.

Gara Underground Development: During 2010, a total of 1,879 meters development was completed. The Gara declines have now been advanced to a distance of 614 meters and a vertical depth of 127 meters. Overall development is down on plan, due to the influx of water during the fourth quarter and a starting date delay, but development rates picked up towards the end of the year.

The following table shows a summary of the underground section's progress to date:

at 31 December 2010	Development (meters)	Ore (tonnes)	Grade (g/t)	Ounces mined (oz)	Total (tonnes)

Processing

The utilization of mills and crusher was 84.9% and 70.9% respectively during 2010, while the average engineering availability was 90.5% and 81.1%. The mill and crusher have engineering standards of 95% and 85%. The negative variance for the mills is attributed to downtime due to various technical issues including a power outage.

Major projects completed in 2010 include the upgrade of the secondary ore crushing circuit, a new warehouse, the Gara portal frames, vehicles and conveyor decline, the mill rotary magnet, the fourth tailing pump, and the installation of the Acacia module for gravity gold recovery. In 2011, the focus will be on the installation of the third mill, upgrading the power plant with additional medium speed energy efficient engines and the conversion of the medium speed engines to Heavy Fuel Oil (HFO) in order to increase the plant's fuel efficiency.

Exploration

In 2010, exploration continued to delineate open pit resource ounces from satellite deposits near the Loulo plant. Work concentrated on two main structures which not only host the Gara and Yalea deposits but also Loulo 3, Loulo 2, Loulo 1 and PQ10. While underground grade control drilling at Yalea extended the high grade mineralization associated with the purple patch.

Morila

Morila is owned by a Malian company, Société des Mines de Morila SA (Morila), which in turn is owned 80% by Morila Limited and 20% by the Malian government. Morila Limited is jointly owned by ourselves and AngloGold

Ashanti Limited and the mine is controlled by a 50:50 joint venture management committee. Responsibility for the day-to-day operations rests with us.

Table of Contents

The mine was commissioned in October 2000 and, since the start of production to December 2010, has produced approximately 5.8 million ounces of gold at a total cash cost of \$216 per ounce.

As planned, the mine was converted in April 2009 from open pit mining to a 100% stockpile treatment operation. Gold production for 2010 was 238,607 ounces. Total cash cost for the year was \$669 per ounce, including stockpile adjustments of \$246 per ounce. The operation is expected to come to an end in 2013, although the mine is currently investigating the opportunity to retreat the TSF material, which would extend the mine life by approximately 5 years. Despite the drop in grade associated with processing the stockpiles, the mine still reported \$133.9 million in profits from mining activity in 2010.

In order to leave a sustainable source of economic activity for the local community after the closure, an agribusiness feasibility study has been advanced in conjunction with USAID.

Production results for the 12 months ended December 31,	2010	2009

The stockpile adjustment per ounce reflects the charge expensed/(credit deferred) in respect of stockpile movements during the period divided by the number of ounces sold. The total cash cost per ounce includes non-cash stockpile adjustments.

Ore Reserves

Remaining reserves were lower than last year after mining depletion has been taken into account. Open pit mining activities ended in April 2009, and therefore the current reserves are based on already mined stockpiles only.

Operations

In April 2009, Morila managed a successful transition from the open pit operation to stockpile retreatment, operated by Mining and Rehandling Services.

Initially, the conventional Carbon in Leach plant had been designed to treat 260,000 tonnes of ore. This plant was upgraded in 2004 to treat 360,000 tonnes and by the end of 2010, 4,353,877 tonnes of sulfide had been treated. In spite of the low grade ore being treated, good gold recoveries were achieved due to improved oxygen plant availability, good control of the leach parameters, the increase in the gravity recovery and the oxygenation system upgrade.

Total ounces of 238,607 were produced during 2010 at a total cash cost of \$669/oz sold. This translated into profit from mining of \$133.9 million for the year which enabled the mine to pay dividends of \$135.0 million to shareholders during 2010.

The 91.5% engineering availability was in line with the 2010 plan despite the downtime associated with the SAG mill gearbox changeover in February and December, cyclone pump conversion in May and extended crusher maintenance during January. Planned maintenance using the PRAGMA system helped to further enhance the mine maintenance program.

The mine generates its own power via a diesel electrical generating station equipped with five Allen engines (6 Mwatts each). Three are producing power, one is on maintenance and one is on standby. 2010 consumption at 130.7 mkWh was well contained and also contributed to cost savings.

Tailings Project

During 2010, a study on the Morila Tailing Storage Facility (TSF) retreatment project was completed. Based on management's estimates and reclamation scoping, the project showed marginal economics at a gold price of \$1,200/oz but demonstrated significant benefits and costs savings as far as mine closure plans were concerned. Based on these conclusions, the board agreed that the project should proceed to a bankable feasibility study.

Mine Closure

Currently the plan provides for mine closure in 2013. However, the outcome of the TSF retreatment feasibility study could impact on the closure plan, its costs and risks as well as its timing.

An internal closure coordinator has been appointed and the Ministry of Mines has revived the closure committee (including representatives from government, the local community, employees and management). The committee met quarterly in Bamako to review the closure plan and the mine's activities related to closure.

A communication campaign was conducted at local and regional level to inform all the stakeholders of the closure plan and the possible options.

Work continued on the agribusiness project which is planned to ameliorate the impact of mine closure on the local economy by offering alternative employment and economic opportunities to the local community. During the year the project, which has now partnered with a number of NGO agencies, progressed to a stage in which pilot poultry, animal husbandry, honey production and fishing projects are being initiated to test the viability and sustainability potential of each activity.

The key next steps to be addressed in order to roll out the larger project is the completion of a final comprehensive integrated feasibility study and business plan along with a solution regarding land ownership issues.

Table of Contents**Tongon**

Tongon is owned by an Ivorian company, Société des Mines de Tongon SA, in which we have an 89% interest, the State of Côte d'Ivoire a 10% interest, and the remaining 1% held by a local Ivorian company.

The Tongon project is located within the Nielle exploitation permit in the north of Côte d'Ivoire, 55 kilometers south of the border with Mali.

Tongon is an open-cut mining operation and employs the four standard mining practices of drill, blast, load and haul. Mining started in April 2010 and Tongon has a ten year Life of Mine (LOM). Two main pits are scheduled in the LOM as follows:

South Zone pit will be mined from 2010 to 2016 to the final pit bottom; and

North Zone pit, which is smaller than the South Zone, will be mined from 2015 to 2019.

Ore Reserves

Ore reserves at Tongon are sourced within two open pits, the Northern and Southern Zone. Mining commenced in the Southern pit in April 2010. Ore reserves are slightly lower this year compared to 2009 due to depletion from mining in and geological model changes from the inclusion of advanced grade control drilling over the two open pit reserves, which saw reserves increase in the northern pit but decrease in the southern pit.

Table of Contents

Operations

Tongon started production during the fourth quarter of 2010 and 355,000 tonnes of ore was milled at a grade of 2.67g/t. The mine produced 28,126 ounces at a total cash cost of \$459/oz sold. Profit from mining was \$4.4 million. This was impacted by 23,428 ounces that were unsold at year end resulting from disruptions in Côte d'Ivoire following the disputed elections in November 2010.

Mining

Mining operations are carried out by Mine de Tongonaise SA (ToMi), a contract mining company and subsidiary of DTP Terrassement. The mine operates 24 hours a day based on a working roster of three eight-hour shifts. The major load and haul mobile fleet consists of one Liebherr 984 and three Liebherr 9350 diggers and 15 Cat 777F haul trucks. The mining fleet has an annual capacity of approximately 26Mtpa at a strip ratio of 4:1.

Processing

The Tongon plant design is based on well-established gravity/flotation and Carbon in Leach technology. The plant is designed to treat 3.6 million tonnes per annum of oxide, transition and sulfide ores which can be campaigned through the plant separately or fed in a combination if required. There is a common primary crushing plant for oxides and sulfides. Oxides, which may at times contain high clay quantities and moisture content, have been identified to potentially cause material handling problems when processed through the full crushing circuit. As a result, the design allows the plant to bypass the secondary and tertiary crushing circuit, thus feeding primary jaw crusher product of size 100% passing 300 millimeters directly onto the ball mill feed conveyor, bypassing the stockpiling facility.

Transition and sulfide ores are treated through a primary, secondary and tertiary crushing circuit to produce a ball mill feed of size 100% passing 20 millimeters. The primary crushing plant consists of a complete standby circuit, which allows higher, but also more consistent throughput and better maintenance planning. Milling consists of two ball mills when treating oxide, transition or sulfides. The discharge from each is pumped in separate cyclone feed pump and classifier systems.

First ore was fed through mill no. 1 in October 2010. The feed rate was steadily increased via one mill, as the process circuits and systems were debugged, up to the designed throughput rate of 456tph.

Gold recovery of 92.2% was better than forecast and overall 28,126 ounces of gold was produced.

Engineering

Overall mill availability was 72.6% for 2010. A gradual increase in mill availability was obtained from 69.7% in October to 77.6% in December. Commissioning issues mainly associated with feeding the softer clay containing ore through the system were systematically addressed by the engineering team as part of the commissioning process which included ongoing modifications and operational enhancements with respect to the relevant process sections to facilitate ease of tonnage throughput and improvement in efficiency of key process circuits.

The power plant availability and utilization were 90% and 51% respectively for 2010. All 20 of the power plant generators, including the PLC automatic synchronization, were commissioned ahead of the plant start-up.

Developments

Grid Power

The Korogho substation is 90% complete. The main outstanding items are the installation of the related equipment and the 33kV link to the national grid. The forecast grid power line completion date is the second quarter of 2011.

Tongon and Pougbe Village Electrification

Table of Contents

An agreement between Tongon and Enterprise d Electricite, CIE and Power Management and Electrical Services was reached with respect to the electrification of Tongon and Pougbe villages. The project started in January 2011 and is scheduled for completion in the second quarter of 2011.

Maintenance Planning

The software system On Key from Pragma which was chosen as the CMMS system to be used at our operating mines has been 80% installed at Tongon. Loading of the lubrication and preventative maintenance tasks for the process plant is complete. Extensive configuration work remains to streamline the generation of job cards for these tasks and ensure these fit in with the existing business processes and staffing configurations.

Exploration

In terms of exploration, 2010 was a critical year which saw great improvements in our understanding of the Senoufo Greenstone Belt. This followed the completion of an airborne EM survey flown in January, which enabled not only a reinterpretation of the geological and structural framework but also a target generating and prioritization exercise. Since then, follow-up work was focused on the most prospective targets within a 15 kilometer radius from the plant. These have been advanced through mapping, RAB, RC drilling and trenching.

Goukoto

The Goukoto project is located approximately 25 kilometers south of the Loulo gold plant on the Loulo Exploitation Permit. We hold an effective 80% interest in the project.

The project moved rapidly in 2009 from a greenfields exploration find through a scoping study and completed a prefeasibility study in the first quarter of 2010. In addition, the environmental and social impact assessment and feasibility study were completed during 2010.

We are currently engaged in the process of applying for the formation of the new Goukoto Exploitation Permit which is planned to be split from the current Loulo permit, and which will be owned by a separate company, Société des Mines de Goukoto SA.

The Goukoto mine development (Goukoto) is located within the Kedougou-Kenieba erosional inlier which is underlain by Lower Proterozoic Birimian metasedimentary-volcanic sequences. The area is extensively laterized and covered by depositional regolith, with approximately only 6% outcrop. The host rocks to the Goukoto mineralization are a sequence of the grained arkoses which have suffered an early silica carbonate alteration event. More than 95% of the sulfide is pyrite (with minor arsenopyrite and chalcopyrite) and additionally gold tellurides are present. Mineralization is bounded by a hangingwall shear and footwall mylonite. In the hangingwall there is a prominent limestone unit which is used as a marker horizon.

Ore Reserves

Following the completion of the mineral reserve in September 2010, drilling continued and completion of a revised geological model was incorporated into the feasibility study to produce mineral reserves as at December 31, 2010.

*** *Cutoff grade of 1.40g/t used to calculate the Goukoto reserves.*

Table of Contents

Further potential exists below the present design pit where an additional 11.04 million tonnes at 5.54g/t for 1.96 million ounces of mineralized material supports the potential of underground extensions. Drilling is currently underway to test depth and strike extensions and these results will be used to evaluate upside potential from extending the Goukoto orebody together with incremental material from Faraba and P64.

Feasibility Study

A feasibility study was completed on the revised open pit mineral reserve calculated in September 2010. The feasibility is based on a toll treat project whereby the ore is mined and fed through an onsite fixed crusher at Goukoto. The crushed ore is then to be loaded onto dedicated haul trucks and trucked and direct fed into the Loulo plant. Infrastructural development will include two diversion dams and a diversion trench to divert the seasonal rain flows from the east. Support facilities will include accommodation, workshops and offices. The use of the Loulo plant to process Goukoto as opposed to building a standalone operation at Goukoto is better utilization of the current infrastructure and human capital and has reduced the environmental footprint. It has significant synergies with the present open pit mining fleet which are nearing the completion of open pit mining at Loulo, while it also allows for the faster realization of value from Goukoto as opposed to a standalone operation and as such is better use of our capital.

An economic assessment on the financial viability of the Goukoto project open pit reserve has been carried out, based on the following parameters summarized below:

Total ore mined of 13.79 million tonnes of ore containing 2.3 million ounces of gold at a strip ratio of 9.7:1, to give total tonnes mined of 147 million tonnes;

Mining costs average \$2.86/tonne over the life of mine;

Crush and haul costs average \$5.22/tonne ore;

Mill throughput of 100,000 tonnes per month to be treated at the Loulo plant;

Plant costs average \$21.69/tonne;

Average plant recovery of 93%;

G&A cost is \$5.19/tonne over life of mine, including outside engineering costs;

Capital cost is \$84.7 million including site construction, plant upgrade, preproduction and ongoing capital.

A financial model was run using a \$1,000/oz gold price with an average 1.2M tonnes per year throughput, together with a 5 year tax holiday and 6% royalty which produced the following:

Initial capital payback period	2.0 years
Mine Life (post processing plant commissioning)	11 years
Net after tax cashflow	\$747m
IRR	69%
Total cash cost	\$420/oz

Based on the positive financial results the board approved the development of Goukoto project.

Development

Mining started in January 2011 with ore currently stockpiled until the crusher station is ready, which is expected to be in the third quarter of 2011. The dam and river diversion together with support facilities are planned for completion

by midyear. Project work will continue to develop the underground resources and complete the initial design studies on the underground opportunities. In addition, a heap leach prefeasibility study is being carried out to potentially process the low grade Goukoto material and the satellite deposits of Faraba and P64.

Exploration

The exploration team at Goukoto has been solely focused on completing the fast-tracked feasibility study and has succeeded in progressing the field work for the project from first borehole to submitted feasibility document in 26 months. Work at Goukoto has included all resource definition drilling on the main orezone and the footwall and hangingwall structures.

Table of Contents

The team has also completed the metallurgical, piezometric, geotechnical drilling and advanced grade control drilling and has sterilized the area around the pit to allow for the construction of the infrastructure.

Massawa

The Massawa project is situated in eastern Senegal, approximately 75 kilometers west of the border with Mali. We hold an effective 83.25% interest in the project. The government of Senegal retains a 10% carried interest in the project while the balance is held by a Senegalese joint venture partner.

Massawa is located within the Kedougou-Kenieba erosional inlier which is underlain by Lower Proterozoic Birimian metasedimentary-volcanic sequences. Regionally it is located on the plus 150 kilometer long northeast-southwest trending Main Transcurrent Shear Zone (MTZ) which is a significant transcrustal dislocation between the Mako Supergroup (basaltic flow rocks, minor intercalated volcanoclastics, and ultramafic sub volcanic intrusions) and the Diale-Dalema Supergroup (volcano-sedimentary to sedimentary rocks) within the Kedougou-Kenieba inlier. Mineralization at Massawa locates in various lithologies but is structurally controlled within anatomizing shears which converge to the north.

Prefeasibility study

A prefeasibility study was completed by the end of 2009 and highlighted the complex nature of the metallurgy. Dedicated metallurgical drilling and extensive metallurgical testwork was undertaken this year to improve our understanding of geochemical and metallurgical characterization of the ore. Batch testwork completed has shown pressure oxidation to be very effective in releasing the gold from the sulfides. Significant additional bondwork testwork was also conducted which confirmed the hardness of the ore. This combined with the PoX process will make the Massawa project a high energy user and thus alternative options to diesel and heavy fuel oil power generation are required. Additional drilling was also conducted to test the geological model of the central zone which resulted in a revised geological model of higher tonnage and lower grade.

Ore Reserves

Ore reserves were calculated by incorporating the new geological model into the 2009 prefeasibility, using a \$800 per ounce gold price, for the pit design.

* *Open pit mineral reserves are reported at a gold price of \$800/oz and 1.1g/t cut-off and include dilution and ore loss factors. Open pit mineral reserves were calculated by Mr. Onno ten Brinke, an officer of the company and competent person.*

** *Attributable gold (Moz) refers to the quantity attributable to ourselves based on its 83.25% interest in the Massawa gold project.*

*** *Cutoff grade of 1.1g/t used to calculate the Massawa reserves.*

Development

Due to the time required to secure a power solution, further pilot plant testwork has been put on hold. The exploration team has been mobilized to delineate and test the large number of satellite targets in the area with the focus of finding additional non-refractory mineralization that could incrementally add to the project.

A heap leach study will also be undertaken to determine if this could be a viable option for the low grade non-refractory material available that will be delineated further by the ongoing exploration programs.

Exploration

Table of Contents

The exploration team focused on determining the geological controls within the Massawa orebody and followed up with further exploration on Sofa, Delaya, Bakan Corridor and Bambaraya.

Kibali

The Kibali project is controlled by a 50:50 joint venture, between ourselves and AngloGold Ashanti Limited, which holds an effective 90% interest in Kibali Goldmines SPRL.

The remaining 10% of the shares are held by Sokimo, the parastatal mining company of the DRC. We acquired our interest in this project following the acquisition of Moto Goldmines, in conjunction with AngloGold Ashanti, and the further acquisition of a 20% interest from Sokimo on behalf of the joint venture. The Kibali project is located some 560 kilometers northeast of the city of Kisangani and 150 kilometers west of the Ugandan border town of Arua in the northeast of the DRC.

Geology and Mineralization

The goldfields at the Kibali gold project are located within the Moto greenstone belt, which is comprised of the Archaean Kibalian (Upper and Lower) volcanisedimentary rocks and ironstone-chert horizons that have been metamorphosed to greenschist facies. The goldfields at Kibali are transgressed by regional-scale north, east, northeast and northwest trending faults and are bounded to the north by the Middle Archaean West Nile granite-gneiss complex and cut to the south by the Upper Congo granitic complex. The stratigraphy consists of a volcanisedimentary sequence comprising fine-grained sedimentary rocks, several varieties of pyroclastic rocks, basaltic flow rocks, mafic-intermediate intrusions (dykes and sills) and intermediate-felsic intrusive rocks (stocks, dykes and sills). The sequence is variably altered from slight (texture benign) to intense (texture destructive) such that in some cases the protolith rock is unrecognizable. In the Kibali district the majority of gold mineralization identified to date is disseminated style, hosted within a sequence of volcanoclastics, coarse volcanoclastics, sedimentary rocks and banded ferruginous cherts. The mineralization is generally structurally controlled and associated with quartz-carbonate alteration and pyrite.

The majority of mineralization currently being delineated occurs within two broad mineralized trends. The first group lies within a northeast trending structural-alteration corridor; from the Kibali prospect in the southwest to the Ndala prospect in the northeast, called the Kibali-Durba-Karagba Trend. The second group lies within a northwest trending zone that stretches from the Pakaka prospect in the southeast to the Mengu Hill prospect in the northwest and is called the Pakaka-Mengu Trend.

Ore Reserves

Following the completion of the Moto acquisition, we have moved swiftly to update the ore reserves, retaining the services of SRK Consulting in Perth, supported by in-house skills from both ourselves and AngloGold Ashanti, to ensure continuity with regards to the updates.

Open pit reserves have been calculated in house, while SRK Consulting completed an update of the underground ore reserves based on a \$800 gold price. New reserve numbers are presented below and reflect a significant increase in underground ore reserves to almost 7 million ounces, bringing the total ore reserve number to 10.05 million ounces. The main changes to the ore reserve resulted from the inclusion of additional stopes in the mine design.

Progress

All key pre-production targets set for 2010 have been met by the Kibali development team and the project is on track for the start-up of construction by the middle of 2011, six months earlier than was originally scheduled.

The implementation of the RAP is already underway, with the acquisition from the State of the site for a new town, to be known as Kokiza, as well as farmland. Model homes have been built and the process of house selection by each of the families involved has started. The company and its partners continue to work with the local community to alleviate the loss of income derived from illegal informal mining, which has been ended on the site. Alternative work programs have already been created and these include the production of basic building materials to be used for the construction of the RAP houses as well as the mine. Progress on other fronts includes the substantial upgrading of the regional infrastructure through the completion ahead of schedule of the roads between Aru/Doko, Nzoro and Aru/Arriwara the latter being a contribution towards the president's priority fund aimed at improving infrastructure. The completion of these roads has already directly benefited the local communities by improving the availability of basic goods and therefore significantly cutting their cost of living. The Aru/Doko road is particularly significant as it links Kibali with international ports.

Feasibility Study

An update to the feasibility study along with an updated financial model was generated based on a new mining plan which incorporated an integrated mining plan including multi open pit and underground schedule. The study will now go through a process of further internal and external review and optimization of the mining and processing rates, capital estimate scheduling ahead of final design and approval which is targeted for mid 2011. The revised open pit and underground mining designs and schedules support a 4Mtpa operation over an estimated 19 year mine life. Updated processing costs and G&A costs have been generated based on the larger plant throughput. A full flotation plant is expected to be commissioned on plant start-up, planned for late 2013. Full flotation and flash flotation circuits will be incorporated due to an overall increase in gold recovery. Carbon in Leach (CIL) treatment of the flotation tailings stream will be utilized as this significantly enhances the overall process recovery. During the update of the feasibility an opportunity for a larger project of 6Mt throughput was also identified, due to the large build up in ore stockpiles. As the feasibility update continues, more work will be done to optimize the project for the benefit of all stakeholders.

The underground mine design was completed by SRK Perth and consists of an initial single decline that accesses the ore beneath the KCD pit and then connects with a vertical shaft ore hoisting system to exploit the high tonnage stopes of the 5,000 lode and deeper 9,000 lodes. A trade off investigation points towards a blind sink of the vertical shaft being the preferred method, thus divorcing the capital sink from the operating mine as opposed to a drill and ream method of shaft sinking which would intrinsically link the decline development to the shaft progress. RSV Perth has been awarded the feasibility study for the shaft, which is targeted for completion in May 2011, pending the completion of geotechnical drilling.

The updated study, which is based only on existing reserves, currently anticipates:

Total open pit ore mined of 37 million tonnes of ore containing 3.2 million ounces of gold at a strip ratio of 3.8:1, to give total tonnes mined of 141 million tonnes;

Total underground ore mined of 37 million tonnes of ore containing 6.8 million ounces of gold;

Open pit mining costs average \$3.40/tonne over the life of mine;

Underground mining costs of between \$31 and \$34/tonne

Mill throughput of 4 million tonnes per year;

Plant costs average \$11.79/tonne;

Open pit metallurgical recoveries between 83 and 86% depending on ore type

Underground metallurgical recoveries of 91%

G&A cost is \$4.43/tonne over life of mine, including outside engineering costs;

Table of Contents

Life of Mine capital cost, including 2010 expenditure, is \$1.4 billion including site construction, plant, hydropower installations, preproduction and ongoing capital

The financial model carried out using a \$1,000/oz gold price gave the following returns and cash costs of production:

IRR	21%
Total Cash Cost per ounce	\$388/oz

Development

The first six months of 2011 will be dominated by the completion of the detailed costing and designs for the underground operation, shaft complex and detailed Tailings Storage Facility design and the costing to optimize the feasibility. Hydropower technical feasibility and environmental and social impact assessment studies are to be completed. This will be coupled with the start of pre-construction and establishment of the construction camp and brick making facilities. Advanced grade control drilling on the KCD pit is planned for the third quarter of 2011 in preparation of mining works. The physical implementation of the RAP started with the construction of the first houses in February 2011. The program is expected to take 24 months to complete.

Specification of long lead time items will be completed in the second quarter to enable finalization of tender bids for the start of the construction phase for underground, surface operations and hydropower projects at the beginning of the third quarter of 2011.

Exploration

Following the acquisition of Moto Goldmines at the beginning of the fourth quarter of 2009, we established a geological team on site at Kibali. The primary objective was to complete a detailed geological analysis of the KCD deposit, to understand the geology, structure, alteration and mineralization, and to construct a geological model, as well as to look at the possibility of a lateral link between the KCD and Gorumbwa deposits.

Work undertaken included: diamond drilling (44 holes completed, 8,484 meters); core review of selective KCD holes (60 holes) and geological modeling; surface mapping of the KCD Gorumbwa area; the completion of two strategic holes (1,557 meters) in the KCD Gorumbwa gap; ongoing soil geochemistry over block 1 west of KCD, where four new gold anomalies were identified; sampling of the old Durba mill (251 samples); first pass interpretation of the airborne magnetic data; and reconnaissance pitting (10 pits) on the ATF concession.

Objectives in 2010 at Kibali included continued reserve determination, not only on the KCD deposit but also the satellite deposits; the identification of new near mine ore reserves; and generative work on the wider lease area through the completion of soil sampling and an airborne electro-magnetic survey.

The exploration team completed a detailed analysis of the KCD deposit, resulting in a new geological model which supported a growth in reserves from 4.5 million ounces at acquisition to 10.05 million ounces at the end of December 2010. Continuity of mineralization was confirmed between the Sessenge and KCD deposits and remains open down plunge. This will be tested by a program of deep drilling in 2011.

An airborne electromagnetic survey was flown over the permit holding. Three-dimensional modeling and the integration of additional geological datasets has prioritized targets for drilling in 2011.

EXPLORATION REVIEW

We have a portfolio of projects within some of the most prospective gold belts of both West and Central Africa. We have exploration projects in five African countries hosting 275 targets on 13,583 square kilometers of groundholding. We have an exploration team of more than 70 geoscientists.

Mali**Loulo**

In 2010 exploration delivered on two key objectives:

Table of Contents

Completion of a positive feasibility study at Goukoto

Delivery of additional open pittable mineral resources to the Loulo plant

Goukoto

At Goukoto, a positive feasibility was completed on the back of mineralized material totaling 5.53 million ounces at 5g/t. Work included drilling for mineralized material definition, metallurgical testwork, piezometry, sterilization of infrastructure and advanced grade control. All forms of drilling totaled 99,120 meters during 2010.

The host rocks to the Goukoto mineralization are a sequence of fine grained arkoses which have suffered an early silica carbonate alteration event. More than 95% of the sulfide is pyrite (with minor arsenopyrite and chalcopyrite) and additionally gold tellurides are present. Mineralization is bounded by a hangingwall shear and footwall mylonite. In the hangingwall there is a prominent limestone unit which is used as a marker horizon.

The mineralization at Goukoto has now been intersected over a 1.9 kilometer strike length and down to a depth of 642 vertical meters. The geometry of the Goukoto system varies along its length as well as down dip and variations in strike, dip and thickness are closely related to grade distribution. Structural intersections also played an essential role in focusing fluid flow and multiple plunging zones projected from surface have been confirmed by deeper drilling, highlighting the good potential for underground mineable resources. Additional upside has been identified in the deposit as detailed below:

Southern pit area: near-surface drilling has identified an area of wide, high grade mineralization in the southern part of the deposit: GKAGCRC119 61.00 meters at 8.09g/t from 35.00 meters and GKAGCRC120 78.00 meters at 4.74g/t from 28.00 meters. Drilling is ongoing and results suggest this is a dilation zone within the main structure which plunges to the north and has a strike potential of 125 meters to a vertical depth of nearly 90 meters.

Fe structure: A north-south orientated iron rich structure which locates to the west of the main zone is providing further upside following RC drilling. Drill hole GKAGCRC293 19.00 meters at 10.72g/t from 3.00 meters and GKAGCRC294 26.00 meters at 14.56g/t from 32.00 meters. The weighted average gold grade from drilling is 4.4g/t over a strike length of 275 meters, to vertical depths of 120 meters and a true thickness of 12 meters.

Jog zone: A broad zone of high grade mineralization has been intersected at the base of the \$700 pit shell, over a strike length of 100 meters. GKDH281 100.00 meters at 8.37g/t from 197.20 meters, GKDH285 93.45 meters at 5.51g/t from 182.00 meters, GKDH286 47.05 meters at 6.20g/t from 122.95 meters and GKDH283 55.30 meters at 11.60g/t from 187.50 meters.

Hangingwall: Drilling on the hangingwall has confirmed continuity of gold mineralization associated with Si-Alb-CO₃ alteration within a brittle fault, striking approximately north-south; average gold grade from drilling is 2.2g/t over a 500 meter strike length. Mineralization is open in all directions with both shallow and steep high grade plunges evident. The follow-up of these will be prioritized as part of a program to advance the underground conceptual study in 2011.

Goukoto Region

The southern half of the Loulo mining permit is developing into a new, significantly mineralized district. At the P64 target, 300 meters northwest of Goukoto, previous work including trenching, diamond core and RC drilling, identified a 145 meter long strongly mineralized zone with the following intercepts: P64C13 26 meters at 6.29g/t, P64C4 34.45 meters at 8.85g/t, P64C5 - 21 meters at 4.87g/t, P64C6 24 meters at 2.81g/t, P64C7 25 meters at 2.40g/t, P64RC05 71 meters at 1.67g/t, and P64RC06 81 meters at 1.75g/t. Mineralization is hosted in a tourmalinized greywacke with weak chlorite alteration.

Two kilometers southeast of Goukoto is Faraba where mineralized material of 567,000 ounces at 2.60g/t has been previously delineated. Mineralization at Faraba locates where the north-south striking shear system intersects favorable coarse grained lithological layers. The resulting mineralization occurs as sub-horizontal to gently plunging shoots with blade-like morphology.

In 2011, drill programs will further test P64 and Faraba as well as Toronto and additional targets highlighted by an update generative study.

Loulo 3

Table of Contents

The Loulo 3 target has developed into a significant satellite deposit and a 1.7 kilometer long open pit. During 2010 a total of 1.93 million tonnes of ore were mined at a grade of 3.05g/t for 189,491 ounces. Geologically the deposit trends northeast and is bound both in the hangingwall and footwall by fine grained semi-pelitic units termed SQR (after the French term schistose quartz rosé meaning argillaceous pink quartzite). Mineralization is hosted within a coarse grained greywacke which has been variably altered by silica and tourmaline. Intersecting north-south to north-northwest orientated structures, which are shallow dipping to the east, control high grade plunging shoots.

A program of nine diamond holes for 2,380 meters is ongoing to test Loulo 3 at 160 to 180 meters vertical depth, testing beneath the base of the \$1,000 pit shell, the extent of which is limited by data constraints. To date, four diamond holes totaling 1,102 meters have been drilled along the entire strike length of the deposit at approximately 400 meters spacing. The holes confirmed the geological model and returned very encouraging mineralization: L3DH33 4.7 meters at 2.50g/t from 235.1 meters, L3DH35 6.0 meters at 4.59g/t from 224 meters, L3DH36 10.4 meters at 10.22g/t from 221.15 meters and L3DH39 9.5 meters at 7.59g/t from 183 meters.

Yalea Structure

The Yalea structure is highly mineralized, hosting the deposits of Yalea and Loulo 3, as well as a number of surface targets.

At Loulo 1, 22 RC holes totaling 1,623 meters were drilled over a 630 meter strike length to a vertical depth of 50 meters. Mineralization (5 to 15 meter thickness) follows the strike and dip of the lithological layering, trending north-northeast-northeast and dipping east at between 50 and 60 degrees. Sulfides are present predominantly as disseminated pyrite within the tourmalinized greywacke and quartz tourmaline. Results from the RC drilling include: L1RC18 5 meters at 4.43g/t from 7 meters, L1RC21 8 meters at 5.21g/t from 12 meters, L1RC22 8 meters at 4.71g/t from 62 meters and L1RC30 11 meters at 4.54g/t from 22 meters. Global mineral resource estimates amount to 23,858 ounces at 2.65g/t.

The priority in 2011 for exploration is the five kilometer segment from Loulo 3 to Loulo 1, which is a zone of continual gold anomalism and mineralization including the surface targets of Loulo 2 and the Loulo 2-3 Gap. An initial program of deeper diamond drilling will be completed on 500 meter drill centers to vertical depths of 200 meters. Surface RC drilling will also continue to define satellite open pits.

Yalea Underground Drilling

Grade control drilling defined additional high grade mineralization on the margins of the purple patch : YUDH109 25.60 meters at 10.65g/t and YUDH112 21.35 meters at 10.88g/t.

In 2011, as underground development advances, grade control drilling will continue to target extensions to high grade mineralization as geological models are updated and refined.

Gara Structure

PQ10: On the Gara structure, attention focused on the PQ10 target. Forty-six holes for 3,504 meters were drilled over a strike length of 600 meters testing the western mineralized structure. The geology consists of finely laminated sediments units which bound mineralized pink quartzite (QR) units. The SQR units are weakly foliated, striking 185 to 195 degrees and dipping 50 to 70 degrees west. Brittle-ductile shears are present in the QR units. Subsequently a small resource was mined: 60,806 tonnes at 4.11g/t (8,035 ounces). The eastern structure is narrow with a true width of 7 meters and average grade of 1.8g/t. Additional upside has been identified at PQ10 South 7 RC holes defined mineralization along a steep east-dipping shear which cross-cuts the western limb of an open antiform. The weighted average gold grade is 2.2g/t over a true width of 6 meters.

Other Loulo Targets

During the year the potential of all the Loulo satellites was evaluated. This involved a data review and updated geological estimates, fieldwork and in the case of Bolibanta, drilling. Additionally, pit shells and resources have been calculated for the most promising of the satellites around Loulo and these will be further evaluated by exploration in 2011. The combined potential from all the Loulo satellites is approximately 270,000 ounces at 2.8 g/t.

Table of Contents**Senegal****Bambadji**

On the Bambadji permit in Senegal, adjacent to both Loulo and Goukoto, work progressed from reconnaissance exploration, through RAB and RC drilling and culminated in diamond drilling on specific targets which have analogies to Gara, Yalea and Goukoto styles of mineralization. By the year end, six holes had been drilled on two targets: Kolya and Waraba. The program has intersected strongly deformed and altered rocks containing pyrite mineralization at both targets. However, intersections from the Kolya target have so far confirmed a narrow mineralized quartz tourmaline (QT) system beneath strong gold mineralization at the surface. At Waraba, the holes intersected a large alteration system on the margin of an albitite intrusive. The remaining priority targets for this initial phase of drilling are Kach, Gefa, Baqata and Mananord.

