(Lake Forest) October 4, 2001. CNH Global N.V. (NYSE:CNH) today announced that weakening sales in the construction equipment industry are expected to adversely affect the company's performance in the fourth quarter of 2001. Third quarter results, to be announced on October 25, 2001, are expected to be within the guidance communicated in July, that is, a loss of between \$.35 and \$.45 per share. Detailed guidance for the fourth quarter will be provided in the company's third quarter earnings release and conference call.

CNH expects that construction equipment industry sales will decline further in the fourth quarter across all major markets resulting in a full year world wide industry decline of approximately 15%, compared to the previous year. The industry decline is greater for light equipment, the sector in which CNH is the market leader. Sales of CNH construction equipment are down essentially in line with the industry, except for backhoe loaders, where company sales were adversely impacted by a model changeover at the beginning of the year. As a result, CNH is reducing production across most CE product lines during the fourth quarter, in order to bring inventories in line with lower retail demand. These reductions in production and inventories will allow CNH to improve its cash position.

The agricultural equipment industry sales in the Americas and Western Europe were stronger than expected in the third quarter and this positive trend should continue through the balance of the year. Sales of CNH agricultural equipment in the third quarter were in line with the industry.

The company continues to aggressively implement its restructuring and development plan. CNH benefits from the favorable dealer and customer response from new products introduced this year through its multiple distribution channels. Merger related profit improvements continue to accrue from manufacturing efficiencies, reductions in material costs and in SG&A expenses. In addition, CNH continues to emphasize process reengineering programs to streamline administrative processes to reduce SG&A, further improve its supply chain to reduce working capital, and revamp its product development processes to improve quality and product cost.

CNH is the number one manufacturer of agricultural tractors and combines in the world, the third largest maker of construction equipment, and has one of the industry's largest equipment finance operations.