Massawa

The Massawa gold project is located within the Kounemba permit in eastern Senegal which geologically lies within the 150 kilometer long Mako greenstone belt. The Mako greenstone belt, comprises mafic-ultramafic and felsic volcanic rocks intruded by granitoids. A regional crustal scale shear zone, the Main Transcurrent Shear Zone (MTZ) with northeast-southwest trend exploits the lithological contact between the Mako and the Dialé-Daléma Supergroups and is the host structure to mineralization at Massawa.

A total strike length of 8.5 kilometers has been drilled, but only a 4 kilometer portion of this has been evaluated for the present mineral resource modeling and has been drill tested to a 50 meter by 50 meter spacing to a maximum vertical depth of 640 meters. In 2010, 50 diamond holes for 19,835 meters, 47 dedicated metallurgical diamond holes for 8,620 meters and 15 geotechnical diamond holes for 3,697 meters were drilled. Additionally 105 shallow RC holes for 7,204 meters were drilled.

The four kilometer strike at Massawa currently being evaluated contains two zones of mineralization: northern and central. However, they are part of the same northeast trending mineralized structure, which has been offset by north-south belt discordant structures. Geological logging of core and interpretation confirms that the mineralized system occurs at a volcanic/sedimentary contact, where a prominent and continuous lapilli tuff sequence acts as a marker horizon. The average bedding strikes 020 and dips 60 to 76 degrees to the west. Graded-bedding is common and suggests the sequence is overturned. The host sequences have been intruded by felsic dykes, gabbros and granitic bodies, particularly in the central area. Mineralization is hosted in a variety of rocks including: greywackes, volcanoclastics and both mafic (gabbros) and felsic intrusive. The mineralized system is however structurally controlled and deformation is essentially brittle-ductile. The alteration assemblage is composed of sericite, silica, carbonate, pyrite and arsenopyrite. Gold mineralization formed in two phases: an early phase composed of fine disseminated pyrite and arsenopyrite, and a later stage which is a shallow level gold system where quartz-stibnite and a large range of antimony-bearing minerals host coarse native gold.

During 2010, as well as the resource drilling, deep drilling has confirmed continuity of the lithological sequence, structure, alteration and gold mineralization to a maximum depth of 640 meters below the surface, results include: 17.15 meters at 3.49g/t, including 4 meters at 6g/t in the central zone and 29.20 meters at 3.75g/t, including 12.60 meters at 5.98g/t in the northern zone. Step out drilling, testing the mineralization along strike confirmed continuity of high grades, 200 meters, north of Lion Extension with 1.60 meters at 15.49g/t. In Massawa South, drilling returned broad low grade intersections (MWDDH464 22.85 meters at 0.59g/t) but revealed a similar geological and alteration package as the central zone.

Exploration on Massawa has been slowed down as we have advanced Goukoto and Kibali providing the time to fully evaluate the metallurgy and development strategies. The aim is to progress the project to final feasibility in 2011.

Satellite Targets: As well as Massawa, there are a number of targets which have had varying degrees of follow-up work completed on them from trenching through to RAB and diamond drilling, and all highlight the possibility of providing additional ounces within a 15 kilometer radius of Massawa. Our key objective is the discovery of at least 2 million ounces of non-refractory ore to supplement the ore from Massawa. These targets are summarized below:

Sofia: 56 RC holes for 5,571 meters were drilled at 100 meter spacing along a strike length of 4 kilometers. The mineralization is continuous along strike, the weighted average gold grade is 1.45g/t over a true thickness of 18 meters and includes intersections of: SFRC001 31 meters at 2.5g/t, SFRC007 29 meters at 3.16g/t, SFRC010 16 meters at

4.6g/t and SFRC021 15 meters at 4.08g/t. Geologically the target is underlain by a sequence of andesite and volcaniclastic rocks intruded

Table of Contents

by quartz feldspar porphyries and gabbros. Mineralization is associated with disseminated pyrite accompanied with silica-K feldspar-carbonate alteration.

Delya: Is defined by a 6 kilometer by 100 meter plus 20ppb gold in soil anomaly. A program of 2,761 meters of RC drilling, on 100 meter spaced centers, was completed over a strike length of 1 kilometer. Intersections from this program include DLRC005 5 meters at 5.59g/t, DLRC010 4 meters at 7.22g/t, DLRC013 11 meters at 9.50g/t and DLRC014 9 meters at 14.95g/t from a structure which averages 5 meters width and a weighted average gold grade of 4.5g/t. Mineralization is hosted within a package of schists, strongly sheared and altered by silica-sericite-iron and disseminated pyrite and arsenopyrite.

Bakan Corridor: The Bakan Corridor groups together a number of anomalous gold in soil targets (Bakan, Tizia, Khosa, Tiwana and Tina) along a 10 kilometer segment of the northeast trending Kossanto structural corridor which is sub-parallel to the MTZ. The geology comprises a sequence of ultramafic units, felsic and intermediate volcanics (andesites, dacites and rhyodacites), cherts and igneous rocks ranging from diorite to monzonite. By year end a total of 5 RC holes for 531 meters, out of a program of 11 RC holes, had been drilled at the Bakan target. The first hole returned 29 meters at 1.9g/t, including 10 meters at 4.5g/t. A further 13 RC holes (1,175 meters) are designed to test mineralized felsic intrusive at Tina along a 1.25 kilometer strike. Additional holes are being planned at Khosa where intensively northeast sheared felsic intrusive and silicified bodies (cherts) were mapped.

Bambaraya: At Bambaraya, 5 RC holes for 588 meters were completed as infill drilling to previous work over a 1 kilometer strike. Results returned narrow, low grade intersections: BBRC03 3 meters at 2.12g/t, BBRC04 3 meters at 1.57g/t and BBRC08 18 meters at 1.8g/t and 9 meters at 1.26g/t. Mineralization is hosted within northeast trending pillow basalts and is associated with silica-sericite-tourmaline-iron carbonate-pyrite alteration. No further work is planned on this target for the time being.

As well as RC drilling on known satellite targets the team commenced the evaluation of the next level of targets for drilling in 2011: Kawsara, Manja, Galama, Sira, Kaldou, Makana, KB and KA. Additionally, work also started on generating new targets at Nouma, Makana East and Sofia South.

Côte d'Ivoire

With the commissioning of the new mine at Tongon and the first commercial gold production, exploration has now shifted focus to the evaluation of satellite targets.

An 11,647 line kilometer airborne electromagnetic geophysical survey was flown over the Senoufo Greenstone Belt in northern Côte d'Ivoire, covering the Nielle permit and portions of the Diaouala and Fapoha permits. The survey provided the foundation to an improved geological and structural interpretation of the belt; the resultant prospectivity analysis identified 79 new targets, of which 18 ranked high to medium are located within a 15 kilometer radius of the Tongon plant.

The prioritization of targets resulted in exploration programs being performed at: Seydou, Jubula, Tongon West, Sekala, Belokolo and Nafoun. Encouraging results were returned from:

Seydou: trenching and drilling 12.3 meters at 2.3g/t, 19 meters at 5.32g/t and 21 meters at 3.76g/t.

Sekala: RAB drilling returned multiple mineralized zones including 23 meters at 2.18g/t and 15 meters at 1.11 g/t.

Jubula: trenching 61 meters at 1.31g/t, 16.5 meters at 3.52g/t and 12 meters at 1.7g/t.

Tongon West: RC drilling 10 meters at 4.47g/t and 14 meters at 3.08g/t.

In 2011 RAB, RC and diamond drilling are all planned to progress these targets as well as to advance stand-alone opportunities within our permit portfolio.

Democratic Republic of Congo

Kibali

Table of Contents

Exploration completed a detailed analysis of the KCD deposit resulting in a new geological model which supported a substantial increase in mineral reserves to 10 million ounces at 4.21g/t within global mineral resources of 18.4 million ounces at 3.1g/t. Drilling connected the Sessenge deposit to KCD and confirmed over 2 kilometers of continuous mineralization: DDD472 14.80 meters at 4.18g/t, DDD475 25.95 meters at 4.28g/t, DDD484 29.70 meters at 3.92g/t and DDD485 39.60 meters 6.65g/t.

There is additional upside within the current Sessenge-KCD deposit both near surface and at depth. The deposit comprises a series of stacked lodes, which have been labeled by their elevation: 3,000 series, 5,000 series and 9,000 series plunging moderately to the northeast. The outlines of these lodes, rather than being limited by the extent of mineralization, are in fact limited by drilling.

There are three key upside opportunities:

Expand the open pit to the northeast by testing extensions to the 3,000 lode within the drained Lake Durba

Sessenge-KCD gap requires infill drilling for resource conversion

Test the continuity and extensions to the underground lodes down plunge (9,000 and 5,000 series)

Kibali Exploration**Airborne Geophysics**

A 12,277 line kilometer SPECTREM airborne electromagnetic (EM) survey was flown over the Kibali concession during the second quarter of 2010.

The key highlights of this survey were:

Igneous intrusions are more widespread than previously mapped.

A corridor of strong northeast trending structural grain is coincident with the main areas of mineralization.

Strong EM conductor coincident with the KCD area, interpreted to be the response from carbonaceous shales +/- the Durba hill ironstone.

Strong east-west conductors along the West Nile Gneiss contact possibly related to carbonaceous shale unit that was exploited by early thrusting and subsequently crosscut by a later northeast structural grain.

Conductive and magnetic trend running along or parallel to the main mineralized trend.

Three-dimensional modeling of the data has identified a number of northeast plunging shoots of highly conductive material that are interpreted to represent mainly graphitic carbonaceous shale.

Several of these shoots are associated with areas of known mineralization, for example at KCD and Pakaka. The shoots are thought to represent intersections of important mineralizing northeast trending S2 structures and northwest trending S1 thrusts that have exploited carbonaceous shale horizons.

Although the EM anomalies do not map actual gold mineralization it is thought the conductive shoots highlight structurally important traps especially as they daylight coincident with gold in soil anomalies.

In 2011, exploration programs will target the upside opportunities within the Sessenge-KCD deposit. In evaluating satellite targets, priority will be given to Gorumbwa and Agbarabo, which were high grade underground mines during the Belgium era, as well as testing conceptual ideas generated from the geophysical survey.

MINERAL RIGHTS AND ORE RESERVES

The reporting of Ore Reserves is in accordance with SEC Industry Guide 7.

Pit optimization is carried out at a gold price of \$800 per ounce; underground reserves are also based on a gold price of \$800 per ounce. Dilution and ore loss are incorporated into the calculation of reserves.

Addition of individual line items may not sum to sub totals because of rounding off to two decimal places.

Our reserves are calculated at a weighted average cut off grade of 2.38g/t for Loulo, 0.97g/t for Morila, 0.85g/t for Tongon, 1.40g/t for Goukoto, 1.10g/t for Massawa, and 1.59g/t for Kibali.

Locality of the Loulo and Morila Mines in Mali**Mineral Rights and Permits**

Table of Contents

Central Africa: location of mines and permits

Although we believe that our exploration permits will be renewed when they expire, based on the current applicable laws in the respective countries in which we have obtained permits, we cannot assure you that those permits will be renewed on the same or

Table of Contents

similar terms, or at all. In addition, although the mining laws of Mali, Côte d'Ivoire, Senegal, Burkina Faso and DRC provide a right to mine should an economic orebody be discovered on a property held under an exploration permit, we cannot assure you that the relevant government will issue a permit that would allow us to mine. All mineral rights within the countries in which we are currently prospecting are state-owned. Our interests effectively grant us the right to develop and participate in any mine development on the permit areas.

GENERATIVE AND NEW BUSINESS

As well as advancing the key strategic areas, generative work and research continues to identify new exploration opportunities within Archaean and Proterozoic age rocks across the African continent.

SOCIAL RESPONSIBILITY AND ENVIRONMENTAL SUSTAINABILITY

We believe that a successful mining company is one which is profitable while meeting its social responsibilities in the countries and communities in which it operates.

Strong local relationships are one of the foundation stones on which the company has been built. For each new development, a process of assessment and engagement is undertaken to ensure that the positive impacts of the operation are maximized and the negative impacts minimized.

Our general approach is guided by the IFC Guidelines on Environmental, Safety and Health and specifically on IFC Guidelines related to Mining and Performance Standards on Social and Environmental Sustainability OHSAS 18001, the Occupational Health and Safety Advisory Service's occupational health and safety standards, and ISO 14001, the international environmental standards, guide health, safety and environmental management practices on our operations. All social and environmental assessments are reviewed by an independent party to ensure compliance to these codes.

During the early exploration stage our aim is to make as small a social impact as possible. Once a target progresses to feasibility, full social, medical and environmental baseline studies are conducted, which define the pre-mining conditions and are used as benchmarks while the project develops and when it moves into production. Full environmental and social impact assessments are generated including public participation programs with the local communities where the impacts, both negative and positive, are communicated and considered. During the past year a full environmental and social impact assessment was completed for Goukoto, while good progress was made with the completion of specialist studies on flora, fauna, aquatics, water and sediment quality and archeology were completed.

Community liaison committees, consisting of a broad spectrum of community representatives, are set up prior to production and provide a forum for regular, open dialogue where problems can be tabled and mutually acceptable solutions found. Our exploration team represents our first interface with the community and it is instrumental in allaying suspicions and conflicts, while building relationships based on trust between future mines and the community.

To keep environmental and social issues in the forefront of our business, the executive social and environmental committee was met quarterly to review all environmental and social action plans. A summary of this review is presented at each group board meeting.

Our integrated social and environmental management process identifies potentially negative and positive impacts. The implementation of sustainable environmental and social responsibility strategies aim to minimize negative impacts and maximize the positive impacts of our activities, commensurate with our business strategy and with national and IFC standards. The implementation and effectiveness of these strategies is audited by independent external consultants Digby Wells Associates (DWA) and monitored internally on a quarterly basis by the group's environmental and social oversight committee.

Environmental Management

Monthly monitoring programs incorporating dust fallout levels, physiochemical, cyanide, oil, grease and bacteriological levels of surface and groundwater across the mine sites and tailings storage facilities as well as surrounding water courses continued throughout the year. No pollution or breach of World Bank guidelines occurred.

Table of Contents

Morila successfully renewed its ISO 14001 certification and Loulo achieved its certification in 2010. Tongon is planned to achieve certification in 2011.

Environmental management plans have been implemented in Tongon on start up of production which are in line with ISO 14001 to allow for the rapid accreditation of the mine.

Closure studies of the Morila Tailings Storage Facility have identified an option of processing the surface tailings storage facility as being economic after the completion of a sampling exercise over the dam with full environmental leach testwork to determine the environmental implications. Closure plans at Loulo and Tongon continue to be updated with the changing mining environment to ensure appropriate reclamation costs are allocated.

Environmental Performance Data

Our environmental performance data is reported for calendar years and reported on an operational control basis at each managed operation, even though only partial ownership may exist. We are in the process of implementing measurement systems on each site in line with Global Reporting Initiative . Principal performance areas currently reported include Greenhouse Gas Emissions, Energy Use, Freshwater Withdrawal and Land Disturbed.

Greenhouse gas (GHG) emissions

As a growing company, operating in remote areas with poor infrastructure, on site diesel generation of power is required. This makes it more of a challenge for us to reduce our total greenhouse gas emissions while sustaining company growth. However we aware that the reduction of emissions intensity is intrinsically linked to improved operating efficiencies and where the opportunity presents itself we are aggressively working to reduce greenhouse gas emissions per production unit and have a five year strategy to achieve this. These activities include transforming to more fuel efficient low speed diesel generating machines at Loulo, linking into the predominantly hydro and gas generated national electricity grid at Tongon in the Ivory Coast and coming up with innovative solutions at Kibali in eastern DRC to maximize the generation of hydro power generation for the project. We are thus expecting to improve and materially reduce our greenhouse gas emission per production unit performance from 2011 to 2016. The company has filed its 2009 greenhouse emissions in the 2010 Carbon Disclosure Project (CDP) and will continue to do so in order to demonstrate its progress in this regard.

Our total unverified GHG emissions for 2010, defined as the sum of onsite emissions were 314 thousand tonnes of carbon dioxide equivalent. The disclosure is currently undergoing independent verification and final verified numbers will be presented in the 2011 Carbon Disclosure Project in May 2011. Our total gross Scope 1 GHG emissions were calculated using The Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard . Scope 1 emissions are direct emissions occurring from sources that are owned or controlled by a company, while Scope 2 emissions include emissions from the generation of purchased electricity. We generate the vast majority of its electricity on-site through diesel generation. Scope 2 emissions therefore only reflect electricity purchased for offsite offices. This will change once we connect to the Ivory Coast national grid in 2011. Emissions are reported as per operational control and is based on the assumption that a company accounts for 100% of the GHG emissions from operations over which it has operational control. Financial GHG emissions intensity reported on an operational basis were 645 metric tonnes CO² equivalent per \$ million revenue for 2010.

Energy use

We generate all the energy used by its operations. Our mineral processing operations are energy intensive and currently depend on diesel power generation to keep them running. This year our energy generation and use increased from 256 to 271 thousand megawatt hours. This change has been influenced by the increase in tonnage throughput and hardness of ore at Loulo and the start up of the Tongon operation in Ivory Coast. Notwithstanding the increase in overall energy use we have been able to reduce our energy use per tonne milled from 35.3 kWh/t to 34.4 kWh/t, due to the fact the additional tonnes milled at Tongon have been oxide and thus used less energy. Once political stability returns to Ivory Coast we would expect to change over to the hydro and gas generated national grid. We are working at ways to maximize the hydro power opportunities available in the DRC project of Kibali and minimising the use of diesel generation. We are working on a concept to reduce the energy intensity of new projects

Table of Contents

that come on line around the Loulo complex by having a centrally powered generating complex from which power could be distributed.

Water Use

Our water policy has focussed this year on maximizing the return of water from Tailings Storage Facilities in an attempt to minimize the off take of fresh water from the environment. All our operations withdraw fresh water from either adjacent river systems or from purpose built water storage dams as well as dewatering of mining operations. The amount of water we removed from the environment has increased this year due to the addition of the Tongon operation to our portfolio. Water management plans are aimed at increasing the reuse of water whenever we can, and to return it to the environment meeting regulatory limits. Our freshwater withdrawal increased by 3 per cent to 7,300 million litres in 2010 but our water withdrawal per tonne milled decreased from 0.98 to 0.93 kl/tonne, due to better reuse of tailings water.

Land

Our mining concessions cover a total of 3,159 km² of land excluding our exploration leases. At the end of 2010 our activities had impacted 1.1 per cent of this area up from 0.8 per cent in 2009, principally due to the construction of the Tongon mine. In line with IFC guidelines on mining, we aim to implement incremental rehabilitation of land rather than waiting until all operations at the site have ceased. Internal annual rehabilitation review and closure estimation helps to drive the process.

Community development

To survive and prosper, we must be an integral part of and benefit the communities of which it is a corporate citizen. Establishing and maintaining good relations with the communities requires constant and effective two-way communication and in pursuit of such relationships we have a sustainable community development strategy backed by a budget and community development departments. We believe we have been more successful in community endeavors than most other mining companies operating in Africa. However, the need to stay focused and continually improve was brought home to us when we suffered a setback in July 2009 in community relations at our Loulo mine. Members of the community – mainly but not exclusively young job seekers newly arrived in the area – became upset about the method of recruitment of the new surface mining contractor, which had brought its mining team with it from Morila. The group disrupted operations which were suspended for 36 hours, allowing the authorities to restore the situation to normal. We have had an independent audit carried out and have implemented its recommendations, such as intensifying our interaction with the communities surrounding our operations.

In 2010, \$7 million was contributed to community development projects which focused on basic education, potable water and basic health provisions, food security and local infrastructure. This more than doubled the amount spent in 2009. This amount excluded the direct community and social work undertaken by ourselves as part of our normal operations and capital projects, including the Resettlement Action Plans and related compensation and infrastructure establishment such as road building related to Tongon, Goukoto and the Kibali projects.

Further payments exceeding \$340.0 million were made to governments, local employees and local suppliers. The governments received taxes, royalties and dividends; employees received salaries while local suppliers and contractors were paid for goods and services received.

We have been championing the establishment of a world class center of excellence to provide West Africans and others in Sub-Saharan Africa with the opportunity to study disciplines at the African School of Mines (ASM), based in Bamako. We are working in collaboration with the Government of Mali, the Nelson Mandela Institution, the World Bank and several leading universities in South Africa, Europe and North America. To date we have set aside \$1 million for this purpose and have provided assistance from our chairman, Philippe Liétard, and the chairman of the audit committee, Karl Voltaire. The Nelson Mandela Institute and the World Bank have undertaken to provide sufficient funds to build the campus and the Malian Government has provided the land for the ASM on which a college will open in 2012

Projects

During the year community development spending on projects identified by the representatives of the communities situated close to our operations was in excess of \$2 million. This excludes the direct community and social work undertaken by the group, including the RAP at Tongon, the provision of medical care to villagers living close to our

operations, the excellent community work done on

51

Table of Contents

our exploration sites and the work at Kibali to carry out medical and other baseline studies and social/economic/human rights and other impact studies.

The focus areas for our community development efforts have remained the creation of sustainable employment opportunities, primary health care, education, food security, and potable water provision.

Human Resources Report

Group manpower

Group manpower levels, inclusive of contractor labor, rose during the year by 1,459 to 7,257, the most significant increases occurred at Tongon, where numbers employed, including contractor staff, increased from 1,510 to 2,445. Manning levels related to employees working on our operations and projects are shown in the following table.

Mine/function	December 2010	December 2009	Variance

Industrial relations

We continued to support the role of unions and representative committees to strengthen our pact with labor which is structured through internal establishment agreements. Employee participation is enhanced by the presence of local mine shop stewards at quarterly mine board meetings.

At Tongon, the political instability of the country resulted in a challenging period towards the end of 2010. Presidential elections were held resulting in extended absence of staff as they were required to vote in the areas where they were registered. At the same time the operation released a number of construction staff in line with the completion of various construction phases. The release of these employees compounded the general feeling of uncertainty and members of the community and some ex-workers blockaded the entrance of the mine preventing employees from entering the mine for a number of days until settlement could be reached for the redeployment of the released employees to other construction projects.

Table of Contents

At Loulo, a second union was established on the mine. This union has recently gained dominant representation. While mine agreements made between management and the original union has been respected, allowance is made for their renegotiation every two years and this is expected to take place in 2011.

Employee health

One of our key objectives is the reduced exposure to airborne contaminants and noise on our sites. Personal protective equipment is supplied as required in the relevant areas. Malaria remains the most significant health risk for our operations. We carried out annual entomological surveys to determine the most effective insecticide to use in the spraying programs that are carried out on site as well as in surrounding villages. At Loulo, the annual incidence rate of Malaria was 30.4% in 2010 compared to 30.9% in 2009; and 26.6% in 2010 at Morila compared to 20.7% in 2009. The incidence rate was 30.8% at Tongon and at 23.2% at Kibali in 2010.

Awareness education of employees and local communities on HIV/AIDS and its prevention is another important health issue addressed on all sites. This is generally conducted by our medical departments in conjunction with NGOs.

Safety

During the year, a standardized health and safety reporting format, agreed by all the medical officers, was introduced across the group. The safety statistics produced comply with OHSAS 18001 and industry best practice. Morila maintained its OHSAS 18001 accreditation and work has been ongoing during 2010 in conjunction with NOSA consultants preparing Loulo to become OHSAS 18001 accredited on the latter half of 2011. Work has also commenced at Tongon on preparing the mine for OHSAS 18001 accreditation expected in 2012.

While low injury frequency rates do not always translate into low fatality rates the Lost Time Injury Frequency Rate (LTIFR) (number of LTI per number of hours worked) x 1,000,000 was 1.36 at Loulo, 0.55 at Morila and 3.83 at Tongon. Daily toolbox meetings are held in workplaces across our mines to constantly remind employees of the need for each to be safety conscious. These meetings are based on the principle of personal responsibility with regard to safety where the onus is transferred to the individual to practice a high level of safety in the workplace.

RANDGOLD RESOURCES GROUP STATISTICS FOR LAST 3 YEARS

Year	No. Of Fatalities	Fatalities / 1000	LTI Freq Rate / 1m hours	All Incident / Accident
2010	1	0.06	1.75	14.88
2009	4(a)	0.51	0.96	18.25
2008	1	0.26	1.71	30.26

(a) Three of the fatalities relate to contractor employees working on developing our Yalea underground mine. These fatalities significantly affected the decision to terminate the services of the contractor at the end of 2009.

Training

Courses given on the operations in 2010 comprised of driving competency; first aid; community development; environmental law and rehabilitation; cyanide safety; hazardous substances; metallurgy processes; engineering maintenance; electrical and mechanical practice; air conditioner repair; occupational health; computer literacy; supervision; Sanvic mechanical training; compressor maintenance; and electrical competency. A total of 536 employees attended courses during the year. In addition, we sponsored a number of employees to further extend their tertiary qualifications at universities in South Africa, Senegal, the Netherlands and the United Kingdom.

REGULATORY AND ENVIRONMENTAL MATTERS

Our business is subject to extensive government and environment-related controls and regulations, including the regulation of the discharge of pollutants into the environment, disturbance of and threats to endangered species and other environmental matters. Generally, compliance with these regulations requires us to obtain permits issued by government agencies.

Some permits require periodic renewal or review of their conditions. We cannot predict whether we will be able to renew those permits or whether material changes in permit conditions will be imposed. To the extent that the countries in which we have exploration and mining permits have no established environmental laws, we are currently working to ensure that our operations are in compliance with environmental performance standards set by the IFC in relation to air emissions and water discharges. In accordance with our stated policy, we provide for estimated environmental rehabilitation costs based on the net present value of future rehabilitation cost estimates for disturbance to date.

We carry out our operations within the guidelines outlined in our social responsibility policy and in accordance with Equator Principles and IFC performance standards.

The Morila Mine maintained its International Standard Organization (ISO14001) certification during 2007 and the Loulo mine achieved its ISO14001 certification. The Tongon mine has now commenced procedures with the aim of attaining ISO14001 certification.

Table of Contents

Our environmental reporting committee comprising senior executives and chaired by our CEO continued to meet on a quarterly basis. The committee considers all issues affecting the environment.

MARKETING

We derive the majority of our income from the sale of gold produced by Morila, Loulo and Tongon in the form of dorè, which we sell under agreement to a refinery. Under these agreements, we receive the ruling gold price on the day after dispatch, less refining and freight costs, for the gold content of the dorè gold. We have only one customer with whom we have an agreement to sell all of our gold production. The customer is chosen periodically on a tender basis from a selected pool of accredited refineries and international banks to ensure competitive refining and freight costs. Unlike other precious metal producers, gold mines do not compete to sell their product given that the price is not controlled by the producers.

PROPERTY

Our operational mining area is comprised of Morila operations of 200 square kilometers, the Loulo mining permit of 372 square kilometers and the Tongon project located within the 751 square kilometer Nielle exploitation permit. Our exploration permits are detailed above.

We also lease offices in London, Dakar, Abidjan, Bamako, Ouagadougou, Mwanza, Accra, Johannesburg, Jersey, Kinshasa and Entebbe.

LEGAL PROCEEDINGS

In August 2004, we entered into a fixed lump sum turnkey contract for \$63 million for the design, supply, construction and commissioning of the Loulo processing plant and infrastructure with MDM Ferroman (Pty) Ltd, or MDM. At the end of 2005, after making advances and additional payments to MDM totaling \$26 million in excess of the contract, we determined that MDM was unable to perform its obligations under the MDM Contract, at which time we enforced a contractual remedy which allowed us to act as our own general contractor and to complete the remaining work on the Loulo project that was required under the MDM Contract.

We believe that we are entitled to recover certain amounts from MDM, including advances of \$10.7 million included in receivables as at December 31, 2010. Of this amount, \$7 million is secured by performance bonds and the remainder is secured by various personal guarantees and other assets. In January 2009 and 2010, the liquidator declared and paid dividends of \$1.6 million from the insolvent estate, leaving an outstanding balance of \$10.7 million (stated net of an impairment provision of \$1.3 million) as at December 31, 2010.

As part of our efforts to recoup the monies owed to us, MDM was put into liquidation on February 1, 2006. This resulted in a South African Companies Act Section 417 investigation into the business and financial activities of MDM, its affiliated companies and their directors. This investigation was completed in the last quarter of 2007 and the liquidators issued their report that confirms that MDM's liabilities exceeded its assets. During the second quarter of 2011 we will be involved in arbitration proceedings with the providers of the performance bonds, which have been the subject of legal proceedings in the South African Courts.

Recovery of the other \$47.2 million is dependent on the extent to which the group's claim is accepted by the liquidators and the amount in the free residue. The ultimate outcome of this claim cannot be determined at present. The financial statements do not reflect any adjustment to the cost of the Loulo development that may arise from this claim, or any additional income that may arise from the claim for damages, or any charge that may arise from MDM's inability to settle amounts that are determined to be payable by MDM to the group in respect of the Loulo development.

As of December 31, 2010, we had approximately \$366.4 million of cash and cash equivalents. In addition, we had available-for-sale financial assets with a carrying value of approximately \$15.9 million. The available-for-sale financial assets consists primarily of an investment in 6 million Volta Resources Inc. shares with a market value at year end of \$14.4 million.

Other than as disclosed above we are not party to any material legal or arbitration proceedings, nor is any of our property the subject of pending material legal proceedings.

Table of Contents

HEALTH AND SAFETY REGULATIONS

Mali

The primary laws, regulations and standards governing Safety and Health in our Malian operations are as follows:

Law 1992-020 Code du travail (the Labor Code);

Ordonnance No. 99-032 le code minier, Ordonnance 200-013 le code minier modifications 2000 (the Mining Code);

Decree No. 91-278 / PM-RM Approving the Establishment Agreement Covering Research and Mining in the Republic of Mali (the Decree)

Code de la Sécurité (INPS – Institute National de Prevoyance Social);

Social du Mali (Social Security Code);

Convention Collective (National Collective Agreement for the Mining Industry).

Labor Code

The Labor Code provides generally for the following:

General provision for protection, prevention and hygiene,

Dangerous goods handling,

Employer responsibility regarding safety and health (implementation of safety system),

Labor inspector duty (control of employer safety system)

Injury notification to Labour Inspector within 48 hours,

Requirement to ensure medical service on site, and

Medical leave (up to 12 months) and medical separation compensation.

Establishment of a Joint Management and employees health and safety committee,

Mining Code

The Mining Code provides generally for an Occupational Health and Safety Committee (Joint management and employee safety committee), PPE, safety guide, emergency procedure, means of education and sensitization, employees obligation regarding occupational health.

The Decree

The Decree provides generally for the following:

Must carry out research or mining work to ensure the safety and health of the public,

Must inform the local administrative authorities and the Director in the event of a fatal accident or serious injury or any natural phenomenon which may have an adverse effect on the safety of the area, the safety and hygiene of the personnel or conservation of the mine, neighboring mines or public roads,

In the case of imminent danger or an accident, the local administrative authorities and the Director may requisition the necessary material and personnel to alleviate the danger, at the expense of the mining company,

Code de la Sécurité (INPS – Institute National de Prevoyance Social)

The Code de la Sécurité provides generally for the following:

Requirement to have medical service on work site for occupational health and primary health care purposes,

Requirement for pre-employment medical check,

Requirement for periodical medical check of employees,

Requirement for general hygiene (ablutions, change house, potable water, workplace)

57

Table of Contents

Protection against injury, environmental pollutants, occupational disease),

Ergonomic conditions,

Notification of occupational disease to the employer by the occupational health practitioner

Requirement for first aid training for one employee per section of work or shift,

Requirement for compensation in case of debilitating injury, occupational disease,

Requirement for notifying injury and or occupational disease to INPS/Labor inspection, and

Redeployment of employee following injury and/or occupational disease.

Morila and Loulo have a Hygiene and Security Committee made up of elected labor and specialist management representatives, as outlined in the respective labor code. This committee designates, from its members, a consultative technical sub-committee charged with the elaboration and application of a concerted policy of improvement of health and security conditions at work. Its composition, attributions and operational modalities are determined by legal provisions and regulations.

The chairman of this committee coordinates monthly committee meetings, sets the agendas with his secretariat, monitors resolutions and signs off on committee determinations.

The committee's secretariat ensures under the supervision of the chairman that:

follow-up activities such as action resulting from the regular surveys and inspections are carried out; and

health and safety manuals and updates are distributed, posters are posted on notice boards and safety committee minutes and reports are distributed.

Each mine's medical officer sits on the Hygiene and Security Committee and advises on the following:
working conditions improvements;

general hygiene on the operation;

ergonomics;

protection of workers safety in the workplace; and

medical checks and eye and ear testing.

The Hygiene and Security Committee forms, from within its membership, two consultative commissions, the Commission of Inquiry and the Educational Commission. The Commission of Inquiry:

investigates accidents and makes recommendations to avoid repetitions;

ensures plant, machinery and equipment have adequate protection to avoid injury; and

updates and revises safety and health manuals.

The Educational Commission:

provides information and training on safe practices and potential risks;

provides first aid training;

administers and promotes the safety suggestion scheme; and

Table of Contents

explains, where necessary, the contents of the safety and health manual.

All employees are covered by the state's social security scheme and our medical reimbursement scheme, that reimburses a large portion of expenses related to medical treatment and medicines. Dental and optical expenses are also covered to 50%.

No post-employment medical aid liability exists for the group.

Côte d'Ivoire

The primary laws, regulations and standards governing Safety and Health in our Côte d'Ivoire operations is the Mining Code (95-553) of July 15, 1995.

The Mining Code provides generally for the following:

Any individual or legal entity carrying out works for prospecting or mining mineral substances is required to undertake such works in a way that the safety of the people and goods is assured,

Must adopt and comply with internal regulations concerning safety and specific hygiene measures, subject to approval by the Mining Authority,

Any accident in a mine or quarry or in their dependencies and any identified cause of accident must be reported to the Mining Authority as soon as possible, and

In case of impending danger or accident in a mine, mining engineers and other authorized agents of the Mining Authority must take all necessary measures, at the expense of the individual or legal entity, to stop the danger and prevent it from occurring again.

Safety Performance

Officials from the Labour Ministry, INPS and officials from the Ministry of Mines regularly visit and audit our operations. Both Morila and Loulo have received safety awards and commendations from INPS.

The national statistics in the countries of West Africa in which we operate are not generally available, with only fatalities cases and lost time/compensable injuries being reported.

Our safety programs are based on the outcome of the risk assessment and continual improvement strategy. The statistical measures we use to monitor our performance, such as LTIFR, are based on international good practice (OHSAS 18001) which we believe is the most accepted by our peers and best standard specification for such statistics. We are progressing with the implementation of occupational health and safety assessment series OHSAS 18001 at all of our operations as part of our health and safety strategy to continuously improve safety in our operations.

Table of Contents

D. PROPERTY, PLANT AND EQUIPMENT

For a discussion of our principal properties, including mining rights and permits, see Item 4. Information on the Company A. History and Development of the Company and Item 4. Information on the Company B. Business Overview . We have all material legal rights necessary to entitle us to exploit such deposits in respect of the Morila mine in Mali to April 2022, Loulo in Mali to 2029 and Tongon in Côte d'Ivoire to 2020.

The exploration permits in Côte d'Ivoire, Mali, Senegal, Burkina Faso and DRC give us the exclusive right for a fixed time period, which is open to renewal, to prospect on the permit area.

Once a discovery is made, we, as the permit holder, then commence negotiations with the respective governments as to the terms of the exploration or mining concession. Depending on the country, some of the terms are more open to negotiation than others, but the critical areas which can be agreed to are the government's interest in the mine, taxation rates and taxation holidays, repatriation of profits and the employment of expatriates and local labor.

Item 4A. Unresolved Staff Comments

None.

Item 5. Operating and Financial Review and Prospects

Statements in this Annual Report concerning our business outlook or future economic performance; anticipated revenues, expenses or other financial items; and statements concerning assumptions made or expectations as to any future events, conditions, performance or other matters, are forward-looking statements as that term is defined under the United States Federal securities laws. Forward-looking statements are subject to risks, uncertainties and other factors which could cause actual results to differ materially from those stated in such statements. Factors that could cause or contribute to such differences include, but are not limited to, those set forth under Item 3. Key Information D. Risk Factors in this Annual Report as well as those discussed elsewhere in this Annual Report and in our other filings with the Securities and Exchange Commission.

General

We earn substantially all of our revenues in US dollars and a large proportion of our costs are denominated or based in US dollars, excluding the Morila mining contract which is partially denominated in Euros. We also have South African Rand, Communauté Financière Africaine franc, Congolese franc and Pound Sterling denominated costs, which are primarily wages and material purchases.

Impact of Malian Economic and Political Environment

We are a Jersey incorporated company and are subject to income tax at a rate of zero percent in Jersey. Our current significant operations are located in Mali and are therefore subject to various economic, fiscal, monetary and political policies and factors that affect companies operating in Mali, as discussed under Item 3. Key Information D. Risk Factors Risks Relating to Our Operations .

Impact of Favorable Tax Treaties

We are subject to income tax at a rate of zero percent in Jersey. Somilo SA benefited from a five year tax holiday until November 7, 2010. Tongon SA also benefits from a five year tax holiday in Cote d'Ivoire which commenced on December 1, 2010. The benefit of the tax holidays to the group was to increase its net profit by \$30.2 million, \$26.7 million, and \$9 million for the years ended December 31, 2010, 2009, and 2008, respectively.

Under Malian tax law, income tax is based on the greater of 35% of taxable income or 0.75% of gross revenue. Under Ivorian tax law, income tax is based on the greater of 25% of taxable income or 0.5% of gross revenue.

Table of Contents

The Morila, Loulo and Tongon operations have no assessable capital expenditure carry forwards or assessable tax losses, as at December 31, 2010 and 2009 respectively, for deduction against future mining income.

Revenues

Substantially all of our revenues are derived from the sale of gold. As a result, our operating results are directly related to the price of gold. Historically, the price of gold has fluctuated widely. The gold price is affected by numerous factors over which we have no control. See Item 3. Key Information D. Risk Factors Risks Relating to Our Operations The profitability of our operations, and the cash flows generated by our operations, are affected by changes in the market price for gold which in the past has fluctuated widely .

We have followed a hedging strategy the aim of which is to secure a minimum price which is sufficient to protect us in periods of significant capital expenditure and debt finance, while at the same time allowing significant exposure to the spot gold price. Accordingly, we have made use of hedging arrangements. Under the terms of the Morila project loan, we were required to hedge 50% of approximately 36% of Morila's first 5 years of production. The last remaining hedges were closed out during 2004.

Our prior financing arrangements for the development of Loulo included provisions for gold price protection. Although the facility was fully repaid in December 2007, these instruments were in place until the last remaining hedges were delivered into during 2010. The group is now fully exposed to the spot gold price on gold sales.

Significant changes in the price of gold over a sustained period of time may lead us to increase or decrease our production, which could have a material impact on our revenues.

Our Realized Gold Price

The following table sets out the average, high and low afternoon London Bullion Market fixing price of gold and our average US dollar realized gold price during the years ended December 31, 2010, 2009, and 2008.

	Year Ended December 31,		
	2010	2009	2008
Average	1,224	972	871
High	1,421	1,213	1,011
Low	1,058	810	712
Average realized gold price	1,180(1)	893(1)	792(1)

(1) Our average realized gold price differs from the average gold price as a result of the timing of our gold deliveries and different realized prices achieved on the hedge book.

Costs and Expenses

Our operations currently comprise three operations. Mining operations at both Loulo and Tongon are being conducted by contractors and managed by the company. Morila is currently processing stockpiles only as mining ceased in April 2009. Milling operations are undertaken by the group's own employees. Total cash costs in the year ended December 31, 2010 as defined by guidance issued by the Gold Institute made up approximately 78% of total costs and expenses and comprised mainly mining and milling costs, including labor and consumable stores costs. Consumable stores costs include diesel and reagent costs. Contractor costs represented 46% of total cash costs, with diesel and reagent costs making up 25% of total cash costs. Direct labor costs accounted for approximately 5% of total cash costs. For a definition of total cash costs, please refer to Item 3 Key Information.

The price of diesel for the Loulo, Morila and Tongon operations were consistent from 2009 to 2010. Should prices increase, this could significantly impact total cash costs mainly as a result of the high volume of diesel consumed to generate power and to run the mining fleet. A significant portion of the costs at Loulo and Morila are denominated in CFA and therefore costs are exposed to fluctuations in the Euro/dollar exchange rate. The Euro weakened slightly against the dollar during 2010. The remainder of our total

Table of Contents

costs and expenses consists primarily of amortization and depreciation, exploration costs, exchange losses, interest expense and general administration or corporate charges.

Looking Forward

Despite the challenges of 2010 our four year organic growth profile remains intact. Assuming the situation in the Côte d'Ivoire does not impact upon operations much longer, the group forecast production for 2011 is 750,000 to 790,000 ounces which is a 70% increase on 2010. On an equity attributable basis this equates to approximately 640,000 to 670,000 ounces compared to 373,706 ounces in 2010.

Considering the situation in the Côte d'Ivoire and given the ongoing remedial work planned for the Yalea underground in the first quarter, as well as the anticipated contribution from Goukoto starting in July, the production forecast is skewed towards the second half of the year. Notwithstanding the additional non-cash adjustments relating to the Morila stockpiles, management is targeting total cash costs per ounce for the group, after royalties and taxes, of less than \$600/oz for 2011, assuming current prevailing oil price and Euro-Dollar exchange rates, which movements have a significant impact on operating costs. Continued growth in production over the following four years is forecast from increasing grades out of Loulo, Gara and Goukoto with Kibali adding to production in 2014. Consequently, on the back of this forecast increase in grade, the group total cash costs based on current prevailing input cost parameters, are forecast to reduce to the lower \$400/oz range over the same period.

Given our exploration success, exploration expenditure is expected to remain high in the coming year. Significant capital expenditure will also be incurred across the group as part of our planned growth in production, including on the Massawa feasibility project in Senegal, targeted to be concluded by the end of the year, and at Kibali in the DRC, where the mine construction start-up is targeted for mid-year. At Goukoto, capital expenditure will be focused on the first six months of the year, leading up to production anticipated to start in the second half of the year. Capital expenditure at Loulo will be focused on the Yalea and Gara underground mine developments as well as the plant upgrade as part of the Goukoto start-up. Total group capital expenditure for 2011 is anticipated to be approximately \$310 million.

We continue to maintain our focus on organic growth through discovery and development of world class orebodies, and have a pipeline of high quality projects and exploration targets. Notwithstanding this core strategy, management routinely reviews corporate and asset acquisition opportunities, focused on gold in Africa.

Critical Accounting Policies

Our significant accounting policies are more fully described in note 2 to our consolidated financial statements. Some of our accounting policies require the application of significant judgment by management in selecting the appropriate assumptions for calculating financial estimates. By their nature, these judgments are subject to an inherent degree of uncertainty and are based on our historical experience, terms of existing contracts, management's view on trends in the gold mining industry and information from outside sources.

Management believes the following critical accounting policies, among others, affect the more significant judgments and estimates used in the preparation of our consolidated financial statements and could potentially impact our financial results and future financial performance.

Joint Venture Accounting

We account for our investment in joint ventures by incorporating our proportionate share of the joint ventures assets, liabilities, income, expenses and cash flows in the consolidated financial statements under appropriate headings. Should this method of accounting not be permitted in the future, the results of each joint venture would need to be equity accounted. This would require the recognition in the consolidated statement of comprehensive income, on a separate line, of our share of the joint ventures' profit or loss for the year. Our interest in the joint venture would be carried on the statement of financial position at an amount which would reflect our share of the net assets of the joint venture.

This would result in a presentation of our statement of financial position and statement of comprehensive income that differs significantly from the current presentation, but would have no impact on our net income or our net asset value.

Table of Contents**Depreciation and Amortization of Mining Assets**

Depreciation and amortization charges are calculated using the units of production method and are based on tonnes processed through the plant as a percentage of total expected tonnes to be processed over the lives of our mines. A unit is considered to be produced at the time it is physically removed from the mine. The lives of the mines are based on proven and probable reserves as determined in accordance with the Securities and Exchange Commission's industry guide number 7. The estimates of the total expected future lives of our mines could be materially different from the actual amounts of gold mined in the future and the actual lives of the mines due to changes in the factors used in determining our mineral reserves. These factors could include: (i) an expansion of proven and probable reserves through exploration activities; (ii) differences between estimated and actual cash costs of mining, due to differences in grade, metal recovery rates and foreign currency exchange rates; and (iii) differences between actual gold prices and gold price assumptions used in the estimation of reserves. Such changes in reserves could similarly impact the useful lives of assets depreciated on a straight-line basis, where those lives are limited to the life of the mine, which in turn is limited to the life of the proven and probable reserves.

Valuation of Long-Lived Assets

Management compares the carrying amounts of property, plant and equipment to the recoverable amount of the assets whenever events or changes in circumstances indicate that the net book value may not be recoverable. In determining if the asset can be recovered, we compare the recoverable amount to the carrying amount. If the carrying amount exceeds the recoverable amount, we will record an impairment charge in profit or loss to write down the asset to the recoverable amount. The recoverable amount is assessed by reference to the higher of value in use (being the net present value of expected future cash flows of the relevant cash-generating unit) and fair value less cost to sell. To determine the value in use amount, management makes its best estimate of the future cash inflows that will be obtained each year over the life of the mine and discounts the cash flow by a rate that is based on the time value of money adjusted for the risk associated with the applicable project. In estimating future cash flows, assets are grouped at the lowest level for which there is identifiable cash flows that are largely independent of future cash flows from other asset groups. With the exception of mine-related exploration potential, all assets at a particular operation are considered together for purposes of estimating future cash flows.

These reviews are based on projections of anticipated future cash flows to be generated by utilizing the long-lived assets. While management believes that these estimates of future cash flows are reasonable, different assumptions regarding projected gold prices and production costs as discussed above under depreciation and amortization of mining assets could materially affect the anticipated cash flows to be generated by the long-lived assets. The ability to achieve the estimated quantities of recoverable minerals from exploration stage mineral interests involves further risks in addition to those factors applicable to mineral interests where proven and probable reserves have been identified, due to the lower level of confidence that the identified mineralized material can ultimately be mined economically.

Environmental Rehabilitation Costs

We provide for environmental rehabilitation costs and related liabilities based on our interpretations of current environmental and regulatory standards with reference to World Bank guidelines. Final environmental rehabilitation obligations are estimated based on these interpretations and in line with responsible programs undertaken by similar operations elsewhere in the world. While management believes that the environmental rehabilitation provisions made are adequate and that the interpretations applied are appropriate, the amounts estimated may differ materially from the costs that will actually be incurred to rehabilitate our mine sites in the future.

Exploration and evaluation costs

We expense all exploration and evaluation expenditures until the directors conclude that a future economic benefit is more likely than not of being realized, i.e. probable. While the criteria for concluding that an expenditure should be capitalized are always probable, the information that the directors use to make that determination depends on the level of exploration.

Exploration and evaluation expenditure on greenfield sites, being those where we do not have any mineral deposits which are already being mined or developed, is expensed until such time as our directors have sufficient information to determine that future economic benefits are probable, after which the expenditure is capitalized as a mine development cost. The information required by directors is typically a final feasibility study, however, a

prefeasibility study may be deemed to be sufficient where the additional work required to prepare a final feasibility study is not significant.

Table of Contents

Exploration and evaluation expenditure on brownfield sites, being those adjacent to mineral deposits which are already being mined or developed, is expensed as incurred until our directors are able to demonstrate that future economic benefits are probable through the completion of a prefeasibility study, after which the expenditure is capitalized as a mine development cost. A prefeasibility study consists of a comprehensive study of the viability of a mineral project that has advanced to a stage where the mining method, in the case of underground mining, or the pit configuration, in the case of an open pit, has been established, and which, if an effective method of mineral processing has been determined, includes a financial analysis based on reasonable assumptions of technical, engineering, operating economic factors and the evaluation of other relevant factors. The prefeasibility study, when combined with existing knowledge of the mineral property that is adjacent to mineral deposits that are already being mined or developed, allow the directors to conclude that it is more likely than not that the group will obtain future economic benefit from the expenditures.

Exploration and evaluation expenditure relating to extensions of mineral deposits which are already being mined or developed, including expenditure on the definition of mineralization of such mineral deposits, is capitalized as a mine development cost following the completion of an economic evaluation equivalent to a prefeasibility study. This economic evaluation is distinguished from a prefeasibility study in that some of the information that would normally be determined in a prefeasibility study is instead obtained from the existing mine or development. This information when combined with existing knowledge of the mineral property already being mined or developed allow our directors to conclude that more likely than not we will obtain future economic benefit from the expenditures. Costs relating to property acquisitions are also capitalized within development costs.

Receivables

Receivables are recognized initially at fair value. There is a rebuttable presumption that the transaction price is fair value unless this could be refuted by reference to market indicators. Subsequently, receivables are measured at amortized cost using the effective interest method, less provision for impairment. A provision for impairment of trade receivables is established when there is objective evidence that we will not be able to collect all amounts due according to the original terms of receivables. Significant financial difficulties of the debtor, probability that the debtor will enter bankruptcy or financial reorganization, and default or delinquency in payments are considered indicators that the trade receivable is impaired.

The amount of the provision is the difference between the asset's carrying amount and the present value of estimated future cash flows, discounted at the effective interest rate. The amount of the provision is recognized in the statement of comprehensive income.

Share-based payments

The fair value of the employee services received in exchange for the grant of options or restricted shares is recognized as an expense. The total amount to be expensed over the vesting period is determined by reference to the fair value of the options or restricted shares determined at the grant date, including any market performance conditions and excluding the impact of any service and non-market performance vesting conditions (for example profitability, sales growth targets and remaining an employee of the entity over a specified time period). Non-market vesting conditions are included in assumptions about the number of options that are expected to become exercisable or the number of shares that the employee will ultimately receive. This estimate is revised at each statement of financial position date and the difference is charged or credited to the statement of comprehensive income, with a corresponding adjustment to equity. Market performance conditions are included in the fair value assumptions on the grant date with no subsequent adjustment. The proceeds received on exercise of the options net of any directly attributable transaction costs are credited to equity. When the options are exercised, the company issues new shares. The proceeds received net of any directly attributable transaction costs are credited to share capital (nominal value) and share premium when the options are exercised.

Mineral properties

Mineral properties acquired are recognized at fair value at the acquisition date. Mineral properties are tested annually for impairment on the same basis that property, plant and equipment are when there is an indication of impairment. Mineral properties will be amortized on a units of production basis when the related mine commences production.

Recent accounting pronouncements

The group and company have adopted the following standards, amendments to standards and interpretations which are effective for the first time this year. Their impact is discussed below. Those standards, amendments to standards and interpretations that are

Table of Contents

effective for the first time this year but have no impact on the group, and are not expected to have an impact in the future, have not been included below:

Amendments to IFRIC 9 and IAS 39: Embedded Derivatives (effective for annual periods beginning on or after 30 June 2009).

This amendment clarifies the treatment of embedded derivatives in host contracts that are reclassified out of fair value through profit or loss following the changes introduced by the Amendments to IAS 39 and IFRS 7: Reclassification of Financial Instruments. This has not had an impact on the group in the current year but may have an impact in future.

Revised IFRS 3: Business Combinations (effective for annual periods beginning on or after 1 July 2009).

The basic approach of the existing IFRS 3 to apply acquisition accounting in all cases and identify an acquirer is retained in this revised version of the standard. It also includes much of the current guidance for the identification and recognition of intangible assets separately from goodwill. However, in some respects the revised standard may result in very significant changes, including: The requirement to write off all acquisition costs to profit or loss instead of including them in the cost of investment; the requirement to recognize an intangible asset even if it cannot be reliably measured; and, an option to gross up the statement of financial position for goodwill attributable to minority interests (which are renamed non-controlling interests). The revised standard does not require the restatement of previous business combinations. This has not had an impact on the group in the current year but may have an impact in future.

Amendment to IAS 27: Consolidated and Separate Financial Statements (effective for annual periods beginning on or after 1 July 2009).

This amendment affects in particular the acquisition of subsidiaries achieved in stages and disposals of interests, with significant differences in the accounting depending on whether or not control is obtained as a result of the transaction, or where a transaction results only in a change in the percentage of a controlling interest. The amendment does not require the restatement of previous transactions. This has not had an impact on the group in the current year but may have an impact in future.

Amendment to IAS 39: Financial Instruments – Recognition and Measurement: Eligible Hedged Items (effective for annual periods beginning on or after 1 July 2009).

This amendment clarifies how the principles that determine whether a hedged risk or portion of cash flows is eligible for designation should be applied in the designation of a one-sided risk in a hedged item, and inflation in a financial hedged item. This has not had an impact on the group or company in the current year but may have an impact in future.

Improvements to IFRSs: 2010 (effective for annual periods beginning on or after 1 January 2010).

The improvements in this amendment clarify the requirements of IFRSs and eliminate inconsistencies within and between standards. This has not had a significant impact on the group.

Amendments to IFRS 2: Group Cash-settled Share-based Payment Transactions (effective for annual periods beginning on or after 1 January 2010).

This amendment clarifies that, where a parent (or another group entity) has an obligation to make a cash-settled share-based payment to another group entity's employees or suppliers, the entity receiving the goods or services should account for the transaction as equity-settled. The amendment also moves the IFRIC 11 requirements in respect of equity-settled share-based payment transactions among group entities and the clarification of the scope of IFRS 2 contained within IFRIC 8 into IFRS 2 itself. This has not had an impact on the group in the current year but may have an impact in future.

The following standards, amendment to standards and interpretations which have been recently issued or revised have not been adopted early by the group or company but may have an impact in the future; their expected impact is discussed below. Standards, amendments to standards and interpretations that are not expected to impact the group, are not included below.

Classification of Rights Issues (Amendment to IAS 32) (effective for annual periods beginning on or after 1 February 2010).

Table of Contents

This Amendment addresses the accounting for rights issues (rights, options or warrants) that are denominated in a currency other than the functional currency of the issuer. Previously such rights issues were accounted for as derivative liabilities. However, the Amendment requires that, provided the entity offers the rights, options or warrants pro rata to all of its existing owners of the same class of its own non-derivative equity instruments, such rights issues are classified as equity regardless of the currency in which the exercise price is denominated. This will be applied in the year ending 31 December 2011 but is not expected to have an immediate impact on the group.

IFRIC 19 Extinguishing Financial Liabilities with Equity Instruments (effective for annual periods beginning on or after 1 July 2010).

This Interpretation addresses transactions in which an entity issues equity instruments to a creditor in return for the extinguishing of all or part of a financial liability. Broadly, it applies to transactions where the two parties are acting only in their capacity as lender and borrower. It does not address the appropriate treatment for the creditor and does not apply to arrangements in which liabilities are extinguished in return for equity instruments in accordance with the original terms of the financial liability. For transactions within its scope, where the whole liability is extinguished, the Interpretation requires the equity instruments issued to be measured at their fair value and the difference between that fair value and the carrying value of the financial liability extinguished to be recognized in profit or loss. Where only part of the financial liability is extinguished, some allocation of the consideration between the extinguished portion of the liability and the part of the liability that remains outstanding may be required. This will be applied in the year ending 31 December 2011 but is not expected to have an immediate impact on the group.

Revised IAS 24 Related Party Disclosures (effective for annual periods beginning on or after 1 January 2011).

The revision to IAS 24 is in response to concerns that the previous disclosure requirements and the definition of a related party were too complex and difficult to apply in practice, especially in environments where government control is pervasive. The revised standard addresses these concerns by:

Providing a partial exemption for government related entities Until now, if a government controlled, or a significantly influenced, an entity, the entity was required to disclose information about all transactions with other entities controlled, or significantly influenced by the same government. The revised Standard requires such entities to disclose information about individually and collectively significant related party transactions only.

Providing a revised definition of a related party The structure of definition of a related party has been simplified and inconsistencies eliminated. Illustrative examples have also been added. The revised definition will mean that some entities will have more related parties for which disclosures will be required. The entities that are most likely to be affected are those that are part of a group that includes both subsidiaries and associates, and entities with shareholders that are involved with other entities.

This will be applied in the year ending 31 December 2011 but is not expected to have an immediate impact on the group.

Improvements to IFRSs (2010) (effective for annual periods beginning on or after 1 January 2011).

The improvements in this Amendment clarify the requirements of IFRSs and eliminate inconsistencies within and between Standards. The changes include amendments to:

IFRS 3 (Revised 2008) Business combinations including: (i) Clarification that the treatment of contingent consideration arising in business combinations occurring before the effective date of IFRS 3(R) continues to be treated under the old requirements. (ii) Limiting the choice to measure non-controlling interests at a proportionate share in recognized amounts of the acquiree's identified net assets to present ownership interests with other components of the non-controlling interest being measured at fair value. (iii) The inclusion or otherwise in the cost of investment of replacement share-based payment awards provided to employees of the acquiree.

IFRS 7 Financial instruments: Disclosures including clarification that an entity should provide qualitative disclosures in the context of quantitative disclosures to enable users to link related disclosures and hence form an overall picture of the nature and extent of risks arising from financial instruments.

IAS 1 (Revised 2007) Presentation of financial statements clarifying that the analysis of components of other comprehensive income in the statement of changes in equity may be presented in a note.

Table of Contents

IAS 34 Interim financial reporting clarifying the disclosures required in respect of significant events and transactions during the period.

Improvements to IFRSs (2010) also made minor amendments to the wording of IFRIC 13 Customer loyalty programs regarding the valuation of award credits and the transitional arrangements for amendments to IAS 21 The effects of changes in foreign exchange rates and IAS 28 Investments in associates in respect of the loss of control or significant influence which were introduced by IAS 27 (as amended 2008) Consolidated and separate financial statements. This will be applied in the year ending 31 December 2011 but is not expected to have an immediate impact on the group.

Disclosures Transfers of Financial Assets (Amendments to IFRS 7) (effective for annual periods beginning on or after 1 July 2011).

This Amendment requires the disclosure of information in respect of all transferred financial assets that are not derecognized and for any continuing involvement in a transferred asset, existing at the reporting date, irrespective of when the related transfer transaction occurred. The disclosures are intended to enable users of financial statements: (a) to understand the relationship between transferred financial assets that are not derecognized in their entirety and the associated liabilities; and (b) to evaluate the nature of, and risks associated with, the entity's continuing involvement in derecognized financial assets.

These enhanced disclosures are likely to affect, among others, entities that have debt factoring arrangements. These amendments are not yet endorsed by the EU. This will be applied in the year ending December 31, 2012 but is not expected to have an immediate impact on the group.

Deferred Tax: Recovery of Underlying Assets (Amendments to IAS 12) (effective for annual periods beginning on or after 1 January 2012).

IAS 12 requires an entity to measure the deferred tax relating to an asset depending on whether the entity expects to recover the carrying amount of the asset through use or sale. It can be difficult and subjective to assess whether recovery will be through use or through sale when the asset is measured using the fair value model in IAS 40 Investment Property. The amendment provides a practical solution to the problem by introducing a presumption that recovery of the carrying amount will, normally, be through sale. As a result of the amendments, SIC-21 Income Taxes - Recovery of Revalued Non-Depreciable Assets would no longer apply to investment properties carried at fair value. The amendments also incorporate into IAS 12 the remaining guidance previously contained in SIC-21, which is accordingly withdrawn. These amendments are not yet endorsed by the EU. This will be applied in the year ending December 31, 2012 but is not expected to have an immediate impact on the group.

IFRS 9 Financial Instruments (effective for annual periods beginning on or after 1 January 2013).

IFRS 9 will eventually replace IAS 39 in its entirety. However, the process has been divided into three main components: Classification and measurement; impairment; and, hedge accounting. As each phase is completed, it will delete the relevant portions of IAS 39 and create new chapters in IFRS 9.

To date IFRS 9 addresses only the classification and measurement of financial instruments. The requirements for financial assets are that they should be:

Classified on the basis of the entity's business model for managing the financial assets and the contractual cash flow characteristics of the financial asset;
measured at amortized cost if it meets two conditions: (a) The entity's business model is to hold the financial asset in order to collect the contractual cash flows; and, (b) the contractual terms of the asset give rise on specified dates to cash flows that are solely payments of principal and interest on the principle outstanding; and,
subsequently measured at amortized cost or fair value depending on the business model of the entity and the terms of the instrument.

Hybrid contracts with a host that is within the scope of IFRS 9 (i.e. a financial host) must be classified in its entirety in accordance with the classification approach stated above. This eliminates the existing IAS 39 requirements to separately account for an embedded derivative and a host contract. The embedded derivative requirements under IAS 39 continue to apply where the host contract is a non-financial asset and for financial liabilities.

Table of Contents

The requirements for classifying and measuring financial liabilities are mostly unchanged from those set out in IAS 39.

IFRS 9 includes an accounting policy choice allowing investments in equity instruments to be measured at fair value through other comprehensive income. This is an irreversible election made, on an instrument by instrument basis, at the date of initial recognition. Where this option is not taken, all equity instruments with the scope of IFRS 9 will be classified as fair value through profit or loss. Irrespective of the policy choice made, dividends received on equity instruments will always be recognized in profit or loss. Subsequent reclassification of financial assets between the amortized cost and fair value categories is permitted only when an entity changes its business model for managing its financial assets. The held to maturity and available for sale classifications have been eliminated. This standard has not yet been endorsed by the EU. This will be applied in the year ending 31 December 2013. We will review the impact on the group closer to the date of implementation, but it is currently expected that it will result in a reclassification of available for sale assets.

A. OPERATING RESULTS

Our operating and financial review and prospects should be read in conjunction with our consolidated financial statements, accompanying notes thereto, and other financial information appearing elsewhere in this Annual Report.

Years Ended December 31, 2010 and 2009Total revenue

Total revenues from gold sales for the year ended December 31, 2010 increased by \$51.8 million, or 12%, from \$432.8 million to \$484.6 million. This is mainly due to a 32% increase in the average gold price received from \$893/oz in 2009 to \$1,180/oz in 2010, partially offset by a 15% decrease in group ounces sold to 413,262 in 2010, mainly due to a decrease in grade at Loulo, which is expected to improve in 2011.

Other Income

Other income of \$22.6 million for the year ended December 31, 2010 compared to \$9 million for the year ended December 31, 2009. Other income includes a profit of \$19.3 million (2009: \$10.7 million) in respect of the sale of 15.5 million Volta Resources shares. The amount recognized in 2009 relates to the profit realized on the sale of the Kiaka project in Burkina Faso.

Costs and ExpensesTotal Cash Costs

The following table sets out our total ounces sold and total cash cost and production cost per ounce sold for the years ended December 31, 2010 and 2009:

	Year Ended December 31,			
	2010			2009
	Ounces sold	\$ Per Ounce	Ounces sold	\$ Per Ounce
Morila (40% share) cash costs	95,443	669	136,664	480
Loulo (100% share) cash costs	313,122	712	351,591	522
Tongon (100% share) cash costs	4,698	459		
Total ounces (sold)	413,263		488,255	
Group total cash costs*		699		510
Total production costs per ounce under IFRS		767		569

* For a definition of cash costs, please see Item 3. Key Information A. Selected Financial Data .

Total production cost includes total cash costs and also the depreciation and amortization cost which is discussed below. Total cash cost per ounce has been restated following the change in the bases for these calculations. Refer to page 9 for more information.

Table of Contents

Total cash costs for the year ended December 31, 2010 of \$289 million increased by 16% from 2009, mainly due to increased mining costs at Loulo primarily due to increased open pit mining costs resulting from deepening pits, revised mining rates and general cost increases in reagents and other consumables. Cash costs also increased at Morila during 2010, due to the continued impact of processing lower grade ore. The total cash costs per ounce of \$699/oz increased by 37% year on year.

Royalties increased by \$2.3 million, or 9%, to \$27.7 million for the year ended December 31, 2010 from \$25.4 million for the year ended December 31, 2009. The increased royalties reflect the higher average gold price received.

Other mining and processing costs comprise various expenses associated with providing on mine administration support services to the Morila, Loulo and Tongon mines. These charges amounted to \$20.6 million for the year ended December 31, 2010 and \$19.1 million for the year ended December 31, 2009. The increase in other mining and processing costs also reflect the commencement of operations at the Tongon mine towards the end of 2010.

Depreciation and Amortization

Depreciation and amortization of \$28.1 million for the year ended December 31, 2010 is consistent with the depreciation of \$28.5 million that was charged for the year ended December 31, 2009. This includes depreciation charged at Loulo, Morila and Tongon since production commenced at Tongon in the fourth quarter of 2010.

Exploration and Corporate Expenditure

Exploration and corporate expenditure was \$47.2 million for the year ended December 31, 2010 and \$51.1 million for the year ended December 31, 2009. Following the successful completion of prefeasibility studies at the Massawa project in Senegal (now at feasibility stage) and the Goukoto project in Mali (now in construction), a higher proportion of expenditure was capitalized in 2010. During 2010, \$2.5 million and \$1.4 million were expensed for Massawa and Goukoto, respectively, before these projects moved into feasibility stage and expenses thereon could be capitalized as per our accounting policies. In 2009, \$14.3 million and \$1.8 million were expensed on the Massawa and Goukoto project, respectively.

Other expenses

Other expenses for the year ended December 31, 2010 of \$14.1 million mainly comprised operational foreign exchange losses of \$13.4 million. Other expenses for the year ended December 31, 2009 of \$0.24 million consisted of an increase in the loss related to the ineffective portion of hedging contracts. All gold price forward sales contracts were delivered into during the year.

Finance Income

Finance income amounts consist primarily of interest received on cash held at banks of \$1.3 million (2009:\$1.9 million). Finance income of \$3.4 million for the year ended December 31, 2009 also included a net foreign exchange gain of \$1.6 million. The decrease in finance income was due to lower cash balances during 2010 compared to 2009.

Finance costs

Finance costs for the year ended December 31, 2010 was \$5.3 million compared to finance costs for the year ended December 31, 2009 of \$1.9 million. Finance costs for the year ended December 31, 2010 included net foreign exchange losses on financing activities of \$3.6 million, while a net foreign exchange gain of \$1.6 million was achieved during the year ended December 31, 2009 and included in finance income.

Provision for financial assets

The auction rate securities (ARS) have now been disposed following a settlement that was reached in relation to these investments. The gain on settlement was \$13 million. During 2009, we made a provision of \$9.6 million against these assets.

Table of Contents*Income Tax Expense*

The income tax expense amounted to \$24.5 million for the year ended December 31, 2010 and \$21.5 million for the year ended December 31, 2009. The increase in the tax expense is the result of the expiration of the Loulo tax exoneration period in November 2010. Morila SA benefited from a five year tax holiday until November 14, 2005. Loulo SA also benefited from a five year tax holiday in Mali until November 7, 2010. Tongon SA benefits from a five year tax holiday in Cote d'Ivoire from December 1, 2010. Under Malian tax law, income tax is based on the greater of 35% taxable income or 0.75% of gross revenue. Under Ivorian tax law, income tax is based on the greater of 25% of taxable income or 0.5% of gross revenue.

Non-controlling interests

The non-controlling interests for the year ended December 31, 2010 represent the Malian government's 20% share of the profits at Loulo since production commenced in November 2005, the Ivorian government's 10% share and other outside shareholder's 1% share of the profits at Tongon since production commenced in November 2010 and Sokimo's 5% share of Kibali. We have 45% interest in Kibali, but as we gross proportionally consolidate our interest, as at December 31, 2009 we recognized 50% of Kibali and a 5% non-controlling interest.

Years Ended December 31, 2009 and 2008Total revenue

Total revenues from gold sales for the year ended December 31, 2009 increased by \$94.2 million, or 28%, from \$338.6 million to \$432.8 million. This is mainly due to a 14% increase in attributable ounces sold to 486,324 ounces year on year, as well as an increase in the average gold price received of \$101/oz from \$792/oz in 2008 to \$893/oz in 2009.

Other Income

Other income of \$9.0 million for the year ended December 31, 2009 compared to \$4.2 million for the year ended December 31, 2008. Other income for 2009 included management fees received from Morila (\$2 million net of eliminations) since we assumed operations of the mine from February 15, 2008 (2008: \$2 million). Other income also included a profit of \$10.7 million (2008: \$0) realized on the sale of the Kiaka project in Burkina Faso. This was partially offset by foreign exchange losses included in other income during 2009.

Costs and Expenses*Total Cash Costs*

The following table sets out our total ounces produced and total cash cost and production cost per ounce for the years ended December 31, 2009 and 2008:

		Year Ended December 31,		
		2009		2008
		\$ Per		\$ Per
	Ounces	Ounce	Ounces	Ounce
Morila (40% share) cash costs	136,664	480	170,331	400
Loulo (100% share) cash costs	349,660	525	259,382	512
Total ounces (attributable sales)	486,324		427,713	
Group total cash costs*		512	468	
Total production costs per ounce under IFRS		571	517	

* For a definition of cash costs, please see Item 3. Key Information A. Selected Financial Data .

Total production cost includes total cash costs and also the depreciation and amortization cost which is discussed below. Total cash cost per ounce has been restated following the change in the bases for these calculations. Refer to page 9 for more information.

Table of Contents

Total cash costs for the year ended December 31, 2009 of \$249.2 million increased by 25% from 2008, mainly due to the incremental increases associated with higher production, increased open cast mining costs at Loulo and the full transitioning of Morila into a stockpile treatment operation. The total cash costs per ounce of \$510/oz increased by 9% year on year.

Royalties increased by \$5.7 million, or 29%, to \$25.4 million for the year ended December 31, 2009 from \$19.7 million for the year ended December 31, 2008. The increased royalties reflect increased gold sales and a higher gold price received.

Other mining and processing costs comprise various expenses associated with providing on mine administration support services to the Morila and Loulo mine. These charges amounted to \$19.1 million for the year ended December 31, 2009 and \$13.7 million for the year ended December 31, 2008. The increase in other mining and processing costs also reflect the increase in operating activity at Loulo resulting from the development of the underground mines.

Depreciation and Amortization

Depreciation and amortization of \$28.5 million for the year ended December 31, 2009 compares to \$21.3 million for the year ended December 31, 2008. This includes depreciation charged at both operations. The increase in depreciation year on year is a result of the increase in capital expenditure at Loulo as a result of the development of the underground mines and the amortization of the capital items in use during 2009. Capital expenditure at Tongon has not attracted depreciation during 2009, as the mine development is currently in the construction phase.

Exploration and Corporate Expenditure

Exploration and corporate expenditure was \$51.1 million for the year ended December 31, 2009, and \$45.2 million for the year ended December 31, 2008. The increase during 2009 was due to the increase in exploration expenditure during the year as a result of continued commitment to exploration and prefeasibility drilling, especially at the Massawa project in Senegal.

Other expenses

Other expenses for the year ended December 31, 2009 of \$0.24 million and \$0.36 million for the year ended December 31, 2008 both consisted of an increase in the loss related to the ineffective portion of hedging contracts.

Finance Income

Finance income amounts consist primarily of interest received on cash held at banks (\$1.9 million), as well as exchange gains on financing activities (\$1.6 million). Finance income of \$3.4 million for the year ended December 31, 2009 compared to \$9.3 million for the year ended December 31, 2008. The decrease in finance income was due to a lower effective interest rate for 2009 (0.35%) compared to 2008 (2.7%). This was partially offset by higher cash balances during 2009 compared to 2008, resulting from the \$329.7 million capital raising that was concluded in August 2009.

Finance costs

Finance costs for the year ended December 31, 2009 was \$1.9 million compared to finance costs for the year ended December 31, 2008 of \$3.3 million. Finance costs for the year ended December 31, 2008 included net foreign exchange losses on financing activities of \$1.3 million, while a net foreign exchange gain of \$1.6 million was achieved during the year ended December 31, 2009 and included in finance income.

Provision for financial assets

At the end of 2007, we transferred \$49.0 million from cash and cash equivalents to available-for-sale financial assets which were attributable to our portfolio of ARS. The trading market for these instruments became substantially illiquid as a result of the conditions in the credit markets. During 2009, following the continued deterioration of the underlying credit ratings of the collateral of certain of the ARS, we provided \$9.6 million (2008: \$10.4 million) against these assets, and the assets were reclassified into the non-current section of available-for-sale financial assets during 2008.

Table of Contents*Income Tax Expense*

The income tax expense amounted to \$21.5 million for the year ended December 31, 2009 and \$24.6 million for the year ended December 31, 2008. The decrease in the tax expense is the result of a decrease in profit before tax at Morila. Morila SA benefited from a five year tax holiday until November 14, 2005. Loulo SA also benefits from a five year tax holiday in Mali. The tax holiday commenced on November 8, 2005. Under Malian tax law, income tax is based on the greater of 35% taxable income or 0.75% of gross revenue.

Non-controlling interests

The non-controlling interests for the years ended December 31, 2009 and December 31, 2008 represent the Malian Governments 20% share of the profits at Loulo since production commenced in November 2005 and Sokimo's share of Kibali. We have 45% interest in Kibali, but as we gross proportionally consolidate our interest, as at December 31, 2009 we recognized 50% of Kibali and a 5% non-controlling interest.

B. LIQUIDITY AND CAPITAL RESOURCES**Cash Resources**

The group had \$366.4 million cash and cash equivalents for the year ended December 31, 2010 and \$589.7 million for the year ended December 31, 2009.

Operating Activities

Net cash generated from operating activities was \$107.8 million for the year ended December 31, 2010 and \$63.7 million for the year ended December 31, 2009. The \$44.1 million increase was due mainly to the changes in operating working capital items. Cash flows related to receivables increased by \$26.4 million during 2010, due to the settlement of TVA balances at Loulo and Morila, the settlement of contractor receivables and improved debtor management. Cash flows related to inventories and ore stockpiles decreased significantly during 2010 by \$61.4 million, due to the Tongon stockpiles now being included following commencement of mining activities in 2010, as well as significant dore balances on hand at Tongon at year end (\$11.3 million). Cash flows related to trade and other payables increased by \$10.8 million from December 31, 2009 to December 31, 2010, mainly due to the effect of additional contractors and accruals at the Tongon mine at year end.

Net cash generated from operating activities was \$63.7 million for the year ended December 31, 2009 and \$57.5 million for the year ended December 31, 2008. The \$6.2 million increase was due mainly to the changes in operating working capital items, offset by movements in the actual tax paid for 2009 compared to 2008. Cash flows related to trade and other payables increased significantly (\$25.6 million) from December 31, 2008 to December 31, 2009, mainly due to the timing of payments of creditors. Cash flows related to receivables decreased by \$73.7 million during 2009 and increased by \$8.6 million during 2008, mainly as a result of the timing of receipts of gold sales and loans made to contractors.

Net cash provided by operating activities was \$57.5 million for the year ended December 31, 2008 and \$62.2 million for the year ended December 31, 2007. The \$4.7 million decrease was mainly the result of the changes in operating working capital items, as well as movements in the actual tax paid for 2008 compared to 2007.

Investing

Investing activities for the year ended December 31, 2010 utilized \$410.8 million compared to \$196.7 million utilized for the year ended December 31, 2009 and consisted primarily of expenditure related to bringing the Tongon mine into production of \$232.7 million, expenditure incurred on the Yalea and Gara underground developments, the plant expansion and the power plant at Loulo amounting to \$86.9 million and \$33.2 million related to the Kibali project.

Investing activities for the year ended December 31, 2009 utilized \$82.4 million compared to \$85 million utilized for the year ended December 31, 2008. Investing activities in 2009 consisted primarily of expenditures incurred on the underground development work at Loulo amounting to \$74 million at Yalea and Gara, crusher upgrade stockpile reclaim facility, overland conveyer expenditure, power plant expansion and the oxygen plant expansion at Loulo. Capital expenditure at Tongon included costs related to earthworks, site establishment, infrastructure, design and engineering, as well as progress payments on the mills, crushers and fleet amounting to \$120 million. Investing activities also includes the acquisition of the Moto group as well as the acquisition of a further 10% interest in

Table of Contents

the Kibali project amounting to \$56 million. The overall net cash inflow in respect of the acquisition of Moto and Kibali was \$114 million as a result of the joint agreement with AngloGold in which they paid cash for their share of the acquisition.

Financing

Financing activities for the year ended December 31, 2010 generated \$14 million. This comprised \$30.6 million received on exercise of share options offset by a dividend payment of \$15.3 million and repayment of long term loans of \$1.3 million.

Financing activities for the year ended December 31, 2009 generated \$350.8 million. This comprised mainly of the proceeds from our equity placement in July 2009 (\$329.7 million) less a payment of dividends to our shareholders amounting to \$10 million. \$32.6 million was further received on the exercise of share options during 2009.

Credit and Loan Facilities

During the year ended December 31, 2000, Morila entered into a finance lease for five Rolls-Royce generators under the terms of a Deferred Terms Agreement between Morila and Rolls-Royce. The lease is repayable over ten years commencing April 1, 2001 and bears interest at a variable rate which at December 31, 2010 was approximately 38% (2009: 38%) per annum. Our attributable share of this finance lease obligation amounted to \$0.2 million at December 31, 2010 and \$1.1 million at December 31, 2009. We have guaranteed the repayment of the lease.

Morila had a finance lease with Air Liquide relating to three oxygen generating units. The lease was fully repaid in 2010.

Somilo SA has a \$0.6 million loan from the Government of Mali. This loan is uncollateralized and bears interest at the base rate of the Central Bank of West African States plus 2% per annum. The accrual of interest ceased in the last quarter of 2005 per mutual agreement between shareholders. This loan is repayable from cash flows of the Loulo mine after the repayment of all other loans.

The Loulo project finance loan was arranged by NM Rothschild & Sons Limited and SG Corporate & Investment Banking, who were joined in the facility by Absa Bank and HVB Group, and was repaid in December 2007.

The Loulo project finance facility was replaced in May of 2007 with a \$60 million corporate revolving credit facility to Randgold Resources (Somilo) Limited. The facility was with NM Rothschild, Société Générale, Fortis and Barclays. It carried interest at rates of between LIBOR + 1.4% and LIBOR + 1.6%. The facility was fully repaid in December 2007. The corporate facility was cancelled during the year, ended December 31, 2009.

Loulo had a Euro denominated Caterpillar finance facility relating to fifteen 3512B HD generator sets and ancillary equipment purchased from JA Delmas and financed by a loan from Caterpillar Finance. The lease was payable quarterly over 42 months commencing on August 1, 2005, and bore interest at a fixed rate of 6.03% per annum. Together with Randgold Resources (Somilo) Limited, we jointly guaranteed the repayment of this lease. The average lease payments of \$0.5 million were payable in installments over the term of the lease.

Corporate, Exploration, Development and New Business Expenditures

Our expenditures on corporate, exploration, development and new business activities for the past three years are as follows:

Area	Year Ended December 31,		
	2010	2009	2008
		\$ 000	
Rest of Africa	498	430	200
Burkina Faso	558	653	1,886
Mali	3,432	3,484	4,334
Tanzania	97	236	1,105
Côte d Ivoire	4,203	2,360	2,129
Senegal	2,210	14,330	4,768
Ghana	85	336	846
Total exploration expenditure	11,083	21,829	15,268

Table of Contents

Area	Year Ended December 31,		
	\$ 000		
	2010	2009	2008
Corporate expenditure	36,095	29,282	29,895
Total exploration and corporate expenditure	47,178	51,111	45,163

The Group has various exploration programs, ranging from substantial to early stage in Mali, Senegal, Burkina Faso, Côte d'Ivoire and the Democratic Republic of the Congo.

Working Capital

Management believes that our working capital resources, by way of internal sources are sufficient to fund our currently foreseeable future business requirements.

C. RESEARCH AND DEVELOPMENT, PATENTS AND LICENSES, ETC.

We are not involved in any research and development and have no registered patents or licenses.

D. TREND INFORMATION

Our financial results are subject to the movement in gold prices. In the past fiscal year, the general trend has been upwards and this has had an impact on revenues. However it should be noted that fluctuations in the price of gold remain a distinct risk to us.

Gold Market

The gold market is relatively liquid compared with many other commodity markets, with the price of gold generally quoted in US dollars. The physical demand for gold is primarily for fabrication purposes, and gold is traded on a world-wide basis. Fabricated gold has a variety of uses, including jewelry, electronics, dentistry, decorations, medals and official coins. In addition, central banks, financial institutions and private individuals buy, sell and hold gold bullion as an investment and as a store of value.

Historically, gold has been used as a store of value because it tends to retain its value in relative terms against basic goods in times of inflation and monetary crisis. Therefore, large quantities of gold in relation to annual mine production are held for this purpose. This has meant that, historically, the potential total supply of gold has been far greater than annual demand. Thus, while current supply and demand play some part in determining the price of gold, this does not occur to the same extent as for other commodities.

Instead, gold prices have been significantly affected, from time to time, by macro-economic factors such as expectations of inflation, interest rates, exchange rates, changes in reserve policy by central banks, and global or regional political and economic crises. In times of inflation, currency devaluation, and political and economic crises, gold has traditionally been seen as refuge, leading to increased purchases of gold and a support for the price of gold.

Interest rates affect the price of gold on several levels. High real interest rates increase the cost of holding gold, and discourage physical buying in developed economies. High Dollar interest rates also make hedging by forward selling attractive because of the higher contango premiums (differential between LIBOR and gold lease rates) obtained in the forward prices. Increased forward selling in turn has an impact on the spot price at the time of sale.

Changes in reserve policies of central banks have affected the gold market and gold price on two levels. On the physical level, a decision by a central bank to decrease or to increase the percentage of gold in bank reserves leads to either sales or purchases of gold, which in turn has a direct impact on the physical market for the metal. In practice, sales or purchases by central banks have often involved substantial tonnages within a short period of time and this selling/buying can place strong pressure on the markets at the time they occur. As important as the physical impact to official sales, announcements of rumors of changes in central bank policies which might lead to the sale of gold reserves historically had an effect on market sentiment and encouraged large speculative positions against gold in the futures market for the metal.

Table of Contents

The volatility of gold prices is illustrated in the following table, which shows the approximate annual high, low and average of the afternoon London Bullion Market fixing price of gold in Dollars for the past ten years.

Year	Price Per Ounce (\$)		
	High	Low	Average
2001	293	256	271
2002	349	278	310
2003	416	320	363
2004	454	375	409
2005	537	411	444
2006	725	525	604
2007	841	608	695
2008	1,011	712	871
2009	1,213	810	972
2010	1,421	1,058	1,224
2011 (through February)	1,411	1,319	1,364

E. OFF-BALANCE SHEET ARRANGEMENTS

None.

F. TABULAR DISCLOSURE OF CONTRACTUAL OBLIGATIONS

Our contractual obligations and commercial commitments consist primarily of credit facilities, as described below. The related obligations as at December 31, 2010 are set out below:

	Total	Less			More than 5 Years
		than 1 Year	1-3 Years	3-5 Years	
Contractual Obligations					
		(dollars in thousands)			
Capital lease obligations(1)	334	334			
Operating lease obligations	2,624	328	656	656	984
Environmental rehabilitation	29,564	67	953	4,812	23,732
Loans from minority shareholders in subsidiaries	2,718				2,718
Total contractual cash obligations	35,240	729	1,609	5,468	27,434
Contracts for capital expenditure	85,008	85,008			

(1) Includes total interest of \$0.1 million calculated at the interest rate existing at year end.

Item 6. Directors, Senior Management and Employees**A. DIRECTORS AND SENIOR MANAGEMENT**

Our Articles of Association provide that the board must consist of no less than two and no more than 20 directors at any time. During January 2010, Dr. K. Dagdelen was appointed as a non-executive director. Mr. J.K. Walden resigned from the board on July 1, 2010. The board currently consists of 8 directors.

Our Articles of Association provide that any new director should be re-elected by the shareholders at the annual general meeting following the date of the director's appointment. As a result of his appointment in January 2010, Dr. K. Dagdelen was re-elected at the annual general meeting held on May 4, 2010, as required by our Articles of Association. At the annual general meeting Mr. P. Liétard, Mr. R.I. Israel, Mr. N.P. Cole Jr and Dr. K. Voltaire were re-elected,

According to the Articles of Association, the board meets at intervals determined by the board from time to time.

Table of Contents

The address of each of our executive directors and non-executive directors is the address of our principal executive offices, 3rd Floor, Unity Chambers, 28 Halkett Street, St. Helier, Jersey, JE2 4WJ, Channel Islands.

Executive Directors

D. Mark Bristow (52) Chief Executive Officer. Chief executive since our incorporation, which was founded on his pioneering exploration work in West Africa. He has subsequently led our growth through the discovery and development of world-class assets into a major gold mining business with a market capitalization of more than \$7 billion. He also played a significant part in promoting the emergence of a sustainable mining industry in West Africa. A geologist with more than 28 years experience in the mining industry and a PhD from Natal University, South Africa, he has held board positions at a number of global mining companies and is currently a non-executive director of Rockwell Resources International.

Graham P. Shuttleworth (42) Chief Financial Officer; Financial Director. Mr. Shuttleworth joined us as Chief Financial Officer and Financial Director in July 2007 but has been associated with the company since its inception, initially as part of the management team involved in our listing on the London Stock Exchange in 1997, and subsequently as an advisor. A chartered accountant, he was a managing director and the New York-based head of metals and mining for the Americas in the global investment banking division of HSBC before taking his new position with us. At HSBC he led or was involved in a wide range of major mining industry transactions, including our Nasdaq listing, and subsequent equity offerings.

Non-Executive Directors

Philippe Liétard (62) Non-Executive Chairman; Chairman of the nomination and governance committee. Mr. Liétard was managing director of the Global Natural Resources Fund from 2000 to 2003. Prior to July 2000, he was director of the Oil, Gas and Mining Department of the International Finance Corporation. His experience in corporate and project finance with UBS, IFC and the World Bank extends over 30 years, most of them in the minerals business and in Africa. Mr. Liétard is now an independent consultant and a promoter of mining and energy investments. He was appointed a director in February 1998 and chairman in November 2004. He is also a director of CellMark AB of Sweden, the world's largest independent marketer of forest products.

Norborne P. Cole (69) Senior Independent Non-Executive Director. Chairman of the remuneration committee and member of the governance and nomination committee. Mr. Cole started working for the Coca-Cola Company as a field representative in the USA in 1996 and advanced steadily through the organization, becoming chief executive of Coca-Cola Amatil in Australia in 1994, a position he held until 1998. Under his leadership, Coca-Cola Amatil grew into the second largest Coca-Cola bottler in the world. Now based in San Antonio, Texas, he serves on the boards of a number of US companies. He was appointed a director in May 2006.

Christopher L. Coleman (42) Non-Executive Director; member of the governance and nomination, remuneration and audit committees. Mr. Coleman is co-head of banking and a managing director of NM Rothschild, chairman of Rothschild Bank International in the Channel Islands and serves on a number of other boards and committees of the Rothschild Group, which he joined in 1989. A BSc (Econ) graduate from the London School of Economics, he served as a non-executive director of the Merchant Bank of Central Africa from 2001 to 2008. He was appointed a director in November 2008.

Kadri Dagdelen (56) Non-Executive Director; Member of the audit committee. Dr. Dagdelen is a professor and head of the Department of Mining Engineering at the Colorado School of Mines in the US. He began his professional career as a mining engineer at Homestake Mining Co (now Barrick Gold Corporation) and was the technical services manager when he left for academia in 1992. He holds a PhD in Mining Engineering and an ME in Geostatistics and has been involved in numerous research and consulting projects worldwide, also serving on the board of directors of the Society of Mining, Exploration and Metallurgy in the US for six years and chairing other professional societies that support the mining industry. He was appointed a director in January 2010.

Robert I. Israel (61) Non-Executive Director; Member of the governance and nomination committee. He is currently the managing partner of One Stone Energy Partners, a private equity fund. Until April 2000, a managing director of Schroder & Co Inc and head of its energy department, and until 2010 he was a partner at Compass Advisers, LLP. He holds a BA from Middlebury College and an MBA from Harvard Business School. His experience in corporate finance, especially in the natural resources sector, extends over 30 years. He was appointed a director in

June 1997.

Karl Voltaire (60) Non-Executive Director; Chairman of the audit committee since May 5, 2009 and member of the remuneration committee. A graduate in mineral resources engineering from the Ecole des Mines in Paris, he holds an MBA and a PhD in economics and finance from the University of Chicago. He started his career as a mining engineer in Haiti and subsequently spent 23

Table of Contents

years in the World Bank Group in Washington DC, the bulk of these at the International Finance Corporation (IFC) where his last position was that of director of global financial markets. Subsequently he was director of the Office of President at the African Development Bank. He was the CEO of the Nelson Mandela Institution from 2005 to 2009, and is currently a member of the Board of Trustees of the African University of Science and Technology. He was appointed a director in May 2006.

Executive Officers

Luiz Correia (49) General Manager Tongon. A metallurgist with 25 years experience in the gold mining industry, he has a BSc Eng as well as a BCom degree. He joined us in 2005 and in 2006 was appointed operations manager responsible for the mining, planning, processing, maintenance and engineering functions at Loulo. He was recently appointed general manager of the Tongon mine in Côte d'Ivoire, which is scheduled to be commissioned in the last quarter of 2010.

Edouard de Villiers (57) Group general manager mining. A mining engineer, he has 34 years experience in gold and base metal mining operations, mining contracting and consulting. He joined us in December 2010, having executive responsibility for the group's rapidly expanding mining operations in Africa. He brings a wealth of mining knowledge to the group.

David Haddon (53) General Counsel and Secretary. Having overseen our administrative obligations from our incorporation in 1995, Mr. Haddon assumed full secretarial responsibility when we became listed on the London Stock Exchange in July 1997. He has over 26 years of legal and administrative experience. He assumed the responsibility as general counsel in January 2004. He is a director of Seven Bridges Trading 14 (Pty) Limited.

Paul Harbidge (41) General Manager Exploration. Mr. Harbidge is a geologist with 17 years experience, mainly in West Africa. He joined us in 2000 and was appointed exploration manager in 2004 and general manager exploration in November 2006.

Bill Houston (63) General Manager Human Capital and Social Responsibility. Mr. Houston joined us in 1992 as group training and development manager and currently heads the human resources function. He has 30 years of human resources experience. He is a director of Morila Ltd, Somilo SA and Seven Bridges Trading 14 (Pty) Limited.

Willem Jacobs (52) General Manager Operations Central and East Africa. With a BPL(Hons) and DCom he is a seasoned executive. Having served as a director of listed and private companies in the areas of mining, engineering and manufacturing in Southern, Central and Eastern Africa for the past 15 years, he joined the group in January 2010.

Amadou Konta (53) General Manager Loulo. Mr. Konta has a degree in civil engineering as well as several management and project management qualifications. He was appointed mine foreman and superintendent at Syama mine and served as mine manager from 1997. In 2001 he was promoted as our construction manager in Mali and was appointed Loulo general manager on October 1, 2004.

Victor Matfield (46) General Manager Corporate Finance. Mr. Matfield is a chartered accountant with 18 years experience in the mining industry. He was appointed corporate finance manager in August 2001, prior to that he served as financial manager of the Syama mine and of the Morila capital project. He is a director of Seven Bridges Trading 14 (Pty) Limited.

Philip Pretorius (47) Human Resources Executive. Joined us in 2008, bringing with him 22 years of human resources experience of which the last 14 years were spent exclusively dealing with the West African gold mining industry. With a post-graduate diploma in management practice, he has been involved in establishing various gold mining projects in Mali.

Chris Prinsloo (60) General Manager Commercial and Operations. Mr. Prinsloo was appointed general manager commercial and operations in April 2009 and prior to that he was group commercial and financial manager. He has 37 years of experience in the mining industry. He is a director of Somilo SA, Morila SA, Tongon SA, Kankou Moussa SARL, RAL 1 Limited and Randgold Resources (UK) Ltd.

Rodney Quick (39) General Manager Evaluation and Environment. Mr. Quick is a geologist with 17 years experience in the gold mining industry. Since joining us in 1996, he has been involved in the exploration, evaluation and production phases of the Morila, Loulo and Tongon deposits and was appointed the Somilo resource manager in 2006. He is now responsible for all project development, evaluation and environmental issues.

Table of Contents

Mahamadou Samaké (63) General Manager West Africa. Mr. Samaké is the general manager for West Africa and is a director of our Malian subsidiaries. He was a professor of company law at the University of Mali.

N golo Sanogo (48) General Manager Mali. Has a masters degree in economics from the National School of Administration of Bamako as well as several management, accounting and financial qualifications. Qualified as an auditor in 1992 before joining BHP Mali in 1995. Appointed material manager in 1998 and management accountant in 2001 at the Syama mine. Following the sale of Somisy SA in 2004, joined us as Mali financial controller. He was appointed Mali general manager in March 2009.

John Steele (50) Technical and Capital Projects Executive. Mr. Steele has overseen the capital expansion program at the Syama mine, and at the beginning of July 1998, assumed the position of general manager capital projects for the group, overseeing the construction of Morila. He is a director of Somilo SA and Morila Limited and is currently leading the Tongon construction project.

Samba Touré (57) General Manager Operations: West Africa. Mr. Touré has a masters degree in chemical engineering and geochemistry and was part of the team that set up Mali's first research laboratory for the mining and petroleum industries in 1985. As country manager for BHP Minerals, he oversaw that company's exploration programs in West Africa. He joined Morila in 2000 and was promoted to operations manager in 2004 and general manager in 2007.

Tania de Welzim (35) Chief Accounting Officer; Group Financial Manager. Ms. de Welzim was appointed group financial manager in April 2009 and prior to that she was group financial controller. She is a chartered accountant with 12 years' experience in finance including nine years in the mining industry. She is responsible for financial reporting in the group as well as internal control procedures.

Lois Wark (55) Group Corporate Communications Manager. A member of our team since our inception who assumed management of the cartography department in 1995, Ms. Wark is responsible for the coordination of the group's communication and investor relations programs as well as for the management of its South African subsidiary, Seven Bridges. She holds a diploma in land surveying: cadastral and topographical.

Louis Watum (48) General Manager Kibali Gold Project; Country Manager DRC. A metallurgist with 21 years experience in base metals, coal and gold processing, he has an MSc in Chemical Engineering. He joined us in 2009 and was appointed general manager and country manager responsible for: Building and leading the Kibali team; communicating with the DRC government and local authorities; directing and managing Kibali business; and, delivering on strategies, objectives and the Kibali business plan.

Our Articles of Association provide that the longest serving one-third of directors retire from office at each annual general meeting. Retiring directors normally make themselves available for re-election and are re-elected at the annual general meeting on which they retire. Our officers who are also directors retire as directors in terms of the Articles of Association, but their service as officers is regulated by standard industry employment agreements.

The date of appointment, date of expiration and length of service for each of our directors is set forth in the table below:

Director	Date of Appointment	Date of Expiration Term	Number of Years Served
Executive			
D.M. Bristow	8/05/95	5/03/11*	16
G.P. Shuttleworth	7/01/07	5/03/11*	4
Non-Executive			
R.I. Israel	6/12/97	5/03/11*	14
P. Liétard	2/11/98	5/03/11*	13
N.P. Cole	5/03/06	5/03/11*	6
K. Voltaire	5/03/06	5/03/11*	6
C.L. Coleman	11/03/08	5/03/11*	3

K. Dagdelen	1/29/10	5/03/11*	1
-------------	---------	----------	---

* The UK Corporate Governance Code issued in June 2010 requires that all directors should stand for re-election on an annual basis.

Table of Contents

None of our directors and executive officers was selected under any arrangements or understandings between that director or executive officer and any other person. All of our non-Executive directors are considered independent directors.

B. COMPENSATION

Our objective is to provide senior management, including executive directors, with a competitive remuneration package which will attract and retain executives of the highest caliber and will encourage and reward superior performance in the manner consistent with the interests of our shareholders. The remuneration committee's policies are designed to meet these objectives and to ensure that the individual directors are fairly and responsibly rewarded for their respective contributions to our performance.

We have no liability in respect of retirement provisions for executive directors. We do, however, provide a vehicle in the form of a defined contribution fund into which employees, including executive directors, may contribute for the purpose of providing for retirement. While we make an annual contribution on behalf of our employees, we do not do so on behalf of our executive directors.

Each executive director receives a basic salary. Executive directors do not receive any fees. Executive directors are paid an annual bonus which is determined in accordance with set performance criteria agreed between the executive directors and the board.

The fees paid to non-executive directors have remained unchanged since the 2010 annual general meeting save for a proposal at the next annual general meeting, which proposes that the chairman, in addition to the general retainer, which will remain unchanged, will receive a fee increasing annually from \$170,000 to \$200,000 in addition to an additional award of 2,400 restricted shares per annum. The fees paid to our non-executive directors, including the chairman, and are:

A general retainer to all non-executive directors of \$50,000;

An annual committee assignment fee per committee served:

Audit committee \$35,000;

Remuneration committee \$25,000; and

Governance and Nomination committee \$10,000.

The chairman of a board committee to receive an additional premium to the committee assignment fee of \$15,000;

The senior independent director, in addition to the general annual retainer but in lieu of any committee assignment fee, to receive an additional \$85,000;

The non-executive chairman, in addition to the general annual retainer but in lieu of any committee assignment fee, to receive an additional \$200,000;

An award to each director of restricted shares being 1,200 ordinary shares per year and an additional award of 2,400 ordinary shares per year to the Non-executive chairman. The shares are to vest over a three year period from the date of the award, being January 1, 2012.

In the circumstances listed in paragraph (i) and (ii) below, a Director shall be entitled to retain all his vested and unvested awards and all such awards shall vest immediately, if not already vested, on the date on which the relevant event occurs:

(i) a change of control of the Company other than as a result of an internal reorganization or restructuring such that the shareholdings in the Company and any acquiring company remain substantially the same both before and after the relevant event.

(ii)

the Director ceasing to hold office after a minimum of three years service as a Director, in the following circumstances:

- (a) resignation after a minimum of three years service as a Director;

Table of Contents

- (b) giving notice to terminate his office under the terms of his appointment where he has decided not to seek re-election as a director but has completed a minimum of three years service as a Director;
- (c) not being re-elected as a director at a meeting of the Company's shareholders where the Director has stood for re-election with board support;
- (d) injury, ill-health or disability proved to the satisfaction of the Board;
- (e) death.

Where a Director ceases to hold office for any of the reasons specified in paragraphs (f) or (g) below, the Director shall retain all his vested awards and the Board may in its absolute discretion determine whether the Director may retain all or any of his unvested awards and the conditions of vesting.

- (f) termination of the Director's appointment by the Company other than where the Director:
 - (i) has committed any serious breach or (after warning in writing) any repeated or continued material breach of his obligations to the Company (which include an obligation not to breach his fiduciary duties);
 - (ii) has been guilty of any act of dishonesty or serious misconduct or any conduct which in the reasonable opinion of the Board tends to bring the Director concerned or the Company into disrepute; or
 - (iii) has been declared bankrupt or have made an arrangement or composition for the benefit of his creditors;

the Director ceasing to hold office for any reason other than a reason specified in paragraphs (i), (ii) and (a) to (f) above.

A non-executive director must hold shares at least equal in value (as at the beginning of the year) to the general annual retainer. A director would be granted three years in which to acquire the required shareholding and this period could be extended by the unanimous approval of the uninterested directors. If the number of shares were to fall below the threshold due to a fall in the share price, no additional purchase of shares would be required. Except for Dr. K. Dagdelen, who was appointed to the board in January 2010 and only obtained his first restricted shares with effect from January 1, 2011, the remaining non-executive directors hold shares equal to the value of the general annual retainer.

There is now a proposal that the requirement for executive directors to hold shares in the company at least equal in value (as at the beginning of the year) of \$50,000 has been amended and it is now proposed, for approval by shareholders, that the executive directors should hold shares equal to at least two times their base salary (being \$1,500,000 per annum for Dr. D.M. Bristow and £330,212 per annum for Mr. G. P. Shuttleworth). Both Dr. D.M. Bristow and Mr. G.P. Shuttleworth hold shares at least equal in value to twice their base salary. New directors will be allowed three years in which to acquire the required shareholding and this period may be extended at the discretion of the remuneration committee.

In the past non-executive directors have been granted options to purchase our ordinary shares. However, all options have been exercised by the respective non-executive directors. Details of the options exercised by the non-executive directors are shown below.

On February 13, 2006 the second \$30,000 award was allocated to each of the non-executive directors for the purpose of acquiring restricted stock. The price of the restricted stock calculation was the Nasdaq National Market closing price on February 10, 2006, or \$17.11. In terms of the policy, 584 shares were issued directly to each non-executive director and 1,169 shares were held as restricted stock. Non-executive directors were issued the second tranche of 584 ordinary shares on January 3, 2007 and the final balance was issued on January 1, 2008.

On January 3, 2007 the third \$30,000 award was allocated to each of the non-executive directors for the purpose of acquiring restricted stock. The price of the restricted stock calculation was the Nasdaq Global Select Market closing price on January 3, 2007, or \$22.37. In terms of the policy 447 shares were issued directly to each non-executive director and 894 shares were held as restricted stock. Non-executive directors were issued the second and third

tranches on January 1, 2008 and January 1, 2009, respectively.

Table of Contents

On January 3, 2008, the fourth \$30,000 award was allocated to each of the non-executive directors for the purpose of acquiring restricted stock. The price of the restricted stock calculation was the Nasdaq Global Select Market closing price on January 2, 2008, or \$38.15. In terms of the policy 262 shares were issued directly to each non-executive director and 524 shares were held as restricted stock. Non-executive directors were issued the second tranche and the third tranches on January 1, 2009 and January 1, 2010 respectively.

On January 1, 2009, the first award of 1,200 restricted shares was allocated to the non-executive directors as approved by shareholders at our 2008 annual general meeting. The price of the restricted stock calculation was the Nasdaq Global Select market closing price on January 2, 2009, or \$43.92. In terms of the policy, 400 shares were issued directly to each non-executive director and 800 shares were held as restricted stock. Non-executive directors were issued the second tranche on January 1, 2010 and to the final tranche was issued on and January 1, 2011.

On January 1, 2010, the second award of 1,200 restricted shares was allocated to the non-executive directors as approved by shareholders at our 2009 annual general meeting. The price of the restricted stock calculation was the Nasdaq Global Select market closing price on January 4, 2010 or \$82.25. In terms of the policy, 400 shares were issued directly to each non-executive director and 800 shares are held as restricted stock. Non-executive directors were issued the second tranche on January 1, 2011 and subject to agreed conditions, the final tranche will be issued on January 1, 2012.

On January 1, 2011, the third award of 1,200 restricted shares was allocated to the non-executive directors as approved by shareholders at our 2010 annual general meeting. This price of the restricted stock calculation was the Nasdaq Global Select market closing price on January 3, 2011, or \$81.60. In terms of the policy, 400 shares were issued directly to each non-executive director and 800 shares are held as restricted stock. Non-executive directors will be issued the second and third tranches subject to agreed conditions on January 1, 2012 and January 1, 2013, respectively.

During the year ended December 31, 2010, the aggregate compensation paid or payable to our directors and executive officers as a group was approximately \$18 million, of which \$10.7 million was payable to directors and recognized as a remuneration expense.

The remuneration of the executive directors comprised:

Basic salary and benefits (fixed remuneration).

An annual bonus opportunity.

Participation in the Restricted Share Scheme, measuring performance over the longer term.

The total executive directors remuneration for the year ended December 31, 2010, was \$10.3 million (2009: \$9.3 million).

Fixed remuneration comprises a basic salary, from which executive directors can elect to contribute into a defined contribution pension scheme, and pay for certain other benefits such as medical aid. Fixed remuneration normally represents less than 50% of the individual s remuneration package (based on target performance and expected values of share awards).

Base salaries are determined by the committee, taking into account the performance of the individual and pay practice among a comparable group of FTSE 100 companies as well as individual companies in the mining industry. When setting base salaries, the committee also takes into consideration executives personal commitment to extensive travel and time spent at the company s operations overseas. This is considered critical in effective management of the company s business.

Executive directors can elect to sacrifice up to 20% of their base salary to contribute to a defined contribution provident fund. The company does not make any contribution to the fund.

Executive directors can elect to receive other benefits including, medical aid and group life insurance. All such benefits are funded out of the executives base salary and are nonpensionable. Where appropriate, executive directors may be provided with other benefits such as security services for executives while travelling for work, social club fees to facilitate the entertainment of business associates and professional association membership costs. All such benefits authorized by the board are paid for by the company and end when the employee leaves the company s service, for

whatever reason.

Table of Contents

Executive directors are eligible to receive an annual bonus, subject to the achievement of stretching performance criteria. The performance criteria for 2010 focus on achieving challenging strategic and financial targets that contribute to the creation of sustainable shareholder value. The committee may make adjustments to the criteria used for measuring performance on an annual basis taking into account the strategic objectives of the company for the year.

Based on exceptional performance achieved against all targets during the 2010 financial year, the remuneration committee determined that both Dr. D.M. Bristow and Mr. G.P. Shuttleworth should receive their maximum annual bonus of \$4.5 million and \$800,000 respectively.

The company's policy is to incentivize executives over the long term by awarding shares under the Restricted Share Scheme. Neither Dr. D.M. Bristow nor Mr. G.P. Shuttleworth participate in the company's share option scheme. The Restricted Share Scheme was approved by shareholders on July 28, 2008. Awards are made periodically, generally not every year, at the discretion of the committee.

The company's policy is that the shares awarded are normally expressed as a specific number of shares, rather than a percentage of salary. The CEO received an award of 40,000 shares on January 1, 2010. The CFO will not receive an award in 2010. (Both executive directors received awards in 2009, as described below). Shares awarded under the scheme generally vest in three equal tranches over a relevant three year period as specified at the date of award.

In 2009, the CEO received the following restricted share awards:

40,000 restricted shares with an award date of January 1, 2009. Two thirds vested on January 1, 2010 and the remaining third was to vest on January 1, 2011. However, no vesting occurred because the company TSR performance fell below that of the HSC Global Gold Index over the performance period. The issue price of these shares was \$43.26.

40,000 restricted shares with an award date of January 1, 2009, one third vesting on January 1, 2010, one third vesting on January 1, 2011 and the remaining third vesting on January 1, 2012. The issue price of these shares was \$43.26.

In 2009, the CFO received 54,000 restricted shares at an issue price of \$56.99. The first tranche of the restricted shares vests on September 2, 2011, with the second and third tranches vesting on September 2, 2012 and September 2, 2013, respectively.

The following tables set forth the aggregate compensation for each of the directors, firstly the executive directors and secondly the non-executive directors:

	Basic Salary		Annual Bonus		Other Payments*		Total**	
	December 31, 2010 (\$)	2009 (\$)	December 31, 2010 (\$)	2009 (\$)	December 31 2010 (\$)	2009 (\$)	December 31, 2010 (\$)	2009 (\$)
Executive								
D.M. Bristow								
(CEO)	1,500,000	1,250,000	4,400,000	3,750,000	1,730,400	2,626,000	7,730,400	7,626,000
G.P. Shuttleworth								
(CFO)	509,901	424,047	800,000	400,000	1,244,444	821,933	2,554,345	1,645,980
TOTAL	2,009,901	1,674,047	5,300,000	4,150,000	2,974,844	3,447,933	10,284,745	9,271,980

* Other payments include expenses for restricted share award, which have been costed in accordance with IFRS 2 based on the valuation at the date of grant. Performance is measured against the HSBC Global Gold Index for each tranche of the restricted share awards. No vesting occurred on January 1, 2011, in respect of Dr. D. M. Bristow's shares over the past 12 month period, as the company's performance fell below that of the HSBC Global Gold Index over the performance period, however, \$1.7 million is still included in the figures above for Dr. D. M. Bristow, in line with the accounting requirements.

**

Edgar Filing: RANDGOLD RESOURCES LTD - Form 20-F

The total remuneration disclosed in our Annual Report on Form 20-F for the year ended December 31, 2010 was therefore \$11,084,745.

C. BOARD PRACTICES**Directors Terms of Employment**

We have entered into contracts of employment with Dr. D.M. Bristow and Mr. G.P. Shuttleworth with the period of employment set as one year.

We have entered into letters of appointment with our non-executive directors. Each non-executive director is now subject to re-election annually by our shareholders in accordance with the provisions of the 2010 UK Corporate Governance Code.

Board of Directors Committees

In order to ensure good corporate governance, the board has formed an audit committee, a remuneration committee and a governance and nomination committee. The audit, remuneration, and governance and nomination committees are comprised of a majority of non-executive directors.

Audit Committee

Our audit committee charter, which defines the terms of reference for the audit committee members, sets out the framework through which the audit committee reviews our annual results, the effectiveness of our systems of internal control, internal audit procedures and legal and regulatory compliance and the cost effectiveness of the services provided by the external auditors. The audit committee also reviews the scope of work carried out by our external auditors and holds discussions with the external auditors at least twice a year. The audit committee is comprised of three independent non-executive directors. The members of the audit committee are Dr. K. Voltaire (chairman), Mr. C.L. Coleman and Dr. K. Dagdelen, was appointed a member of the audit committee on January 29, 2010. Mr. J.K. Walden resigned from the board on July 1, 2010.

Remuneration Committee

The remuneration committee reviews the remuneration of directors and senior management and determines the structure and content of the senior executives remuneration packages by reference to a number of factors including current business practice and our prevailing business conditions and the mining and exploration industry. The members of the remuneration committee are Mr. N.P. Cole Jr. (chairman), Dr. K. Voltaire and Mr. C.L. Coleman.

Governance and Nomination Committee

Table of Contents

The governance and nomination committee reviews our corporate governance and sets out the framework in which such policies are established to guide our operations and activities. In addition, the committee at the instance of the board interviews and recruits any future board members. The members of the governance and nomination committee are Messrs. P. Liétard (chairman), N.P. Cole, Jr., C.L. Coleman and R.I. Israel.

D. EMPLOYEES

At the end of each of the past three years, the breakdown of employees, including our subsidiaries by main categories of activity was as follows:

Category of Activity	December 31, 2010	December 31, 2009	December 31, 2008
Mining and related engineering	202	136	241
Processing and related engineering	767	631	668
Management and technical	125	105	100
Exploration	221	161	164
Administration	290	261	253
TOTAL*	1,605	1,294	1,426

* Tongon became fully commissioned in the fourth quarter of 2010.

E. SHARE OWNERSHIP

See Item 7 Major Shareholders and Related Party Transactions .

Employee Share Option Scheme

Since 1996, we have operated a share option scheme under which senior management may be offered options to purchase our ordinary shares. The aggregate number of shares available for issuance under the option scheme may not exceed 15% of our issued share capital. Share options granted since 2007 are subject to performance criteria for individual employees. Any options provided to an individual employee as defined by the rules of the scheme, are subject to an upper limit of 2% of our issued ordinary share capital.

The exercise price of any new share options is determined as the closing price of the share on the trading day preceding that on which the person was granted the option. Under the rules of the share option scheme, all option holders, inclusive of executive and non-executive directors, were granted additional options to subscribe for shares in the open offer which was concluded in November 1998. These additional options are exercisable at the open offer price and otherwise on the same terms as the initial grant.

The scheme provides for the early exercise of all options in the event of an acquisition of a number of shares that would require an offer to be made to all of our other shareholders.

Restricted Share Scheme

On July 28, 2008, our shareholders approved the creation of a restricted share scheme for employees and executive directors. At that time, the Board elected to limit eligibility for awards to executive directors. The Board has subsequently decided that all employees would be eligible to receive restricted shares in the future. The aggregate number of shares available for issuance under the restricted share scheme may not exceed 5% of our issued share capital. The awards of shares under the restricted share scheme are subject to the attainment of performance criteria agreed between the remuneration committee and the individual executive director on an annual basis.

No options were awarded to staff in terms of the Employee Share Option Scheme during 2010.

Item 7. Major Shareholders and Related Party Transactions**A. MAJOR SHAREHOLDERS**

Table of Contents

As of February 28, 2011, our issued share capital consisted of 91,097,370 ordinary shares with a par value of \$0.05 per share. To our knowledge we are not, directly or indirectly, owned or controlled by another corporation, any foreign government or other person.

The following table sets forth information regarding the beneficial ownership of our ordinary shares as of February 28, 2011, by:

Any person of whom the directors are aware that is interested directly or indirectly in 3% or more of our ordinary shares;

Each of our directors; and

All of our executive officers and directors as a group.

Beneficial ownership is determined in accordance with the rules of the SEC and generally includes voting or investment power with respect to securities. Ordinary shares issuable pursuant to options, to the extent the options are currently exercisable or convertible within 60 days of February 28, 2011, are treated as outstanding for computing the percentage of the person holding these securities but are not treated as outstanding for computing the percentage of any other person.

Unless otherwise noted, each person or group identified possesses sole voting and investment power with respect to the shares, subject to community property laws where applicable. Unless indicated otherwise, the business address of the beneficial owners is: Randgold Resources Limited, 3rd Floor Unity Chambers, 28 Halkett Street, St. Helier, Jersey JE2 4WJ, Channel Islands.

- (1) Shares held by BNY (Nominees) Limited are held for and on behalf of our ADS holders.
- (2) Wells Fargo & Company reported in its Schedule 13G filed with the Securities and Exchange Commission on January 25, 2011 that its beneficial ownership in us amounted to 4,685,031 ordinary shares (5.15%) on a consolidated basis. These shares are included in the shares held by BNY (Nominees) Limited.
- (3) FMR LLC reported in its Schedule 13G/A filed with the Securities and Exchange Commission that as at February 14, 2011 its beneficial ownership in us amounted to 11,812,915 ordinary shares (12.98%) on a consolidated basis. These shares are included in the shares held by BNY (Nominees) Limited.

- (4) BlackRock Inc. reported in its Schedule 13G/A filed with the Securities and Exchange Commission on January 10, 2011 that its beneficial ownership in us amounted to 10,622,151 ordinary shares (11.67%) on a consolidated basis. These shares are included in the shares held by BNY (Nominees) Limited.

Table of Contents

(5) Van Eck Associates Corporation reported in its Schedule 13G filed with the Securities and Exchange Commission on February 14, 2011 that its beneficial ownership in us amounted to 5,939,876 ordinary shares (6.53%) on a consolidated basis. These shares are included in the shares held by BNY (Nominees) Limited.

(6) No executive officer beneficially owns in excess of 1% of the outstanding ordinary shares.

To the knowledge of management, none of the above shareholders hold voting rights which are different from those held by our other shareholders.

As of February 28, 2011, there were 4 record holders of our ordinary shares in the United States, holding an aggregate of 1,691 ordinary shares or 0.0%.

As of February 28, 2011, there were 51 record holders of our ADSs in the United States, holding an aggregate of 60,160,282 ADSs or 100%.

B. RELATED PARTY TRANSACTIONS

None of our directors, officers or major shareholders or, to our knowledge, their families, had any interest, direct or indirect, in any transaction during the last fiscal year or in any proposed transaction which has affected or will materially affect us or our investment interests or subsidiaries, other than as stated below.

The Randgold Name

Under an agreement dated June 26, 1997, Randgold & Exploration Group has licensed us to carry on business under the name Randgold. The license has been provided to us on a royalty free perpetual basis. The U.K. Trademark Registry granted a registration certificate to us for Randgold on February 16, 2001.

C. INTERESTS OF EXPERTS AND COUNSEL

Not applicable.

Item 8. Financial Information

See Item 18.

Item 9. The Offer and Listing**A. OFFER AND LISTING DETAILS**

The following table sets forth, for the periods indicated, the high and low sales prices of our ordinary shares, as reported by the London Stock Exchange, and of our ADSs, as reported by the Nasdaq Global Select Market. Effective March 10, 2003, we changed the ratio of ordinary shares to ADSs from two ordinary shares per ADS to one ordinary share per ADS, so that each ADS now represents one ordinary share. In March 2003 we changed the currency in which the price of our ordinary shares that are traded on the London Stock Exchange are quoted. The ordinary shares are now quoted in pound sterling and not in US dollars. The ADSs continue to be quoted on the London Stock Exchange and the Nasdaq Global Select Market in US dollars.

B. MEMORANDUM AND ARTICLES OF ASSOCIATION

Table of Contents

General

We are a company organized with limited liability under the laws of Jersey, Channel Islands. Our registered number is 62686.

The authorized share capital is \$6,000,000 divided into 120,000,000 ordinary shares of \$0.05 each, of which 91,097,370 were issued as of February 28, 2011 and 28,902,630 were available for issue.

At the annual general meeting held on May 4, 2010, shareholders approved a resolution which authorized an increase in the authorized share capital of the company from \$5,000,000 divided into 100,000,000 ordinary shares of \$0.05 each to \$6,000,000 divided into 120,000,000 ordinary shares of \$0.05 each.

Memorandum of Association

Clause 2 of our Memorandum of Association provides that we shall have all the powers of a natural person including but not limited to the power to carry on mining, exploration or prospecting.

Changes in Capital or Objects and Powers

Subject to the 1991 Law and our Articles of Association, we may by special resolution at a general meeting:

- increase our authorized or paid up share capital;

- consolidate and divide all or any part of our shares into shares of a larger amount;

- sub-divide all or any part of our shares having a par value;

- convert any of our issued or unissued shares into shares of another class;

- convert any of our paid-up shares into stock, and reconvert any stock into any number of paid-up shares of any denomination;

- convert any of our issued shares into redeemable shares which can be redeemed;

- cancel shares which, at the date of passing of the resolution, have not been taken or agreed to be taken by any person, and diminish the amount of the authorized share capital by the amount of the shares so cancelled;

- reduce the authorized share capital;

- reduce our issued share capital; or

- alter our Memorandum or Articles of Association.

Articles of Association

We adopted our Articles of Association by special resolution passed on June 24, 1997. Our Articles of Association include provisions to the following effect:

General Meeting of Shareholders

We may at any time convene general meetings of shareholders. We hold an annual general meeting for each fiscal year within nine months of the end of each fiscal year. No more than eighteen months may elapse between the date of one annual general meeting and the next.

Annual general meetings and meetings calling for the passing of a special resolution require twenty-one days notice of the place, day and time of the meeting in writing to our shareholders. Any other general meeting requires no less than fourteen days notice in writing. Our business may be transacted at a general meeting only when a quorum of shareholders is present. Two persons entitled to attend and to vote on the business to be transacted, each being a member or a proxy for a member or a duly authorized representative

Table of Contents

of a corporation which is a member, constitute a quorum. Nasdaq's marketplace rules, which apply to all companies listed on the Nasdaq Global Select Market, state in Rule 4350(f) that the minimum quorum for any meeting of holders of a company's common stock is 33 1/3% of the outstanding shares.

As a result, we requested, and Nasdaq granted to us, an exemption from compliance with the Rule 4350(f) requirement.

The annual general meetings deal with and dispose of all matters prescribed by our Articles of Association and by the 1991 Law including:

the consideration of our annual financial statements and report of our independent accountants;

the election of directors; and

the appointment of independent auditors.

Voting Rights

Subject to any special terms as to voting on which any shares may have been issued or may from time to time be held, at a general meeting, every shareholder who is present in person (including any corporation present by its duly authorized representative) shall on a show of hands have one vote and every shareholder present in person or by proxy shall on a poll have one vote for each share of which he is a holder. In the case of joint holders, the vote of the senior who tenders a vote, whether in person or by proxy, shall be accepted to the exclusion of the votes of the other joint holders.

Unless we otherwise determine, no shareholder is entitled to vote at a general meeting or at a separate meeting of the holders of any class of shares, either in person or by proxy, or to exercise any other right or privilege as a shareholder in respect of any share held by him unless all calls presently payable by him in respect of that share, whether alone or jointly with any other person, together with interest and expenses, if any, have been paid to us.

Dividends

Subject to the provisions of the 1991 Law and of the Articles of Association, we may, by ordinary resolution, declare dividends to be paid to shareholders according to their respective rights and interests in our profits. However, no dividend shall exceed the amount recommended by us. Subject to the provisions of the 1991 Law, we may pay an interim dividend, including a dividend payable at a fixed rate, if an interim dividend appears to us to be justified by our profits available for distribution.

Except as otherwise provided by the rights attached to any shares, all dividends shall be declared and paid according to the amounts paid up, otherwise than in advance of calls, on the shares on which the dividend is paid. All dividends unclaimed for a period of 12 years after having been declared or become due for payment shall, if we so resolve, be forfeited and shall cease to remain owing by us.

We may, with the authority of an ordinary resolution, direct that payment of any dividend declared may be satisfied wholly or partly by the distribution of assets, and in particular of paid up shares or debentures of any other company, or in any one or more of those ways.

We may also with the prior authority of an ordinary resolution, and subject to such conditions as we may determine, offer to holders of shares the right to elect to receive shares, credited as fully paid, instead of the whole, or some part, to be determined by us, of any dividend specified by the ordinary resolution.

Ownership Limitations

Our Articles of Association and the 1991 Law do not contain limits on the number of shares that a shareholder may own.

Distribution of Assets on a Winding-Up

If we are wound up, the liquidator may, with the sanction of a special resolution and any other sanction required by law, divide among the shareholders in specie the whole or any part of our assets and may, for that purpose, value any assets and determine how

Table of Contents

the dividend shall be carried out as between the shareholders or vest the whole or any part of the assets in trustees on such trusts for the benefit of the shareholders as he with the like sanction shall determine but no shareholder shall be compelled to accept any assets on which there is a liability.

Transfer of Shares

Every shareholder may transfer all or any of his shares by instrument of transfer in writing in any usual form or in any form approved by us. The instrument must be executed by or on behalf of the transferor and, in the case of a transfer of a share which is not fully paid up, by or on behalf of the transferee. The transferor is deemed to remain the holder until the transferee's name is entered in the register of shareholders.

We may, in our absolute discretion and without giving any reason, refuse to register any transfer of a share or renunciation of a renounceable letter of allotment unless:

it is in respect of a share which is fully paid up;

it is in respect of only one class of shares;

it is in favor of a single transferee or not more than four joint transferees;

it is duly stamped, if so required; and

it is delivered for registration to our registered office for the time being or another place that we may from time to time determine accompanied by the certificate for the shares to which it relates and any other evidence as we may reasonably require to prove the title of the transferor or person renouncing and the due execution of the transfer or renunciation by him or, if the transfer or renunciation is executed by some other person on his behalf, the authority of that person to do so; provided that we shall not refuse to register any transfer of partly paid shares which are listed on the grounds they are partly paid shares in circumstances where our refusal would prevent dealings in those shares from taking place on an open and proper basis.

Variation of Rights

If at any time our share capital is divided into shares of different classes, any of the rights for the time being attached to any share or class of shares may be varied or abrogated in the manner, if any, that is provided by the rights or, in the absence of any such provision, either with the consent in writing of the holders of not less than three-quarters in nominal value of the issued shares of the class or with the sanction of a resolution passed by the holders of not less than three-quarters in nominal value of the issued shares of that class at a separate general meeting of the holders of shares of the class. The quorum at that meeting shall be not less than two persons holding or representing by proxy at least one-third of the nominal amount paid up on the issued shares of the class in question and at an adjourned meeting not less than one person holding shares of the class in question or his proxy.

Subject to the terms of issue of or rights attached to any shares, the rights or privileges attached to any class of shares shall be deemed not to be varied or abrogated by the creation or issue of any new shares ranking equally in all respects, except as to the date from which those new shares shall rank for dividend, with or subsequent to those already issued or by the reduction of the capital paid up on those shares or by the purchase or redemption by us of our own shares in accordance with the provisions of the 1991 Law and the Articles.

Capital Calls

Subject to the terms of allotment of shares, we may from time to time make calls on the members in respect of any monies unpaid on the shares, whether in respect of nominal value or premium, and not payable on a fixed date. A member must receive fourteen days' notice of any call and any call is deemed to be made when the resolution of the board authorizing such call was passed.

If any call is not paid on or before the date appointed for payment, the person liable to pay that call shall pay all costs, charges and expenses of ours in connection with the non-payment, including interest on the unpaid amount, if requested by us.

Table of Contents

Unless we otherwise determine, no member shall be entitled to receive any dividend or to be present and vote at any general meeting, or be included in a quorum, or to exercise any other right or privilege as a shareholder unless and until any outstanding calls in respect of his shares are paid.

Borrowing Powers

We may exercise all of our powers to borrow money and to mortgage or charge all or any part of our undertaking, property and assets, present and future, and uncalled capital and, subject to the provisions of the 1991 Law, to create and issue debenture and other loan stock and other securities, whether outright or as collateral security for any debt, liability or obligation of ours or of any third party.

Issue of Shares and Preemptive Rights

Subject to the provisions of the 1991 Law and to any special rights attached to any shares, we may allot or issue shares with those preferred, deferred or other special rights or restrictions regarding dividends, voting, transfer, return of capital or other matters as we may from time to time determine by ordinary resolution, or if no ordinary resolution has been passed or an ordinary resolution does not make specific provision, as we may determine. We may issue shares that are redeemable or are liable to be redeemed at our option or the option of the holder in accordance with our Articles of Association. Subject to the provisions of the 1991 Law the unissued shares at the date of adoption of the Articles of Association and shares created thereafter shall be at our disposal. We cannot issue shares at a discount.

There are no pre-emptive rights for the transfer of our shares either within the 1991 Law or our Articles of Association.

Meetings of the Board of Directors

Any director may, and the secretary at the request of a director shall, call a board meeting at any time on reasonable notice. A director may waive this notice requirement.

Subject to our Articles of Association our board of directors may meet for the conducting of business, adjourn and otherwise regulate its proceedings as it sees fit. The quorum necessary for the transaction of business may be determined by the board of directors and unless otherwise determined shall be two persons, each being a director or an alternate director. A duly convened meeting of the board of directors at which a quorum is present is necessary to exercise all or any of the board's authorities, powers and discretions.

Our board of directors may delegate or entrust to and confer on any director holding an executive office any of its powers, authorities and discretions for such time, on such terms and subject to such conditions as it sees fit. Our board of directors may also delegate any of its powers, authorities and discretions for such time and on such terms and subject to such conditions as it sees fit to any committee consisting of one or more directors and one or more other persons, provided that a majority of the members of the committee should be directors.

Remuneration of Directors

Our directors (other than alternate directors) shall be entitled to receive by way of fees for their services as directors any sum that we may from time to time determine, not exceeding in aggregate \$300,000 per annum or any other sum as we, by ordinary resolution in a general meeting, shall from time to time determine. That sum, unless otherwise directed by ordinary resolution of us by which it is voted, shall be divided among the directors in the proportions and in the manner that the board determines or, if the board has not made a determination, equally. The directors are entitled to be repaid all traveling, hotel and other expenses properly incurred by them in or about the performance of their duties as directors.

The salary or remuneration of any director appointed to hold any employment or executive office may be either a fixed sum of money, or may altogether or in part be governed by business done or profits made or otherwise determined by us, and may be in addition to or in lieu of any fee payable to him for his services as director.

Pensions and Gratuities for Directors

Table of Contents

We may exercise all of our powers to provide and maintain pensions, other retirement or superannuation benefits, death or disability benefits or other allowances or gratuities for persons who are or were directors of any company in our group and their relatives or dependants.

Directors Interests in Contracts

Subject to the provisions of the 1991 Law and provided that his interest is disclosed as soon as practicable after a director becomes aware of the circumstances which gave rise to his duty to disclose in accordance with the Articles of Association, a director, notwithstanding his office, may enter into or otherwise be interested in any contract, arrangement, transaction or proposal with us, or in which we are otherwise interested, may hold any other office or place of profit under us (except that of auditor of, or of a subsidiary of ours) in conjunction with the office of director and may act by himself or through his firm in a professional capacity for us, and in any such case on such terms as to remuneration and otherwise as we may arrange, and may be a director or other officer of, or employed by, or a party to any transaction or arrangement with, or otherwise interested in, any company promoted by us or in which we are otherwise interested and shall not be liable to account to us for any profit, remuneration or other benefit realized by any such office, employment, contract, arrangement, transaction or proposal.

No such contract, arrangement, transaction or proposal shall be avoided on the grounds of any such interest or benefit.

Restrictions on Directors Voting

Except as provided in our Articles of Association, a director shall not vote on, or be counted in the quorum in relation to, any resolution of the board or of a committee of the board concerning any contract, arrangement, transaction or any other proposal whatsoever to which we are or will be a party and in which he has an interest which (together with an interest of any person connected with him) is to his knowledge a material interest otherwise than by virtue of his interests in shares or debentures or other securities of or otherwise in or through us, unless the resolution concerns any of the following matters:

the giving of any guarantee, security, or indemnity in respect of money lent or obligations incurred by him or any other person at the request of or for the benefit of us or any of our subsidiary undertakings;

the giving of any guarantee, security or indemnity in respect of a debt or obligation of ours or any of our subsidiary undertakings for which he himself has assumed responsibility in whole or in part under a guarantee or indemnity or by the giving of security;

any proposal concerning an offer of shares or debentures or other securities of or by us or any of our subsidiary undertakings in which offer he is or may be entitled to participate as a holder of securities or in the underwriting or sub-underwriting of which he is to participate;

any proposal concerning any other body corporate in which he (together with persons connected with him) does not to his knowledge have an interest in 1% or more of the issued equity share capital of any class of that body corporate or of the voting rights available to shareholders of that body corporate;

any proposal relating to an arrangement for the benefit of our employees or the employees of any of our subsidiary undertakings which does not award him any privilege or benefit not generally awarded to the employees to whom the arrangement relates; or

any proposal concerning insurance which we propose to maintain or purchase for the benefit of directors or for the benefit of persons who include directors.

A director shall not vote or be counted in the quorum for any resolution of the board or committee of the board concerning his own appointment (including fixing or varying the terms of his appointment or termination) as the holder of any office or place of profit with us or any company in which we are interested.

Number of Directors

Unless and until otherwise determined by a special resolution, the number of directors shall be not less than two or more than 20.

Table of Contents

Directors Appointment and Retirement by Rotation

Directors may be appointed by ordinary shareholder resolution or by the board. If appointed by ordinary resolution, a director holds office only until the next annual general meeting and shall not be taken into account in determining the number of directors who are to retire by rotation. A director shall not be required to hold any of our shares.

At each annual general meeting, one-third of the directors who are subject to retirement by rotation will retire by rotation and be eligible for re-election. Subject to the provisions of the 1991 Law and to the Articles, the directors to retire will, first, be any director who wishes to retire and not offer himself for re-election and secondly, will be those who have been longest in office since their last appointment or re-appointment, but as between those who have been in office an equal length of time, those to retire shall (unless they otherwise agree) be determined by lot. There is no age limit imposed upon directors.

Untraced Shareholders

Subject to the Articles, we may sell any of our shares registered in the name of a shareholder remaining untraced for 12 years who fails to communicate with us following advertisement of an intention to make such a disposal. Until we can account to the shareholder, the net proceeds of sale will be available for use in our business or for investment, in either case at our discretion. The proceeds will not carry interest.

CREST

The Companies (Amendment No. 4) (Jersey) Law 1998 and the Companies (Uncertificated Securities) (Jersey) Order 1999 allow the holding and transfer of shares under CREST, the electronic system for settlement of securities in the United Kingdom. Our Articles of Association already provide for our shares to be held in uncertificated form under the CREST system.

Purchase of Shares

Subject to the provisions of the 1991 Law, we may purchase any of our own shares of any class. The 1991 Law provides that we may, by special resolution approve the acquisition of our own shares from any source, but only if they are fully paid.

Non-Jersey Shareholders

There are no limitations imposed by Jersey law or by our Articles of Association on the rights of non-Jersey shareholders to hold or vote on our ordinary shares or securities convertible into our ordinary shares.

Rights of Minority Shareholders and Fiduciary Duties

Majority shareholders of Jersey companies have no fiduciary obligations under Jersey law to minority shareholders. However, under the 1991 Law, a shareholder may, under some circumstances, seek relief from the court if he has been unfairly prejudiced by us. The provisions of the 1991 Law are designed to provide relief from oppressed shareholders without necessarily overriding the majority's decision. There may also be common law personal actions available to our shareholders.

Jersey Law and Our Memorandum and Articles of Association

The content of our Memorandum and Articles of Association is largely derived from an established body of corporate law and therefore they mirror the 1991 Law. Jersey company law draws very heavily from company law in England and there are various similarities between the 1991 Law and the English Companies Act 1985 (as amended). However, the 1991 Law is considerably shorter in content than the English Companies Act 1985 and there are some notable differences between English and Jersey company law. There are, for example, no provisions under Jersey law (as there are under English law):

controlling possible conflicts of interests between us and our directors, such as loans by us or directors, and contracts between us and our directors other than a duty on directors to disclose an interest in any transaction to be entered into by us or any of our subsidiaries which to a material extent conflicts with our interest;

Table of Contents

specifically requiring particulars to be shown in our accounts of the amount of loans to officers or directors emoluments and pensions, although these would probably be required to be shown in our accounts in conformity to the requirement that accounts must be prepared in accordance with generally accepted accounting principles;

requiring us to file details of charges other than charges of Jersey realty; or

as regards statutory preemption provisions in relation to further issues of shares.

Under Article 143 of the 1991 Law, the court may make an order giving relief, including regulation of our affairs requiring us to refrain from doing or continuing to do an act complained of, authorizing civil proceedings and providing for the purchase of shares by any of our other shareholders.

The court has wide powers within its inherent jurisdiction and a shareholder could successfully bring an action in a variety of circumstances. Although there is no statutory definition of unfairly prejudicial conduct, authority suggests that it includes oppression and discrimination and that the test is objective.

There are no provisions in our Memorandum or Articles of Association concerning changes of capital where these provisions would be considered more restrictive than that required by the 1991 Law.

Proposed Amended Articles of Association

We will be submitting a proposal to amend the Articles of Association to our stockholders at our 2011 annual general meeting to be held on May 3, 2011. The Articles of Association will be amended primarily take account of changes to law and practice since the current Articles of Association were last updated and incorporate certain amendments required as a result of changes to the laws and regulations to which we are subject. In particular, the amended Articles of Association will reflect certain amendments to the Companies (Jersey) Law 1991 (as amended) and certain requirements of the UK Listing Rules which come into effect for companies incorporated outside of the UK who have a premium listing of equity securities on the Official List of the UK Financial Services Authority.

C. MATERIAL CONTRACTS

1. Arrangement Agreement dated August 5, 2009 between Randgold Resources Limited, 0858065 B.C. Limited and Moto Goldmines Limited.

We entered into the arrangement agreement in connection with the acquisition of Moto Goldmines Limited.

2. Protocole d Accord dated October 31, 2009 between Randgold Resources Limited, AngloGold Ashanti Limited, Moto Goldmines Limited, Kibali Goldmines S.P.R.L. and the Government of the Democratic Republic of The Congo. We entered into the Protocole d Accord in connection with the development of the Moto Gold Project.

3. Share Purchase Agreement dated October 31, 2009 between L Office des Mines de Kilo-Moto, Randgold Resources Limited, AngloGold Ashanti Limited, Moto Goldmines Limited, Border Energy Pty Limited, Kibali (Jersey) Limited and Kibali Goldmines S.P.R.L.

We entered into a share purchase agreement for the indirect acquisition of 10% of the issued share capital of Kibali Goldmines S.P.R.L.

4. Agreement between Randgold Resources Limited and DTP Terrassement, dated July 26, 2010.

We entered into an Agreement with DTP Terrassement with respect to the equipment for the Goukoto mine.

5. Joint Venture Agreement between AngloGold Ashanti Limited and Randgold Resources Limited, dated July 16, 2009.

We entered into a Joint Venture Agreement in connection with the acquisition of Moto Goldmines Limited.

6. Employment Contract between Randgold Resources Limited and Graham P. Shuttleworth, dated August 3, 2010.

Table of Contents

We entered into an employment contract with Mr. Shuttleworth in respect of his position as Chief Financial Officer. Pursuant to the employment contract, Mr. Shuttleworth is deemed to have been employed by us from July 1, 2007. The employment contract provides that Mr. Shuttleworth's base remuneration is £330,212 per annum beginning January 1, 2010, and a bonus based on the achievement of certain performance targets.

D. EXCHANGE CONTROLS

There are currently no Jersey or United Kingdom foreign exchange control restrictions on the payment of dividends on our ordinary shares or on the conduct of our operations. Jersey is in a monetary union with the United Kingdom. There are currently no limitations under Jersey law or our Articles of Association prohibiting persons who are not residents or nationals of the United Kingdom from freely holding, voting or transferring our ordinary shares in the same manner as United Kingdom residents or nationals.

E. TAXATION

Material Jersey Tax Consequences

General

The following summary of the anticipated tax treatment in Jersey in relation to the payments on the ordinary shares and ADSs is based on the taxation law and practice in force at the date of this Annual Report, and does not constitute legal or tax advice and prospective investors should be aware that the relevant fiscal rules and practice and their interpretation may change. We encourage you to consult your own professional advisers on the implications of subscribing or buying, holding, selling, redeeming or disposing of ordinary shares or ADSs and the receipt of interest and distributions, whether or not on a winding-up, with respect to the ordinary shares or ADSs under the laws of the jurisdictions in which they may be taxed.

Following amendments to the Income Tax (Jersey) Law 1961 (the Income Tax Law), our tax position (along with all other companies incorporated in Jersey) has changed. Up until December 31, 2008, we were an exempt company within the meaning of Article 123A of the Income Tax Law. As an exempt company we were not liable for Jersey income tax other than on Jersey source income, except by concession bank deposit interest on Jersey bank accounts. For as long as we were an exempt company, payments in respect of the ordinary shares and ADSs were not subject to any taxation unless a shareholder was resident in Jersey, and no withholding in respect of taxation was required on those payments to any holder of the ordinary shares or ADSs.

We are now subject to Jersey income tax at the rate of zero percent in accordance with Article 123C of the Income Tax Law with effect from January 1, 2009.

The Income Tax Law now provides that the standard rate of income tax on profits of a non-financial service company regarded as resident in Jersey or having a permanent establishment in Jersey will be zero percent. The Income Tax Law also provides that the new tax regime will apply for the year of assessment 2008 in relation to non-financial service companies which are first regarded as resident in Jersey or which have a permanent establishment in Jersey on or after June 3, 2008.

As a non-financial service company subject to tax at the rate of zero percent, we will not be liable for Jersey income tax other than on income arising from Jersey land or property. For so long as we are subject to tax at the rate of zero percent, payments in respect of the ordinary shares and ADSs will not be subject to any taxation in Jersey and no withholding in respect of taxation will be required on those payments to any holder of the ordinary shares or ADSs.

Currently, there is no double tax treaty or similar convention between the US and Jersey.

Taxation of Dividends

Dividends are declared and paid gross in US dollars. Under the existing Jersey law, payments in respect of the ordinary shares and ADSs, whether by dividend or other distribution paid to shareholders (other than to residents in Jersey), will not be subject to any taxation in Jersey and no withholding in respect of taxation will be required on those payments to any holder of our ordinary shares or ADSs.

Table of Contents

Taxation of Capital Gains and Estate and Gift Tax

Under current Jersey law, there are no death or estate duties, capital gains, gift, wealth, inheritance or capital transfer taxes. No stamp duty is levied in Jersey on the issue or transfer of ordinary shares or ADSs. In the event of the death of an individual sole shareholder, duty at rates of up to 0.75% of the value of the ordinary shares or ADSs held may be payable on the registration of Jersey probate or letters of administration which may be required in order to transfer or otherwise deal with ordinary shares or ADSs held by the deceased individual sole shareholder.

Material United States Federal Income Tax Consequences

The following summary describes the material US Federal income tax consequences to US holders (as defined below) arising from the purchase, ownership and disposition of our ordinary shares or ADSs. This summary is based on the provisions of the Internal Revenue Code of 1986, as amended, which we refer to as the Code, final, temporary and proposed US Treasury Regulations promulgated under the Code, and administrative and judicial interpretations of the Code and the US Treasury Regulations, all as in effect as of the date of this summary, and all of which are subject to change, possibly with retroactive effect. In addition, this discussion assumes that the representations contained in the deposit agreement are true and that the obligations in the deposit agreement and any related agreement have been and will be complied with in accordance with their terms.

This summary has no binding effect or official status of any kind; we cannot assure holders that the conclusions reached below would be sustained by a court if challenged by the Internal Revenue Service.

For purposes of this discussion, a US holder is a holder of our ordinary shares or ADSs that is a beneficial owner of such shares or ADSs and is:

a US citizen;

an individual resident in the United States for US Federal income tax purposes;

a domestic corporation, or other entity taxable as a corporation, organized under the laws of the United States or of any US state or the District of Columbia;

an estate the income of which is includible in its gross income for US Federal income tax purposes without regard to its source; or

a trust, if either: a US court is able to exercise primary supervision over the administration of the trust and one or more US persons have the authority to control all the substantial decisions of the trust, or the trust has a valid election in effect under applicable US Treasury regulations to be treated as a US person.

This summary does not address all aspects of US Federal income taxation that may be relevant to particular US holders in light of their particular circumstances, or to US holders subject to special rules, including, without limitation:

retirement plans;

insurance companies;

persons that hold ordinary shares or ADSs as part of a straddle, synthetic security, hedge, conversion transaction or other integrated investment;

persons that enter into constructive sales involving our ordinary shares or ADSs or substantially identical property with other transactions;

persons whose functional currency is not the US Dollar;

expatriates or former long-term residents of the United States;

financial institutions;

Table of Contents

dealers in securities or currencies;

tax-exempt organizations;

persons that own, actually or constructively, 10% or more of our outstanding voting stock;

persons subject to the alternative minimum tax;

regulated investment companies;

real estate investment trusts;

persons who trade in securities who elect to apply a mark-to-market method of accounting; and

persons who acquired their shares or ADSs pursuant to the exercise of employee stock options or otherwise as compensation.

In addition, this summary does not address the effect of any applicable US state, local or non-US tax laws or any federal, estate or gift tax consequences, does not consider the tax treatment of persons who own our ordinary shares or ADSs through a partnership or other pass-through entity, and deals only with ordinary shares or ADSs held by US holders as capital assets as defined in Section 1221 of the Code. If a partnership (including for this purpose, any entity treated as a partnership for US Federal income tax purposes) holds shares or ADSs, the tax treatment of a partner generally will depend upon the status of the partner and the activities of the partnership. If a US holder is a partner in a partnership that holds shares or ADSs, the holder is urged to consult its own tax advisor regarding the specific tax consequences of the ownership and disposition of the shares or ADSs.

We encourage holders of our ordinary shares or ADSs to consult with their own tax advisors with respect to the US Federal, state and local tax consequences, as well as the tax consequences in other jurisdictions, of the purchase, ownership and disposition of our ordinary shares or ADSs applicable in their particular tax situations.

Ownership of Ordinary Shares or ADSs

For purposes of the Code, US holders of ADSs should be treated for US Federal income tax purposes as the owner of the ordinary shares represented by those ADSs. Accordingly, exchanges of ordinary shares for ADSs and ADSs for ordinary shares generally should not be subject to US Federal income tax. The US Treasury has, however, expressed concerns that intermediaries in the chain of ownership between the US holder of an ADS and the issuer of the security underlying the ADS may, in some circumstances, be taking actions that are inconsistent with the beneficial ownership of the underlying security (for example, pre-releasing ADSs to persons that do not have the beneficial ownership of the securities underlying the ADSs). Accordingly, the availability of the reduced tax rate (as discussed below) for dividends received by certain non-corporate US holders, including US holders who are individuals, could be affected by future actions that may be taken by the US Treasury and/or intermediaries in the chain of ownership between the US holders of ADSs and us.

Subject to the discussion below under the heading **Passive Foreign Investment Company Rules**, for US Federal income tax purposes, distributions with respect to our ordinary shares or ADSs, other than distributions in liquidation and distributions in redemption of stock that are treated as exchanges, will be taxed to US holders as ordinary dividend income to the extent that the distributions do not exceed our current and accumulated earnings and profits as determined for federal income tax purposes. Distributions, if any, in excess of our current and accumulated earnings and profits will constitute a non-taxable return of capital and will be applied against and reduce the holder's basis in our ordinary shares or ADSs. To the extent that these distributions exceed the US holder's tax basis in our ordinary shares or ADSs, as applicable, the excess generally will be treated as capital gain. We do not, however, intend to calculate our earnings and profits under US federal income tax principles. Therefore, you should expect that any distribution from us generally will be treated for US federal income tax purposes as a dividend. Such dividends will not be eligible for the dividends received deduction generally allowed to a US corporation under Section 243 of the

Code.

Individual US holders are eligible for reduced rates of US Federal income tax (currently a maximum of 15%) in respect of qualified dividend income received in taxable years beginning before January 1, 2013. For this purpose, qualified dividend income generally includes dividends paid by non-US corporations if, among other things, certain minimum holding periods are met and either (i) the ordinary shares (or ADSs) with respect to which the dividend has been paid are readily tradable on an established securities

Table of Contents

market in the United States, or (ii) the non-US corporation is eligible for the benefits of a comprehensive US income tax treaty which provides for the exchange of information. For this purpose, ADSs listed on the Nasdaq exchange are considered to be readily tradable on an established securities market in the United States. Therefore, we currently believe that dividends paid with respect to our ordinary shares and ADSs will constitute qualified dividend income for US federal income tax purposes, provided the individual US holders of our shares and ADSs meet certain holding period requirements. However, if we are a passive foreign investment company, as discussed below under the heading Passive Foreign Investment Company Rules, in the taxable year of the distribution or the preceding tax year, the dividends paid with respect to our ADSs will not constitute qualified dividend income. US holders are urged to consult their own tax advisors regarding the classification of any distributions from us as qualified dividend income.

Dividends from us generally will constitute non-US-source income for foreign tax credit limitation purposes. The limitation on foreign taxes eligible for credit is calculated separately with respect to specific classes of income. For this purpose, dividends distributed by us generally will be treated as passive category income or, in the case of certain US holders, as general category income.

Sale or Other Disposition of Ordinary Shares or ADSs

Subject to the discussion below under Passive Foreign Investment Company Rules, if a US holder sells or otherwise disposes of its ordinary shares or ADSs in a taxable transaction, it will generally recognize gain or loss for US Federal income tax purposes in an amount equal to the difference between the amount realized on the sale or other taxable disposition and its tax basis in the ordinary shares or ADSs. Such gain or loss generally will be capital gain or loss and will be long-term capital gain or loss if the US holder has held the ordinary shares or ADSs for more than one year at the time of the sale or other taxable disposition. In general, any gain that US holders recognize on the sale or other taxable disposition of ordinary shares or ADSs will be US source income for purposes of the foreign tax credit limitation and any losses recognized will generally be allocated against US source income. Deduction of capital losses is subject to limitations under the Code.

Additional Tax After 2012

For taxable years beginning after December 31, 2012, US holders that are individuals, estates or trusts and whose income exceeds certain thresholds generally will be subject to an additional 3.8% Medicare contribution tax on unearned income, including, among other things, cash dividends on, and capital gains from the sale or other taxable disposition of, our ordinary shares, subject to certain limitations and exceptions. US holders should consult their own tax advisors regarding the effect, if any, of such tax on their ownership and disposition of our ordinary shares.

Passive Foreign Investment Company Rules

A special and adverse set of US Federal income tax rules apply to a US holder that holds stock in a passive foreign investment company, or PFIC. In general, we will be a PFIC if 75% or more of our gross income in a taxable year is passive income. Alternatively, we will be considered to be a PFIC if at least 50% of our assets in a taxable year, averaged over the year and determined based on fair market value, are held for the production of, or produce, passive income.

In determining whether a non-US corporation is a PFIC, a proportionate share of the income and assets of each corporation in which it owns, directly or indirectly, at least a 25% interest (by value) is taken into account.

We believe that we currently are not a PFIC and do not expect to become a PFIC in 2011. However, there is significant uncertainty in the application of the PFIC rules to mining enterprises such as ourselves as a result of the interplay of several sets of tax rules. In addition, because the tests for determining PFIC status are applied as of the end of each taxable year and are dependent upon a number of factors, some of which are beyond our control, including the value of our assets, the market price of our ordinary shares, and the amount and type of our gross income, we cannot assure you that we will not become a PFIC in the future or that the US Internal Revenue Service will agree with our conclusion that we are not a PFIC now.

If we are a PFIC for US Federal income tax purposes for any year during a US holder's holding period of our ADSs or ordinary shares and the US holder does not make a mark-to-market election or a QEF election, both as described below:

any gain recognized by a US holder upon the sale of ADSs or ordinary shares, or the receipt of some types of distributions, would be treated as ordinary income;

Table of Contents

this income generally would be allocated ratably over a US holder's holding period with respect to our ADSs or ordinary shares; and

the amount allocated to prior years, with certain exceptions, will be subject to tax at the highest tax rate in effect for those years and an interest charge would be imposed on the amount of deferred tax on the income allocated to the prior taxable years.

We generally will be treated as a PFIC as to any US holder if we are a PFIC for any year during such holder's holding period. However, if we cease to satisfy the requirements for PFIC classification, a US holder may avoid PFIC classification for subsequent years if such holder elects to recognize gain based on the unrealized appreciation in the ADSs or ordinary shares through the close of the tax year in which we cease to be a PFIC. Additionally, if we are a PFIC, a US holder who acquires ADSs or ordinary shares from a decedent would be denied the normally available step-up in tax basis for our ADSs or ordinary shares to fair market value at the date of death and instead would have a tax basis equal to the lower of the fair market value or the decedent's tax basis.

Further, if we are a PFIC, each US holder will generally be required to file an annual report with the Internal Revenue Service for the taxable years beginning on or after March 18, 2010. **US holders are urged to consult their own tax advisors regarding this new reporting obligation and how it may apply to their particular circumstances.**

A US holder generally may be able to avoid the imposition of the special tax and interest charge described above by electing to mark its ADSs or ordinary shares to market annually, and, therefore, recognize for each taxable year, subject to certain limitations, ordinary income or loss equal to the difference, as of the close of taxable year, between the fair market value of its ADSs or ordinary shares and the adjusted tax basis of his or its ADSs or ordinary shares. Losses would be allowed only to the extent of the net mark-to-market gain previously included by the US holder under the election in prior taxable years. If a mark-to-market election with respect to ADSs or ordinary shares is in effect on the date of a US holder's death, the tax basis of the ADSs or ordinary shares in the hands of a US holder who acquired them from a decedent will be the lesser of the decedent's tax basis or the fair market value of the ADSs or ordinary shares. A mark-to-market election is available only if the ADSs or ordinary shares, as the case may be, are considered marketable stock. Generally, stock will be considered marketable stock if it is regularly traded on a qualified exchange within the meaning of applicable US Treasury regulations. A class of stock is regularly traded during any calendar year during which such class of stock is traded, other than in de minimis quantities, on at least 15 days during each calendar quarter. The Nasdaq constitutes a qualified exchange, and a non-US securities exchange constitutes a qualified exchange if it is regulated or supervised by a governmental authority of the country in which the securities exchange is located and meets certain trading, listing, financial disclosure and other requirements set forth in US Treasury regulations.

In certain circumstances a holder of stock or ADSs in a PFIC may avoid taxation under the rules described above by making a qualified electing fund, or QEF, election to include in income its share of a PFIC's annual income on a current basis. However, a QEF election is only available if the PFIC annually provides its stockholders with certain tax information, and we currently do not intend to prepare or provide such information. Accordingly, you should assume that a QEF election is unavailable.

Rules relating to a PFIC are very complex. US holders are encouraged to consult their own tax advisors regarding the application of the PFIC rules to their investments in our ADSs or our ordinary shares.

Backup Withholding and Information Reporting

Payments to US holders in respect of our ordinary shares or ADSs may be subject to information reporting to the US Internal Revenue Service and to backup withholding tax, currently imposed at a rate of 28% (but currently scheduled to increase to 31% for taxable years beginning on or after January 1, 2013).

However, backup withholding and information reporting will not apply to a US holder that is a corporation or comes within an exempt category, and demonstrates the fact when so required, or furnishes a correct taxpayer identification number and makes any other required certification. US holders who are required to establish their exempt status generally must provide such certification on Internal Revenue Service Form W-9.

Backup withholding is not an additional tax. Amounts withheld under the backup withholding rules will be allowed as a refund or credit against a US holder's US Federal income tax liability, provided that the required procedures are followed.

Table of Contents

Recently enacted legislation requires US individuals to report an interest in any specified foreign financial asset if the aggregate value of such assets owned by the U.S. individual exceeds \$50,000 (or such higher amount as the IRS may prescribe in future guidance). Stock issued by a foreign corporation is treated as a specified foreign financial asset for this purpose. **US holders should consult their own tax advisors regarding this reporting obligation and how it may apply to their particular circumstances.**

United Kingdom Tax Considerations

The following statements do not constitute tax advice and are intended as a general guide only to the U.K. tax position under current U.K. tax legislation, case law and published HM Revenue & Customs (HMRC) practice as at the date of this document, both of which is subject to change at any time, possibly with retrospective effect. These statements deal only with the position of shareholders who are resident (and, in the case of individuals only, ordinarily resident and domiciled) solely in the U.K. for tax purposes (except where the position of a non-U.K. tax resident shareholder is expressly referred to), who hold their ordinary shares or ADSs as an investment and who are the absolute beneficial owners of the ordinary shares or ADSs and of all dividends of any kind paid in respect of them in circumstances where the dividends paid are regarded for U.K. tax purposes as that person's own income (and not the income of some other person). The tax position of certain categories of shareholders who are subject to special rules (such as persons acquiring their shares or ADSs (or deemed to acquire their shares or ADSs) in connection with an employment or office, dealers in securities, insurance companies and collective investment schemes and shareholders owning 10% or more of the ordinary shares or voting power, rights to profit or capital of the company) is not considered. Any shareholder who is in doubt as to their tax position regarding the acquisition, ownership or disposal of their ordinary shares or ADSs, or who are subject to tax in a jurisdiction other than the U.K., should consult their own independent tax adviser.

Dividends

A person having an interest in ADSs or ordinary shares who is not a resident in the U.K. will not be subject to tax in the U.K. on dividends paid on ordinary shares, unless that person carries on a trade, profession or vocation in the U.K. (and, if that person is a company, does so through a permanent establishment) to which the ordinary shares or ADSs in question are attributable.

A person having an interest in ADSs or ordinary shares who is resident in the U.K. and is not a body corporate will, in general, be subject to U.K. income tax on dividends paid by us.

A U.K. resident body corporate holding an interest in ADSs or ordinary shares should not generally be taxable on dividends paid by us after July 1, 2009. Dividends paid before this date were, in general, subject to U.K. corporation tax.

A U.K. resident individual shareholder will be entitled to a tax credit, which may be set off against the shareholder's total income tax liability on the dividend. The value of the tax credit is currently 10% of the aggregate of the dividend and the tax credit (the Gross Dividend), which is also equal to one-ninth of the cash dividend received.

Such an individual U.K. resident shareholder who is liable to income tax at the basic rate will be subject to tax on the dividend at the rate of 10% of the Gross Dividend, so that any tax credit will satisfy in full such shareholder's liability to income tax on the dividend.

An individual shareholder who is liable to income tax at the 40% tax rate will be taxed at the rate of 32.5% on the Gross Dividend. Any tax credit will be set against, but not fully match, the shareholder's tax liability on the Gross Dividend and such shareholder will have to account for additional income tax equal to 22.5% of the Gross Dividend (which is equal to 25% of the cash dividend received) to the extent that the Gross Dividend, falls within the 40% tax band.

From April 6, 2010 a tax rate of 50% for taxable income above £150,000 was introduced. Dividends which are taxable at the 50% rate will be liable to income tax at a rate of 42.5% of the Gross Dividend. Any tax credit will be set against, but not fully match, the shareholder's tax liability on the Gross Dividend and such shareholder will have to account for additional income tax equal to 32.5% of the Gross Dividend (this equates to 36.1% of the cash dividend received) to the extent that the Gross Dividend, when treated as the top slice of the shareholder's income, falls above the threshold for the 50% rate of tax.

An individual shareholder will not generally be able to claim repayment from HMRC of any part of the tax credit attaching to dividends paid by us.

Table of Contents

Each shareholder resident outside the U.K. may also be subject to foreign taxation on dividend income under the local law of the country(ies) in which they reside/are resident.

We are subject to tax at the rate of zero percent for the purposes of Article 123C of the Income Tax (Jersey) Law 1961 and therefore we are taxed in Jersey at the rate of 0% on our worldwide income. We are not required to make any deduction or withholding in respect of Jersey taxation on any dividend we may pay.

Capital Gains

A person having an interest in ADSs or ordinary shares who is neither resident nor, in the case of an individual shareholder, ordinarily resident in the U.K. will generally not be subject to tax in the U.K. on gains arising on a disposal of our ordinary shares or interests in the ADSs.

However, individuals who left the U.K. on or after March 17, 1998, who were resident in the U.K. for four out of seven tax years prior to departure, and who return to the U.K. before five complete tax years following departure will be subject to U.K. capital gains tax on any gains realized on the disposal during the period of absence of any assets which were owned before taking up residence abroad.

Persons having an interest in ADSs or ordinary shares who are resident and/or, in the case of an individual shareholder, ordinarily resident in the U.K. or who hold their ordinary shares or interests in ADSs through a U.K. trading branch or agency (or, if that person is a company, a permanent establishment) will, in general, be subject to U.K. taxation on gains arising on a disposal of ordinary shares or interests in ADSs. The first £10,100 of an individual's net chargeable gains are exempt. For gains realized on or after June 23, 2010, the balance is taxed at 18% for gains that fall within the individual's otherwise unused basic rate income tax band (currently £37,400) and 28% thereafter. Gains realized prior to June 23, were taxed at a flat rate of 18% irrespective of the level of the individual's other income.

A body corporate will generally be subject to U.K. corporation tax on chargeable gains at the standard rate of U.K. corporation tax (which is reducing from 28% to 26% from April 1, 2011).

Inheritance Tax

Liability to U.K. inheritance tax may arise on the death of an individual having an interest in ADSs or ordinary shares, or on a gift (or disposal at an undervalue) of ordinary shares or ADSs by an individual, who is domiciled, or deemed to be domiciled, in the U.K.

U.K. inheritance tax may still be relevant for individuals who are neither domiciled nor deemed to be domiciled in the U.K. U.K. property is generally liable to U.K. inheritance tax subject to Double Tax Treaty provisions. This is a complicated area and individuals should consult their own independent tax adviser.

Stamp Duty and Stamp Duty Reserve Tax

No U.K. stamp duty or stamp duty reserve tax should be payable on the issue of the ordinary shares or ADSs, or on the delivery of the ADSs into DTC.

No U.K. stamp duty should in practice be payable on the transfer of ordinary shares or ADSs provided any instrument of transfer is executed and retained outside of the U.K. and no U.K. stamp duty will arise in respect of any dealings in the ordinary shares or ADSs within a clearance service, where such dealings are effected in book entry form in accordance with the procedures of the clearance service and not by written instrument.

Stamp duty reserve tax will not be payable on an agreement to transfer ADSs or ordinary shares, provided there is no register in the United Kingdom in respect of the ordinary shares or ADSs.

Item 11. Quantitative and Qualitative Disclosures About Market Risk Hedge Policy

Although, in general, it is not our policy to hedge our gold sales, we believe it is prudent to hedge during times of significant capital expansion and debt and we are sometimes required to do so under debt financing arrangements. The market price of gold has a significant effect on our results of operations, our ability to pay dividends and undertake capital expenditures, and the market price of our ordinary shares. Gold prices have historically fluctuated widely and are affected by numerous industry factors over which we have no control. The aggregate effect of these factors is impossible for us to predict.

We use hedging instruments to protect the selling price of some of our anticipated gold production. These hedging instruments have been required by the terms of our Morila and Loulo loans.

The Morila hedge book was closed out in 2004.

The Loulo project finance loan was entered into in 2004 with a consortium of financial lenders, namely, Rothschild, SG Corporate and Investment Bank, ABSA Bank and HVB Group, and had as a requirement that some hedging be put in place. The intended effect of the hedging transactions was to lock in a fixed sale price for some of our future gold production, and reduce the adverse impact of a future fall in gold prices.

Loulo's hedging is administered by our finance department which acts upon the recommendations of a hedging committee within the guidelines of a policy set by our board. The hedging was entered into in terms of a requirement of the Loulo Loan. The Loulo loan and our hedging arrangements were with a consortium of financial lenders: NM Rothschild, SG Corporate and Investment Bank, ABSA Bank and HVB Group. The Loulo Loan had in early May 2007 been replaced by a Revolving Credit Facility, which was terminated in 2009.

All of Loulo's derivative transactions previously had to be in compliance with the terms and conditions of the Loulo loan agreement. That agreement placed a limit on derivative transactions of 70% of Loulo's forecast production for a given year. Our board agreed as part of the financing arrangements for the development of Loulo that some gold price protection be secured. All remaining gold price forward sales contracts were delivered into during the year.

Foreign Currency and Commodity Price Sensitivity

In the normal course of business, the group enters into transactions denominated in foreign currencies (primarily Euro, South African Rand, Congolese franc and Communauté Financière Africaine Franc). As a result, the group is subject to exposure from fluctuations in foreign currency exchange rates. In general, the group does not enter into derivatives to manage these currency risks. Generally, the group does not hedge its exposure to gold price fluctuation risk and sells at market spot prices. Gold sales are disclosed in US dollars and do not expose the group to any currency fluctuation risk. However, during periods of capital expenditure or loan finance, the company may use forward contracts or options to reduce the exposure to price movements, while maintaining significant exposure to spot prices. These derivatives may establish a fixed price for a portion of future production while the group maintains the ability to benefit from increases in the spot gold price for the majority of future gold production. The group is also exposed to

Table of Contents

fluctuations in the price of consumables, such as fuel, steel, rubber, cyanide and lime, mainly due to changes in the price of oil, as well as fluctuations in exchange rates.

\$000	2010	2009
Level of exposure of foreign currency risk		
Carrying value of foreign currency balances		
Cash and cash equivalents includes balances denominated in:		
Communauté Financière Africaine franc (CFA)	24,532	7,506
Euro (EUR)	3,439	10,987
South African rand (ZAR)	502	(668)
British pound (GBP)	281	59
Australian dollar (AUD)	205	3,617
Canadian dollar (CAD)	1,155	360
Accounts receivable and prepayments include balances denominated in:		
Communauté Financière Africaine franc (CFA)	18,578	51,435
Euro (EUR)	1	3,956
South African rand (ZAR)	345	6,564
British pound (GBP)	131	159
Australian dollar (AUD)	12	1,171
Canadian dollar (CAD)		47
Accounts payable includes balances denominated in:		
Communauté Financière Africaine franc (CFA)	(5,453)	(28,264)
Euro (EUR)	(3,949)	(5,895)
South African rand (ZAR)	(3,583)	(3,489)
British pound (GBP)	(51)	
Australian dollar (AUD)	(21)	(3,487)
Canadian dollar (CAD)	(39)	

The group's exposure to foreign currency arises where a company holds monetary assets and liabilities denominated in a currency different to the functional currency of the group which is the US dollar. Set out below is the impact of a 10.0% change in the US dollar on profit and equity arising as a result of the revaluation of the group's foreign currency financial instruments.

Level of exposure of foreign currency risk (continued)	Closing exchange Rate	Effect of 10.0% strengthening of US dollar on net earnings and equity
At December 31, 2010		
Euro (EUR)	0.7546	51
British pound (GBP)	0.6465	36
Communauté Financière Africaine franc (CFA)	504.68	3,766
South African rand (ZAR)	6.6468	274
Australian dollar (AUD)	1.0163	20
Canadian dollar (CAD)	1.0001	112
At December 31, 2009		
Euro (EUR)	0.6977	905
British pound (GBP)	0.6279	22
Communauté Financière Africaine franc (CFA)	457.66	2,600

South African rand (ZAR)	7.4174	241
Australian dollar (AUD)	1.1199	130
Canadian dollar (CAD)	1.0494	41

The sensitivities are based on financial assets and liabilities held at December 31 where balances were not denominated in the functional currency of the group. The sensitivities do not take into account the group's sales and costs and the results of the sensitivities could change due to other factors such as changes in the value of financial assets and liabilities as a result of non-foreign exchange influenced factors.

Table of Contents

The market price of gold has a significant effect on our results of operations, our ability to pay dividends and undertake capital expenditures and the market prices of our ordinary shares.

Gold prices have historically fluctuated widely and are affected by numerous industry factors over which we have no control. The aggregate effect of these factors is not possible for us to predict. All gold price forward sales contracts were delivered into during the year.

During 2004, a hedging program totaling 365,000 ounces was put in place in terms of a requirement of the Loulo loan. We have used four counterparties for our current hedge book. These counterparties are international banks which have not failed to perform as required under our hedging arrangements.

During January 2006, 10,000 ounces previously sold in even amounts over the period January 2006 to June 2006 at \$430 per ounce were rolled forward into the period January 2009 to June 2009, with a new forward price of \$489 per ounce. In the same month, 6,667 ounces from the January 2006 forward sales, previously priced at \$430 per ounce, were rolled forward into May and June 2006 at a price of \$437 per ounce. In February 2006, we moved 20,000 ounces previously sold forward over the period February 2006 to April 2006 at a price of \$430 per ounce, into the period June 2006 to December 2006 at a price of \$441 per ounce.

In August 2006, 5,999 ounces previously sold forward at \$425.91 were rolled out in equal quantities into January 2007 and April 2007 at prices of \$431.81 and \$434.06, respectively.

In December 2006, we moved 10,580 ounces previously sold forward at \$435.33 in equal quantities into February and March 2007 at new forward prices of \$437.90 and \$438.18, respectively.

During the first quarter of 2007, 10,752 ounces previously sold forward at \$444.81 were rolled out to the second and third quarters of 2007, 3,583 ounces at \$454.51 into the second quarter and 7,168 ounces at \$456.09 into the third quarter.

The Revolving Credit Facility replaced the Loulo Loan in May 2007. As the HVB Group, which previously participated in the Loulo Loan, is not a lender in the Revolving Credit Facility, the 40,248 ounces of the remaining 2007, 2008 and 2009 hedged ounces which pertained to the HVB Group was novated to other counterparties in May 2007. The 11,748 ounces at an average forward price of \$436.69 per ounce due for delivery in 2007 were novated and subsequently rolled forward to 2010 at \$472 per ounce. The new price is net of any novation charges. The 28,500 ounces at a previous average forward price of \$429.95 due for delivery in 2008 and 2009 were novated at \$418.58, the lower price being the result of novation charges pertaining to these ounces. Also in May 2007, 30,000 ounces previously sold forward in 2007 at an average price of \$447.29 per ounce, were rolled into 2010 at a new average forward price of \$511.28 per ounce. The revolving credit facility was cancelled during 2009.

The accounting effects of our hedging activities are as follows:
All remaining gold price forward sales contracts were delivered into during the year.

The total fair value of the above financial instruments as at December 31, 2010 was a liability of \$0 million (December 31, 2009: liability of \$25.3 million).

During the year ended December 31, 2008, we sold 427,713 ounces of gold at an average price of \$792 per ounce. At the average spot gold price for the year of approximately \$871 per ounce, product sales would have amounted to approximately \$373 million for the year, an increase of approximately \$34 million in sales.

During the year ended December 31, 2009, we sold 486,324 ounces of gold at an average price of \$893 per ounce. At the average spot gold price for the year of approximately \$973 per ounce, product sales would have amounted to approximately \$473 million for the year, an increase of approximately \$40 million in sales.

During the year ended December 31, 2010, we sold 413,262 ounces of gold at an average price of \$1,180 per ounce. At the average spot gold price for the year of approximately \$1,224 per ounce, product sales would have amounted to approximately \$506 million for the year, an increase of approximately \$21 million in sales.

Table of Contents**Interest Rate Sensitivity**

We generally do not undertake any specific actions to cover our exposure to interest rate risk and at December 31, 2010 were not party to any interest rate risk management transactions.

At December 31, 2008 the fair value of our borrowings, including the short-term portion of these liabilities, excluding loans from outside shareholders in subsidiaries, was estimated at \$2.8 million. The aggregate hypothetical loss in earnings on an annual basis from a hypothetical increase of 10% of the three month LIBOR rate is negligible.

At December 31, 2009 the fair value of our borrowings, including the short-term portion of these liabilities, excluding loans from outside shareholders in subsidiaries, was estimated at \$1.3 million. The aggregate hypothetical loss in earnings on an annual basis from a hypothetical increase of 10% of the three month LIBOR rate is negligible. At December 31, 2010 the fair value of our borrowings, including the short-term portion of these liabilities, excluding loans from outside shareholders in subsidiaries, was estimated at \$0.2 million. The aggregate hypothetical loss in earnings on an annual basis from a hypothetical increase of 10% of the three month LIBOR rate is negligible.

As our net earnings exposure with respect of debt instruments was mostly to the one month LIBOR, the hypothetical loss was modeled by calculating the 10% adverse change in one month LIBOR multiplied by the fair value of the respective debt instrument.

D. AMERICAN DEPOSITARY SHARES**Fees Payable by ADS Holders**

Our American Depositary Shares, or ADSs, each representing the right to receive one of our ordinary shares, are listed on the Nasdaq Global Select Market under the symbol GOLD. A copy of our Form of Amended and Restated Deposit Agreement with The Bank of New York Mellon (the Depository) was filed with the SEC as an exhibit to our Form F-6 filed on October 7, 2009 (the Deposit Agreement). Pursuant to the Deposit Agreement, holders of our ADSs may have to pay to the Depository, either directly or indirectly, fees or charges up to the amounts set forth in the table below:

Associated Fee

\$5.00 or less per 100 ADSs (or portion thereof).

\$0.02 or less per ADS (or portion thereof).

Depository Action

Execution and delivery of ADRs and the surrender of ADRs pursuant to the Deposit Agreement.

Any cash distribution made pursuant to the Deposit Agreement, including, among other things:

cash distributions or dividends,

distributions other than cash, shares or rights,

distributions in shares, and

rights of any other nature, including rights to subscribe for additional shares.

Table of Contents

Associated Fee

Taxes and other governmental charges.

Registration fees in effect for the registration of transfers of shares generally on the share register of the Company or foreign registrar and applicable to transfers of shares to or from the name of the Depositary or its nominee or the custodian or its nominee on the making of deposits or withdrawals.

A fee equal to the fee for the execution and delivery of ADSs which would have been charged as a result of the deposit of such securities.

Any other charges payable by the Depositary, any of its agents (and their agents), including the custodian (by billing such owners for such charge or by deducting such charge from one or more cash dividends or other cash distributions).

Expenses incurred by the Depositary.

Depositary Action

As applicable.

As applicable.

Distributions of securities other than cash, shares or rights.

Servicing of shares or other deposited securities.

Cable, telex and facsimile transmission (where expressly provided for in the Deposit Agreement)

Foreign currency conversion into U.S. dollars

Depositary Payments for 2009

For the year ended December 31, 2010, our Depositary made no payments on our behalf in relation to our ADR program.

PART II

Item 13. Defaults, Dividend Arrearages and Delinquencies

There have been no material defaults in the payment of principal, interest, a sinking fund or purchase fund installment or any other material default with respect to any of our indebtedness.

Item 14. Material Modification to the Rights of Security Holders and Use of Proceeds

Effective on June 11, 2004, we undertook a subdivision of our ordinary shares, which increased our issued share capital from 29,273,685 to 58,547,370 ordinary shares. In connection with this share split, our ordinary shareholders of record on June 11, 2004 received two additional \$0.05 ordinary shares for every one \$0.10 ordinary share they held. Following the share split, each shareholder held the same percentage interest in us, however, the trading price of each share was adjusted to reflect the share split. ADS holders were affected the same way as shareholders and the ADS ratio remains one ADS to one ordinary share.

Item 15. Controls and Procedures

(a) **Disclosure Controls and Procedures:** Our management, with the participation of our Chief Executive Officer and Chief Financial Officer, carried out an evaluation of the effectiveness of the design and operation of our disclosure controls and procedures. Based on such evaluation, our Chief Executive Officer and Chief Financial Officer have concluded that, as of the end of the period covered by this report, our disclosure controls and procedures, including controls and procedures that are designed to ensure that information required to be disclosed by us in the reports that we file or submit under the Securities Exchange Act of 1934, is accumulated and communicated to our management, including our Chief Executive Officer and Chief Financial Officer, or persons

Table of Contents

performing similar functions, as appropriate to allow timely decisions regarding required disclosure, are effective to ensure that information required to be disclosed by us in reports that we file or submit under the Securities Exchange Act of 1934 are recorded, processed, summarized and reported within the required time periods.

(b) **Management's Report on Internal Control over Financial Reporting:** Our management is responsible for establishing and maintaining adequate internal control over financial reporting. The Securities Exchange Act of 1934 defines internal control over financial reporting in Rule 13a-15(f) and 15d-15(f) as a process designed by, or under the supervision of, the company's principal executive and principal financial officers and effected by the company's board of directors, management and other personnel, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles and includes those policies and procedures that:

Pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions of the assets of the company;

Provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and

Provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the company's assets that could have a material effect on the consolidated financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Our management assessed the effectiveness of our internal control over financial reporting as of December 31, 2010. In making this assessment, our management used the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) in Internal Control-Integrated Framework.

Based upon its assessment, our management concluded that, as of December 31, 2010, our internal control over financial reporting is effective based upon those criteria.

BDO LLP, an independent registered public accounting firm that audited the consolidated financial statements included in this annual report on Form 20-F, has issued an attestation report on the effectiveness of our internal control over financial reporting as of December 31, 2010.

(c) See report of BDO LLP, an Independent Registered Public Accounting Firm included under Item 18 Financial Statements, on page F-1.

(d) **Changes in Internal Control Over Financial Reporting:** There were no changes in our internal control over financial reporting that occurred during the year ended December 31, 2010 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

During the year ended December, 31 2010, as our business has expanded, we put in place internal controls over financial reporting for two new operational areas of the business: Kibali and Tongon. We have experienced an increase in the number of controls operated that are consistent with those already in place. As at December 31, 2010, due to the on-going political situation in Côte d'Ivoire, a higher level of control was exercised in respect of Tongon by Randgold's group level finance staff.

Item 16. Reserved

Item 16A. Audit Committee Financial Expert

Our board determined that Mr. B.H. Asher, the former chairman of the audit committee (through May 5, 2009), was an audit committee financial expert as defined in Item 16A of Form 20-F. Dr. K. Voltaire, the current chairman of the audit committee, has been determined by the board to be an audit committee financial expert. Dr. Voltaire and each of the other members of the audit committee (being Mr. C.L. Coleman and Dr. K. Dagdelen) are independent directors.

Table of Contents**Item 16B. Code of Ethics**

Our board has adopted a code of ethics that applies to the Chief Executive Officer, Chief Financial Officer and all financial officers. This code of ethics is posted on our website, www.randgoldresources.com.

Item 16C. Principal Accountant Fees and Services

BDO LLP has served as our independent registered public accounting firm for the financial years ended December 31, 2010, 2009, and 2008.

The following table presents the aggregate fees for professional services and other services rendered by our Independent Registered Public Accounting Firm to us in 2010 and 2009.

	2010 \$	2009 \$
	(in millions)	
Audit Fees (1)	0.7	0.8
Audit-related Fees (2)		0.2
Tax Fees		
All Other Fees (3)		0.2
Total	\$ 0.7	\$ 1.2

- (1) The Audit Fees consist of fees billed for the annual audit services engagement and other audit services, which are those services that only the external auditor reasonably can provide, and include our audit and statutory audits.
- (2) Audit-related fees include fees billed relating to comfort letters and consents; attest services; and assistance with and review of documents filed with the Securities and Exchange Commission and UK Listing Authority.
- (3) Other fees relate to other work performed in respect of the documents filed with the UK Listing Authority.

Audit Committee Pre-Approval Policies and Procedures

Below is a summary of the Audit Committee's pre-approved policies and procedures:

The Audit Committee comprises only independent non-executive directors and its mandate covers the sphere of duties relating to accounting policies, internal control, financial reporting practices, identification of exposure to significant risks and all corporate governance issues.

The Audit Committee is responsible for the appointment, removal and oversight of the activities of the external auditors. In addition, the Audit Committee sets the principles for recommending the use of external auditors for non-audit services. The Audit Committee approves all external consulting services and other charges levied by the external auditors.

The Audit Committee met six times during 2010. At some of these meetings the committee met with the external audit partner and the finance director, to review the audit plans of the external auditors, to ascertain the extent to which the scope of the audit can be relied upon to detect weaknesses in internal controls and to review the quarterly and half-yearly financial results, the preliminary announcement of the annual results and the annual financial statements, as well as all statutory submissions of a financial nature, prior to approval by the board.

During 2010, all Audit-related Fees provided to us by BDO LLP were approved by the Audit Committee pursuant to the de minimis exception to the pre-approval requirement provided by paragraph (c)(7)(i)(C) of Rule 2-01 of Regulation S-X.

No work was performed by persons other than BDO LLP's full-time, permanent employees on the BDO LLP's engagement to audit our financial statements for 2010 and 2009.

Table of Contents

During 2010, the Audit Committee has overseen work undertaken to ensure compliance with the requirements of Section 404 of the Sarbanes Oxley Act.

Item 16D. Exemptions from the Listing Standards for Audit Committees

Not Applicable.

Item 16E. Purchase of Equity Securities by the Issuer and Affiliated Purchasers

Neither the issuer nor any affiliate of the issuer purchased any of our shares during 2009.

Item 16F. Change in Registrant's Certifying Accountant

Not Applicable.

Item 16G. Corporate Governance

We are subject to a variety of corporate governance guidelines and requirements of Nasdaq, the London Stock Exchange and the SEC. We believe that we comply with the applicable corporate governance requirements. Although we are listed on the Nasdaq Global Select Market, we are not required to comply with all of Nasdaq's corporate governance rules which are applicable to US companies. The significant ways in which the Nasdaq corporate governance rules differ for us, as a foreign company, are a reduced quorum requirement for shareholder meetings. In the year 2010 we were required to comply with the provisions of the Combined Code on Corporate Governance which was issued in the United Kingdom in June 2008. According to the provisions of the Combined Code we were in compliance with the provisions throughout the year, and we disclosed that Mr. R. I. Israel was not deemed independent in accordance with the independence definitions and was subject to re-election on an annual basis as per such requirements. At the annual general meeting held in May 2010 Mr. Israel was re-elected. With respect to reporting periods after June 29, 2010 we are subject to the requirements of the United Kingdom's Corporate Governance Code.

PART III

Item 17. Financial Statements

Not Applicable.

Item 18. Financial Statements

Reference is made to the financial statements, commencing on page F-1, and the financial statement schedule on page S-1.

Item 19. Exhibits

REPORT OF THE INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

Board of Directors and Shareholders

Randgold Resources Limited

We have audited the accompanying consolidated statements of financial position of Randgold Resources Limited as of December 31, 2010 and 2009 and the related consolidated statements of comprehensive income, consolidated statements of changes in equity and statements of consolidated cash flows for the three years in the period ended December 31, 2010. Our audits also included the financial statement schedule included on page S-1 of this Form 20-F. We have also audited Randgold Resources Limited's internal control over financial reporting as of December 31, 2010, based on criteria established in *Internal Control - Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (the COSO criteria). Randgold Resources Limited's management is responsible for these financial statements, financial statement schedule, maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying report included under item 15B, "Controls and Procedures". Our responsibility is to express an opinion on these financial statements and financial statement schedule and express an opinion on the company's internal control over financial reporting based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements and the schedule are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of Randgold Resources Limited as of December 31, 2010 and 2009 and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2010, in conformity with International Financial Reporting Standards as issued by the International Accounting Standards Board (IASB). Also, in our opinion, Randgold Resources Limited maintained, in all material respects, effective internal control over financial reporting as of December 31, 2010, based on the COSO criteria.

In addition, in our opinion, the financial statement schedule, when considered in relation to the basic consolidated financial statements taken as a whole, presents fairly, in all material respects, the information set forth therein.

SHARE CAPITAL

The share capital comprises the issued ordinary shares of the company at par.

SHARE PREMIUM

The share premium comprises the excess value recognized from the issue of ordinary shares at par.

RETAINED EARNINGS

Retained earnings comprises the group's cumulative accounting profit since inception.

OTHER RESERVES

Other reserves include the cumulative charge recognized under IFRS 2 in respect of share option schemes (net of amounts transferred to share capital and share premium) and the mark-to-market valuation of derivative financial instruments designated as cash flow hedges (Refer to note 21), as well as the foreign currency translation reserve and the movements in current available-for-sale financial assets.

At December 31, 2010, the balance of the share-based payment reserve amounted to US\$18.4 million (December 31, 2009: US\$22.7 million; December 31, 2008: US\$9.6 million). The balance of the hedging reserve was US\$0 (December 31, 2009: debit of US\$14.2 million; December 31, 2008: debit of US\$41 million). Refer to note 21 for further details on the hedging reserve. The foreign currency translation reserve was US\$1.4 million at December 31, 2010 (December 31, 2009: US\$1.4 million; December 31, 2008: US\$0) and the movements in current available-for-sale financial assets amounted to US\$11.8 million as at December 31, 2010 (December 31, 2009: US\$9 million; December 31, 2008: US\$0). Refer to note 13 for further details.

+

Movement in recognition of options exercised includes the exercise of options issued as part of the acquisition of Moto.

Restricted shares were issued to executive directors, non-executive directors and senior management as remuneration. The transfer between other reserves and share premium in respect of the shares vested represents the cost calculated in accordance with IFRS 2.

§ Excludes restricted shares granted but not yet vested and 7,200 treasury shares.
The accompanying notes are an integral part of these consolidated financial statements.

Table of Contents

RANDGOLD RESOURCES LIMITED
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS
FOR THE YEAR ENDED DECEMBER 31, 2010

1. NATURE OF OPERATIONS

The company and its subsidiaries (the group) together with its joint ventures carry out exploration and gold mining activities. Currently there are two operating mines in Mali, West Africa: the Morila gold mine, which commenced production in October 2000, and the Loulo mine complex, which commenced production in November 2005. The group also operates a third mine in Côte d'Ivoire, Tongon, which poured its first gold in November 2010. The group also has a portfolio of exploration projects in West and Central Africa.

The interests of the group in its operating mines are held through Morila SA (Morila) which owns the Morila mine, Somilo SA (Somilo) which owns the Loulo mine and Tongon SA (Tongon) which owns the Tongon mine. Randgold holds an effective 40% interest in Morila, following the sale to AngloGold Ashanti Limited on July 3, 2000 of one-half of Randgold's subsidiary, Morila Limited. Management of Morila Limited, the 80% shareholder of Morila SA, is effected through a joint venture committee, with Randgold and AngloGold Ashanti each appointing one-half of the members of the committee. From the date of acquisition AngloGold Services Mali SA (Anser), a subsidiary of AngloGold Ashanti, was the operator of Morila. On February 15, 2008 Randgold assumed responsibility for the operatorship.

Randgold holds an effective 80% interest in Somilo. The remaining 20% interest is held by the Malian government. Randgold is the operator of the Loulo mine.

Randgold holds an effective 89% interest in Tongon, 10% is held by the government of Côte d'Ivoire while the remaining 1% is held by a local Ivorian company. The group also holds an effective interest of 45% in the Kibali gold project in the Democratic Republic of Congo following the acquisition by the company of a joint venture interest in Moto Goldmines Limited in 2009, in conjunction with AngloGold Ashanti.

The group has various exploration programs ranging from substantial to early stage in Mali, Senegal, Burkina Faso, Côte d'Ivoire and the Democratic Republic of Congo.

2. SIGNIFICANT ACCOUNTING POLICIES

The principal accounting policies applied in the preparation of these consolidated financial statements are set out below. These policies have been consistently applied to all the years presented, unless otherwise stated.

BASIS OF PREPARATION The consolidated financial statements of Randgold Resources Limited and its subsidiaries have been prepared in accordance with International Financial Reporting Standards and Interpretations (collectively (IFRS)) issued by the International Accounting Standards Board (IASB) and in accordance with Article 105 of the Companies (Jersey) Law of 1991. The consolidated financial statements have been prepared under the historical cost convention, as modified by the revaluation of available-for-sale financial assets, and various financial assets and financial liabilities (including derivative instruments) which are carried at fair value. The preparation of financial statements in conformity with IFRS requires the use of certain critical accounting estimates. It also requires management to exercise its judgment in the process of applying the group's accounting policies. The areas involving a high degree of judgment or complexity, or areas where assumptions and estimates are significant to the consolidated financial statements, are disclosed in note 3.

The going concern basis has been adopted in preparing the financial statements. The directors have no reason to believe that the group will not be a going concern in the foreseeable future based on forecasts and available cash resources. The viability of the group is supported by the financial statements.

The group has adopted the following standards, amendments to standards and interpretations which are effective for the first time this year. Their impact is discussed below. Those standards, amendments to standards and interpretations that are effective for the first time this year but have no impact on the group, and are not expected to have an impact in the future, have not been included below.

AMENDMENTS TO IFRIC 9 AND IAS 39: EMBEDDED DERIVATIVES (effective for annual periods beginning on or after June 30, 2009). This amendment clarifies the treatment of embedded derivatives in host contracts that are reclassified out of fair value through profit or loss following the changes introduced by the Amendments to IAS 39 and IFRS 7: Reclassification of Financial Instruments. This has not had an impact on the

group in the current year but may have an impact in future.

F-7

Table of Contents**RANDGOLD RESOURCES LIMITED****NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (CONTINUED)**

REVISED IFRS 3: BUSINESS COMBINATIONS (effective for annual periods beginning on or after July 1, 2009). The basic approach of the existing IFRS 3 to apply acquisition accounting in all cases and identify an acquirer is retained in this revised version of the standard. It also includes much of the current guidance for the identification and recognition of intangible assets separately from goodwill. However, in some respects the revised standard may result in very significant changes, including: the requirement to write off all acquisition costs to profit or loss instead of including them in the cost of investment; the requirement to recognize an intangible asset even if it cannot be reliably measured; and, an option to gross up the statement of financial position for goodwill attributable to minority interests (which are renamed non-controlling interests). The revised standard does not require the restatement of previous business combinations. This has not had an impact on the group in the current year but may have an impact in future.

AMENDMENT TO IAS 27: CONSOLIDATED AND SEPARATE FINANCIAL STATEMENTS (effective for annual periods beginning on or after July 1, 2009). This amendment affects in particular the acquisition of subsidiaries achieved in stages and disposals of interests, with significant differences in the accounting depending on whether or not control is obtained as a result of the transaction, or where a transaction results only in a change in the percentage of a controlling interest. The amendment does not require the restatement of previous transactions. This has not had an impact on the group in the current year but may have an impact in future.

AMENDMENT TO IAS 39: FINANCIAL INSTRUMENTS – RECOGNITION AND MEASUREMENT: ELIGIBLE HEDGED ITEMS (effective for annual periods beginning on or after July 1, 2009). This amendment clarifies how the principles that determine whether a hedged risk or portion of cash flows is eligible for designation should be applied in the designation of a one-sided risk in a hedged item, and inflation in a financial hedged item. This has not had an impact on the group in the current year but may have an impact in future.

IMPROVEMENTS TO IFRSs: 2010 (effective for annual periods beginning on or after January 1, 2010). The improvements in this amendment clarify the requirements of IFRSs and eliminate inconsistencies within and between standards. This has not had a significant impact on the group.

AMENDMENTS TO IFRS 2: GROUP CASH-SETTLED SHARE-BASED PAYMENT TRANSACTIONS (effective for annual periods beginning on or after January 1, 2010). This amendment clarifies that, where a parent (or another group entity) has an obligation to make a cash-settled share-based payment to another group entity's employees or suppliers, the entity receiving the goods or services should account for the transaction as equity-settled. The amendment also moves the IFRIC 11 requirements in respect of equity-settled share-based payment transactions among group entities and the clarification of the scope of IFRS 2 contained within IFRIC 8 into IFRS 2 itself. This has not had an impact on the group in the current year but may have an impact in future.

The following standards, amendment to standards and interpretations which have been recently issued or revised have not been adopted early by the group but may have an impact in the future; their expected impact is discussed below.

Standards, amendments to standards and interpretations that are not expected to impact the group, are not included below.

CLASSIFICATION OF RIGHTS ISSUES (AMENDMENT TO IAS 32) (effective for annual periods beginning on or after February 1, 2010). This Amendment addresses the accounting for rights issues (rights, options or warrants) that are denominated in a currency other than the functional currency of the issuer. Previously such rights issues were accounted for as derivative liabilities. However, the Amendment requires that, provided the entity offers the rights, options or warrants pro rata to all of its existing owners of the same class of its own non-derivative equity instruments, such rights issues are classified as equity regardless of the currency in which the exercise price is denominated. This will be applied in the year ending December 31, 2011 but is not expected to have an immediate impact on the group.

IFRIC 19 EXTINGUISHING FINANCIAL LIABILITIES WITH EQUITY INSTRUMENTS (effective for annual periods beginning on or after July 1, 2010). This Interpretation addresses transactions in which an entity issues equity instruments to a creditor in return for the extinguishing of all or part of a financial liability. Broadly, it applies to transactions where the two parties are acting only in their capacity as lender and borrower. It does not address the

appropriate treatment for the creditor and does not apply to arrangements in which liabilities are extinguished in return for equity instruments in accordance with the original terms of the financial liability.

For transactions within its scope, where the whole liability is extinguished, the Interpretation requires the equity instruments issued to be measured at their fair value and the difference between that fair value and the carrying value of the financial liability extinguished to be recognized in profit or loss. Where only part of the financial liability is extinguished, some allocation of the consideration between the extinguished portion of the liability and the part of the liability that remains outstanding may be required. This will be applied in the year ending December 31, 2011 but is not expected to have an immediate impact on the group.

REVISED IAS 24 RELATED PARTY DISCLOSURES (effective for annual periods beginning on or after January 1, 2011). The revision to IAS 24 is in response to concerns that the previous disclosure requirements and the definition of a related party were too complex and difficult to apply in practice, especially in environments where government control is pervasive. The revised standard addresses these concerns by:

F-8

Table of Contents

RANDGOLD RESOURCES LIMITED

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (CONTINUED)

Providing a partial exemption for government-related entities Until now, if a government controlled, or a significantly influenced, an entity, the entity was required to disclose information about all transactions with other entities controlled, or significantly influenced by the same government. The revised Standard requires such entities to disclose information about individually and collectively significant related party transactions only.

Providing a revised definition of a related party The structure of definition of a related party has been simplified and inconsistencies eliminated. Illustrative examples have also been added. The revised definition will mean that some entities will have more related parties for which disclosures will be required. The entities that are most likely to be affected are those that are part of a group that includes both subsidiaries and associates, and entities with shareholders that are involved with other entities.

This will be applied in the year ending December 31, 2011 but is not expected to have an immediate impact on the group.

IMPROVEMENTS TO IFRSs (2010) (effective for annual periods beginning on or after January 1, 2011). The improvements in this Amendment clarify the requirements of IFRSs and eliminate inconsistencies within and between Standards. The changes include amendments to:

IFRS 3 (Revised 2008) Business combinations including: (i) Clarification that the treatment of contingent consideration arising in business combinations occurring before the effective date of IFRS 3(R) continues to be treated under the old requirements. (ii) Limiting the choice to measure non-controlling interests at a proportionate share in recognized amounts of the acquiree's identified net assets to present ownership interests with other components of the non-controlling interest being measured at fair value. (iii) The inclusion or otherwise in the cost of investment of replacement share-based payment awards provided to employees of the acquiree.

IFRS 7 Financial instruments: Disclosures including clarification that an entity should provide qualitative disclosures in the context of quantitative disclosures to enable users to link related disclosures and hence form an overall picture of the nature and extent of risks arising from financial instruments.

IAS 1 (Revised 2007) Presentation of financial statements clarifying that the analysis of components of other comprehensive income in the statement of changes in equity may be presented in a note.

IAS 34 Interim financial reporting clarifying the disclosures required in respect of significant events and transactions during the period.

Improvements to IFRSs (2010) also made minor amendments to the wording of IFRIC 13 Customer loyalty programmes regarding the valuation of award credits and the transitional arrangements for amendments to IAS 21 The effects of changes in foreign exchange rates and IAS 28 Investments in associates in respect of the loss of control or significant influence which were introduced by IAS 27 (as amended 2008) Consolidated and separate financial statements. This will be applied in the year ending December 31, 2011 but is not expected to have an immediate impact on the group.

DISCLOSURES TRANSFERS OF FINANCIAL ASSETS (AMENDMENTS TO IFRS 7) (effective for annual periods beginning on or after July 1, 2011). This Amendment requires the disclosure of information in respect of all transferred financial assets that are not derecognized and for any continuing involvement in a transferred asset, existing at the reporting date, irrespective of when the related transfer transaction occurred. The disclosures are intended to enable users of financial statements: (a) to understand the relationship between transferred financial assets that are not derecognized in their entirety and the associated liabilities; and (b) to evaluate the nature of, and risks associated with, the entity's continuing involvement in derecognized financial assets.

These enhanced disclosures are likely to affect, among others, entities that have debt factoring arrangements. These amendments are not yet endorsed by the EU. This will be applied in the year ending December 31, 2012 but is not expected to have an immediate impact on the group.

DEFERRED TAX: RECOVERY OF UNDERLYING ASSETS (AMENDMENTS TO IAS 12) (effective for annual periods beginning on or after January 1, 2012). IAS 12 requires an entity to measure the deferred tax relating to an asset depending on whether the entity expects to recover the carrying amount of the asset through use or sale. It can be difficult and subjective to assess whether recovery will be through use or through sale when the asset is measured using the fair value model in IAS 40 Investment Property. The amendment provides a practical solution to the problem by introducing a presumption that recovery of the carrying amount will, normally, be through sale. As a result of the amendments, SIC-21 Income Taxes – Recovery of Revalued Non-Depreciable Assets would no longer apply to investment properties carried at fair value. The amendments also incorporate into IAS 12 the remaining guidance previously contained in SIC-21, which is accordingly withdrawn. These amendments are not yet endorsed by the EU. This will be applied in the year ending December 31, 2012 but is not expected to have an immediate impact on the group.

IFRS 9 FINANCIAL INSTRUMENTS (effective for annual periods beginning on or after January 1, 2013).

IFRS 9 will eventually replace IAS 39 in its entirety. However, the process has been divided into three main components: Classification and measurement; impairment; and, hedge accounting. As each phase is completed, it will delete the relevant portions of IAS 39 and create new chapters in IFRS 9.

To date IFRS 9 addresses only the classification and measurement of financial instruments.

The requirements for financial assets are that they should be:

- Classified on the basis of the entity's business model for managing the financial assets and the contractual cash flow characteristics of the financial asset;

Table of Contents

RANDGOLD RESOURCES LIMITED

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (CONTINUED)

measured at amortized cost if it meets two conditions: (a) The entity's business model is to hold the financial asset in order to collect the contractual cash flows; and, (b) the contractual terms of the asset give rise on specified dates to cash flows that are solely payments of principal and interest on the principle outstanding; and,

subsequently measured at amortized cost or fair value depending on the business model of the entity and the terms of the instrument.

Hybrid contracts with a host that is within the scope of IFRS 9 (ie a financial host) must be classified in its entirety in accordance with the classification approach stated above. This eliminates the existing IAS 39 requirements to separately account for an embedded derivative and a host contract. The embedded derivative requirements under IAS 39 continue to apply where the host contract is a non-financial asset and for financial liabilities.

The requirements for classifying and measuring financial liabilities are mostly unchanged from those set out in IAS 39.

IFRS 9 includes an accounting policy choice allowing investments in equity instruments to be measured at fair value through other comprehensive income. This is an irreversible election made, on an instrument by instrument basis, at the date of initial recognition. Where this option is not taken, all equity instruments with the scope of IFRS 9 will be classified as fair value through profit or loss. Irrespective of the policy choice made, dividends received on equity instruments will always be recognized in profit or loss.

Subsequent reclassification of financial assets between the amortized cost and fair value categories is permitted only when an entity changes its business model for managing its financial assets.

The held to maturity and available for sale classifications have been eliminated. This standard has not yet been endorsed by the EU. This will be applied in the year ending December 31, 2013, once endorsed by the EU. We will review the impact on the group closer to the date of implementation, but it is currently expected that it will result in a reclassification of available for sale assets.

CONSOLIDATION The consolidated financial information includes the financial statements of the company, its subsidiaries and the company's proportionate share in joint ventures using uniform accounting policies for like transactions and other events in similar circumstances.

SUBSIDIARIES Subsidiaries are entities over which the group has the power to govern the financial and operating policies, generally accompanying an interest of more than one half of the voting rights. Subsidiaries are fully consolidated from the date on which control is transferred to the group. They are de-consolidated from the date that control ceases. The purchase method of accounting is used to account for the acquisition of subsidiaries by the group. The cost of an acquisition is measured at the fair value of the assets given, equity instruments issued and liabilities incurred or assumed at the date of exchange. Acquisition costs are expensed. Identifiable assets acquired (including mineral property interests) and liabilities and contingent liabilities assumed in a business combination are measured initially at their fair values at the acquisition date, irrespective of the extent of any non-controlling interest. The excess of the cost of acquisition over the fair value of the group's share of the identifiable net assets acquired is recorded as goodwill or other identifiable intangible assets. If the cost of acquisition is less than the fair value of the net assets of the subsidiary acquired, the difference is recognized directly in the statement of comprehensive income.

Inter-company transactions, balances and unrealized gains on transactions between group companies are eliminated. Unrealized losses are also eliminated unless the transaction provides evidence of an impairment of the asset transferred. Accounting policies of subsidiaries have been changed where necessary to ensure consistency with the policies adopted by the group.

JOINT VENTURE Joint ventures are those entities in which the group holds a long term interest and which are jointly controlled by the group and one or more joint venture partners under a contractual arrangement.

The group's interest in such jointly controlled entities is accounted for by proportionate consolidation. Under this method the group includes its share of the joint venture's individual income and expenses, assets and liabilities and cash flows on a line by line basis with similar items in the group's financial statements. Inter-company accounts and

transactions are eliminated on consolidation.

The group recognizes the portion of gains or losses on the sale of assets by the group to the joint venture that is attributable to the other joint venture partners. The group does not recognize its share of profits or losses from the joint venture that result from the purchase of assets by the group from the joint venture until it resells the assets to an independent party. However, if a loss on the transaction provides evidence of a reduction in the net realizable value of current assets or an impairment loss, the loss is recognized immediately. The results of joint ventures are included from the effective dates of acquisition and up to the effective dates of disposal.

The cost of a joint venture acquisition is measured at the fair value of the assets given, equity instruments issued and liabilities incurred or assumed at the date of exchange. Identifiable assets acquired (including mineral property interests) and liabilities and contingent liabilities assumed in a joint venture acquisition are measured initially at their fair values at the acquisition date, irrespective of the extent of any non-controlling interest. The excess of the cost of acquisition over the fair value of the group's share of the identifiable net assets acquired is recorded as goodwill or other identifiable intangible assets. If the cost of acquisition is less than the fair value of the net assets of the subsidiary acquired, the difference is recognized directly in the statement of comprehensive income.

Table of Contents

RANDGOLD RESOURCES LIMITED

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (CONTINUED)

INVESTMENT IN SUBSIDIARIES AND JOINT VENTURES Are stated at cost less any provisions for impairment in the financial statements of the company. Dividends are accounted for when the company becomes entitled to receive them. On the disposal of an investment, the difference between the net disposal proceeds and the carrying amount is charged or credited to the statement of comprehensive income.

SEGMENT REPORTING An operating segment is a group of assets and operations engaged in performing mining or advanced exploration that are subject to risks and returns that are different from those of other segments. Other parts of the business are aggregated and treated as part of a corporate and exploration segment. The group provides segmental information using the same categories of information the group's chief operating decision maker utilizes. The group's chief operating decision maker is considered by management to be the board of directors. The group has only one business segment, that of gold mining. Segment analysis is based on individual mining operations and exploration projects that have a significant amount of capitalized expenditure or other fixed assets.

FOREIGN CURRENCY TRANSLATION

Functional and presentation currency

Items included in the financial statements of each of the group's entities are measured using the currency of the primary economic environment in which the entity operates (the functional currency). The consolidated financial statements are presented in US dollars, which is the group's functional and presentation currency.

Transactions and balances

Foreign currency transactions are translated into the relevant functional currency using the exchange rates prevailing at the date of the transactions. Foreign exchange gains and losses resulting from the settlement of such transactions and from the translation at year end exchange rates of monetary assets and liabilities denominated in foreign currencies are recognized in the statement of comprehensive income.

Group companies

The results and financial position of material group entities (none of which has the currency of a hyper-inflationary economy) that have a functional currency different from the presentational currency are translated into the presentation currency as follows:

Assets and liabilities for each statement of financial position presented are translated at the closing rate at the date of that statement of financial position;

Income and expenses for each statement of comprehensive income are translated at average exchange rates (unless this average is not a reasonable approximation of the cumulative effect of the rates prevailing on the transaction dates, in which case income and expenses are translated at the rate on the dates of the transactions); and

All resulting exchange differences are recognized as a separate component of equity.

INTANGIBLE ASSETS

Mineral properties

Mineral properties acquired are recognized at fair value at the acquisition date. Mineral properties are tested annually for impairment on the same basis that property, plant and equipment are when there is an indication of impairment. Mineral properties will be amortized on a units of production basis when the related mine commences production.

PROPERTY, PLANT AND EQUIPMENT

Undeveloped properties

Undeveloped properties upon which the group has not performed sufficient exploration work to determine whether significant mineralization exists are carried at original acquisition cost. Where the directors consider that there is little likelihood of the properties being exploited, or the value of the exploitable rights has diminished below cost, an impairment is recorded.

Long-lived assets

Long-lived assets including development costs and mine plant facilities are initially recorded at cost. Where relevant the estimated cost of dismantling the asset and remediating the site is included in the cost of property, plant and equipment, subsequently they are measured at cost less accumulated amortization and impairment.

Development costs and mine plant facilities relating to existing and new mines are capitalized. Development costs consist primarily of direct expenditure incurred to establish or expand productive capacity and are capitalized until commercial levels of production are achieved, after which the costs are amortized.

Short-lived assets

Short-lived assets including non-mining assets are shown at cost less accumulated depreciation and impairment.

Depreciation and amortization

Long-lived assets include mining properties, such as freehold land, metallurgical plant, tailings and raw water dams, power plant and mine infrastructure, as well as mine development costs. Depreciation and amortization are charged over the life of the mine (or over the remaining useful life of the asset, if shorter) based on estimated ore tonnes contained in proven and probable reserves, to reduce the cost to estimated residual values. Proven and probable ore reserves reflect estimated quantities of economically recoverable reserves, which can be recovered in the future from known mineral deposits. Total proven and probable reserves are used in the depreciation calculation. The remaining useful lives for Morila and Loulo are estimated at four and a minimum of 19 years respectively. Any changes to the expected life of the mine (or asset) are applied prospectively in calculating depreciation and amortization charges. Short-lived assets which include motor vehicles, office equipment and computer equipment are depreciated over estimated useful lives of between two to five years but limited to the remaining mine life. Residual values and useful lives are reviewed, and adjusted if appropriate, at each statement of financial position date. Changes to the estimated residual values or useful lives are accounted for prospectively.

Table of Contents**RANDGOLD RESOURCES LIMITED****NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (CONTINUED)***Impairment*

The carrying amount of the property, plant and equipment of the group is compared to the recoverable amount of the assets whenever events or changes in circumstances indicate that the net book value may not be recoverable. The recoverable amount is the higher of value in use and the fair value less cost to sell. In assessing the value in use, the expected future cash flows from the assets is determined by applying a discount rate to the anticipated pre-tax future cash flows. The discount rate used is derived from the group's weighted average cost of capital. An impairment is recognized in the statement of comprehensive income to the extent that the carrying amount exceeds the assets recoverable amount. The revised carrying amounts are amortized in line with group accounting policies.

A previously recognized impairment loss is reversed if the recoverable amount increases as a result of a reversal of the conditions that originally resulted in the impairment. This reversal is recognized in the statement of comprehensive income and is limited to the carrying amount that would have been determined, net of depreciation, had no impairment loss been recognized in prior years. Assets are grouped at the lowest levels for which there are separately identifiable cash flows (cash-generating units) for purposes of assessing impairment. The estimates of future discounted cash flows are subject to risks and uncertainties including the future gold price. It is therefore reasonably possible that changes could occur which may affect the recoverability of mining assets.

STRIPPING COSTS All stripping costs incurred (costs incurred in removing overburden to expose the ore) during the production phase of a mine are treated as variable production costs and as a result are included in the cost of inventory produced during the period that the stripping costs are incurred.

INVENTORIES Include ore stockpiles, gold in process and supplies and spares and are stated at the lower of cost or net realizable value. The cost of ore stockpiles and gold produced is determined principally by the weighted average cost method using related production costs. Costs of gold inventories include all costs incurred up until production of an ounce of gold such as milling costs, mining costs and directly attributable mine general and administration costs but exclude transport costs, refining costs and royalties. Net realizable value is determined with reference to current market prices. Morila uses a selective mining process and has a few grade categories. Full grade ore is defined as ore above 1.4g/t and marginal ore is defined as ore below 1.4g/t. For Loulo, high grade ore is defined as ore above 3.5g/t and medium grade is defined as ore above 2.0g/t. All stockpile grades are currently being processed and all ore is expected to be fully processed. This does not include high grade tailings at Morila, which are carried at zero value due to uncertainty as to whether they will be processed through the plant. For Loulo, Yalea material less than 0.8g/t is classified as mineralized waste and is not in inventory, while material less than 0.7g/t from Gara is regarded as mineralized waste and is not in inventory.

The processing of ore in stockpiles occurs in accordance with the life of mine processing plan that has been optimized based on the known mineral reserves, current plant capacity and mine design. Stores and materials consist of consumable stores and are valued at weighted average cost after appropriate impairment of redundant and slow moving items. Consumable stock for which the group has substantially all the risks and rewards of ownership are brought on to the statement of financial position.

INTEREST/BORROWING COSTS Is recognized on a time proportion basis, taking into account the principal outstanding and the effective rate over the period to maturity. Borrowing cost is expensed as incurred except to the extent that it relates directly to the construction of property, plant and equipment during the time that is required to complete and prepare the asset for its intended use, when it is capitalized as part of property, plant and equipment. Borrowing cost is capitalized as part of the cost of the asset where it is probable that the asset will result in economic benefit and where the borrowing cost can be measured reliably. No interest or borrowing costs have been capitalized during the year.

FINANCIAL INSTRUMENTS These are measured as set out below. Financial instruments carried on the statement of financial position include cash and cash equivalents, receivables, accounts payable, borrowings, derivative financial instruments, and available for sale financial assets.

DERIVATIVES The group uses derivative financial instruments such as gold forward contracts to manage the risks associated with commodity prices. Derivatives are initially recognized at fair value on the date a derivative contract is

entered into and are subsequently re-measured to their fair value.

The method of recognizing the resulting gain or loss depends on whether the derivative is designated as a hedging instrument, and if so, the nature of the item being hedged. The group designates certain derivatives as hedges of highly probable forecast transactions (cash flow hedges). The fair value of derivative financial instruments that are traded on an active market is based on quoted market prices at the statement of financial position date. The fair value of financial instruments not traded on an active market is determined using appropriate valuation techniques. At the inception of the transaction, the group documents the relationship between hedge instruments and hedged items, as well as its risk management objective and strategy for undertaking various hedge transactions. The group also documents its assessment, both at hedge inception and on an ongoing basis, of whether the derivatives that are used in hedging transactions have been and will continue to be highly effective in offsetting changes in fair values or cash flows of hedged items. Refer to note 21 for treatment of the group's gold contracts.

Cash flow hedge

The effective portion of changes in the fair value of derivatives that are designated and qualify as cash flow

Table of Contents**RANDGOLD RESOURCES LIMITED****NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (CONTINUED)**

hedges is recognized in equity in the hedging reserve. The gain or loss relating to the ineffective portion is recognized immediately in profit or loss. Amounts accumulated in equity are recycled in the statement of comprehensive income in the periods when the hedged item will affect profit or loss (for instance when the forecast sale that is hedged takes place). When a hedging instrument expires or is sold or terminated, or when a hedge no longer meets the criteria for hedge accounting, any cumulative gain or loss existing in equity at that time remains in equity and is recognized when the forecast transaction is ultimately recognized in profit or loss. When a forecast transaction is no longer expected to occur, the cumulative gain or loss that was reported in equity is immediately transferred to profit or loss. The fair values of derivative instruments used for hedging purposes are disclosed in note 21. Movements on the hedging reserve in shareholders' equity are shown in note 21. The full fair value of a hedging derivative is classified as a non-current asset or liability when the remaining maturity of the hedged item is more than 12 months; it is classified as a current asset or liability when the remaining maturity of the hedged item is less than 12 months.

RECEIVABLES Are recognized initially at fair value. There is a rebuttable presumption that the transaction price is fair value unless this could be refuted by reference to market indicators. Subsequently, receivables are measured at amortized cost using the effective interest method, less provision for impairment. A provision for impairment of trade receivables is established when there is objective evidence that the group will not be able to collect all amounts due according to the original terms of receivables. Significant financial difficulties of the debtor, probability that the debtor will enter bankruptcy or financial reorganization, and default or delinquency in payments are considered indicators that the trade receivable may be impaired. The amount of the provision is the difference between the asset's carrying amount and the present value of estimated future cash flows, discounted at the effective interest rate. The amount of the provision is recognized in the statement of comprehensive income.

CASH AND CASH EQUIVALENTS Cash and cash equivalents are carried in the statement of financial position at cost. For the purpose of the cash flow statement, cash and cash equivalents comprise cash on hand, deposits held at call with banks, other short term highly liquid investments with a maturity of three months or less at the date of purchase and bank overdrafts. In the statement of financial position, bank overdrafts are included in borrowings in current liabilities.

AVAILABLE-FOR-SALE FINANCIAL ASSETS Available-for-sale financial assets are non-derivatives that are either designated in this category or not classified in any of the other categories. Available-for-sale financial assets are designated on acquisition. They are normally included in current assets and are carried at fair value. Where a decline in the fair value of an available-for-sale financial asset constitutes objective evidence of impairment, the amount of the loss is recognized in the statement of comprehensive income, other movements in fair value are recognized in other reserves in equity.

BORROWINGS Are recognized initially at fair value, net of transaction costs incurred. Borrowings are subsequently stated at amortized cost; any difference between the proceeds (net of transaction costs) and the redemption value is recognized in the statement of comprehensive income over the period of the borrowings using the effective interest method. Borrowings are classified as current liabilities unless the group has an unconditional right to defer settlement of the liability for at least 12 months after the statement of financial position date.

ACCOUNTS PAYABLE Accounts payable and other short term monetary liabilities, are initially recognized at fair value and subsequently carried at amortized cost using the effective interest method.

REHABILITATION COSTS The net present value of estimated future rehabilitation costs is provided for in the financial statements and capitalized within mining assets on initial recognition. Rehabilitation will generally occur on closure or after closure of a mine. Initial recognition is at the time of the disturbance occurring and thereafter as and when additional disturbances take place. The estimates are reviewed annually to take into account the effects of inflation and changes in estimates and are discounted using rates that reflect the time value of money. Annual increases in the provision due to the unwinding of the discount are recognized in the statement of comprehensive income as a finance cost. The present value of additional disturbances and changes in the estimate of the rehabilitation liability are capitalized to mining assets against an increase in the rehabilitation provision. The rehabilitation asset is amortized as noted previously. Rehabilitation projects undertaken, included in the estimates, are charged to the

provision as incurred.

Environmental liabilities, other than rehabilitation costs, which relate to liabilities arising from specific events, are expensed when they are known, probable and may be reasonably estimated.

PROVISIONS Are recognized when the group has a present legal or constructive obligation as a result of past events where it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation, and a reliable estimate of the amount of the obligation can be made.

CURRENT TAX Current tax is the tax expected to be payable on the taxable income for the year calculated using rates (and laws) that have been enacted or substantively enacted by the statement of financial position date. It includes adjustments for tax expected to be payable or recoverable in respect of previous periods.

DEFERRED TAXATION Deferred tax is provided in full, using the liability

Table of Contents**RANDGOLD RESOURCES LIMITED****NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (CONTINUED)**

method, on temporary differences arising between the tax bases of assets and liabilities and their carrying amounts in the consolidated financial statements. However, if the temporary difference arises from initial recognition of an asset or liability in a transaction other than a business combination that at the time of the transaction affects neither accounting nor taxable profit or loss, it is not accounted for. Deferred tax is determined using tax rates (and laws) that have been enacted or substantively enacted by the statement of financial position date and are expected to apply when the related deferred tax asset is realized or the deferred tax liability is settled. Deferred tax assets are recognized to the extent that it is probable that future taxable profit will be available against which the temporary differences can be utilized.

Deferred tax is provided on temporary differences arising on investments in subsidiaries and joint ventures, except where the timing of the reversal of the temporary difference is controlled by the group and it is probable that the temporary difference will not reverse in the foreseeable future.

SHARE CAPITAL Ordinary shares are classified as equity. Incremental costs directly attributable to the issue of new shares or options are shown in equity as a deduction from the proceeds.

EMPLOYEE BENEFITS*Pension obligations*

The group has defined contribution plans. A defined contribution plan is a pension plan under which the group pays fixed contributions into a separate entity. The group has no legal or constructive obligations to pay further contributions if the fund does not hold sufficient assets to pay all employees the benefits relating to employee service in the current and prior periods. For defined contribution plans, the group pays contributions to publicly or privately administered provident funds on a mandatory, contractual or voluntary basis. The group has no further payment obligations once the contributions have been paid. The contributions are recognized as employee benefit expenses when they are due. Prepaid contributions are recognized as an asset to the extent that a cash refund or a reduction in the future payments is available.

Termination benefits

Termination benefits are payable when employment is terminated before the normal retirement date, or whenever an employee accepts voluntary redundancy in exchange for these benefits. The group recognizes termination benefits when it is demonstrably committed to either: terminating the employment of current employees according to a detailed formal plan without possibility of withdrawal; or providing termination benefits as a result of an offer made to encourage voluntary redundancy. Benefits falling due more than 12 months after statement of financial position date are discounted to present value.

Profit-sharing and bonus plans

The group recognizes a liability and an expense for bonuses. The group recognizes a provision where contractually obliged or where there is a past practice that has created a constructive obligation.

Share-based payments

The fair value of the employee services received in exchange for the grant of options or restricted shares is recognized as an expense. The total amount to be expensed over the vesting period is determined by reference to the fair value of the options or restricted shares determined at the grant date:

including any market performance conditions; and

excluding the impact of any service and non-market performance vesting conditions (for example, profitability, sales growth targets and remaining an employee of the entity over a specified time period).

Non-market vesting conditions are included in assumptions about the number of options that are expected to become exercisable or the number of shares that the employee will ultimately receive. This estimate is revised at each statement of financial position date and the difference is charged or credited to the statement of comprehensive income, with a corresponding adjustment to equity. Market performance conditions are included in the fair value assumptions on the grant date with no subsequent adjustment.

The proceeds received on exercise of the options net of any directly attributable transaction costs are credited to equity.

When the options are exercised, the company issues new shares. The proceeds received net of any directly attributable transaction costs are credited to share capital (nominal value) and share premium when the options are exercised.

LEASES Determining whether an arrangement is, or contains, a lease is based on the substance of the arrangement and requires an assessment of whether fulfilment of the arrangement is dependent on the use of a specific asset or assets and whether the arrangement conveys a right to use the asset. Leases of plant and equipment where the group assumes a significant portion of risks and rewards of ownership are classified as a finance lease. Finance leases are capitalized at the estimated present value of the underlying lease payments. Each lease payment is allocated between the liability and the finance charges to achieve a constant rate on the finance balance outstanding. The interest portion of the finance payment is charged to the statement of comprehensive income over the lease period. The plant and equipment acquired under the finance lease are depreciated over the useful lives of the assets, or over the lease term if shorter.

Leases in which a significant portion of the risks and rewards of ownership are retained by the lessor are classified as operating leases. Payments made under operating leases are charged to the statement of

Table of Contents

RANDGOLD RESOURCES LIMITED

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (CONTINUED)

comprehensive income on a straight-line basis over the period of the lease.

REVENUE RECOGNITION The company enters into contracts for the sale of gold. Revenue arising from gold sales under these contracts is recognized when the price is determinable, the product has been delivered in accordance with the terms of the contract, the significant risks and rewards of ownership have been transferred to the customer and collection of the sales price is reasonably assured. These criteria are met when the gold leaves the mines' smelt houses. As sales from gold contracts are subject to customer survey adjustment, sales are initially recorded on a provisional basis using the group's best estimate of the contained metal. Subsequent adjustments are recorded in revenue to take into account final assay and weight certificates from the refinery, if different from the initial certificates. The differences between the estimated and actual contained gold have historically not been significant.

Losses on matured hedges are included within revenue as these pertain to losses incurred as gold hedges are settled and the actual price received (see accounting policy on derivatives).

EXPLORATION AND EVALUATION COSTS The group expenses all exploration and evaluation expenditures until the directors conclude that a future economic benefit is more likely than not of being realized, i.e. probable. While the criteria for concluding that an expenditure should be capitalized is always probable, the information that the directors use to make that determination depends on the level of exploration.

Exploration and evaluation expenditure on brownfield sites, being those adjacent to mineral deposits which are already being mined or developed, is expensed as incurred until the directors are able to demonstrate that future economic benefits are probable through the completion of a prefeasibility study, after which the expenditure is capitalized as a mine development cost. A prefeasibility study consists of a comprehensive study of the viability of a mineral project that has advanced to a stage where the mining method, in the case of underground mining, or the pit configuration, in the case of an open pit, has been established, and which, if an effective method of mineral processing has been determined, includes a financial analysis based on reasonable assumptions of technical, engineering, operating economic factors and the evaluation of other relevant factors. The prefeasibility study, when combined with existing knowledge of the mineral property that is adjacent to mineral deposits that are already being mined or developed, allow the directors to conclude that it is more likely than not that the group will obtain future economic benefit from the expenditures.

Exploration and evaluation expenditure on greenfield sites, being those where the group does not have any mineral deposits which are already being mined or developed, is expensed until such time as the directors have sufficient information to determine that future economic benefits are probable, after which the expenditure is capitalized as a mine development cost. The information required by directors is typically a final feasibility study however a prefeasibility study may be deemed to be sufficient where the additional work required to prepare a final feasibility study is not significant.

Exploration and evaluation expenditure relating to extensions of mineral deposits which are already being mined or developed, including expenditure on the definition of mineralization of such mineral deposits, is capitalized as a mine development cost following the completion of an economic evaluation equivalent to a prefeasibility study. This economic evaluation is distinguished from a prefeasibility study in that some of the information that would normally be determined in a prefeasibility study is instead obtained from the existing mine or development. This information when combined with existing knowledge of the mineral property already being mined or developed allow the directors to conclude that more likely than not the group will obtain future economic benefit from the expenditures. Costs relating to property acquisitions are capitalized within development costs.

DIVIDEND DISTRIBUTION Dividend distribution to the company's shareholders is recognized as a liability in the group's financial statements in the period in which the dividends are approved by the board of directors and declared to shareholders.

EARNINGS PER SHARE Is computed by dividing net income by the weighted average number of ordinary shares in issue during the year.

DILUTED EARNINGS PER SHARE Is presented when the inclusion of potential ordinary shares has a dilutive effect on earnings per share.

3. CRITICAL ACCOUNTING ESTIMATES AND JUDGMENTS

Some of the accounting policies require the application of significant judgment by management in selecting the appropriate assumptions for calculating financial estimates.

By their nature, these judgments are subject to an inherent degree of uncertainty and are based on historical experience, terms of existing contracts, management's view on trends in the gold mining industry and information from outside sources.

The estimates and assumptions that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year are discussed below:

Future rehabilitation obligations

The net present value of current rehabilitation estimates have been discounted to their present value at 3.5% per annum (2009: 3.5%) being an estimate of the prevailing interest rates.

Table of Contents**RANDGOLD RESOURCES LIMITED****NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (CONTINUED)**

Expenditure is expected to be incurred at the end of the respective mine lives. For further information, including the carrying amounts of the liabilities, refer to note 15. A 1% change in the discount rate on the group's rehabilitation estimates would result in an impact of US\$2.8 million (2009: US\$1.4 million) on the provision for environmental rehabilitation, and an impact of US\$0.2 million (2009: US\$0.1 million) on the statement of comprehensive income.

Gold price assumptions

The following gold prices were used in the mineral reserves optimization calculations:

US\$000	2010	2009
Morila	800	700
Loulo: open pit	800	700
Loulo: underground	800	700
Tongon	800	700
Kibali	800	700
Massawa	800	700
Goukoto	800	700

Changes in the gold price used could result in changes in the mineral reserve optimization calculations. Mine modelling is a complex process and hence it is not feasible to perform sensitivities on gold price assumptions.

Determination of ore reserves

The group estimates its ore reserves based on information compiled by Competent Persons as defined in accordance with the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves of December 2004 (the JORC code). Reserves determined in this way are used in the calculation of depreciation, amortization and impairment charges, as well as the assessment of the carrying value of mining assets.

There are numerous uncertainties inherent in estimating ore reserves and assumptions that are valid at the time of estimation may change significantly when new information becomes available. Changes in the forecast prices of commodities, exchange rates, production costs or recovery rates may change the economic status of reserves and may, ultimately, result in the reserves being restated. For further information refer to Annual Reserves Declaration on page 45 of the Company's Annual Report on Form 20-F.

Uncertainties relating to transactions with a contractor

As explained in note 24 to the financial statements, there are uncertainties relating to the value of the securities held in respect of advances to a contractor and also a claim relating to the Loulo development. The amounts reflected in the financial statements reflect the directors' best estimate of the amount that will be recovered in respect of the advances and the outcome of the dispute relating to the cost of the development.

Share-based payments

Refer to note 18 for the key assumptions used in determining the value of share-based payments.

Areas of judgment

Areas of judgment made in applying specific accounting policies that have the most significant effect on the amounts recognized in the financial statements are:

Exploration and evaluation expenditure

The group has to apply judgment in determining whether exploration and evaluation expenditure should be capitalized or expensed. Management exercises this judgment based on the results of economic evaluations, prefeasibility or feasibility studies. Costs are capitalized where those studies conclude that more likely than not the group will obtain future economic benefit from the expenditures.

Depreciation

There are several methods for calculating depreciation, ie the straight line method, the production method using ounces produced and the production method using tonnes milled. The directors believe that the tonnes milled method is the best indication of plant and infrastructure usage.

Carrying values of property, plant and equipment and mineral properties

The group assesses at each reporting period whether there is any indication that these assets may be impaired. If such indication exists, the group estimates the recoverable amount of the asset. The recoverable amount is assessed by reference to the higher of value in use (being the net present value of expected future cash flows of the relevant cash generating unit) and fair value less cost to sell. The estimates used for impairment reviews are based on detailed mine plans and operating plans. Future cash flows are based on estimates of:

the quantities of the reserves for which there is a high degree of confidence in economic extraction;

future production levels;

future commodity prices;

future cash cost of production, capital expenditure, close down, restoration and environmental clean up; and

future gold prices a US\$1,000 gold price was used for the current year's impairment calculations (2009: US\$1,000).

Table of Contents**RANDGOLD RESOURCES LIMITED****NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (CONTINUED)****4. INCOME TAXES**

US\$000	Notes	Dec. 31, 2010	Dec. 31, 2009	Dec. 31, 2008
Current taxation		16,764	18,435	22,395
Deferred taxation	12	7,760	3,015	2,169
		24,524	21,450	24,564
<p>The tax on the group's profit before tax differs from the theoretical amount that would arise using the statutory tax rate applicable to the group's Malian operations.</p>				
Profit before tax		145,155	105,713	71,584
Tax calculated at tax rate of 35%		50,804	37,000	25,054
Reconciling items				
Income taxed at 0%		(13,287)	(8,958)	(10,107)
Expenses deductible at 0%		11,479	18,184	18,629
Mali tax holiday permanent differences		(30,576)	(26,695)	(8,976)
Côte d'Ivoire tax holiday permanent differences		333		
Net capital allowances not deductible		6,854	1,746	2,169
Deferred stripping costs adjustment		906	1,269	()
Other permanent differences		(1,989)	(1,096)	(2,205)
Taxation charge		24,524	21,450	24,564

The company is subject to zero percent income tax in Jersey. Somilo SA (Loulo) benefited from a five year tax holiday in Mali until the tax exoneration period expired on November 7, 2010. Tongon SA benefits from a five year tax holiday in Côte d'Ivoire from the commencement of production in November 2010. The benefit of the tax holidays to the group was to increase its net profit by US\$30.2 million (2009: US\$26.7 million; 2008: US\$9 million). Accordingly, had the group not benefited from the tax holidays in Mali and Côte d'Ivoire, earnings per share would have been reduced by US\$0.33, US\$0.33 and US\$0.12 for the years ended December 31, 2010, 2009 and 2008 respectively. Under Malian tax law, income tax is based on the greater of 35% of taxable income or 0.75% of gross revenue. Under Ivorian tax law, income tax is based on the greater of 25% of taxable income or 0.5% of gross revenue. The Morila, Loulo and Tongon operations have no assessable capital expenditure carry forwards or assessable tax losses, as at December 31, 2010, 2009 and 2008 respectively, for deduction against future mining income.

5. SHARE CAPITAL AND PREMIUM

The total authorized number of ordinary shares is 120 million (2009: 100 million) of US 5 cents each (2009: US 5 cents). All issued shares are fully paid. The total number of issued shares at December 31, 2010 was 91,082,170 shares (2009: 90,100,795). This excludes restricted shares granted but not yet vested and 7,200 treasury shares.

Please refer to the statement of changes in equity for more detail on the annual movement of the number of ordinary shares, share capital and share premium, including the movement arising from the issue of restricted shares and exercise of share options.

FOR THE YEAR ENDED DECEMBER 31, 2008			
Shares outstanding at January 1, 2008		76,140,330	
Weighted number of shares issued		159,786	
Income available to shareholders	41,569	76,300,116	0.54
EFFECT OF DILUTIVE SECURITIES			
Weighted stock options issued to employees		1,240,082	
Diluted earnings per share	41,569	77,540,198	0.54

Refer to note 18 for details on share options issued to employees. US\$15.3 million (US\$0.17 per share) was paid as dividends in 2010 (2009: US\$9.9 million / US\$0.13 per share; 2008: US\$9.2 million). On January 31, 2011, the board of directors approved an annual dividend of US\$0.20 per share which will result in an aggregate dividend payment of US\$18.2 million and is expected to be paid in May 2011. The proposed 2011 dividend is subject to shareholder approval at the annual general meeting to be held on May 3, 2011.

Included in the Moto options are 63,548 options outstanding as at December 31, 2010 (2009: 121,800; 2008: 0) which were anti-dilutive. The total number of potentially issuable shares as at December 31, 2010 is 1,691,174 (2009:

2,643,233; 2008: 0).

7. RECEIVABLES

US\$000	Notes	Dec. 31, 2010	Dec. 31, 2009
Trade		13,902	21,428
Advances to contractors	7.1	29,104	28,544
Taxation debtor	7.2	14,050	42,134
Prepayments and other receivables	7.3	44,300	37,125
		101,356	129,231
Impairment provision		(2,277)	(2,153)
Total		99,079	127,078
Less: current portion		(97,738)	(121,786)
Long term portion		1,341	5,292

7.1 Advances to contractors comprise advances made to a contractor at Loulo, MDM Ferroman (Pty) Ltd (in liquidation) (MDM) of US\$10.7 million (2009: US\$11.6 million), as well as advances made to BCM of US\$7.7 million (2009: US\$6.7 million), Afrilog of US\$4.1 million (2009: US\$9.2 million) and Trident of US\$1.4 million (2009: US\$0). Significant uncertainties exist relating to the recoverability of advances made to MDM. More detail is given in note 24 to the financial statements.

7.2 The taxation debtor relates to indirect taxes owing to the group by the State of Mali, including TVA balances at Loulo US\$11.6 million (2009: US\$37 million), as well as refundable duty taxes US\$1.8 million (2009: US\$1.7 million) and custom duties US\$0.6 million (US\$0.7 million).

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (CONTINUED)
7. RECEIVABLES (CONTINUED)

7.3 Prepayments and other receivables include a balance of US\$2 million (2009: US\$3.7 million) of deferred cash consideration in respect of the sale of the Kiaka project. Refer to note 13 for further details.

US\$000	Dec. 31, 2010	Dec. 31, 2009
The fair values of trade and other receivables are as follows:		
Trade	13,902	21,428
Advances to contractors	27,963	27,527
Taxation debtor	12,914	40,998
Prepayments and other receivables	44,300	37,125
	99,079	127,078

Movements on the provision for impairment and present valuing of trade receivables are as follows:

AT JANUARY 1	2,153	1,136
Provision for receivables impairment advances to contractors	124	1,017
AT DECEMBER 31	2,277	2,153

The creation and release of provision for impaired receivables have been included in mining and processing costs in the statement of comprehensive income. The other classes within trade and other receivables do not contain impaired assets.

The credit quality of receivables that are not past due or impaired remains very high. The maximum exposure to credit risk at the reporting date is the fair value of each class of receivable mentioned above. The group does not hold any collateral as security. Refer to note 20 for further information on the concentration of credit risk.

All receivable balances are due within 30 days, except for a loan made to Sokimo of US\$1.3 million which is due after 12 months.

8. INVENTORIES AND ORE STOCKPILES

US\$000	Dec 31, 2010	Dec 31, 2009
Consumable stores	85,089	58,334
Short term portion of ore stockpiles	88,749	46,336
Gold in process	21,685	4,443
Total current asset inventories and ore stockpiles	195,523	109,113
Long term portion of ore stockpiles	9,123	34,178
Total inventories and ore stockpiles	204,646	143,291

Ore stockpiles have been split between long and short term based on current Life of Mine plan estimates.

The gold in process balance includes an amount of US\$11.3 million (2009: US\$0) of gold in process and unsold dore at Tongon at year end following disruptions in Côte d'Ivoire.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (CONTINUED)
9. PROPERTY, PLANT AND EQUIPMENT

US\$000	Dec. 31, 2010	Dec. 31, 2009
Mine properties, mine development costs and mine plant facilities and equipment		
Cost		
At the beginning of year	634,580	434,997
Additions	422,867	199,583
	1,057,447	634,580
Accumulated depreciation and amortization		
At beginning of year	127,361	98,859
Charge for the year	28,127	28,502
	155,488	127,361
NET BOOK VALUE	901,959	507,219

Long-lived assets

Included in property, plant and equipment are long-lived assets which are amortized over the life of the mine and comprise the metallurgical plant, tailings and raw water dams, power plant and mine infrastructure. The net book value of these assets was US\$793.6 million as at December 31, 2010 (2009: US\$488.8 million).

Short-lived assets

Included in property, plant and equipment are short-lived assets which are amortized over their useful lives and are comprised of motor vehicles and other equipment. The net book value of these assets was US\$42.4 million as at December 31, 2010 (2009: US\$10.5 million).

Undeveloped property

Included in property, plant and equipment are undeveloped property costs of US\$7.3 million (2009: US\$7.9 million).

Mine development costs

US\$30.6 million, US\$15.9 million and US\$12.2 million were capitalized during the year on the Kibali, Goukoto and Massawa projects, following the successful completion of prefeasibility studies on these projects. The figures in the company column relate to the costs which have been capitalized on the Goukoto and Massawa projects.

No borrowing costs were capitalized as part of additions during the year as no borrowing costs were incurred (2009: US\$0). Refer to the property, plant and equipment accounting policy note on page F-11 for details of each asset category's useful economic life.

10. MINERAL PROPERTIES

US\$000	Dec. 31, 2010	Dec. 31, 2009
Cost		
At the beginning of year	405,779	
Adjustment in respect of the settlement of acquisition costs	221

	406,000	405,779

Amortization

At beginning of year

Charge for the year

NET BOOK VALUE

406,000

405,779

Mineral properties relate to the acquisition of a joint venture interest in Moto Goldmines Limited, as well as a further 10% interest in the Kibali project. Refer to note 28 for details thereof.

F-20

Table of Contents**RANDGOLD RESOURCES LIMITED****NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (CONTINUED)****11. INVESTMENTS AND LOANS IN SUBSIDIARIES AND JOINT VENTURES**

The group's interest in the Morila joint venture was as follows:

US\$000	Dec. 31, 2010	Dec. 31, 2009
Non-current assets	29,565	59,310
Current assets	62,962	58,565
 Total assets	 92,527	 117,875
Non-current liabilities	(10,259)	(9,306)
Current liabilities	(8,983)	(21,108)
 Total liabilities	 (19,242)	 (30,414)

The group's interest in the Kibali joint venture was as follows:

Non-current assets	148,128	333,327
Current assets	6,251	8,800
 Total assets	 154,379	 342,127
Non-current liabilities	(37,138)	
Current liabilities	(973)	(5,344)
 Total liabilities	 (38,111)	 (5,344)

Refer to note 19 for disclosure of the income and expenses of the Morila joint venture and the Kibali joint venture respectively. Refer to page 60 of the Company's Annual Report on Form 20-F for details of the group companies, as well as information on the country of incorporation, proportion of ownership interest and voting power held for each of the subsidiaries and joint ventures.

The group's interest in the RAL1 joint venture was as follows:

Non-current assets	28,146	1,863
Current assets	1,020	8,388
 Total assets	 29,166	 10,251
Non-current liabilities	(26,039)	(10,190)
Current liabilities	(2,982)	(55)
 Total liabilities	 (29,021)	 (10,245)

The 50.1% interest in RAL1 has been treated as a joint venture, as the company is jointly controlled with DTP Terrassement. Income and expenses are not disclosed in respect of RAL1. All income and material expenses eliminate on consolidation. RAL1 is not a material segment of the group and is therefore included in corporate and exploration in note 19.

Table of Contents**RANDGOLD RESOURCES LIMITED****NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (CONTINUED)****12. DEFERRED TAXATION**

US\$000	Notes	Dec. 31, 2010	Dec. 31, 2009
Deferred tax is calculated on temporary differences under the liability method using a tax rate of 35% in respect of the Malian operations and 25% in respect of the Ivorian operations (2009: 35%).			
The movement on deferred taxation is as follows:			
At the beginning of the year		4,472	1,457
Statement of comprehensive income charge	4	7,760	3,015
At the end of the year		12,232	4,472
Deferred taxation assets and liabilities comprise the following:			
Decelerated tax depreciation		11,995	4,762
Deferred stripping		616	
Deferred taxation liability		12,611	4,762
Accelerated tax depreciation		(379)	
Deferred stripping			(290)
Deferred taxation asset		(379)	(290)
Net deferred taxation liability/(asset)		12,232	4,472

Temporary differences which are expected to be realized during the Tongon tax holiday are recognized at 0%.

The group did not recognize deferred income tax assets of US\$3.4 million (2009: US\$3.5 million) in respect of rehabilitation costs at Morila amounting to US\$9.6 million (2009: US\$10 million) that can be carried forward against future taxable incomes but are expected to be incurred once production at the mine has ceased and there is no taxable income.

13. AVAILABLE FOR SALE FINANCIAL ASSETS

US\$000	Dec. 31, 2010	Dec. 31, 2009
Beginning of year	46,830	38,600
Settlement of ARS	(29,020)	
Impairment of asset back securities		(9,580)
Additions	1,204	8,831
Disposals	(22,090)	
Fair value movement recognized in equity	19,157	8,970
Exchange differences	(219)	9

At December 31	15,862	46,830
Less: non-current portion		(29,020)
Current portion	15,862	17,810

Additions in the year ending December 31, 2010 consisted of 1.0 million shares being acquired in Volta Resources Inc, as well as the exercise of warrants in Volta Resources Inc resulting in 0.5 million shares being acquired.

Additions in the year ending December 31, 2009 consisted of the group's 50% share of 7.9 million shares in Kilo Goldmines Limited valued at US\$1.6 million and an investment in 20 million Volta Resources Inc shares valued at US\$7.3 million on acquisition.

The fair value of these investments is US\$1.5 million (2009: US\$1.8 million) and US\$14.4 million (2009: US\$16 million) respectively. The shares in Volta Resources were acquired as part of the consideration received for the sale of the Kiaka project in Burkina Faso to Volta Resources. The shares in Kilo Goldmines were acquired as part of the Moto acquisition (refer note 28).

Management has no on-going involvement with the Kiaka project nor Volta Resources and therefore in the absence of significant influence it is deemed to be appropriate to categorise the investments as available-for-sale financial assets. Disposals consisted of the sale of 15.5 million shares in Volta Resources, resulting in a profit of US\$19.3 million.

The auction rate securities (ARS) have now been disposed with US\$42 million received in 2010 following a settlement that was reached in relation to these investments. The gain on settlement of US\$13 million has been included in the statement of comprehensive income as a component of finance income and costs. The net effect of this transaction is shown in the table above as Settlement of ARS .

The impairment of asset backed securities has previously been charged to the statement of comprehensive income as a component of finance income and costs.

Table of Contents**RANDGOLD RESOURCES LIMITED****NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (CONTINUED)****14. TRADE AND OTHER PAYABLES**

US\$000	Note	Dec. 31, 2010	Dec. 31, 2009
Trade payables		15,719	16,139
Payroll and other compensation		7,903	6,325
Accruals and other payables	14.1	71,633	59,616
		95,255	82,080

14.1 Accruals and other payables include a DTP shareholder loan of US\$13 million (2009: US\$5.1 million), BCM accruals of US\$5 million (2009: US\$5 million) and bonus provisions of US\$5.3 million (2009: US\$3.4 million). Accruals and other payables for the company include bonus provisions of US\$5.3 million (2009: US\$3.4 million).

15. PROVISION FOR ENVIRONMENTAL REHABILITATION

US\$000	Dec. 31, 2010	Dec. 31, 2009
Opening balance	16,916	14,054
Unwinding of discount	592	492
Change in estimates	12,056	2,370
	29,564	16,916

As at December 31, 2010, US\$14 million of the provision relates to Loulo (December 31, 2009: US\$11.2 million) which is based on estimates provided by environmental consultants. A provision of US\$9.7 million (2009: US\$0) relates to Tongon as production commenced in November 2010. The remaining US\$5.9 million relates to Morila (December 31, 2009: US\$5.7 million). The provisions for rehabilitation costs include estimates for the effect of inflation and changes in estimates and have been discounted to their present value at 3.5% (2009: 3.5%) per annum, being an estimate derived from the risk free rate. Limited environmental rehabilitation regulations currently exist in Mali and in Côte d'Ivoire to govern the mines, so the directors have based the provisions for environmental rehabilitation on standards set by the World Bank, which require an environmental management plan, an annual environmental report, a closure plan, an up-to-date register of plans of the facility, preservation of public safety on closure, carrying out rehabilitation works and ensuring sufficient funds exist for the closure works. However, it is reasonably possible that the group's estimate of its ultimate rehabilitation liabilities could change as a result of changes in regulations or cost estimates. The group is committed to rehabilitation of its properties. It makes use of independent environmental consultants for advice and it also uses past experience in similar situations to ensure that the provisions for rehabilitation are adequate. Current Life of Mine plans envisage the expected outflow to occur at the end of the Life of Mine, which is 2013 for Morila, 2029 for Loulo and 2020 for Tongon.

16. LOANS FROM MINORITY SHAREHOLDERS IN SUBSIDIARIES

US\$000	Dec. 31, 2010	Dec. 31, 2009
Somilo		
State of Mali - principal amount	604	653
Deferred interest payable	2,114	2,292

Loans	2,718	2,945
-------	-------	-------

The State of Mali loan to Somilo is uncollateralized and bears interest at the base rate of the Central Bank of West African States plus 2%. The accrual of interest ceased in the last quarter of 2005 per mutual agreement between shareholders. The loan is repayable from cash flows of the Loulo mine after repayment of all other loans. In the event of a liquidation of Somilo the shareholder loans and deferred interest are not guaranteed.

17. FINANCIAL LIABILITIES FORWARD GOLD SALES

US\$000	Dec. 31, 2010	Dec. 31, 2009
Forward gold sales		25,312

All outstanding gold price forward sales contracts were delivered into during the year and no new contracts were entered into.

F-23

Table of Contents**RANDGOLD RESOURCES LIMITED****NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (CONTINUED)****18. EMPLOYMENT COST**

The group contributes to several defined contribution provident funds. The provident funds are funded on the money accumulative basis with the members and company having been fixed in the constitutions of the funds. All the group's employees, other than those directly employed by West African subsidiary companies, are entitled to be covered by the above-mentioned retirement benefit plans. Retirement benefits for employees employed by West African subsidiary companies are provided by the state social security system to which the company and employees contribute a fixed percentage of payroll costs each month.

US\$000	Dec. 31, 2010	Dec. 31, 2009
Total employee benefit cost was as follows:		
Short term benefits	11,675	11,162
Pension contributions	564	464
Share-based payments	11,843	9,564
Total	24,082	21,190

Share-based payments – share options

The fair value of employee services received as consideration for share options (equity settled) of the company is calculated using the Black-Scholes option pricing model. No options were granted during the year. The key assumptions used in this model for options granted during the year ending December 31, 2009 were as follows:

US\$000	Notes	Dec 31, 2010	Dec 31, 2009
Expected life			3 years
Volatility	18.1		59.23%
Risk free interest rate			1.65%
Dividend yield			0%
Weighted average share price on grant and valuation date	18.2		US\$56.99
Weighted average exercise price	18.3		US\$56.99

Share option scheme

	Granted	Weighted average US\$ exercise price
BALANCE AT 31 DECEMBER 2008	2,666,170	
Shares exercised during the period	(760,400)	18.01
Shares granted during the period	183,000	56.99
Shares lapsed during the period	(9,600)	22.19
BALANCE AT 31 DECEMBER 2009	2,079,070	

Shares exercised during the period	(672,300)	26.15
Shares granted during the period		
Shares lapsed during the period	(220,556)	28.43
BALANCE AT 31 DECEMBER 2010	1,186,214	

18.1 Volatility is based on the three year historical volatility of the company's shares on each grant date.

18.2 Weighted average share price for the valuation is calculated taking into account the market price on all grant dates.

18.3 The exercise of the options issued in 2009 is subject to a satisfactory performance level being achieved during the 12 month period prior to the exercise date of each tranche of options. The minimum performance level to be achieved is defined as level 3 in the company's performance management system. Similar performance criteria were attached to the options that were issued in previous years. It is expected that most employees who were awarded share options would achieve a level 3 performance.

F-24

SHARE-BASED PAYMENTS RESTRICTED SHARES**Restricted shares issued to directors and management**

The company operates a restricted share scheme for directors and management.

The exercise of these restricted shares shall be subject to a satisfactory performance level being achieved during the 12 month period prior to the exercise date of each tranche of shares. The minimum performance level to be achieved

is defined as level 3 on the company's performance management system. The majority of employees to whom restricted shares have been granted are expected to meet this level of performance. The restricted shares issued to executive directors are subject to a market performance condition. This has been assessed and has a minimal impact on the fair value estimate at the grant date.

The fair value of the restricted shares is based on the share price on the day date of granting and the share based payment charge is charged to profit evenly between the grant and vesting dates. The restriction on the shares (no dividends received during the vesting period) has a minimal impact on the fair value estimate at the grant date. The restricted shares have an exercise price of US\$0.

RESTRICTED SHARES ISSUED TO DIRECTORS AND MANAGEMENT

Movements in the number of restricted shares outstanding and their issue prices are as follows:

	Weighted Market Price at Grant Date	Weighted Market Price at Grant Date			Weighted Average Contractual Life (years)	Weighted Average Contractual Life (years)

19. SEGMENT INFORMATION

Operating segments have been identified on the basis of internal reports about components of the group that are regularly reviewed by the group's chief operating decision maker. The operating segments included in internal reports are determined on the basis of their significance to the group. In particular, operating mines are reported as separate segments and exploration projects that have significant capitalized expenditure or other fixed assets are also reported separately. Other parts of the group, including the RAL1 joint venture, are included with corporate and exploration. The group's chief operating decision maker is considered by management to be the board of directors. An analysis of the group's business segments, excluding intergroup transactions, is set out below. Major customers are not identifiable because all gold is sold to an agent.
